MICHIGAN BUSINESS FARMING,

Hints for Handling the Holiday Poultry

THE DEMAND for poultry during the holiday season is always large but not always exceeding the supply. There is always a tendency among farmers to make their entire sales of poultry during the holidays which often over supplies the demand. While it is advisable to sell during the period from the week prior to Thanksgiving to New Years, still some discretion should be used in not glutting the market upon any holiday.

Often the market is better following the holiday trade. Turkeys always sell well at Thanksgiving but all shippers should make allowance for present day delays in transportation and make their shipments of turkeys early as well as any other poultry intended for Thanksgiving.

There is always a good demand for dressed poultry during the holiday trade but great care should be taken in dressing so s to retain a neat and attractive appearance while displaying turkeys should always be dry picked and some dry pick chickens bring good results. If shipping poultry for holiday trade, the same should arrive a few days before the holidays.

Much could be gained to shippers if they would closely study the market and be governed accordingly as to time of making shipment.—Nathan F. Simpson.

U. S. Issues Report of Record Wool Stocks

Dealers, manufacturers, and the government held 729,373,000 pounds of wool, grease equivalent, on September 30, 1919, according to the Bureau of Markets, United States Department of Agriculture. This represents holdings in excess of those reported in any quarterly period since the reports were first issued. Stocks on September 30 were 8 per cent greater than on June 30, 1919, and 50 per cent greater than stocks held on September 30, 1918.

At the present rate of consumption the bureau points out that the total stocks on September 30 are sufficient to last for more than a year. Because of the great demand for fine wools the reports show a decrease in fine and 1-2 blood grease amounting to 9,000,000 pounds. Both manufacturers and dealers hold more of all grades with the exception of fine wool. A decrease of 22,000,000 pounds of fine wool holdings compared to June 30 is shown for dealers' stocks, while manufacturers' holdings of this grade increased 5,000,000 pounds.

Boston holds first place among the markets of the country with 156,000,000 pounds of all kinds and classes. Philadelphia ranks second, followed closely by Chicago. Manufacturers in Massachusetts held 91,000,000 pounds Rhode Island, 33,000,000; and Pennsylvania, 29,000,000.

The government wool auctions have been the center of attraction, although there has been more or less business privately as well, chiefly for the half-blood and fine wools. Prices for the finer grades are 20 to 25 per cent higher, while medium wools are generally steady and the lower grades from good quarter bloods down are 15 to 20 per cent lower compared with June. The manufacturing situation is very strong and the tendency is for higher prices to be named on the finished product.

Boston quotations are: Michigan and New York fleeces: Fine unwashed, 64 to 65c; delaine, unwashed, 80 to 83c; half-blood, unwashed, 78 to 80c; ⅜-blood, unwashed, 66 to 67c.

Many Attend Clark's Hog Sale

Mr. William Clark's sale of Registered Big Type Poland China Hogs held Nov. 11 at his farm at Eaton Rapids, was quite well attended, as the weather and roads were good and a great many breeders and farmers took advantage of the same and came from all directions. His offering was in splendid shape and was well worth the while of any breeder to attend. The bidding was rather spasmodic at times and at others rather slow, and while some animals sold well, most of them did not bring what they were worth. One littel by Orange Des Moines and Lady Price sold well, No. 39 topping the sale, bringing $257.50 going to A. D. Gregory of Ionia. Below are all selling over $50. Several animals were of late farrow and did not sell as high.

1. Boar. Bear Creek Farm, Hudson, Mich., $68; 2. Boar. A. E. Illenden, Adrian, Mich., $58; 3. Gilt. Chas Tobey, Newport News, Va., $55. 7. Gilt. C. A. Boone, Blanchard, Mich., $77. 17. Gilt. W. H. UNCLE RUBE SPINACH SAYS:

SAY FOLKS'ES! You notice you ain't been hearin' from me lately. Mebbe you hadn't noticed it, but I ain't been writin' any way an' now I'm jest goin' to tell you the hull durn reason an' then, if you like this kind o' litit-ture mebbe I'll write agin'—every week mebbe.

Well to begin. You see I've been workin' quite stiddy an' been saveins a little, as much as I could an' was kinda gittin' along purty smoothike 'till these darn high prices hit us—all of us I guess—an' I could see every thing slippin'; takein more to keep me livin' than I could earn, so I made up my mind I'd kinda quit strugglin', say goodbye an' quietly shuffle off this mortal coil, as the poet said. Of course I wanted to do the thing up right; didn't want to suffer much nor mar my features up with bullets nor puff 'em up with pizen. I wanted to keep my attractive looks even if I couldn't see 'em myself—so to speak.

After considerin' several things I finally decided on my course. I went to one of the restaurants here where they don't serve sugar on the table; put a little mite in your coffee you know—can't trust the patrons to do it—they might get too much an' be sick you see. Well, I went to one of these places and bought 21 meal tickets at $8.98 an' war tax if any, thinkin' that would give me time to make other arrangements an' then I purceeded to make aforesaid other arrangements.

First, I hired three or four not overly perticular fellers to act as mourners; give 'em checks due after their work was done, arranged with a preacher who had lost his job 'cause he kissed 'nother feller's wife, an' made a few other arrangements an' then I went to the undertaker's an' there's where the hull durn business busted—that's why I'm still in this land of tears an' high prices, this world of sorrow an' hot dogs; that's why I'm writin' agin an' workin' an' everything. Why, do you know you can't take a darned thing with you when you leave this world? You got to leave everything behind for your relations to fight over 'cause they ain't no pockets in a shroud. I looked 'em all over carefully, from top to bottom an' nary a pocket could I find, not in the new and up-to-date ones, nor in the secondhand ones either; no place to lug anything away in an' so I sez, I'll jest stick right here an' git the benefit of what I've got myself; I've got them meal tickets an' I'll sell 'em cheap, $12.59 an' war tax (if any) added.

An' now, Kind Friends, I am makin' this letter short; it's long enough if you read it right, an' if you want more of 'em I've got 'em, canned, open raw or biled.

An' I thank you kindly.—*Uncle Rube.*

SEND NO MONEY

These Strong, Durable Corduroy Trousers

HEAVY GRADE

are greatest value ever offered. That is why we are glad to send them on approval. Built for rough wear. Corduroy is stronger and lasts longer than any other material, that is why they are ideal work trousers. Note the excellent workmanship and fine material. Tough (but soft,) strong (but not stiff,) cut roomy full seat. Seams reinforced. If these are not as good as the last pair you bought for $7 or $8, simply return them and your money comes back to you at once. Save unnecessary profits by dealing with us direct.

Only $4.85

On arrival. Send no money. Postage free.

BEANS HOLDING THEIR OWN

BEAN PRICES PER CWT., NOV. 18, 1919			
Grade	Detroit	Chicago	N. Y.
C. H. P.	8.65	10.00	11.50
Prime	6.50	7.25	7.25
Red Kidneys	11.50	13.00	13.50
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
C. H. P.	8.65	10.00	11.50
Prime	8.00	9.00	10.00
Red Kidneys	13.50	11.50	11.25

Beans are holding to the advance made a fortnight ago, but that's about all that can be said of the market. One day the market is strong and bidding is active, but there are always a few cars near at hand to fill the gap and the market relapses again into a state of coma. The farmers of Michigan, according to our crop reporters are watching and waiting, and it is well. Advices from New York state are to the effect that the farmers there are not over anxious either to sell at present prices. The California people are also holding off, and it begins to look as if the slack would soon be taken out of the market and a better demand and higher prices show themselves. There is nothing to report at this time concerning the progress of the bean legislation at Washington. The new congress will convene in another two or three weeks and the chances are good that special tariff bills will be taken up shortly thereafter, providing that congress does not begin work on the general tariff bill. In the latter event relief in the bean situation might be indefinitely delayed. We are keeping close track of the situation, however, and will advise our readers of all developments.

Contributions to the "bean fund" have apparently ceased. The total will not exceed $175. The settlement of the expenses will be made by the first of December and a complete accounting will be made of funds and expenses.

POTATOES STEADILY ADVANCE

PRICES PER CWT., NOV. 18, 1919		
	Sacked	Bulk
Detroit	3.00	2.80
Chicago	2.85	2.75
Pittsburg	3.00	2.75
New York	3.00	2.75
PRICES ONE YEAR AGO		
Detroit	1.85	1.75
Chicago	1.70	1.65
Pittsburg	2.20	2.00
New York	2.25	2.00

Our predictions of higher potato prices are coming true fast. The market has been on the steady climb upward for the better part of November and the top has by no means been reached. Both farmers and traders are satisfied that the crop is not sufficient to take care of the probable demand and that prices will reach a much higher level before it interferes with the demand. Consumers are apparently satisfied with the prevailing prices as a good many are laying in their winter supplies. The car shortage is still being felt in some localities though it is not acute.

The latest government report on potatoes shows that increased yields in certain sections, notably Michigan, will offset the loss from rot in other states. That does not alter the fact, however, that the crop is way short of normal. Farmers are showing remarkably good judgment in their marketing methods, and we are glad that those who have followed our advice and harvested only a portion of their crop are to receive better prices for what remains in their hands.

The hay markets in general have continued to show the same lifeless attitude which has prevailed for several weeks. The various cities send reports of steady and quiet to firm. Receipts in most markets are slight resulting in a steadying and bettering of price offerings. Detroit has been receiving fairly liberal supplies of timothy, and consumers have been able to take it all, therefore Detroit reports a steady market. In New York the hay is taken up just about as fast as unloaded from the incoming cars, but there is no snap to the demand and price conditions remain just about as usual. Pittsburg receipts have improved somewhat, but farmers are not selling freely and cars are scarce.

DAIRY PRODUCTS FIRM

Due to light supply the dairy market is firming up. There seems to be a universal shortage of fine, new laid eggs. New York is the chief market voicing this scarcity, and there was an advance of 3 and 4 cents on higher grades. In Chicago the demand for refrigerators picked up somewhat, though not yet enough to deplete the surplus stocks to any great extent. Detroit quotes fresh eggs at 63@67 cents per dozen.

Butter is about as scarce in general as eggs at some points, although New York reports great surplus stocks due to the longshoremen's strike. This butter has begun to be shipped overseas, however, now that the strike is over. The New York 64@68 cents. Detroit gives the figure at 64 cents for fresh creamery firsts; for fresh creamery in 1 lb. bricks, 62@66 cents per lb.

CHICKENS IN DEMAND

Anticipating the Thanksgiving rush, poultry prices edged up somewhat. There is no special activity, however, excepting in the best grades, where the demand is excellent. Hens, on the other hand, are dull and lower. Geese and ducks are reported as firm. Turkeys are not much in demand, as yet, as the public is holding off for Thanksgiving.

Detroit quotes: Live Poultry: Spring chickens, 26@28c for large and 24@25c for small; hens, 26@28c; small hens, 22c; roosters, 19@20c; geese, 26@27c; ducks, 30@32c turkeys, 35@36c per lb.

EXPLAINS CAR SHORTAGE

(*Continued from page 6*)

"Your letter being general I can, of course, make only the general statement, the Michigan roads and shippers are and will continue to receive their fair share of cars. If you have any specific complaints where would seem some particular shipper is not receiving what he thinks is a proper allotment of cars, I will be glad to have such cases looked into specially. —M. Kendall, Car Service Section."

If any reader has personal knowledge of instances where shippers have not been allotted cars within a reasonable time after the order for them has been placed he will do M. B. F. and the farmers of the state a real service in placing the facts before us that we may take the matter up with the Railway Administration.

Have You Voted?

BALLOTS are coming in by the score in M. B. F.'s straw vote contest for Governor. Have YOU voted? If not please do so at once. No returns will be published for several weeks. Let's have YOUR vote in the first count. Place a cross after the name of your candidate, or if you prefer someone not mentioned write in the name on the dotted line. Then clip the coupon and mail it to Editor Michigan Business Farming, Mount Clemens.

Hogs and Cattle Sell Higher in Chicago

LIVE STOCK has been showing considerable gains of late, although the market this week opened 25 to 50 cents lower on some items. Hog receipts in Chicago increased considerably with the picking up of prices, and the total estimated receipts for Chicago this week are 210,000. Although this is an improvement for the last few months it is still some 25,000 below the figure of a year ago at this time.

Last week hog prices were the highest they had been since the middle of October, with a top near $17. Last year the top price was around $18 and two years ago it was $16.80 at this time. Although certain papers point out that the farmers will probably be more or less satisfied with these figures, we are informed of farmers who believe that present market prices do not pay for the production costs with a fair profit. With a general rising flood of prices of everything else, the price to the farmer needs to be higher also.

The advances of late in various lines of live stock was due largely to a loosening up on the part of the packers, who had refrained from making considerable purchases in the past few months. Even yet the packers are buying some 50,000 fewer hogs per week than their figures for last year at this time show.

Cattle news is in close accord with the hog situation. A top of around $20 has been reached in the cattle market. The sheep market has not had the same encouraging trend as the cattle and hog market has.

The fact that large numbers of readers of M. B. F. tell of horses selling in Michigan for little or nothing, makes it interesting to note that Chicago reports a good demand for heavy horses in the horse markets of that city. Light horses are of slow sale. Good mules have been selling readily, bringing $300 for the best. Drafters have been bringing $225 to $300. Farm chunks, $100 to $125. General purpose horses, $100 to $125. Contrasted with this is the report from our crop reporters to the effect that Michigan farm auctioneers put up good horses on which only $10 is bid without being raised.

Detroit, Nov. 18.—Cattle: market steady, quality some better; best heavy steers, $12@13; best handy weight butcher steers, $9.75@10.75; mixed steers and heifers, $8.75@9.25 handy light butchers, $7.75@8.25; light butchers, $6@7; best cows, $7.75@8.25; butcher cows, $6.75@7.25; cutters, $5.75@6.25; canners, $5.25@5.50; best heavy bulls, $7@7.50; bologna bulls, $6@7; stock bulls, $5@5.50; feeders, $9@10; stockers, $7@8.50; milkers and springers, $65@150. Veal calves; market steady to $1 higher; best $19@20; culls, $14@17; heavy, $6@9. Sheep and lambs; market is steady; best lambs, $14@14.25; fair lambs, $12.50@13.50; light to common lambs, $9@10.50; fair to good sheep, $7; culls and common, $3@4.50. Hogs; market dull, Sullivan Pkg. Co being the only buyers. They took about 1,400 at $14.40 for mixed grades. Hammond Standish & Co. and Parker, Webb & Co., were entirely out of the market and bulk of the receipts went over unsold for lack of bids. Pigs brought $14.75.

YOUR FAMILY'S HEALTH

What is it Worth to You?

ARE YOU going to take another winter's chances on Pneumonia, Sore Throats or the awful dreaded "Flu" by using an outside closet?

DOCTORS' BILLS are not always unavoidable, and how many times will a Doctor call on you for $17.50? Just figure it out, then what have you got left for the money you have spent besides the sickness which you suffered and then sometimes you never get well even if you spend hundreds of dollars. Do you know that a good preventative against sickness and disease is worth many times what it costs and will save you many a dollar each year. Consider the

Coates Sanitary Chemical Indoor Toilet

which is fully guaranteed at our direct Mail Order Price of only $17.50 from manufacturer direct to user at first cost.

No agents' profits added to a Coates.

Send us your order today and use the Toilet 10 days and if you do not find it everything we claim you may return the Toilet and we will return the $17.50 you paid us.

It's only a square deal as advertised by us.

DIXIE Portable Drag Saw

Cheapest because best. Easy to operate. High grade dependable engine—perfect balance; no vibration; no power wasted. Runs itself leaving operator free for other work.

Saws 25 to 40 Cords a Day

and uses only 2 gallons of fuel daily. The most complete, dependable, high grade power drag saw on the market. Write for free descriptive booklet—How to Make Several Hundred Extra Dollars This Winter."

The Peter Gerlach Co., Sole Makers, Dept. 24, Cleveland, O.

Crop Reporters Tell of Auctions and Snow

SHIAWASSEE (E.)—Farmers are doing considerable fall plowing as the soil is in prime condition, and weather conditions favorable. Wheat, even the late sown, has made a good growth and is in fine condition to go into winter. Considerable corn remains to be husked yet. Beans are nearly all threshed, but growers are holding for a change in prices owing to the unsettled conditions of the foreign market controversy. Fresh cows are selling at auction sale from $100 to $150 and some fancy stock at $180. Coal $10; hard, $12; stove wood, dry or green, $2.50 to $3.00 on the ground; pop corn, new, $2 per bushel, old, $2.25.—H. M., Durand, Mich.

VAN BUREN—The grape harvest is over and we are waiting for returns. The Armour Juice Co. and Welch Juice Co. have decided upon $80 per ton While J. Hungerford Smith has not yet reported their pooling price. Grapes proved a good crop and extra good quality potatoes are not turning out very well and not many were planted. The soil has been fine for accomplishing fall work; not much building on account of high priced labor and material. Auction sales are plentiful.—V. G., Mattawan.

MANISTEE, (N. W.)—Farmers busy plowing, cutting and also hauling wood, husking corn and doing other jobs about the farm. Weather cold most of the time; soil wet from frequent rains; frosts and some snow. Farmers are selling rye, potatoes, some corn, and possibly a few beans. Most apples sold. Farmers are selling or intending to do so with the exception of potatoes or corn. We have husked our fine seed corn; some grew in field and the shock on account of frequent rains.—H. A., Bear Lake, Mich.

SAGINAW, (S. E.)—A cold wave has hit us. It has frozen too hard to plow. There is a lot of corn out to husk yet. There is quite a lot of baled hay going to market lately. Beans are all threshed but not many going to market at present prices. There are a good many auction sales this fall. Everything brings a fair price except horses.—G. L., St. Charles.

BARRY—The weather in this joint is rather cold and snow is covering the ground. The farmers are hauling in their corn and clover. A few are still husking. The corn crop this year is very abundant, as are most other crops. The early sowed wheat is looking fine and none has been bothered by the fly. Apples and different fruits are rather scarce this season, but no one is discouraged as we are all ordering trees to set out next spring. The following prices were paid at Hastings recently—Wheat, No. 1 white, $2.05, No. 2 red, $2.10; oats, 70c; rye, $1.20; wheat-oat, $20; potatoes, $1.25; onions, $2; hens, 16 to 20; butter, 55; butterfat, 66; eggs, 62; hogs, dressed, 13 to 16; beef steers, live weight, 7 to 10; veal calves, $8 to $13; apples, $2.50.—M. D., Hastings.

BAY (E.)—The principal work at this time is plowing as the soil is in a good condition. Not much time for husking corn. A few beets going in yet. Winter wheat looks good at this time though the acreage is not very large. The bean crop will average from 18 to 20 bushels per acre and the pick is not very heavy. Not much selling at present. Farmers are holding off. The following prices were paid at Bay City on Nov. 17:—Wheat, $2.05; corn, $1.40 oats, 72; rye, $1.20; hay, $22; beans, $6.26; potatoes, $1.25; hens, 18; springers, 22; butter, 60; butterfat, 64; eggs, 53; sheep, 12; lambs, 17; hogs, light, 14, heavy, 11; beef steers, 10; beef cows, 9; veal calves, 19.—A. G., Linwood.

MANISTEE, (N. W.)—Things are at a standstill on account of weather conditions. It has rained most of the time for the last week. Friday it turned to snow but got too cold to snow much. The wind blew like everything. The ground is frozen too hard to plow. Farmers are selling some potatoes but a small per cent are moving yet. One of our oldest pioneers died a few days ago. Auction sales are still the go. They keep going one by one. Who will buy what the last fellow has to sell? Milch cows are the only thing bringing what they are worth. Farmers feel they don't want to take any more chances on other things. The following prices at shipping points on Arcadia and Bear Lake roads and other roads northeast were paid Nov. 14:—Wheat, $2; corn, $1.20; oats, 90; rye, $1.15; hay, No. 1 timothy, 40, No. 1 light mixed, 35; beans, cwt., $5.65; potatoes, $1.10 bushel; hens, 16; springers, 18; ducks, 21 to 24; geese, 17 to 20; turkeys, 23; butter, 60; butterfat, 66; eggs, 54; hogs, 11 to 12; beef steers, 6; beef cows, 5.—C. H. S., Bear Lake.

MIDLAND—The people in this vicinity are finishing their fall work. There are a lot of auction sales and everything is selling good, especially cattle. The weather is rather chilly the last few days. A few of the farmers are selling their beans but the price is rather low just now. The ground is frozen so the farmers will hold up on their fall plowing. The following prices were paid at Midland Nov. 14:—Wheat, spring, $2.30, fall, $2.05; shelled corn, 56 lb., $1.40 bu.; oats, 70; rye, $1.20; hay, $18 to $20; rye, $6 to $8; beans, $6.25; potatoes, $1; onions, $1.50; hens, 17; springers, 17; dairy butter, 60; butterfat, 69; eggs, 60; beef cows, five, $12; veal calves, 20.—J. H. M., Hemlock.

GENESEE—Farmers are threshing beans, husking corn, plowing and getting ready for winter. The weather has been rainy and cold the last few days. It is much colder now and we are having some snow. The soil has been in good condition and quite a bit of plowing has been done the last two weeks. Farmers are selling some potatoes and a few are selling beans but on an average not much is being sold. Potatoes are all dug. They did not turn out very good. Beans are being threshed and are of good quality but do not yield very well. Rye and wheat that we sowed on time, look good. Auction sales are numerous and prices are getting lower. The following prices were paid at Flint on Nov. 17:—Wheat, white, $2.11, red, $2.13 corn, $1.50; oats, 78; rye, $1.20; hay, No. 1 timothy, $21 to $23; No. 1 light mixed, $19 to $21;;; beans, C. H. P. Pea, $6, red kidney, $9; potatoes, $1.50; onions, $4 to $5 bu.; cabbage, $2 bbl.; cucumbers, $2 bu.; hens, 20; springers, 20; geese, 18 to 22; butter, dairy, 60 to 65, creamery, 68; eggs, 54 to 46; sheep, $7 to lambs, 10 to 11; hogs, $14.50 to $15; beef steers, $9 to $10; beef cows, $6 to $7; veal calves, 15 to 18; apples, $2 to $2.50; pears, $2.50 bu.—C. W. S., Fenton.

GRAND TRAVERSE—Everything is done here in the way of harvesting crops except some corn which is to be husked. Almost all the hauling here is done by auto trucks this season. Bean threshers in the neighborhood last week, but beans are not turning out as good as last year. However the quality is fine. Peninsula Township Co-operative Association coming along nicely. Farmers are saving considerable money on the buying and through co-operation. We have now taken membership with the Potato Growers Exchange. The following prices were paid at Traverse City Nov. 17—Wheat, No. 1, $2.10; corn, $1.50 oats, 75; rye, $1.20; beans, $4 bu.; potatoes, $2.20 cwt.; hens, 16 to 18; butterfat, 71; eggs, 55; veal calves, 18; apples, $1.50 to $3 bu.—A. C., Traverse City.

CHEBOYGAN, (S.)—Farmers nearly ready for winter after a very successful season. Hay, corn, potatoes and fall grain good. Oats are very poor. Many new silos were built this fall and filled. Potatoes find a ready market at about $1 per bushel. Buyers are held up at present for want of cars, it being too cold to ship in common box cars. Quite a blizzard struck this place on the 13th bringing about two inches of snow. The thermometer went down to 20 degrees. Cheboygan would hold up both hands for H. F. Baker (our Herb) for governor. Butter is selling at 65; butterfat, 58; eggs, 65; oats, $1; hay, $25 to $30; wood, $3 for 16 in.—Wolverine.

JACKSON((S.)—Weather cold and windy. Corn about all husked. Corn good quality this year. No apples in this section and many farmers are buying their winter's supply of potatoes, as potatoes did not turn out well on most of the farms. Shippers paid 14 cents for hogs this week, and some buyers are paying as high as 35 cents for turkeys. Chickens are 20 cents and eggs 70 cents. Farmers with a good supply of dry wood on hand are considered fortunate as there is little or no hard coal. Hay is scarce, and rather than buy feed, farmers are sending their old horses to the glue factory. Horses are not in demand at present and do not bring a good price. Not as many farmers as usual feeding steers for market.—G. S., Hanover.

GRAND TRAVERSE, (N. E.)—We are having cold, stormy weather at present. Farmers are hauling in corn, also threshing and getting up wood. Lots of auction sales, therefore stock is low in price.— The following prices were paid at Williamsburg Nov. 14:—Corn, $1.75 bu.; oats, 85; rye, $1.20 bu.; potatoes, $2 per 100 lbs.; onions, $3; butter, 55; butterfat, 71; eggs, 60.—C. L. B.

CALHOUN, (N. W.)—Farmers are getting ready for winter, finishing their husking and drawing corn stalks. The weather has been cold for a few days. Soil is in good shape and grain is looking fine. There have been some beans threshed. They are not a large crop but of nice quality. There is no building in this neighborhood this fall.—The following prices were paid at Battle Creek Nov. 14:—Wheat, $2.13 to $2.15; oats, 75; rye, $1.25; hay, 28; potatoes, $1.50; hens, 20; springers, 20; ducks, 18 butter, 65; eggs, 70; lambs, 10 to 14; hogs, 12; beef steers, 8 to 10; beef cows, 5 to 7; veal calves, 10 to 12.—C. E. B.

MECOSTA, (N.)—Farmers are busy husking corn and plowing. Plenty of rain. The ground is very wet. Fall grain is looking good. Some farmers are selling potatoes and beans. The following prices were paid at Hersey Nov. 17—Wheat, $2.05; corn, $1.20; oats, 64; rye, $1.20; hay, No. 1 timothy, 25, No. 1 light mixed, 20; beans, C. H. P. Pea, $5.75, red kidney, $7; potatoes, $2; hens, 15; butterfat, 64; eggs, 60; sheep, 3 to 8; lambs, 8 to 11; hogs, 11.—L. M.

OAKLAND, (N.)—We have had fine weather for doing farm work. Husking corn is the main object now. We have a fine lot of corn. Potatoes are going to market by trucks. Very few shipped on railroads. Some wheat going to market. Most of the apples gone. Not many farm buildings put up in this vicinity. Help very scarce. We cannot get much coal and it looks as if we will have to burn wood. The following prices were paid at Clarkston Nov. 14:—Wheat, $2 to $2.10; rye, $1.25; hay, 20; potatoes, $1.25; hens, 25; springers, 20; turkeys, 35; butter, 60 to 70; lambs, 12; apples, $2.50.—E. F.

MASON, (W.)—Farmers are getting things shipshape for winter. The sudden drop in temperature found many somewhat unprepared. The ground is slightly frozen. The cold weather has arrested the movement of potatoes to market. The association was having hard work to take care of the farm produce, due partly to difficulty in getting cars and partly to the rapidity with which they moved to market. The following prices were paid at Scottville on Nov. 11:—Wheat $2.08 to $2.10; ear corn, 72 lb., $1.25; oats, 78; rye, $1.15; hay baled, $25; beans, C. H. P. Pea, $5.75 cwt.; red kidney, $11 cwt.; potatoes, $1.85 to $2; hens, 18 to 20; butter, 50 to 55; butterfat, 69; eggs, 53 to 60; hogs, dressed, 16 to 17; beef steers, dressed, 12 to 14; veal calves, 18 to 20; apples, fancy, $2.—B. M., Ludington.

Canadian Farmers Sticking Together and Bucking the Milk Trust

(*Continued from page 10*)

The Middlemen's Fight

Before the Fraser Valley organization entered the field there were 20 milk distributing companies in Vancouver. These distributors did not give in without a struggle. At one time they attempted to bring in milk from the United States in an effort to wreck the producers' organization, but the producers at Bellingham, Wash., are well organized themselves and when the heads of the Fraser Valley organization explained the situation to them, the Vancouver distributors found that there was "nothing doing" in that quarter.

Middlemen declared that the farmers' association was nothing more nor less than a combine to bleed the consumer. They went to great lengths in their efforts to discredit the organization. It is said that when the producers first began to place their own product on the streets of Vancouver that bottles of their milk would be tampered with, worms and dirt being put in and then complaints lodged with the health authorities.

Forceful advertising had much to do with bringing about a reaction in public opinion in favor of the producer. Best of all, however, was the report of a committee appointed by the Vancouver city council to investigate the price of milk. The verdict of this committee was that the farmer would be justified in charging a higher price for his milk than he was getting at the time of the investigation.

In reply to advertisements which appeared from some of the privately owned dairies featuring their independence, the Fraser Valley association advertised as the only independent dairy. Combatting attacks on the association for having eliminated some of the old dealers, the association's advertisements put the facts plainly up to the consumer: "Is there any logical reason," asked the association of the consumer, "why the farmer should not sell his product direct to you? Without the producer, how could the midleman exist? While the farmer rises early and labors late, the middleman sleeps and takes life easy, but demands his 'pound of flesh.'

"Why is the middleman necessary now the producer is organized to handle his own product? Owned by 1,400 Fraser Valley dairymen, the Fraser Valley Producers' Association is a co-operative organization. Thru its efforts the surplus milk supply of the flush season—the amount of milk necessary to supply the winter demand—has been handled in condensaries, cheese and ice cream factories, or made into butter, whereas the middleman was formerly unable to dispose of the summer milk surplus, resulting in loss to both consumer and producer. The association has not only taken care of this surplus in an economical way, but by making more stable markets has encouraged production and thus lowered the cost of the milk during other seasons."

The predominating position in the city milk distribution secured by the producers has brought about a change of tactics on the part of those middlemen still in the field. Most of these are now obtaining all their milk from the association at wholesale prices. Some still have a few independent shippers who for some reason or other have decided to remain outside the association. Some of these are too selfish to assist in the work of the association, but are willing to accept the benefits it brings, while a few others got sore and preferred to form part of the five per cent of opposition. It has been very mortifying for these men, in their determination to stay with the so-called independents, o find that one after another of the small dairies close up or are bought out by the producers' association. Of more than twenty firms formerly engaged in milk distribution in the city only a few of the smaller ones remain. Some were unable to stand the pressure of the producers' organization. One large producer who thought he was big enough to "paddle his own canoe" lost several hundred dollars in overdue milk cheques when the dairy he was shipping to went into liq id i- tion, but he is still carrying on his fight to remain independent.

Asked as to the satisfaction which the Fraser Valley Association was able to give its members in the matter of test, Mr. Vanderhoof said: "What incentive would there be for an organization controlled by the producers to take from one producer and give to another? If we did not give our members all that was coming to them in the matter of test it would simply mean that the balance would be returned to the members at large in another form."

The plant of the Standard Milk Company, Ltd., was acquired by the Fraser Milk Producers' 'Association on May 1, 1919. This plant now handles about 6,000 gallons of milk per day for retail distribution in the city. The association hires auto trucks to collect milk from the farmers within a distance of 30 miles of Vancouver. About 25 cents per can on the average is paid by the association for collection, the truck owners taking contracts for the work. Some of the larger trucks will carry 80 to 100 cans.

Settlements with the producer are made by the association on the 12th and 27th of each month. On the 12th of the month, the producer is paid an initial payment on the amount of milk or cream shipped during the previous two weeks and after the returns from the actual sale of the milk are totalled up he is paid whatever additional amount has been secured on his next check. The association limits its own profits to 6 per cent.

Called Condensers' Bluff

There are two large condensed milk factories in the Fraser Valley, which form the next best market for butter fat to the whole milk market. The condensing process wastes none of the product as does butter and cheese-making, only 50 per cent of the water in the milk is removed by evaporation and nothing is added. Were it not for the large amount of whole milk handled by these plants the returns received by dairy farmers of the Fraser Valley would be considerably less. The condensaries pay almost as well as the whole milk market and there has never been a time since the producers organized that the condensaries have not paid considerably more than the butter factories.

The Borden Condensed Milk plant at Chiliwack handles from 2,000,000 to 2,500,000 lbs. of milk per month. The manager, Mr. Chevalley, although he put up a big fight against the producers' association in behalf of his company in the early stages, admitted that personally he had no fault to find with the producers' organization. "It is the only way," he said, "the farmers have got to organize." He admitted, too, that the regularity of supply for which the association made itself responsible was a considerable factor in operating a condensary, and that the organization of the farmers had improved the service in this respect.

The relations between the condensery and the farmers' organization have not always been so amicable. The Borden plant fought the producers for three months in their attempt to prevent the producer setting the price on their own product. Twice the big milk company closed down their plant and for a time the stream ran white with the skim milk which the small farmers creamery could not dispose of. The company told the farmers on the second occasion that they could not afford to pay any such prices as were asked and stay in business and would have to sell out. The association, however, simply wired the company's head office for their price on the plant, stating that they were prepared to pay spot cash. The plant was opened up again as fast as instructions from the head office could travel. The company also tried offering higher prices than the association was paying, but they did not get a gallon of milk.

A Prosperous Community

The association owns large creamery at Chiliwack. This was formerly known as Edenbank Creamery and was owned by the farmers of Chiliwack district. It now handles a large amount of the milk produced from Chiliwack, making it into butter and cheese, when the condensaries cannot handle it. The plant manufactures 115 to 20 tons of cheese per day.

"How much for milk now?"

Costs More—
Makes You More

"CHARLIE, aren't you wasting money, always buying mixed feed?" asked Nels Pearson, who lives near McHenry, Ill., when he was in the field with Charlie Page last September. (Charlie Page is known as the best dairyman around.) "I bought some last July, and it's no good."

"Bet you didn't buy Unicorn," said Page. "Sure—I knew it. Unicorn isn't money wasted—it's money-making. I've fed Unicorn for five years and every year my cows are in better condition; they give more milk. Unicorn isn't a cheap feed; it costs more per ton, but costs less per pound of milk. I know I'm ahead of the game by using Unicorn."

Pearson believed Charlie Page and bought 6 bags of Unicorn. A week later he bought 2 tons more, and now uses it daily, with his home-grown grains. He repeats Charlie Page's words: "Costs more per ton, but costs less per pound of milk."

CHAPIN & CO., CHICAGO

TRAPPERS

You Will Dance

with joy when you get your returns for furs shipped to the Abraham Fur Co., the house that never disappoints fur shippers. Our expert graders in our "Take-up" Department have positive instructions to see that every shipper gets a liberal grade on every skin and are held accountable for all furs taken up by them. Our prices are the highest ever known and now, more than ever, you need the services of an old established, reliable and experienced fur house. There are no fur houses in the world which have these qualifications to a greater extent than the Abraham Fur Co.

Ship Every Pelt You Have—Now

We urge you to send us your next shipment of furs and let us prove to you that our prices are the highest—our grading the most correct and liberal and our returns most prompt. We have been in the fur business continuously for 43 years and we have made more staunch friends and have a larger percentage of regular old shippers than any other fur house in the U.S. These facts justify our claims that Abraham is America's Leading Fur House. Other fur houses make these same claims, but it is generally conceded by our competitors that the hardest fur house to fight against for business is the Abraham Fur Co. Why? Because our returns are always top of the market and any fur house that wants to keep pace with us will have to go some and be on the job early and late.

SUPPLIES Get one of Abraham's wonderful Smoke Pumps — $2.00 postpaid, with extra extension $2.10. Abraham's Animal Baits and Trail Scent $1.00 per bottle, 3 bottles for $2.50. Best bargain in Rain Coats $5.95. Get our free book "Fur Facts" and Trappers' Supply Catalog. It's free—drop us a card today. Weekly Reports—Tags and other literature—also free. Get the whole business with one postal card—write today.

Wanted--Letters on Your Trapping Experience

WHAT EXPERIENCE have you had in trapping or fur farming, Mr. Farmer-Reader? Nearly every farmer has had some experience. At least you may have noticed possibilities in the fur business which might be carried on in your community which are at present neglected. Perhaps you have devised a home-made trap or home-made bait or know of extra useful trapping supplies to buy. No matter how simple your experience, so long as you think it might help some brother reader, just send it along to us.

The best letters on trapping, written by our readers, are getting prizes, as we have already announced. Any good letters which do not win a prize stand a good chance of being purchased. It is urgent, however, that this material be sent soon, now that the trapping season is under way.

Hints on how to make money are especially helpful to your fellow readers. The time for reaping the harvest of the fields is gone for a few months, but the chances of reaping golden harvests from the wood and stream are great.

Fur Trapping In Ye Olden Times

(Continued from last week)

In 1659 two French traders and trappers, Groeilliers and Raddison, penetrated into the wilderness of the Lake Superior country and brought back a load of wonderful furs to Montreal. Later the French government gave some other traders the exclusive rights to carry on the fur trade in Canada.

Groelliers hurried to France to protest, but getting little encouragement, he went to England and interested Prince Rupert, which resulted in the establishment of the Hudson's Bay Company.

In 1783, Sir Alexander McKenzie founded the Northwest Company, and the bloody battles and lawless trickery of these and other rivals are a matter of history on which we will not dwell. It is the life of the hardy trapper that we are interested in now. now.

$200,000.00 In 18 Months

The stories of the great wealth to be made in the fur business became common in France. How Groelliers and Raddison cleaned up $200,000 at the headwaters of Mississippi in 18 months was talked about in every well-to-do household in France, and it attracted many adventurous young fellows.

It required little capital, other than great courage and the ability to "stand the gaff," as modern slang expresses it. Even in those days when a beaver sold for $3.00 it was a common thing for a trapper to make $1,500 a year—providing he didn't lose his life in the wilderness.

Big risks, big profits was the rule, and it required a lot of nerve to load a canoe in the fall, push off down the Ottawa through the Soo to Lake Superior or partly by river and partly overland to the upper Mississippi. It was dangerous for even a trapper staked and licensed by the powers that were; it was harder still for the trapped who spurned the law and trapped without license. It went hard with him if caught, so besides other dangers the free trapper had to keep his eye peeled for white enemies.

"Take a map of America—put your finger on any point between the Gulf of Mexico and Hudson Bay, or the Great Lakes and the Rockies—ask who was the first man to blaze a trail into this wilderness; and wherever may be the point the answer is the same—the French trapper."

Duluth, LaSalle and Other Great French Trappers

What a great outfit of brave men they were: Duluth trapped in the region near the great city now bearing his name; LaSalle traded on the Illinois and the Mississippi. d'Iberville in his search for furs, traveled from Louisiana to Hudson Bay and Cadillac covered an equal territory from Detroit and Mackinac to New Orleans; LaVerendrys ranged from Lake Superior to the Rocky Mountains; Radison from the upper Mississippi to Hudson Bay. Each of them made his mark in history before the New Englanders ever knew anything of the country west of the Alleghenies.

These are only a few of the better known of that great company of brave men; there were hundreds of others. Once in a while one would make a competence and go back to France, but trapping is a calling few give up willingly, and many a brave fellow kept going into the wilds until he finally left his bones there.

It was a "he-man's" game. A slight miscalculation in shooting a rapids, and the trapper was left in the wilderness hundreds of miles from aid, possibly with winter only a few days off, for northern trappers did not leave for the trapping grounds until late in the fall.

Other accidents were always possible, and many's the man who started out and was never heard of again. Who can say how many of these free trappers or voyagers and coeur de bois who went into the brush awakened at night to find their little camps surrounded by drink-crazed savages stirred up by those who had exclusive privileges!

And the wolves were always present in bigger packs than now. Many a man has heard the far away call of the pack echoed over the silent places and has hurried toward his camp after running his line of traps. Sometimes he reached his shack safely; very often te wolves' trailing cry came nearer and nearer as the trapper threw away his day's catch and hurried toward camp. Fast as he traveled on his snow shoes, the pack gained. His dog ran ahead and looked anxiously back at his master. The wolves sighted their prey and yelped with glee; it was a case now of fight, and the dog rushed to the help of the man whose hand fed him. The trapper's rifle spoke and a wolf, grey and gaunt with hunger, gave a yelp and went down to be eaten by his fellows. But others were there to take his place and the trapper and his faithful dog fought their last great fight there under the stars of a northern night, with the snow stained red by the blood of the savage creatures they killed, only to be pulled down by the weight of superior numbers, fighting to the last breath.

Such was the tragic end of Baptiste L'Aiglon (the Eagle) who accounted for twelve big timber wolves one night on the McKenzie before they pulled him and his husky down.

The following spring some trappers returning to the posts passed that way and found the skeletons.

GENERAL HINTS FOR TRAPPERS

The good workman must have the proper tools. The pelt hunter should not handicap himself with anything but the outfit best suited to his purpose. So far as traps are concerned, get the best trap to be had. Get a trap which catches very high on the leg, thereby assuring the pelt hunter against loss of skins. With furs as high as they are, one cannot afford to let even a few muskrats get away, once they have been taken.

Good bait is necessary. Bought bait will often do better than the home-made. A bottle is an investment which pays big dividends. It makes no difference whether you catch furs only in spare time or make it a business. In each bottle there is enough for a hundred or more ordinary sets. The odors are powerful and lasting.

A word more: The fur shipper must have a market that he can depend upon at all times. The information must be accurate and up to the minute. Your name and those of your friends should be on some good fur firm's list to keep constantly in touch with raw furs during the season. The first step towards success is to get price lists and other comments on the market.

LOOKING INTO THE FUTURE

That's what we had in mind when we started this business. The reason you have given us your confidence is because this business is founded upon the principals of

FAIR DEALING

THE MUSQUASH OR MUSKRAT

Best Ways to Catch This Well Known Fur-Bearer

This animal is, as is the beaver, a vegetarian and its most favored haunts are open marshes along sluggish streams or around ponds or lakes.

These places furnish them abundance of their natural foods such as flagroots, cowslips, bullrushes, lily-roots, etc., and material and location for their homes. In favorable localities they build houses of mud grass rushes, etc., which resemble a hay cock in appearance, with entrance below the water.

Others live in burrows in banks and are called bank rats. In localities where both are found the rats living in the house are usually the best furred though averaging smaller in size. In farming sections the muskrat takes readily to products of the garden and field such as turnips, carrots, parsnips, corn, apples, etc. These make a very good bait for the amateur trapper, who has still to acquire the experience and knowledge necessary to success with blind sets. The muskrat is, however, with the exception of the skunk and civet cat the easiest of all fur bearers to trap. The best sets are to be found around their feeding places in their trails or pathways to dens or houses and where they leave the water. In picking your sets the most important point is to find a place where your catch will drown or if that is not possible a place where you can catch your rat by a hind leg.

In setting in a trail pick a point where the rat is forced to pass over something or where it drops off into deeper water then place trap deep enough so the fore legs will pass over safely then when the hind legs are dropped to climb the bank or obstruction the trap will be sprung and a good hold of the heavy hind leg will be secured and you will not be chagrined on your next visit to your traps to find you have accomplished nothing but maiming and torturing your would be victim.

When possible stake your trap in water deep enough to drown your catch and do not use a light trap. A 11-2 pound Newhouse or Victor makes and ideal muskrat trap as it has weight enough to pull your catch down and will quickly drown it. And above all do not set a trap till well along in November, and your catch while maybe short in numbers will more than make up in value as you will not have in the neighborhood of 25 per cent kits and light rats. Also take up your traps in the spring on the appearance of the first shedders. A few more live breeders in your neighborhood are worth many times the five to fifteen cents you get for these inferior skins.

REMARKS TO AMATEUR PELT HUNTERS

Be a sportsman and use a trap, not a shovel. Live up to what few laws for the protection of the fur bearers that are in existence and advocate better ones. It means dollars in your pocket to do so.

Show me something that will increase faster in value than a live mink or skunk in October. Can you make money faster than letting them live till November when one is worth from two to three October skins? How about those kit and light rats caught in September and October? Wouldn't they have been falls and winters in November and December?

Think about this till next fall and see if you can put up an argument for such a short sighted practice as early trapping. Some one else might get them is the only one there is and a little co-operation will help that. Or the same protection you would give other crops will work a complete cure, killing protected fur bearers out of season is plain stealing. Sounds harsh, but it is true nevertheless, for they are state property until the season is open. Did you ever stop to think how many thousands of dallrs the fur bearers put into the pockets of the boys in the country? Well why destroy that source of income, and it is being destroyed and rapidly isn't it? They are destructive "varmints" are they? Why three years ago a mink killed ten dollars worth of chickens for Mr. So and So. How many dollars worth of mink did So and So and the neighbors get before and since? Or was it a skunk and did he get into that grubby potato field and turn out a few potatoes to get at the grubs that were ruining the potato crop. Or maybe a coon hit up the roasting ears a bit to put a glass on a family of three dollar coon skins.

Now a few things to think about; in February skunk are beginning to be graded "shedders and rubbers." Only got a dollar for that No. 1 you got under Bill's hay barn, but know where there are two or three more just as poor, the chances are so can get the price of one good one out of the bunch.

How about quitting now and let those two or three produce a dozen or so top priced ones for next fall. Need the dollar eh? Could scrape up a few dollars some place else tho' if your banker offered 500 per cent interest on a small deposit till December 1st. Couldn't you? Well, what's the answer?

Just think these things over and next fall and winter you may be aided in going into the business of trapping with better profits in view.

OUTSTANDING BOARS FOR SALE

C. A. KING JOE 290831, sired by King Joe 251257, by King of Wonders 205757, by (Old) A Wonder 107353; Dam, Monarchia 3rd 622512 by A Monarch 213293, by A Wonder 107353. He is bred by W. B. Wallace Bournerton, Mo. His individuality is equal to his pedigree, which a very critical breeder will have cause to admire. He stamps his get, in line with his ancestors, which fact makes him a breeding boar, worthy to go into a very select herd.

BUSTER HALFTON 298225, sired by Great Big Half Ton 261248, by Big Half Ton 217217, by Hillcroft Half Ton 172754; Dam Mollie Buster 622612, one of the best and biggest sows ever sired by Giant Buster 240657 "The Epoch Maker," by Dishers Giant 240655. If you like the top notchers, this great boar has the blood in his pedigree. Come and look them over or write for my price. Be quick, for I have placed them to move in order to make room for a new boar I have ordered, to cross their get with. Look for classy stuff next spring.
C. A. BOONE, Blanchard, Mich.

A New Herd Boar
(his name) Big Bob Mastodon
sired by Caldwell Big Bob, champion of the world in 1917. His dam is Mastodon Josie; she is a daughter of A's Mastodon the Grand Champion at Iowa State Fair in 1917. Ready to ship boars. (Come and see him.)
C. E. GARNANT, Eaton Rapids, Mich.

LEONARD'S Big Type Poland China Boars, all ages. The kind that makes good. Call or write.
E. R. LEONARD, St. Louis, Mich.

Duroc Opportunity

We are now booking orders for July and Sept. pigs cheap. Also March and April pigs of either sex. Shipped C. O. D.
EAGER, BROS., R 1 Howell, Mich.

PEACH HILL FARM

We are offering a few choice spring boars, of March and April farrow. They are of Protection and Col. breeding, out of prize winning stock Prices reasonable. Write or come and see
INWOOD BROS., Romeo, Mich.

DUROC BOARS OF SIZE, QUALITY and breeding, including several State Fair winners. Newton Barnhart, St. Johns, Mich.

SPECIAL PRICES TO MOVE THEM QUICK. Eight big growthy spring boars, will weigh 200 lbs. or better. Price $50.
C. E. DAVIS & SON, Ashley, Mich.

LIVE STOCK FIELD MEN

E. N. Ball ..... Cows and Sheep.
Felix Witt ..... Horses and Swine

One or the other of the above well-known experts will visit all live-stock sales of importance in Michigan, northern Ohio and Indiana, as the exclusive Field Men of Michigan Business Farming.

They are both honest and competent men of standing in their lines in Michigan and they will represent any reader of this weekly at any sale, make bids and purchases. Write them in care of this paper. Their sercice is free to you. They will also help you arrange your sale, etc. They work exclusively in the interests of Michigan's OWN live-stock weekly!

"—for *all* the Farmers of Michigan!"

MICHIGAN BUSINESS FARMING

The only Independent Farmer's Weekly owned and Edited in Michigan

Vol. VII, No. 12 | MT. CLEMENS, SATURDAY, NOVEMBER 29, 1919 | $1 FOR ONE YEAR (3 yrs $2; 5 yrs $3)

Thirty-four of the 46 farmer-members returned in the Ontario election. Left to right, sitting, front row: Edgar Watson, A. Hellyer, M. C. Fox, H. C. Nixon, Beniah Bowman and J. C. Brown. Second row: R. M. Warren, Warren Stringer, John Ford, J. W. Widdifield, J. N. Webster, L. W. Oke and F. C. Briggs. Third row, A. G. Tidsdelle, Malcolm McVicar and G. Sewell. Standing, front row: Carl Homuth, F. G. Sandy, J. B. Clark, Wesley Montgomery, A. T. Walker, T. K. Slack, W. J. Johnston, Hiram McCreary and H. K. Denyer. Second row: Edgar Evans, G. H. Murdock, Joseph Cridland, A. Hicks and J. B. Johnstone. At back: W. H. Casselman, P. G. Cameron, S. S. Staples and E. N. McDonald.

The Farmers' Political Movement

FEARS have been expressed in sundry quarters that the farmers of Michigan might get into politics. These fears come too late. As good citizens the farmers of Michigan have always been interested in the administration of government which is the essence of politics, but their interest has been mostly individual. Now, however, they are uniting their views and their strength, and nothing short of a miracle can keep them out of the campaign of 1920.

From the day that the enemies of the Non-Partisan League began to preach to the farmers of Michigan through newspaper column and hired lecturers against the "iniquitous" program of the League, the farmers of Michigan have been taking a new interest in politics. There never was a chance that the farmers of this state might embrace the principles of the League. But they have learned from the enemies of the League about the tremendous political power of organized effort and they are curious to take a hand in the state's political affairs. Then, too, the Canadian farmers political movement which has been of a more conservative and appealing type than the western movement, has wonderfully stimulated agricultural thought in Michigan along political lines and afforded a safe and practical pattern for Michigan farmers to copy. For months past politics have been the principal topics of discussions at farmers' meetings and sentiment is now rapidly coming to a head for the nomination of at least a farmer governor and possibly an entire state ticket.

A few months ago the reactionary and partisan politicians of Canada laughed at the farmers. Today the farmers are doing the laughing. They control the legislature of Ontario. The people of Michigan may as well prepare now for farmer control of the state government. Never in the history of the state has there been such a unanimity of opinion as is found in all sections upon this subject of a farmer-governor and legislature. The way has been prepared. The legislature of 1919,—reactionary and extravagant to a shameful degree,—flaunted defiance in the face of the farmers, and they stand ready now to accept the challenge and show the force of their united strength.

The farmers' platform is very simple. Among other things it calls for economy in public expenditures, less political horse-playing and more attention to business. It holds that the affairs of the state can be properly administered without creating any more commissions to give jobs to political friends. There is nothing in the farmers' platform to frighten legitimate business. On the contrary, those who pay taxes should be glad that the farmers are interested enough and powerful enough to exert an influence in the administration of public affairs. The state has had lawyer, banker and "business men's" administrations galore. Let's try a farmer administration and see which of the several varieties comes the closest to representing all the people of Michigan.

Soil Structure Subject to Numerous Changes

Elements, Weather Conditions, Plant Roots, Etc., All Tend to Break Up Soil Content

By PROF. M. M. McCOOL

THIS IS the sixth of the talks given by Prof. M. M. McCool, head of the Soils Department at the Michigan Agricultural College at East Lansing. Thousands of farmers in Michigan, along with the farmers in other old agricultural states, have been worrying about the fertility which is gradually being sapped away from their fields. All the important devices to increase or restore soil fertiliy come to Dr. McCool's attention, and he is setting forth the best of these for the use of readers of Michigan Business Farming. In a coming issue, containing his next article on the subject, an especially good fund of such information will be printed. Watch for it.

IN SPEAKING of soil structure we refer to the arrangement of the particles or soil grains that go to make up the soil. If the particles are grouped together into small crumbs ranging in size from that of a pencil point to peas or larger, the soil usually works readily, presents a "live feel," is ideal for plant growth, and is said to be in good tilth. It is obvious from previous discussion that a large number of clay particles may be required to form one of these soil crumbs. On the other hand, if the soil is hard, compact, and runs together readily when rained upon, trampled by live stock or worked when wet it is considered to be in poor tilth and the grouping of the particles is less noticeable. The crumb structure seldom ever occurs in the sandy soils inasmuch as the particles are too large. It is, therefore, confined mainly to the loam and clay groups.

The structural conditions or tilth of a given soil may be determined by attaching a recording scale to the double-tree, which in turn is attached to a plow, and noting the force required to draw a plow thru the soil. In the laboratory it may be determined by ascertaining the weight required to force a steel point a given distance into the soil mass. The latter method has been widely used and, indeed, thru its use much has been added to our knowledge of the conditions that bring about changes in soil structure or tilth.

There is a close relationship between the ventilation and hence the sanitation of soils. We now recognize that the activities of the proper lower organisms are involved in the liberation or making available elements of plant-food in the soil. They decrease rapidly in numbers and consequently in importance below the first 8 inches of soils in good tilth. Where the soil is very compact or run together they are forced to confine their work to still shallower layers of soil owing to lack of oxygen or air carrying it.

As stated in an earlier chapter the mineral elements of plant-food that the crop utilizes is brought into solution in the soil water and thence enters the plants through their root systems. A heavy soil that is well aerated due to a good condition of tilth or structure will furnish larger quantities of minerals to the crop than one that is not inasmuch as oxidation or so-called rusting of the minerals assists in their solution.

The rate of penetration of rain water into the soil is governed to a striking extent by the physical condition of structure. Some soils become so compact that water enters them with difficulty and much of the rainfall is lost by evaporation into the air or by run-off. The latter being most critical on sloping or rolling lands, as a result crops may and do suffer for lack of water, whereas if these soils are loose or porous, conditions with respect to this limiting factor are different.

Those who have grown such crops as sugar beets and turnips on heavy soils in good and poor tilth realize at once the importance of a mellow soil the roots penetrating more deeply affording large yields and products of a good quality. Thus one is not exaggerating when he states that the importance of good tilth of the heavy soils cannot be overestimated.

Factors That Change Soil Structure

The structure of the fine textured soils may change markedly from season to season. methods of management and other conditions. These alter it, in the main, by their influence upon two properties of the soil, namely, plasticity and cohesion.

A plastic soil is one that may be molded readily into different forms without rupture or breaking. This property depends chiefly upon texture; the finer the texture the more plastic; upon the water content, the minimum plasticity being the degree of wetness when tilth is easiest and most successfully accomplished, and finally, upon tilth; the better the condition as to tilth the less plastic.

A soil whose particles cling together quite tenaciously when dry is said to be cohesive. This property of soils results in a tendency for clod formation if soils are worked when too wet. Cohesion decreases with increase in coarseness in texture with increase in vegetable matter content, with increase in lime content, and with the degree of wetness of the soil.

Alternate Wetting and Drying

Most fine textured soils that are wet much of the time are usually in poor tilth or so-called "poor physical condition." On the other hand, if they become alternately wet and dry from time to time they are much more likely to be in good condition since they shrink in volume upon drying and expand somewhat upon wetting. This property tends to form the crumb structure spoken of previously. Thus drainage, as will be shown in detail later on, is an important factor in the management of such soils, inasmuch as it removes the surplus water and permits them to become dry.

The formation of ice crystals in the soil mass also causes granulation or grouping of the soil particles, due largely to the expansion of water when it becomes ice. This accounts in part at least for the benefits so often derived from fall plowing fine textured soils. Deep freezing of subsoils markedly benefit the soils. Under such conditions they are likely to appear "honeycombed," drain rather readily and root systems of plants penetrate them with relative ease. It is well recognized by those who have studied the problem of erosion or washing of soils that this is not nearly so serious where the deep freezing occurs as it is in those regions where the subsoils never become solidified in this manner. There are on record reports which show where puddled clay soils have been frozen and dried a few times, the work required to till them has decreased about 25 per cent.

Plant Roots and Soil Structure

Roots of plants as they expand themselves thru the soil mass force the particles apart resulting in improved physical or structural condition of the soil. It is well recognized that crops differ greatly in their effect upon the soil tilth. The finer rooted crops such as grass, millet, rye, buckwheat, wheat, and others are more effective in this respect than such crops as corn, oats, or beets.

The vegetable matter that remains in the soil after the crops have been removed, upon decaying assists greatly in bringing about improvements in the soil. Indeed, there are on record numerous reports to the effect that puddled soils may be greatly benefitted by the application of vegetable matter in the form of stable manure, muck, or crop residues. The tilth is improved because the added material shrinks upon drying and expands upon wetting, and the products derived during the process of decay assist in soil granulation. Advanced students in our laboratories have shown that the addition of muck at the rate of 20 loads per acre to clay sail may decrease the weight required to force a steel knife into it a given depth about 20 per cent, which, of course, means that tillage operations and root penetration are made less difficult.

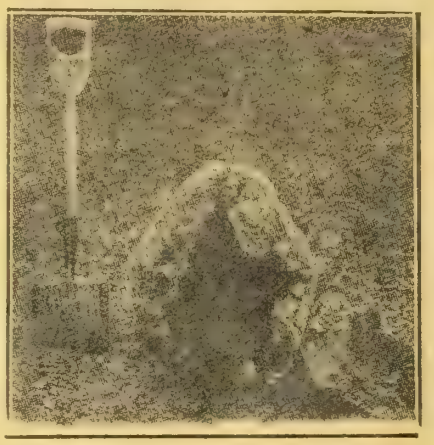
Lime and Soil Structure

If one will shake a handful of clay soil in a glass tumbler or other container filled with water and let stand a few minutes until the larger clusters or granules settle to the bottom and then add about one-half teaspoonful of lime in the form of quick lime, or the hydrated lime, he will observe that the very fine particles in suspension in the water gather themselves into many small crumbs and sink to the bottom of the container. In this case, the presence of the lime results in the formation of the granular or crumb structure of the very fine particles.

When these forms of lime are added to the field soils they doubtless act in a similar but less striking manner in bringing about improved structural conditions. Marl and finely ground limestone act similarly although far less vigorously. It is also true that several fertilizer constituents tend to improve the soil tilth but they are added to the soil in such small amounts that their effect at any one time is slight.

Conditions That Tend to Destroy Soil Tilth

We should not fail to consider several things, or conditions, that may and frequently do result in the so-called "running together" or the puddling of soils. Those of prime importance are lack of drainage, deficiency of vegetable matter, inopportune tillage, the tramping by livestock when wet, and torrential or beating rains, as is the case with the things that tend to improve the condition of the soil two or more of these may work together.



EXPLODING FOR FERTILITY

LEADING UP to the various methods of getting the fertility out of the soil, Professor McCool will tell in coming issues how farmers have been getting out the soil value by explosives and other methods, many of which are proving practical. This picture shows a dynamite jug in a broken condition as discovered on a Kansas farm where powder had been ignited three feet below the surface in a field which had lost much of its fertility value. At the explosion, the jug was formed from the heavier sub-soil elements, while fine particles were spread broadcast.

MINING FOR SOIL WEALTH

MANY FARMS in Michigan are known to be producing less crops per acre every year. Although the device of using a twelve inch plow is nothing new to many farmers, it's use seems to be rather uncommon in places where it could do a great deal of good. Untouched fertility lies just beneath the surface and just out of reach of the ordinary plow bottoms. The picture above was taken on a farm in Pennsylvania with splendid results. But we do not need to look outside of Michigan for similar instances, because in this state the same stunt has worked well.

U. S. Wheat Embargo as Seen by a Farmer

ON SATURDAY, Oct. 25th, Julius Barnes, grain administrator of the U. S., appeared before the Senate Committee on Agriculture and told the committee that President Wilson placed the embargo upon the exportation of wheat from this country last spring, and that its purpose was to make bread stuffs cheap in this country. I don't know at just what temperature a farmer's blood is supposed to boil, but this piece of news ought to make it sizzle.

The farmer has asked no favoritism during the war. He asked no opportunity to profiteer, no regulations for his advantage. All opportunities for war contracts were for others. President Wilson through his boards and commissions was given unprecedented war powers. He proclaimed prohibition because the use of grains in the manufacture of liquor was unnecessary.

This year there was raised by the farmers of America about four hundred millions of bushels of wheat more than the needs of our people, this wheat must find foreign markets or remain in storage. But it will be sold, or has been already. Anyhow it is practically all out of the hands of the farmers. Much of it is yet in the hands of speculators or the big millers.

Now comes the grain administration and advises that the embargo be lifted. Would that not be a fine thing for the farmer to contemplate? Wheat is worth one dollar per bushel more in Europe than it is here, and ocean freight is nominal.

Bread is worth 18 cents per pound loaf in England and the government adds 5 cents to that to the local producer of wheat.

This embargo has cost the farmers of this country in the neighborhood of $800,000,000, or one dollar per bushel on their wheat. We are all sympathetic for the reduced nations of Europe, but why let the entire cost and sacrifice of a nation's sympathy upon one class of your people?

If the farmer had been allowed an open market as have been our manufacturers, he would have obtained three dollars per bushel for his wheat or more.

That extra dollar would have made bread cost three-fourths of a cent more per pound loaf.

Compare the consistency of this secret embargo, with the recent veto of the president of the prohibition measure.

He would allow the breweries, the stills, the saloons of America to open wide their business for three months, in order that they may dispose of their surplus stocks.

What concern for these men and what forgetfulness of the farmer who grows grain. This action would kill more men and boys, ruin more homes and cause more sorrow in America than did the world war.

The farmer is willing to do his share, to abide the laws made for all, to express in taxes, contributions or sacrifice just as much as the other fellow, but this night work, this discrimination doesn't go.—*Milo D. Campbell.*

The Cost of Militarism Comes High in Michigan

Nearly Two Million Dollars Added to 1920-21 Budget for Support of Military Establishment

By JAMES W. HELME

THIS IS an era of extravagance both public and private. The war plunged the nation and state into enormous debts. We shall have exceedingly heavy taxes for a generation to come. If ever a time existed for the utmost economy, both public and private, that time is now.

When the last legislature met the war was over and this situation stared them in the face. Taxes must be increased owing to the high cost of living. Increased taxes were necessary to maintain existing institutions but prudence and economy dictated that no new expenses or institutions should be taken on at this time.

During the war the State Defense Board created the Michigan State Police, ostensibly to take the place of the National Guard and to protect the state from alleged German activities within its borders. The police so created would expire by limitation on July 1, 1919. To renew its life the legislature must pass a new act creating it. Such a bill was introduced and passed. It calls on the taxpayers of Michigan to pay taxes to support it for the next two years of over $736,000. The force is to consist of 53 officers and 156 privates. The commanding officer gets $4,000 per year. The quartermaster, $2,500 per year. Six captains get $2,000 a year each. Six lieutenants get $1800 each yearly. Sixteen sergeants get annual pay of $1,200. Twenty-two corporals get $1,080 yearly and 156 privates get $900 each.

In addition they get rations estimated to cost $44.000 also clothing and equipment estimated to cost $30,000 yearly. Two hundred horses needed will cost $32.810 yearly for their feed and shoeing.

Was this expenses justified? The legislature at this same session appropriated $455,000 for the building of a new national guard and $390,000 for armories of the same. Thus our state military establishment for the next two years will cost Michigan taxpayers $1,581,000. It was urged that this police force was necessary to stop rum running from Ohio into Michigan, but the legislature knew that Ohio would go dry on May 27 and after that date rum running would stop, which it did.

The old state police would hold office until July 1st., following. The liquor situation did not justify this expenditure. In case of serious mobs and riots the national guard would have to be called out as a force of 156 men would be helpless to quell a serious disturbance.

The real reason for the state police was that some of the big interests in the state wanted to use it as a strike breaker and a threat to the organization of labor unions. Citizen soldiers could not be depended on to do this work.

State Police originated in Pennsylvania where it has been universally used to quell labor troubles by force and the labor unions there complain bitterly of its high handed actions. In New York after an experience of two years Gov. Smith has recommended the repeal of the law. Ohio and other states have refused to pass such a law.

Only twelve members voted against this bill in the house. They were Rep. Averill, Coleman, Crawford, Daprato, Deuel, Drummond, Holland, Jackson, Kappler, Miles, Town and Ward.

Rep. Chase, McDonald, Young, Aldrich, McKeona and Weidenfeller were absent. The balance of the house voted for the bill or dodged.

In the senate, four senators, Baker, Brennan, Rowe and Wood voted against the bill. Senators Lemire and Harvey were absent, the remaining senators voted for the bill.

The cost of Michigan's military establishment for the two years prior to the war was $243,000. For the two years after the war it will be nearly $2,000.000. And we fought a war to end militarism. While the State Police were quartered in Monroe county serious scandals resulted from the conduct of the members. In Lenawee county on two occasions autos containing responsible citizens were fired on without warning and in one case a business man was severely wounded. Damage suits resulted and money was paid to settle the cases. Where the money came from is unknown.

Rep. Holland stated in the legislative record that in Gogebic county forty Hungarians quit at one mine and started to go to another. The State police followed them up and chased them into the woods and ended the strike.

It is said they can be used to enforce the automobile license law. Detailed for this duty in Emmet county theri actions were so arbitrary that recently the Board of Supervisors of that county by resolution condemned their actions and asked for their recall. Our local peace officers are hired to enforce our laws; being responsible to the local electorate they do this in an efficient but not obnoxious manner. State Police destroy the principle of Home Rule and being responsible only to central authority at Lansing, act in an autocratic manner. Last year Michigan taxpayers paid nine million in State taxes. This December they will pay nearly eighteen million. Much of this increase was necessary, but over a million could have been saved by cutting down our military appropriation.

Legislative Doings in Washington of Interest to Farmer

Capper-Hersman Bill, Permitting Farmers to Bargain Collectively Most Important Measure Now Pending

By CHAS. A. LYMAN,
Special Washington Correspondent Michigan Business Farming

CONGRESS appears to be taking greater interest than before in legislation which directly affects agriculture. The "men on the hill" are realizing that farming as an industry has not received that attention from the greatest law making body in the world, to which it is entitled. Members of long experience and conspicuous ability are earnestly inquiring into the needs of farmers and are expressing an evidently sincere wish to serve them. This is shown by the number of messages addressed either in person or over the telephone to the National Board of Farm Organizations.

Not only are members of both houses showing a keen interesting in agricultural legislation, but some of them have voluntarily assumed the office of watchman determined to see that nothing of an injurious nature is slipped into any bill. This was shown in the recent attempt of Senator Edge, of New Jersey, to induce Congress to adopt an amendment to the deficiency bill placing funds at the disposal of the Attorney General for the purpose of financing prosecutions of leaders of farm organizations.

Farmers Defeat Edge Amendment

As soon as the Edge amendment made its appearance officers of the National Board of Farm Organizations flashed a danger signal which was readily caught by Senator Gore, Representative Haugan, Representative Hersman and other friends of agriculture in each House. The result is that the Edge amendment is as good as dead and innocent heads of innocent farm organizations may proceed with their legitimate business unafraid that they will be prosecuted on trivial pretexts.

"Senator Edge will not be able to get away with anything like that," said Mr. Hersman, joint author of the Capper-Hersman bill. "This has been tried a number of times and each time it has failed."

Realizing, however, that Representative Fess, of Ohio, and others who seem to have improperly interpreted the Capper-Hersman bill, will probably make a vigorous attempt to force through the House the Edge amendment, the friends of agriculture, in and out of Congress, will remain on the watch tower until the danger has fully passed.

Sometimes legislation is enacted by minorities. The shrewd politician who realizes that he hasn't a majority for his measure waits until what he terms the psychological moment arrives. The psychological moment for him is when the friends of agriculture in the usual numbers are not present. Then he hurriedly presents his amendment, asks that it be immediately considered and proceeds, in spite of the fact that it is unpopular, to force it on the statute books. This will not again be accomplished, Mr. Haugan and his friends, declare.

The Capper-Hersman Bill

The Capper-Hersman bill, the most important measure from an agricultural standpoint yet considered by Congress, is making satisfactory progress. It may be reported during the special session, but there is a very strong probability that it will be among the first measures to be considered at the regular meeting of Congress. Representative Volstead, chairman of the Judiciary committee said he would not be surprised of the bill is enacted by the House by Jan. 1. Of course there may be some changes in the bill and it may even be more favorable to agriculture than in its present form, but Mr. Volstead said he believed the main features of the measure would be retained.

It is not expected that the bill will get through without encountering strong opposition. Already its enemies are lining up. Under the wholly mistaken idea that the measure gives the farmers the right to break some section of the Clayton law, some who had been counted among the friends of agriculture are attacking it. These men do not yet understand that the bill simply by affirmative enactment gives the farmers the right to do what under a proper interpretation of the Clayton act they are already entitled to do. Juries in Illinois and Ohio have recently declared that men engaged in co-operatively marketing their products were innocent of any infraction of law. All the Capper-Hersman bill does is to write these verdicts into the Federal statutes thereby stopping District Attorneys from instituting fruitless, but extremely embarrassing prosecutions.

In the Senate it is believed a substantial majority will be found on the side of the Capper-Hersman bill. Gore, Smith, of Georgia; Wadsworth, Kenyon, Sterling, Wolcott, Jones, of Washington; Walsh, of Montana; Gronna and Curtis are among the Senators who have already expressed approval of the principle of the bill.

Duty on Beans and Potatoes

The present Congress may be called upon to consider the advisability of placing a duty on potatoes. Already hearing have been had on the subject. It is contended that the potato growers of Maine and other New England States are forced to compete with the farmers of the Maritime provinces of Canada who appear to be able to raise the tuber at prices considerably below that which can possibly be done on this side of the Canadian line.

Bean growers of Michigan and other states are seeking relief from the ruinous competition forced on them by the bean growers of the Orient. According to figures presented at a recent hearing before the Ways and Means Committee of the House it was shown that the acreage under cultivation in Michigan in 1919 is only 69 per cent of the previous year. This will be still farther reduced if farmers are forced, as they now are, to sell their beans below the cost of production.

It is believed that some relief will be granted by Congress during the regular session, though it is not possible to accomplish anything before the end of the year.

Oleomargarine legislation is an incomplete condition. Some progress has been made on the bill recently taken up by the Agricultural Committee of the House and it is believed that a fairly satisfactory adjustment will be made in the near future.

Railway Legislation

It doesn't appear to be possible that any definite railway legislation will be enacted before the end of the year. The Committee on Interstate and Foreign Commerce Committee of the House will probably report a bill during the present week, but if this does navigate the lower House it will not see daylight in the Senate until several weeks later. Agriculture is vitally interested in any legislation affecting transportation and many farmers fear that by precipitate action Congress will cause the freight rates to climb to much higher altitudes than they have hitherto reached.

While in Congress and out there appears to be a very strong desire to return the railways to their private owners, there is some very emphatic sentiment for their retention by the government at least until a permanent and enduring policy in relation to their future management can be adopted. This, it is argued, cannot and should not be done in a hurry. According to a statement by R. C. Wooley, of the Interstate Commerce Commission, the railways are now earning sufficient money to pay their way.

According to Mr. Wooley the railway executives are preparing to ask for a horizontal increase in freight rates of twenty-five per cent. This, of course, must be paid in large part by the farmers. Agriculture can hardly afford to burden itself with this additional charge and, unless farming is made more profitable, it is difficult to see how the industry can meet this increased tax.

United Ontario Farmers Announce Program

Partisan Politics in Canadian Province are Shattered by Farmers Pledged to Progressive Legislation

By J. M. WARD, in Grain Growers' Guide.

A YEAR ago the United Farmers of Ontario were not in politics. Today thew are so far into politics, and politics are so far into them that they are the most powerful political force in the province, and have a larger number of members elected to the provincial legislature than any other party. As a result of the general election held on October 20, the next legislature of Ontario will consist of 46 U. F. O. members, 28 Liberals, 24 Conservatives, 11 labor men and two soldier independents.

The last legislature, at its dissolution, consisted of 76 Conservatives, 30 Liberals and two U. F. O., with three vacant seats. The two U. F. O. members had sat only one session having won their seats at by-elections during the past year. "How it was done," is not a long story but it's one that must be full of inspiration for the farmers and others in the west who are also striving to establish new ideals and higher standards in the political life of this country. The U. F. O. went into politics as the result of spontaneous demand by the people for a comp telhcenage people for a complete chonge in the method of conducting business. The people of Ontario had been voting Grit and Tory all their lives. They had Grit and Tory governments, and from each in turn they have got a little good legislation and a lot that was bad, and whichever party has been in power, they have seen extravagance, inefficiency, maladministration and worse.

They have seen political parties make fair promises and bad performances. They have seen the interests of the political party put first and the welfare of the people last. But in the last few months they have said, "It's time for a change."

The U. F. O. was organized in 1914 by the affiliation of a number of existing farmers' clubs, granges and institutes. It is patterned very much on the lines of the Grain Growers and United Farmers organizations of the west, and is affiliated with them in the Canadian Council of Agriculture. The U. F. O. at its annual convention in 1917, unanimously endrosed the Farmers' Platform, and has done its part in securing from the federal parof some of its planks, such as woman liament the enactment during the war suffrage, income tax, corporation tax and prohibition. The U. F. O., however, held entirely aloof from electioneering until October, 1918, when the officials at Toronto learned from the press that a U. F. O. candidate was in the field in Manitoulin Island, where a by-election for the privincial House was being held. It came to the Central executive as a bolt from the blue. They had heard nothing of it until they read of it in the papers. J. J. Morrison, the provincial secretary of the U. F. O. was sent to Manitoulin Island to investigate. He formed the opinion that the movement was along the right lines; that it would give the people of Ontario the opportunity they were seeking to break the shackles of partyism, and put real democracy into politics. He returned to Toronto and reported to the executive and was sent back to Manitoulin Island where he assisted in the election of Beniah Bowman, as the first U. F. O. M. P .P.

Came From Within

In February, 1919, another vacancy occurred in the legislature in the constituency of North Ontario. The farmers the ersaid, "We want a U. F. O. man," and they elected J. W. Widdifield. Both of these men gave a good account of themselves in the session held this year, and Mr. Bowman on several occasions made speeches which marked him as a man of ability and sound judgment.

When it became known that a provincial general election was approaching, the determination of the farmers to put U. F. O. candidates in the field was seen throughout the province. The Central office was deluged with requests for help in the work of organization. The reply went back to the country, "It's up to you."

While the Central authorities were ready to give what assistance they could, they always impressed upon the farmers in the constituencies that if they wanted a U. F. O. man to represent them in the legislature, it was their business to choose their man, to finance his campaign and to elect him. When the speakers were asked for they were sent if they were available. When advice was requested it was given. Literature was prepared and supplied. But the selection of the candidates and the financing and conduct of the campaign was left to the people at home. The result is a political party without a "boss."

E. C. Drury, Farmer, next Premier of Ontario, operates and lives on a farm of 250 acres, and is descended from a long line of farmers. He was formerly Master of the Ontario Grange and helped to organize the United Farmers in 1911.

A provincial platform, supplementary to the national Farmers' Platform of the Canadian Council of Agriculture, was adopted at a meeting of representatives of the U. F. O. held at Toronto on August 1, 1919.

The U. F. O. is charged by its opponents with being a class movement. But the reading of the platform just referred to dispells that idea. The planks of the platform are:

1. To cut out all expenditures that are not absolutely essential.

2. To abolish the system of party patronages.

3. To limit governmental activity respecting commercial co-operation, to legislation facilitating co-operative efforts, to the keeping of accurate records, and to general education, along co-operative lines.

4. To provide equal educational opportunities for all the children of all the people by greatly extending and improving educational facilities in the rural districts.

5. To substitute for the policy of expensive provincial highways a policy of organized continuous road maintenance, and of making good roads for all, rather than high-grade roads for a few, the cost of road construction and maintenance being equitably distributed between city and country.

6. To promote a system of forestry which will maintain and increase the public revenues from this source, protect and perpetuate our forest resources, re-forest the waste places of old Ontario, and encourage municipalities to engage in forestration.

7. To encourage and cheapen hydro-electric development and maintain effective public control over it.

8. To enact an denforce such prohibitory legislation against the liquor traffic as the people may sanction in th eapproaching referendum ,and as lies within the power of the province. Prohibition is an integral part of the Farmers' Platform, and the U. F. O. will use its influence in that direction.

9. To extend the policy and practice of direct legislation through the initiative and the referendum .

10. To apply the principle of proportional representation to our electoral methods.

It is difficult to see class legislation in a platform like that. It was put forward by a farmers' organization, it is true, but it is a platform on which all progressive democrats can stand, and one which seeks to promote the welfare of all the people of the province. The fact that organized labor is marching hand in hand with the farmers is another proof that in its political aims the U. F. O. is not a class movement.

The harmonious co-operation of farmers and industrial workers of the cities is one of the most hopeful signs of the new political movement in Ontario. It shows a broad spirit on the part of both sections, an understanding of each other's point of view, and it shows a recognition of the fact that the securing of justice and better conditions for people of one occupation does not mean injustice or oppression for others. In six constituencies joint U. F. O. and Labor conventions were held to nominate candidates. In others, where both U. F. O. and labor had organizations, one party or the other remained out of the field and united support was given the other. In only one constituency was there both a U. F. O. and a Labor candidate. This was in West Lambton, and the U. F. O. candidate, J. M. Webster, was elected.

The U. F. O. altogether nominated 66 candidates, Labor 15, and the U. F. O.-Labor combinations 6. The Conservatives, the party in power had 102 men in the field and the Liberals nominated 71, including one woman, who was unsuccessful. There are 111 seats in the house.

Women have a vote in Ontario on equal terms with men, and in addition to the women who took part in their own constituencies, U. F. O. received valuable help from Mrs. Brodie, of Newmarket, pres. of the U .F. O.; Miss Griesbeck, of Collingwood, secretary; Mrs. Webster, of Cambria; and Mrs. Low, of Caledonia. The vote shows that the women voters were with the U. F. O. and Labor candidates. It was expected that they would be because the women, as new voters, have never been political partisans. It is also significant that where the U. F. O. candidates were elected prohibition had the biggest majorities.

What Are the U. F. O. Going to Do?

The large number of seats won by the U. F. O. was a surprise to all parties. It was not realized until the votes were counted to what an extent the old party spirit had been crushed. Thirty-one seats was the most that the leaders of the U. F. O. hoped to capture. They won 45 and defeated two Conservative cabinet ministers. Of the 45 they captured 32 from the Conservatives and 11 fro mthe Liberals, the remaining two having been held by the U. F. O. since last winter. As the strongest party in the legislature the U. F. O. must accept some responsibility. If they had secured only 25 or 30 seats they might have sat on the cross benches and sought to gain their ends through one of the other parties. But now they must take a hand in ruling themselves. With Labor they have almost exactly one-half of the representation in the legislature, but that is not sufficient to form a stable administration.

"What are the U. F. O. going to do?" is the question everyone is asking. So far, that question cannot be answered. As this is being written the U. F. O. members elected are in conference with the executive and political committee of the U. F. O. as to the course which they will pursue.

There were onl ytwo women candidate, Mrs. Bundy, who ran as Liberal in Northeast Toronto, and Mrs. Sears, who contested West Ottawa, as an independent. Both were defeated by substantial majorities.

J. J. Morrison, secretary of the U. F. O. handed out a statement to the press as follows:

"The members-elect of the United Farmers of Ontario, after due consideration of the matter, have decided that it would be unwise for them to enter into alliance with either of the old parties, as parties. They are prepared to assume the fullest share of responsibility and form a government in co-operation with such members of other parties as are in sympahty with their platform and principles, and are free to give support thereto. In the formation of a cabinet full consideration will be given to the various interests of the province."

This may be taken as a determination by the U. F. O. to form a government provided sufficient members of the legislature from outside their ranks are prepared to join them in a progressive administration. The labor members-elect have not yet met, but it is anticipated that they will be quite ready to co-operate with the U. F. O. Some labor men who were elected as joint labor-U. F. O. candidates were present at the conference. Whether the two soldier-independent members will be ready to throw in their lot with the farmers remains to be seen. The liberal platform is in many respects very similar to that of the U. F. O. and liberal members who are sincere in their adherence to the principles laid down and who are ready to assist in establishing progressive government should have no difficulty in joining hands with the U. F. O. and labor groups.

It would be difficult, however, for a party consisting entirely of farmers and labor men to form an administration. It would seem necessary for instance, to have a man with legal training for the post of attorney-general.

The above pronouncement, while it does not solve the problem of forming an administration will at least give the press and the public something practical to discuss. It indicates the terms on which the farmers are ready to carry on and leaves it for the members of the other parties to say if they will make it possible.

Sidelights on Farmers' Political Movements

The farmers of Ontario elected 46 members to the legislature without the help of organized labor. The wage-earners elected 11 members without the help of the organized farmers. On only 6 candidates did the two organized forces unite. In the only contest between a labor candidate and a farmer candidate the latter won.

* * * *

The American Farm Bureau Federation has passed resolutions against a political alliance with organized labor.

* * * *

Out of several hundred ballots received in M. B. F's straw vote contest only five votes are for candidates who are not farmers or farm leaders. One is for Dudley E. Waters. The other four are for W. N. Ferris. One voter names Dickinson as his second choice.

* * * *

The National Grange sent the following telegram last week to Samuel Gompers, president of the American Federation of Labor: "The National Grange declines your invitation to attend the labor conference in Washington, Dec. 13th."

CURRENT AGRICULTURAL NEWS OF THE WORLD

GRINNELL

MONROE TO RETAIN CO. AGENT

The Monroe County Farm Bureau is going to retain the services of County Agent Carr, regardless of what action may be taken by the Board of Supervisors at the January session. This was definitely decided recently, when 17 representative farmers gave their notes for $100 each for the purpose of retaining the services of a county agent.

Fully 100 farmers from every nook and corner in the county attended the meeting which was held at the Chamber of Commerce and after listening to inspiring talks by C. A. Bingham, secretary of the Michigan Farm Bureau, and B. A. Holden, the chairman of organization committee of the Oakland County Farm Bureau, the thirteen ruralists lost no time in giving their notes which will make it possible for the Bureau to retain the services of Agent Carr until a membership drive is made.

The action taken by the Monroe Bureau is similar to that taken by the Shiawassee Bureau several weeks ago which financially is no better off than Monroe's Bureau.

The drive for membership will not likely be made until March. It will be made under the direction of the State organization, and secretary Bingham stated that he hoped to corral at least 1,000 members. Not a ruralist in the county will be overlooked and the dues will be $10 a year.

The seventeen ruralists who came to the front and gave their notes are: Earl Jeffs, of Ottawa Lake; Edward G. Heck, of Monroe; Gale Vivian, of Monroe; Daniel Sullivan, of Maybee; J. Faunce, of Petersburg; John Leedy, of Monroe; E. H. Haverkost, of Monroe; Bert Root, of Flat Rock; Gordon Wagar, of Carleton; H. A. Stearns & Son, of Temperance; Sims Donnelly, of Lambertville; Burton S. Knapp, of Monroe and L. H. Kirtland of Monroe; James Vance, of Dundee; A. D. Tinsman, of Dundee; M. D. Knowles, Azalia, and Frank Peters, Flat Rock, Mich.

It was the most enthusiastic meeting ever held by the Monroe Bureau and it undoubtedly will result in the organization being placed upon a sound financial basis and not in need of aid.

Improved Live Stock Breeders

The twenty-ninth annual meeting of the Michigan Improved Live Stock Breeders' and Feeders' Association will be held January 14 and 15, 1920, writes George A. Brown, secretary. Two pure bred live stock sales will be held on January 13 and 16. Further details of this important meeting will be published later.

State Farm Bureau Continues Campaign

AFFILIATION of the Michigan State Farm Bureau with the American Farm Bureau Federation organized by delegates from 35 states in Chicago last week, will take place in February when the State organization's annual meeting will be held, probably in Grand Rapids.

The Michigan delegation of C. A. Bingham, of Birmingham, Roland Morrill of Benton Harbor, James Nicol of Washington, played a prominent part in the formation of the national body which promises to be the means of welding together the farmers of the nation in a strong, business organization.

The Chicago convention declared its independence of any commercial, industrial or labor organization in establishing a platform that is indicative of the scope of its work. The program includes:

Increasing of maximum federal land bank individual loans from $10,000 to $25,000.

Federal chartering of all corporations doing interstate business.

Opposition to any government ownership of public utilities and immediate return of railroads to private ownership.

Regulating of all purveyors of foodstuffs—packers, wholesale grocers, commission men, etc.,—through federal legislation to stabilize prices and curb speculation.

Discontinuing of government practice of free seed distribution.

Other matters taken up were creation of a commission to work with the American Legion to see that waste lands are not unloaded on returned soldiers and sailors by the government; advocation of joint observance of Armistice Day and of Thanksgiving as a national and international holiday in future years. Many trade matters, such as shipping rates and tariffs on foreign products, were referred to the executive committee of the federation for action.

With more than 2,000 members in Oakland County, half of Barry county canvassed and 1,500 members there in sight, the Michigan State Farm Bureau membership campaign is preparing to extend into half a dozen more counties of the state by Christmas.

Work commenced in Allegan this week, where 2,000 members at least are expected and will be started in Montcalm the following week and in Gladwin the week afterwards.

The probable order of the campaign then will be St. Clair, Lapeer, Genessee, Shiawassee, Kent, Berrien, Van Buren and Eaton. Other counties preparing for the drive are Washtenaw, Clinton, Benzie, Tuscola, Ottawa, Macomb, Monroe, Calhoun and Livingston.

If the present pace is maintained, in another ewelve months the majority of the 200,000 farmers of the state will be united in a business organization with financial strength to promote and protect the interests of farming in a business like way.

At the meeting of county agents of the northern counties of the state in Cadillac this week one of the subjects of importance was plans for more extensive farm improvement work following the various county membership campaigns in the several counties.

THE BOY declared to be the Michigan champion judge of hogs appears in action in the foreground of this picture. His name is Galpin. The other two boys ran him a close race. The picture was snapped on the Brookwater Stock Farm, Ann Arbor, Michigan.

HORTICULTURISTS TO MEET

The annual convention of the Michigan State Horticultural Society will be held in the Hotel Statler on the Ball room floor, Dec. 2-4, says Geo. M. Low, secretary. "A large number of exhibitors will be present, and will have on exhibition the very latest in insecticides, spray machinery, nursery stock, packages, etc. I wish to call your especial attention to these exhibits ,and want you to realize that these exhibitors are not trying to sell you gold bricks, but that they are experts in their line, and are in position to furnish you with reliable information.

"To my mind one of the strongest programs ever presented to the Society since I have been a member will be given at this coming meeting. It is chock full of up-to-the-minute topics ,which every fruit grower should have before his mind if he is to make a success in the fruit growing industry, and let me say now, the future of the fruit industry never looked so good as it does at the present time.

"Freight rates and legislation are something to interest producer, shipper and consumer. These subjects will be very thoroughly discussed by Mr. Coombs, Sec'y Michigan Traffic League, and Mr. R. G. Phillips of Rochester, N. Y., Secretary of the International Apple Shippers Association. Undoubtedly you have read of the long drawn out fight of the Chicago Milk Producers Association. This case involved "collective bargaining." The producers were represented by Hon. Charles S. Deneen, ex-Governor of Illinois, and the decision in favor of the producers was due to his efforts. There is more to be said on the subject of spraying this year than ever before. New materials and new methods have been tried, and will be tried in the future. Mr. Dutton, who has active charge of all spraying experiments at the Michigan Agricultural College, will be prepared to answer any of your many questions. I was very fortunate in securing Mr. E. J. Kraus of the University of Wisconsin, who will be on the program for two subjects. One is "The Relation of Orchard Practices to Fruit-Bud Development," and the other, "When is Fruit Pruning Profitable." The strawberry which has added millions of dollars to the fruit industry in the last few years, will be discussed by F. E. Beatty, along the line of "How to Make Strawberry Growing Both Pleasant and Profitable." Lack of space prevents me from going into further detail about the program. However, it is sufficient to say that every day is full of pep."

Largest Grain and Hay Exposition to Open in Chicago Nov. 29th

By ARTHUR W. JEWETT, JR.

(Special Correspondent, Michigan Business Farming)

THE LARGEST grain and hay show ever held in the United States will take place in Chicago, November 29 to December 6, 1919. At that time the Chicago Board of Trade will give out ten thousand dollars in premiums to the farmers of the United States and Canada who exhibit the best samples of corn, oats, wheat, barley, rye and hay.

Many people are desirous of knowing how this great show was brought about. The history is well worth considering.

In 1907 the first national corn show was held in Chicago under the auspices of the business men of that city. This brought together large exhibits of corn and grain and was deemed worth while. At that time a national corn association was organized and took up the matter of holding national corn shows. The next shows were held at Omaha in 1908 and 1909. The show was then moved to Columbus, Ohio in 1911. Following this a national corn exposition was held at Columbia, S. C., in 1913. The exposition then went to Dallas, Texas, in February, 1914.

Since that time no national corn show has been held. True, it was found that the corn and grain interests appreciated the show and made large and worth-while exhibits. On the other hand, it was not possible to get a sufficient number of people to attend the shows to warrant the holding of the same, or to finance them in the proper way. For this reason they were discontinued.

It has been the feeling for a great many years that a corn and grain show could be held in connection with the International Livestock Exposition. The livestock business is founded upon the grain and hay crops of the country. Livestock men are interested in the development of grain and forage crops. Since these two interests work hand in hand, there is every reason why the livestock and grain exposition should be joined and operated together.

Dean C. F. Curtiss, of Ames, Iowa, was elected president of the International Livestock Exposition this past year, and at once proceeded to arrange for an International Grain and Hay Show. He approached the Chicago Board of Trade which body agreed to contribute $10,000 in cash premiums. With this as a basis the livestock management agreed to meet the overhead expenses. All is now under way and there are big projects for a fine display. In addition to competitive exhibits there will be a large number of educational exhibits from the different agricultpral colleges.

As Michigan is one of the leading hay and grain states she should be well represented at the show. Prizes will be given on corn, oats, wheat, barley, rye and hay.

In the corn exhibits Michigan will compete against North and South Dakota, Minnesota, Wisconsin, New York and Maine. On twenty ear samples of white and yellow dent twelve prizes will be given ranging from a $90 first prize to a $4 12th prize.

All grain samples are to consist of one-half bushel. The samples must have been grown by the exhibitor in the year 1919. Michigan will compete against all the United States and Canada in these exhibits. Prizes ranging from $60 to $3 will be given on each of the following: white or yellow oats, black oats, hard red winter wheat, soft red winter wheat, hard red spring, white wheats, durum wheats, six rowed barley, two rowed barley and rye.

In the hay division the bales are to weigh at least fifty pounds. Prizes ranging from $60 to $3 will be given on alfalfa red clover and timothy. In this division Michigan will also compete against all the United States and Canada.

Reports show that many Michigan farmers are intending to make large exhibitions. In addition to this, the Michigan Crop Improvement Association, the Michigan Potato Growers' Association and the Michigan Agricultural College are uniting in making a large educational display. Farmers who have not already made entries and have prize grain and hay on their farms, should enter before November 20, 1919, by writing to Superintendent of Entries, International Livestock Exposition (Grain and Hay Show) Union Stock Yards, Chicago, Illinois.

JUST BETWEEN OURSELVES

"As the partridge sitteth on eggs, and hatcheth them not; so he that getteth riches, and not by right, shall leave them in the midst of his days, and at his end shall be a fool."—Jeremiah 17-11.

IT HAS been apparent for many years, that finally the center of the money market of the world must move westward to the land of opportunities. However in August, 1914, London was still the financial center of the world, and to a considerable degree, held the reigns of business. When the great test came, all Europe was found to be slumbering on the brink of a volcano; the people were acutely divided by political feuds and burdened by military despotism--indeed illy prepared for the test to be applied. With the war over the old world finds itself terribly impoverished. The cost of war waste reaches more than 250 billion dollars; and we have not taken into account the terrible loss of human life.

It is a grave question as to the actual solvency of the nations engaged in the war; indeed if these nations could be reduced to a commercial business basis, it is quite probable that the creditors would be in charge of their affairs. The United States has loaned nine and one-half billion dollars to her allies in the late war; and about one-half of this immense sum has gone to England. There is no longer a question as to the leading money market of the world; the United States now has this distinction and here this center will ever remain. The war has made more than twenty-thousand new millionaires in this country, and it is true that the country is vastly richer than when we entered into actual hostilities.

True our national debt has vastly increased; but the wealth has merely passed from Uncle Sam to the individuals and combinations which have profited at the expense of the impoverished nations across the seas. No individual or corporation could have profited, by right, through the war. Six million dead across the seas; one hundred and twenty-five thousand of our own dead; and hundreds of thousands of maimed, and injured young men; cry out against the man or corporations, which have gathered unto themselves the blood-money of the nations of the earth. Such will surely some day realize, that "he that getteth riches, and not by right, shall leave them in the midst of his days, and at the end shall be a fool."

* * *

THE manager of a co-operative association made this remark the other day as I was going through his plant: "Why is it that the farmer can never be content until the last product from his farm is off his hands? The markets of the nation will only take a certain amount of farm products, and this demand requires only a normal movement. But harvest time, with any crop, means selling time, and the moment the grain is in the bin or potatoes in the pile—the rush for market commences. And would you believe it, many times when we urge farmers to hold their products because of a glut at terminals, they censure the managers because we can't take all they have to sell and pay top notch prices any time and all the time. If they would only hold a portion of heir crop, the prices could be maintained."

It's the same old story: The tide is in, prices are at a high level; on comes the farmer hosts to market. From the very weight of their deliveries the tide commences to recede; and this is the signal for many farmers to hurry, hurry to market—for sooth, "the market tide is going out, we will be left high and dry if we don't look out." By their very act they hurry on the downward trend of the market, while the dealer well knows that an outgoing tide always returns. The farmer unloads, many times at a loss; the buyer holds—when lo and behold he has low tide products on a high tide market—and we call that fellow a wonderful business man. "Sane marketing;" would cure half the farmer's ills; co-operation would do the rest.

* * *

THOSE who have felt that they could dismiss the whole railroad problem by returning these arteries of commerce back to the original owners, have another guess coming. No question is ever settled until it is settled right. The Government took over the railroads for the simple reason that they had been so long pillaged and milked, that they were mere water soaked wrecks, unable to stand the nation's demands in time of war. And the nation agreed to pay interest on over-capitalized companies; with equipment in such condition that efficient operation was impossible.

That the companies "laid down," there is no longer a question; they welcomed Government operation, because they knew with over-capitalization and worn out equipment, the rental charge could not be met; and many people would then cry out against Government ownership; when in fact the Government has been a mere renter of the lines and equipment—paying money rent. You might as well expect a farmer to rent a farm worth $100.00 per acre and agree to pay interest on a watered value of $500.00 per acre; pay for the use of worn-out machinery found in the fence corners—and get out with his hide, as to expect Uncle Sam to make a success of railway operation under the terms of the war contract with the railroads. But like Banquo's ghost, the question will not down, no sooner is it buried, than it pops up again. So my friend, just remember the "railroad question," which vitally affects your business, still remains to be settled.

* * *

MICHIGAN has the distinction of entertaining the National Grange this year, and the session that has just closed at Grand Rapids, is one of the most important ever held by this, the oldest farm organization. Founded at the close of the civil war, the Grange did a distinctive service for the nation during the reconstruction period. The passing years have brought many changes in general conditions, and the Grange has endeavored to keep step with the march of progress. Hampered, as all farm organizations are, by a multitude of outside influences; progress has been slow; but the fact remains that the Grange has "kept on keeping on," and is one of the very few farm organizations that has survived the teething period.

Just now I discern an effort to lead the farmer away from his active permanent local organizations; to induce the farmer to build from the top down, if you please, rather than from the foundation up. Farmers should take their cue from the labor organizations which are just now dominating things at Washington. The local organizations through which farmers touch elbows, exchange experiences and build confidence in each other, is the very foundation of the whole structure of organized effort. Every farmer should be a member of some local farm organization. Organized labor calls those workmen who do not unite with a local, "scabs." Some day, perhaps, there will be a distinction between those who "pull together" and those who "go-it-alone" on the farm.

* * *

DON was a splendid fellow; faithful to the last degree, patient, obedient and ever ready for work or play. He moved with us to the country nine years ago, and many were the walks and talks we had while tramping through field and wood lot. But with all his virtues, Don had one very bad fault, and he was never able to correct it. Many times I have seen him leave a well filled plate of food; just a bit disgusted to think we should expect him to be hungry again. This was the signal for the neighbor dog to come over; but the moment he started toward the food Don snapped, snarled and growled; and after sending one of his own tribe scurrying home, hungry, he would stay right by the food until he had finished the last bit.

I sat 'round a conference table in Chicago, recently where the question under discussion was how to get back to work, and re-establish unadulterated Americanism. It was a meeting between representatives of the farmers and manufacturers--both sufferers through strikes, lock-outs, railway tie-ups and other troubles which prevent the uninterrupted flow of commerce. Little difficulty was experienced in getting at the basis of true Americanism; but when it came to applying the principles of a true co-operative democracy both for the employer and the employee; the manufacturers began to sniff and snarl and one old Don fairly howled when it was suggested that the workmen have a little more from the profit plate; from which the manufacturer had taken all he could comfortably digest.

This attitude, assumed by both employer and employee, broke up the conference at Washington called by the President, with a hope of bringing these estranged factors in the business world together. And again we come to the conclusion that it is thinking which must first be bettered. With clear thinking and intelligent reasoning applied to present day troubles; with a willingness to co-operate and a desire to deal justly with his fellow man on the part of both capital and labor, conditions would soon become normal again. The present attitude of labor and capital reminds one of old dog Brag and the terrible bull-pup Holdfast, forever fighting, but never settling the wager made between the owners as to which was the best dog. It's about time the people, who are the injured bystanders in the present "dog-fight," got together and tightened up on the collars of the warring factions, until they are both glad to "think," and finally do a little intelligent reasoning.

Grant Slocum

The Sunset Years

Youth fares forth from the cottage,
For Youth is restlessly strong
And has scant time for the chanting rhyme
Or the measures of the song;
And Youth is ever striving,
Youth must clamber the height
And may not wait lest the hour grow late
And the world know not its might.

Roads that lead through the valleys,
And paths that checker the plain,
Must know the beat of the tireless feet
In the sunshine and the rain;
Unseen trails in the desert,
Hidden paths of the sea
Lead on to goals that lure the souls
That would go and do and see.

But Age comes back from the palace
And age comes back from the plain,
And Age comes back from the wearing track
Of the road of greed and gain;
And Age comes back to the cottage,
To hearth and pipe and book,
To the quiet days with the cheering blaze
In the shadowed inglenook.

Life is fair in its morning
And life is rich at its noon—
But life is best in the years of rest
Where the heart may beat in tune
With old songs and with echoes
That thrill and throb and thrum
To chords of peace in care's release
When the sunset years have come.

A Page of Champions

1. Grand Champion Duroc Jersey, owner H. W. Mumford, Ann Arbor
2. These prize mules are owned by Hubbard & Sons, Ovid, Mich.
3. This Chester White Boar, second prize, belongs to Harry Crandell, Cass City.
4. This Aberdeen Angus, Kate of Doddie Farms, is the third prize winner, owned by Dr. G. R. Martin & Son, Croswell.
5. Fairfax Farmer Hereford owned by Alten Bros., Paw Paw, Mich.
6. Blanche 15th, owned by W. H. Neal, Meredith, N. H.
7. Belle Hazeltine Ormsby, first 2 year old senior and grand champion belonging to F. H. Skrei, Glyndon, Minn., won at Waterloo Show.
8. President Wilson 4th, senior bull calf, owned by W. E. Scripps, of Detroit, Mich.
9. Berkshire Boar, Pearl's Successor 8th, 255708, first prize senior yearling boar, by F. E. Kite, St. Paris, O., at N. Y. State Fair.
10. Johan Hengerveld Beauty first prize cow, four years old or over, John Rinke, Warren.
11. Johana Sir Ollie, senior Grand Champion bull at Waterloo, Iowa show, is owned by N. Dickinson and Son, Lake Geneva, Wisconsin.

The Grange and Conservatism

THE conservative east met the radical west" at the National Grange convention at Grand Rapids and judging from the outcome of the election the radical west went down to defeat. In going down it carried with it some of the ablest and most progressive wings of the national organization. The conservative east, numerically outnumbering all other sections of the country, dictated the election of officers and held a ruling hand over the resolutions presented.

It is natural that Michigan Grangers should be dissapointed over the failure of the national seesion to name John Ketcham, state master, as national worthy master. John Ketcham is an able and progressive leader. He has helped to raise the Michigan Grange to the top of the list of state Granges. He is well acquainted with current state and national issues and his attitude upon them is usually right. Under his guidance the Michigan State Grange has set a pace for service to the farmers that other state Granges will find difficult to follow. Living in a middle western state where the extremes of radicalism and conservatism blend into a sentiment that is both practical and progressive, John Ketcham was the logical man to lead the Natonal Grange through the ordeals that are ahead of every farm organization.

It was expected that the National Grange should take some action upon the railroads, other public utilities, national resources, etc., looking to a prevention of further exploitation at the hands of powerful corporate interests. It was thought even that a definite, practical plan for systematizing the present methods of marketing and bringing the producer closer to the consumer might be presented. For these are all great problems of vital interest and concern to every farmer. Some action was taken, it is true. The conservative east voted against government ownership or control of the railroads. The subject of national resources was barely touched upon. Public utilities were declared to be private properties and should be free from molestation on the part of the public. The new national worthy master defended monopolies and combinations and emphatically declared his opposition to state warehouses or any other form of state "socialism". It is plain that some of those who pulled the strings at the National convention were reactionaries of the most pronounced type.

We do not believe, however, that the members of the Michigan State Grange or the western Granges will concur in the pronouncements of the new national master nor in the action that was taken upon some of the biggest problems of the times. We are of the opinion that if the national officers of the Grange or any other farm organization were to sound out the sentiment of the farmers upon these great issues they would find them holding views quite dissimilar to those that have recently been expressed by certain of their leaders. Be that as it may the National Grange rejected a great opportunity to put itself on record as an organization that keeps abreast of the times and isn't afraid to let the country know it.

The Michigan State Grange will hold its annual session at Saginaw the second week in December. It is entirely possible that the members may at that time express such views and take such action as will rectify some of the mistakes or omissions of the National Grange session, and set the country right as to where the Michigan Grange stands.

"Keep Out of Politics"

WELL MEANING men advise their friends to "keep out of politics." Thru long abuse in the hands of unscrupulous men politics has come to mean something that is corrupt and unclean and to be avoided by all who value their reputations.

"Keep out of politics" is the warning given by grafters, professional politicians and all others who conspire to cheat the people of good government. The more good men who stay out of politics the better chance the politicians have to carry out their schemes unmolested.

Politics is "the science of government." In an autocracy where government is administered by succession or "divine right" the people do not have to know anything about the science of government. But in a democracy like the United States where the people are the government, make and unmake their laws, elect and in some states remove their public officers, it is incumbent upon the people to study the science of government and apply their knowledge to the making of good laws and to the choosing of good men to enforce those laws.

Too many people in the United States have "kept out of politics," and by their indifference to the character and qualifications of men who have sought public office have encouraged rogues to dip their fingers into political affairs. As a consequence, the democracy has gradually drifted under the domination of special interests, self-seeking politicians and others whose only interest in politics is the amount of money, honor and position they can secure for themselves and their friends while the rest of the body politic goes blissfully on its way, wholly "uncontaminated" by political contact, it is true, but nevertheless paying high for the privilege.

Get into politics. If you are a citizen of the United States it is your duty to study the science of government, know what laws are passed, what commissions are created, what tariffs are enacted, the kind of men who are seeking public office.

Get into politics. Don't vote for some man because he tells you in an advertisement that he is a good fellow. Give your support to the man who has shown by his deeds, his manner of living, his principles that he can be depended upon to represent your interests fairly in the office he seeks.

Get into politics. Teach your children that self-government is a sacred right and will be an enduring right providing they consider themselves a part of the government and pledge themselves to its honest and efficient administration.

Get into politics. Throw aside petty and partisan prejudices. Take a hand in the next campaign and help to elect candidates because they are good men and not because they belong to the X, Y or Z party.

Senate Rejects Peace Treaty

WHO SAID the war was over? We have just celebrated the first annual anniversary of the signing of the armistice; hostilities have ceased; the troops have been called home, and the country is waiting for the peace treaty to be signed that normal activities and relations with foreign nations may be resumed. But the United States Senate has rejected the peace treaty, and technically speaking we are still at war with Germany.

It would be impossible in our brief space to discuss the several reasons advanced by the senators unfriendly to the League pact for attempting to amend or pass the pact with reservations. Perhaps these motives are sincere and proceed from the Senators' desire to protect the sovereignty of the United States as claimed, but in view of the extreme antagonism that developed against the covenant when first presented, on the grounds that the President had not taken the Senate into his confidence, it looks to the average citizen as if the opponents of the measure were in a conspiracy to prove to the President that they are more powerful than he. The people of the country should not overlook the fact that certain Senators voted exactly alike as though by mutual agreement, on every one of the ten reservations proposed by the foreign relations committee.

Both Senators Townsend and Newberry helped to defeat the covenant. A correspondence with the former Senator sets forth the statement that he was acting to preserve the honor and soverignty of the United States. We did not question the Senator's motives. We told him that in our opinion the majority of the reservations which the recalcitrant Senators insisted upon attaching to the League covenant to prevent the President from "betraying" the country into the hands of foreign nations, were political bombast, intended to deceive the people into thinking that the Senators were protecting some great right that was in danger of being violated. Sen. Townsend said he did not attach great importance to some of the reservations that had been proposed, but insisted that the covenant gave Great Britain five votes to our one and that he couldn't stand for that.

The League of Nations covenant has been examined by the greatest jurists of the day and most of them have approved it. All the leading powers have ratified it. Whose judgment is the best? Whose motives the most sincere and unprejudiced? The judgment and motives of the reactionary Senators, or the judgment and motives of the President, the ratification Senators, the other leading powers and the rank and file of the people who want the peace treaty signed and the League covenant accepted.

The voters of Michigan might do well to sound out both their Senators on this matter and if a satisfactory accounting of their action is not forthcoming to replace them as soon as may be with men of better judgment and understanding.

Ohio a Conundrum

ACCORDING to the latest returns from our sister state, the same people who voted by 40,000 majority to uphold state-wide prohibition, declared against the ratification of the national prohibition amendment, by a few hundred majorities. This is one of the most flagrant inconsistencies that the wet and dry fight has revealed in recent years. It seems so highly improbable that 40,000 people should declare against booze on one ballot and on another ballot virtually vote for it that one's suspicions are immediately aroused. The big issue in Ohio was the action of the state legislature in ratifying the national prohibition amendment. The entire wet forces of the country concentrated their efforts in that state in the hopes of repudiating the action of the legislature. It was believed that if the people of Ohio showed by referendum that they did not approve of the ratification an excuse would be had for submitting the matter in all the states having referendum laws. The whole fight centered on this issue and on the face of the returns the wets have apparently won. But the ordinary citizen is apt to agree with the official of the Anti-Saloon League, who in announcing that he would ask for a recount, said: "A look into the ballot boxes will not hurt the dry cause any."

The farmer-labor conference in progress at Chicago ran up against a snag the first thing. The labor leaders wanted to introduce a resolution against prohibition, but the farmer representatives warned them that any such action would alienate the farmers' support. The prohibition issue is one of many on which farmers and labor unions are quite likely to disagree.

WHAT THE NEIGHBORS SAY

FARMERS AND ANTI-TRUST LAW

The article on the front cover of Business Farming Nov. 15th entitled, "What is Needed in Michigan" has interested me very much.

For twenty years I have heard the questions asked: "Why don't the farmers hang together? Why don't the producers get together and establish a uniform price for their products?"

And the wireacres would wag their heads and sigh, "They never will" you can't get the farmers to co-operate. Is is any wonder? How can they in the face of such a law?

And while it seems evident that this law was intended for others than farmers I would like to hear of a case where any one else was punished for its violation.

The writer knows of an instance where in a nearby small town the grocers were ALL charging 13c per pound for sugar, while in all the newspapers was running an official (?) statement that any dealers charging more than 12c were violating the law.

I don't know what the present regulations are but I do know we are still paying the 13c per pound.

I think it is time we did organize to demand some legislation that will insure us our rights.

There are many of your readers who have no copies of the statutes in their homes and for their benefit I would request that you give a little history of the enactment of the law from which you quote, in the article mentioned.

In what year was the act passed? Who introduced it, and if possible, who voted for and against it?

We women will be voting in the future and we would like to know who the farmers' friends are.

It is just possible that some of our "would-be officials" may find it to their political interests to become the farmers' friend—*A Farmers Wife, Shepherd, Mich.*

We are very glad to hear from you, "farmer's wife." It is right and proper that you and the other women on Michigan's farms should show an interest in these important matters. You are absolutely correct. The anti-trust laws are for the most part "scraps of paper." They are violated with impunity by those who are powerful enough to frighten off the officers of the law from taking action against them. It will be a pleasure for us to go back to the early history of Michigan's anti-trust law and follow its application through to the present time. We have no doubt that we can point to many enterprises firmly and honorably established as law abiding institutions in this state which exist virtually in violation of the anti-trust law.—Editor.

A HELME ENTHUSIAST

I read with interest what you have to say in regard to a straw vote by the farmers for governor. Now as the average voter is probably not very well posted as to the claims of the candidates mentioned would it not be a fair proposition for the Business Farmer to give a short sketch of what these men have done to entitle them to the support of the voters of the state to place them in this great and honorable position. We usually hear a great deal about business administrations with the advice to vote for some banker, lawyer, school teacher or just a common politician or wire puller. And the affairs of the state have been in the hands of that class so long and taxes have been going up until we are the worst taxed state in the country which has depressed the value of the farm land and put a blight on all rural enterprise and improvement. We hear of land selling in adjoining states for $200 or $300 an acre but buyers are avoiding Michigan.

Now as to the candidates mentioned for governor perhaps there is not one among them that is so well known by the rural voter as Jime Helme. He has been up and down the state for years lecturing in the Grange halls and schools houses. Most farmers are familiar with his crisp and level headed editorials in *"Patron."* He has kept in close touch with state politics. As Food Commissioner he made no compromise with law breakers. He calls a spade a spade. He is not only a talker but a doer. I believe he is a product of Michigan, a real-to-goodness farmer whose sympathies can be counted on by the farmers and working people and whose ideas of right will insure a fair deal for all legitimate business.—*J. A. B., Fife Lake, Mich.*

So many requests have been received from our readers that we publish brief sketches of the life and public record of the several suggested gubernatorial candidates named in our straw ballot that we are now gathering information for that purpose. It is well for the voters of the state to become acquainted with the qualifications of candidates before the campaign actually begins. If voters put off "getting acquainted" with those who are suggested as candidates for any public office until the heat of the election contest, it is quite certain that they will not be able to cast an intelligent ballot. Too often in the past the ability and motives of candidates have been wholly overlooked in the maze of election subterfuges. By all means, let us know these men before we vote for them. —Editor.

A FRIENDLY CRITICISM

Have read your article "Shall Farmers Unite with Organized Labor Radical Labor Group Seeks Political Alliance." I do not doubt your sicerity but I wonder if you read *The New Republic*? I'll venture to say you never read "What the Miners are Thinking" in it's last issue.

Am taking the liberty of sending you under separate cover the last issue of *The New Republic* and respectfully ask you to peruse this article, believing that if you do so, you will see many grave errors in your own article.

I do this in a spirit of friendly, constructive criticism, desiring to help both farmers and city workers as they both do necessary work.

My opinions are expressed to a nicety by both neighbor E. W., of Gladwin, Mich., and neighbor E. L. A., of Newberry, in your issue of Nov. 8, 1919.

I believe we all should look at all side of the question, and the farmers' and workers' side, which is also the public's side, can not be found in a capitalistic paper—*M. T. V., Kalamazoo, Mich.*

I do not know why readers persist in misunderstanding the attitude of M. B. F. on labor. We have tried to make it plain that we are in sympathy with the general aims of labor. We have repeatedly stated our convictions that labor should have a greater share of the profits of labor. But that must be a matter of evolution not revolution. The attempt of organized labor to force the closed shop onto the country has all the earmarks of revolution and dictation. The principle is despotic and un-American, and I am surprised that any man who has money invested in a farm should attempt to excuse it. No man who loves liberty will submit to a system by which one group of men dictates to another man whom he shall employ in his factory or on his farm and how much he shall pay them. The condition of labor is rapidly on the upgrade, and we are glad of it. Hundreds of large industrial concerns have voluntarily increased wages and bettered working conditions. One of the latest industrial corporations to share its profits with its employes is the B. F. Goodrich Rubber Co. We predict that the profit sharing plan will shortly become a recognized principle in all the leading industries of the country. And yet, it is not wholly equitable. It forces the employer to divide when he has a profit, but his losses he must bear alone. There are, indeed, two sides to this question. That is why we oppose the efforts of radical labor leaders to control the industry of the country. At the same time we are just as anxious as anyone else to help labor secure its due by peaceful, legitimate means. We would like to have you write in greater detail how you think the relations between capital and labor could be better adjusted.—Editor.

WANTS FARMERS NAME SLATE

Enclosed you will find I have marked 7 of the proposed candidates for governor. I will vote for any one of these and work and help to elect one of them. I feel it is time for the farmers and workers to have something to say about the affairs of Michigan. Judging from the way the present administration has been doing, no one considered only the politicians. But why stop at governor. Why not have the Gleaners, Grange and Farmers' Clubs of each representative district each propose a candidate for representative the same published in Michigan Business Farming, the same voted on and results published and then all unite on one candidate and if you please, with each state official.—*C. R. W. Chesaning.*

This is an excellent suggestion. At a farmers' conference in Lansing just before the legislature adjourned the writer advocated the naming of a complete state and national ticket. No matter how progressive an executive may be he is powerless to carry out his pledges if the legislature is partisan-bound and reactionary. The farm organizations should see to it that enough progressive farmers are elected to the legislature to support a progressive governor or to prevent a self-seeking politician from using his office and the funds of the state to further his political ambitions. We expect to see some definite plans organized by the first of the year to put a complete farmers' ticket in the field.—Editor.

CO-OPERATIVE SUCCESSES IN BAY COUNTY

Your letters of thanks to the farmers union for the check of $50 was received and read at our last meeting. The members accepted it with many thanks for same. I am very much surprised and somewhat ashamed of the farmers of Michigan for not contributing at least one dollar each to help pay these expenses when it is for the benefit of the farmers as a good tariff on our product means a higher price for the produce we raise. I was talking to some of the secretaries of some of the other locals of the township and they said they were going to send in their contributions to M. B. F..

The Secretary of the farmers' co-operative union, our union, thought we were giving a small sum when we sent you the $50 check. The farmer does not hesitate to invest $1,000 or $1,200 dollars in a car for pleasure but think they can't afford to give one dollar to help better their own condition.

Our union is still growing in strength though the union we bought our winter supply of coal from the Robt. Gage Coal Co. for $4.55 per ton at the mine during the month of June and July, and the majority of the farmers secured their coal for the winter and our county committee bought from the Wenona flour mill in Bay City 250 barrels of flour for the members of the farmers' union at $11.50 per barrel where the middle man is charging $13.50 and $14.00 a barrels for the same kind of flour. The farmers union of Bay Co. is taking steps to incorporate for about $25,000 or $30,000 dollars so as to have money on hand to buy in carload lots and have the cash to pay for the same. And thereby save each member from 50 to 100 dollars each year. There were men in our union saved from $14 to $22 on their coal for the winter and from $2 to $10 on their flour. And all it cost these men to belong to the union is $1.00 fees and 10 cents a month for dues with a total for a year of $2.20. These figures show that if the farmers will organize an hold together they will gain financially by it.

The laborer and the city man is accusing the farmer for the high cost of living. The laborer does not stop and think that when he asks for more pay and shorter hours that he is raising the cost of living at the same time, but still lays it to farmers.

The price of pork to the farmer has dropped from 25c to 15c per pound and yet the middleman is selling it out for 30c. Who is getting the profit. The farmer or the middleman. The farmer has to feed this pork for six months before he can get his 15c per pound and the middleman has to keep it in his ice box not to exceed one week. If the laboring man wants to cut the high cost of living in two he wants to begin buying direct from the farmer. If the laboring man would pay the farmer say 20c for his pork he would make 5c per pound and the laborer would save 10 cents per pound. That would cut the high cost of living of pork 10 per cent.—*Irving B. Davis, Sec'y Farmers' Co-operative Union of Williams Township, Bay County.*

The farmers of Bay county have shown themselves to be loyal friends of Business Farming. They are not talkers merely. They do things. We have no fault to find with the bean growers who did not see fit to contribute to the "bean fund." We haven't delivered the goods yet. We are greatly interested in your co-operative ventures. Keep us and our readers posted on the progress of your unions.—Editor.

Sec'y Bingham Replies to Critic

In answer to the questions mentioned will say that the reader misinterpreted the meaning of the advertising matter in question. The questions mentioned in your letter were statements of what Illinois Agricultural Association had accomplished. The Michigan State Farm Bureau at that time had no organization complete enough to eake an active part in such matters. It has been the desire of those interested to get this organization in proper shape to do the things necessary when conditions demand action.

Mr. Arlie Hopkins was the man elected to head the legislative department, but has taken no active part in legislative committee work as far as this organization is concerned. I also believe that no man occupying a public political position should act in this capacity.

At the present rate of membership being signed up in Mishigan the Michigan State Farm Bureau will be able in the very near future to maintain committees wherever and when-

Hoping that this satisfactorily ever necessary.
answers the questions mentioned, I remain—C. H. Bingham, Sec'y.

The above letter is in response to a number of questions asked in these columns two weeks ago by E. B. Follett, Pres. Iosco County Farm Bureau.

Sense and Nonsense

His Vast Knowledge

"This 'ere is a husking peg," explained honest farmer Hornbeak, who was showing his city nephew round the farm. "We use it to husk corn with."

"Well! well!" was the surprised reply. "I always supposed you kept bees to do your husking for you. I remember reading something about husking bees—they had red ears, if I recollect correctly."

One Exception

"Pretension is not natural—Nature never pretends," didactically began Professor Pate. "She———"

"She doesn't, eh?" interrupted Festus Pester. "Then how about the bluff she put up when she created the parsnip, which looks almost exactly like something to eat, but isn't?"

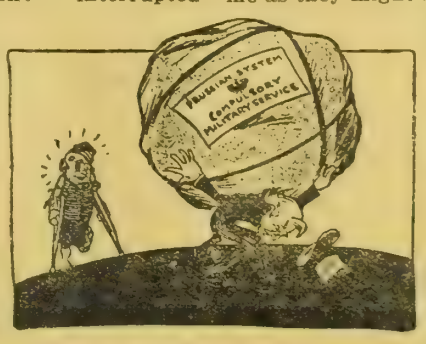
He Meant Well

Angry conductor (as train comes to an unschedule d stop): Did you pull that rope?

Patriotic looking passenger: Yes, I did; and I want you to reverse the train immediately. Half a mile back I saw a miscreant who must be captured and put into prison. He was waving a red flag."

The Ancient Optimist

"My rheumatism has been hectoring me a good deal lately," confessed the Old Codger. "I have a little trouble with my hearing at times. I had a pretty bad spell of grip a couple of months ago, and it left me with a good many symptoms of one kind and another. But, still, things are not by any means as bad with me as they might be, for, thank goodness, my appetite is still in apple-pie order. Well, yes; thank you, Pheeny—I don't care if I do have another piece, being as you insist."



Fritz: "He sure iss welcome to it!"

More'n'ful

Pa: Why do you act so mournful after eating such a good meal?

Kid: That's just the reason, I'm more'n'ful.

COST OF TRUNK LINE ROAD

Will you please thru your farm paper tell me what you may expect to pay in state taxes when this trunk road is built? I just heard that we would be taxed $13 an acre. If so, no one around here can keep their farm. Is that tax paid all at one time or is there a limited time to pay it in? Please let us know through the paper. —*Subscriber, Gratiot County.*

The highway tax levied by the state this year is $900,000. Since the state's valuation has been raised to $4,500,000,000 the tax is 20c on each thousand dollars of valuation.

As no tax will be levied this year for any part of the bond issue it is impossible for any large state highway tax to be levied.

A few trunk line roads may be built where the county's portion ranges from 5% to 25% of the cost of the same and a tax levied by special assessment under the Covert Act (Assessment District), whereby a very small per cent of the cost of the roads might be levied but in such cases the cost per acre could hardly be more than one dollar or thereabouts and that only on the 40-acre lots fronting or abutting upon the highway improved. In this latter case no such tax could be levied unless the improvement was some form of pavement.—*Frank F. Rogers, State Highway Commissioner.*

Michigan Bean Ass'n

What is the address of the Michigan Bean Association?—C. S. C., Rhodes, Mich.

Address of Michigan Bean Jobbers Ass'n., F. B. Drees, Sec'y., Lansing, Mich.; Michigan Bean Growers' Association, A. B. Cook, Pres., Owosso, Mich.

Refuses to Protect Cemetery

There is a cemetery in Bear Lake Township that is privately owned by a certain man and he is worth many thousands of dollars. He sells the lots at prices ranging from $10 to $25 dollars. He keeps no fence around the cemetery, does not a thing to keep it up, briars are growing in it, cattle have run through it. It is impossible for the people owning the lots to keep it up when there is no fence to protect it and the vacant lots growing up with briars, etc. Could this party be compelled to fence and clean out the briars, weeds, brush, etc, out the vacant lots? The township or village can't do anything as the cemetery is owned by this one man. This man won't do anything on his own free will so I think he ought to be made to fix up the place and give a decent look to the city of the dead. I have loved ones buried here and so am interested. There are many buried there, most everyone feels disgusted but don't see that anything can be done about it. So I have written your advice editor who answers these questions in your paper—A reader of M. B. F.

If the cemetery is wholly owned by one person and he does all he contracts to do nothing can be done with him. His rights and duties may be controlled by the right he gives when one purchases a right of burial. If he gives a deed of the land then the purchaser alone has the right to improve or beautify. If the seller did not give an agreement to improve and beautify then he can not be compelled to do what he did not contract to do. I should think it advisable for your community to either organize a village or township cemetery or that you get together and buy a piece and organize an association of your own, elect your own officers and make such improvements as your patrons desire and are willing to pay for. The statute points out the way to secure one.—*W. E. Brown, legal editor.*

A WIFE'S PROPERTY RIGHTS

(a) Does the wife hold one-third of her husband's property?
(b) If the wife dies who does her property go to, husband or children?
(c) Can the wife will her property to any one in case of death?
(d) If wife hasn't any property in her own name.—A Subscriber.

(a) The wife does not hold one third of the husband's property during his life. If the husband dies first and there are no children she takes one half of the real estate and one-half of personal after payment of debts and allowances. If there are children the widow takes one third of the real estate. If one child she takes one half of personal after payment of allowances and if more than one child she takes one third of personal. She may have an election to take dower or homestead.

(b) If a married woman dies leaving a husband and no children the husband takes one half of the real estate and one half of personal, after deducting allowances; if she leaves one child all of the real estate descends to the child and one half of the personal to the husband. If she leaves more than one child then the husband gets only one third of the personal after allowances and the other two thirds goes to the children. This is property she owned during her life and not an interest she may have in her husband's property had she outlived him.

(c) The wife has a right to dispose of all of her property by will to whomsoever she chooses. She must possess the mental competency to execute a will the same as the husband.

(d) A wife may make a will even though she has no property and it will convey such property as may come to her before she dies. Of course she can not dispose of property that does not come to her in her lifetime by descent, by will or by purchase. The title must be vested in her before she dies or she can make no disposition of it by will.—*W. E. Brown, legal editor.*

WINNING PRIZES Is a habit with this noted hog, Big Bob Mastodon, belonging to C. E. Garnant, Eaton Rapids, Mich.

A PERSISTENT PUBLICATION

One year ago last March I subscribed for a daily paper from their agent, receiving a receipt that I paid for same. About the time the year was up their agent called on me again, but I refused to renew my subscription, also notified the publishers of same. The paper still comes daily. Finally I put them back in the mail box marked (refused), until the mail man was disgusted and told me to burn each issue. Finally I had the paper stopped by the P. O. authorities. Nothing was heard of them until about a month ago. when I began to receive threatening letters from a law firm in Kansas City, Mo. Now am I obliged to pay for something I didn't want? I never fail to pay a just account, but do not feel like paying for something imposed upon me.—E. Z., Harbor Springs.

Under the statement of facts given you are not liable for any price to the publishers. Pay no attention to the letters but keep all of them. They hope to annoy you into paying an unjust claim.—*W. E. Brown, legal editor.*

WHAT IS BEST TYPE OF DUROC?

In looking it over on page 13 of the Nov. 15th issue under the heading of Veterinary Dept., you attempt to describe Duroc type. Now every one has a right to his opinion and I do not wish to criticise but I from experience gained while showing at the National Swine show, International and large state fairs, I have found that the type wanted almost exclusively is not what you describe. I would like to have Michigan breeders know that I do not breed that kind. We want a smooth hog but also one that is long and high. It is impossible to get hogs too high to suit the Duroc breeder of today. With this he wants very heavy bone, straight legs, good feet, wide open eyes, dished face, pendulent ears, medium cherry color. deep hams, arched back and a hog that is as smooth as a ribbon. Trusting that you will accept this in the right spirit, I am—*O. F., Sec'y-Treas., Michigana Farm, Ltd., Pavilion, Mich.*

We are pleased to have your views upon this subject. The article to which yop refer was written by a supposed authority upon the subject. His opinion is not final, by any means. We would like to hear from other Duroc breeders on this matter.—Editor.

Pea Growers Seek Information

Will farmers anywhere in Michigan who grow green peas on contract for a canning factory write me fully in reply to the following questions? The writer would like to hear from a large number of growers in different parts of the state and will appreciate your co-operation.

What price is the canning company going to pay you for green peas for 1920?

Are you paid on a flat rate or a sliding scale?

How much will you have to pay for the seed per bushel?

Can you enlighten me to the principal terms of the contract?

Do you get the pea straw back for feed? What arrangement does the company make relative to the pea straw?

What does it cost you to produce and harvest an acre of peas?

Is there a serious shortage of pea seed for 1920? Thank you!—*Guy W. R. Curtis, president, Kent County Pea Growers, Kent City, Michigan.*

Investments, Wise And Otherwise

AN AUSPICIOUS TIME for the opening of this department, for investors have indeed been brought to realize that there are "wise" and "otherwise" investments. Call money started to climb a week ago; then took a jump and reached the highest point in twelve years. Those who had bought stocks on a margin soon found their securities selling off, and being unable to respond to the call for more money, dumped their holdings, and chaos reigned for a few days. Professional traders, with shears sharpened for the occasion got busy, and the number of meek lambs which lost their fleeces just as the cold spell was coming on, will reach into the thousands. Wall Street shears the lambs as soon as the number reaches a point where the shearers can have a full days job, and you meek little fellows who get into the corral with the "old market bucks," will not only loose your financial fleece, but you are quite liable to carry away some financial wounds which will be a long time healing. Again, for "'steen thousands of times,"—don't buy stocks on a margin—the moment you do you are securely corraled with the little lambs. The recent stock flurry cost small investors millions of dollars..

CANADIAN GOV'T BONDS

Your new department will be a great service to your readers. What is your opinion of Canadian Government bonds? Is the investment safe?—Henry J. Allard.

The Victory Loan now being floated by the Canadian government is meeting with a brisk demand, and it is doubtful if even now you can get these bonds direct. Two issues are being put out, one due in five years and one in fifteen years. The five year bonds with the present discount on Canadian money, will net investors five and one-quarter per cent; the fifteen year bonds will net five and three quarters per cent. This investment is absolutely safe; the Victory Loan issue will go above par within three months. Don't hesitate a moment; buy these bonds direct if you can. I will be glad to buy these bonds for you through the Commercial National Bank Detroit, if you can't get them from our local bank.

PETOSKEY CEMENT COMPANY

Kindly give your opinion on Petoskey Cement stock. Do you consider the stock a good investment, and what is the condition of the Company.—H. J. Ellis.

Kindly remember, Neighbor Ellis, that we are not going to advise you to purchase stock in any commercial concern. We are going to get you such facts as are a matter of public record concerning these Companies, but when it comes to whether you should buy or not—believe me, that matter is entirely up to you. Possibly we can prevent your biting a bare hook, if the hook is baited, you alone must determine whether it is "bearded" or not. Will get you information within ten days.

DELCO-LIGHT

"Electricity for every Farm"

The Delco-Light engine is **valve-in-the-head** type—used in the best and most powerful airplane engines and in hundreds of thousands of automobiles.

It is air-cooled—runs on kerosene in any climate—has only one place to oil and has a simple mixing valve in place of carburetor.

The storage battery is exclusively designed and built for Delco-Light with thick plates, wood and rubber separators and many improvements that insure long life.

Delco-Light long ago passed the experimental stage and has gone through the refining influence of three and one-half years of production and of usage by 75,000 customers.

You will find plants in the homes of your community. Just ask your neighbor about his Delco-Light plant.

Delco-Light makes happy homes; it saves time and labor, taking away lots of hard, unpleasant tasks. It "Pays for Itself" by the work it does and the time it saves.

Of the more than 75,000 Satisfied Users of Delco-Light, the first are among the most enthusiastic—proof that the simplicity and durability of Delco-Light meets the requirements of its customers.

There's a Delco-Light Man Near You

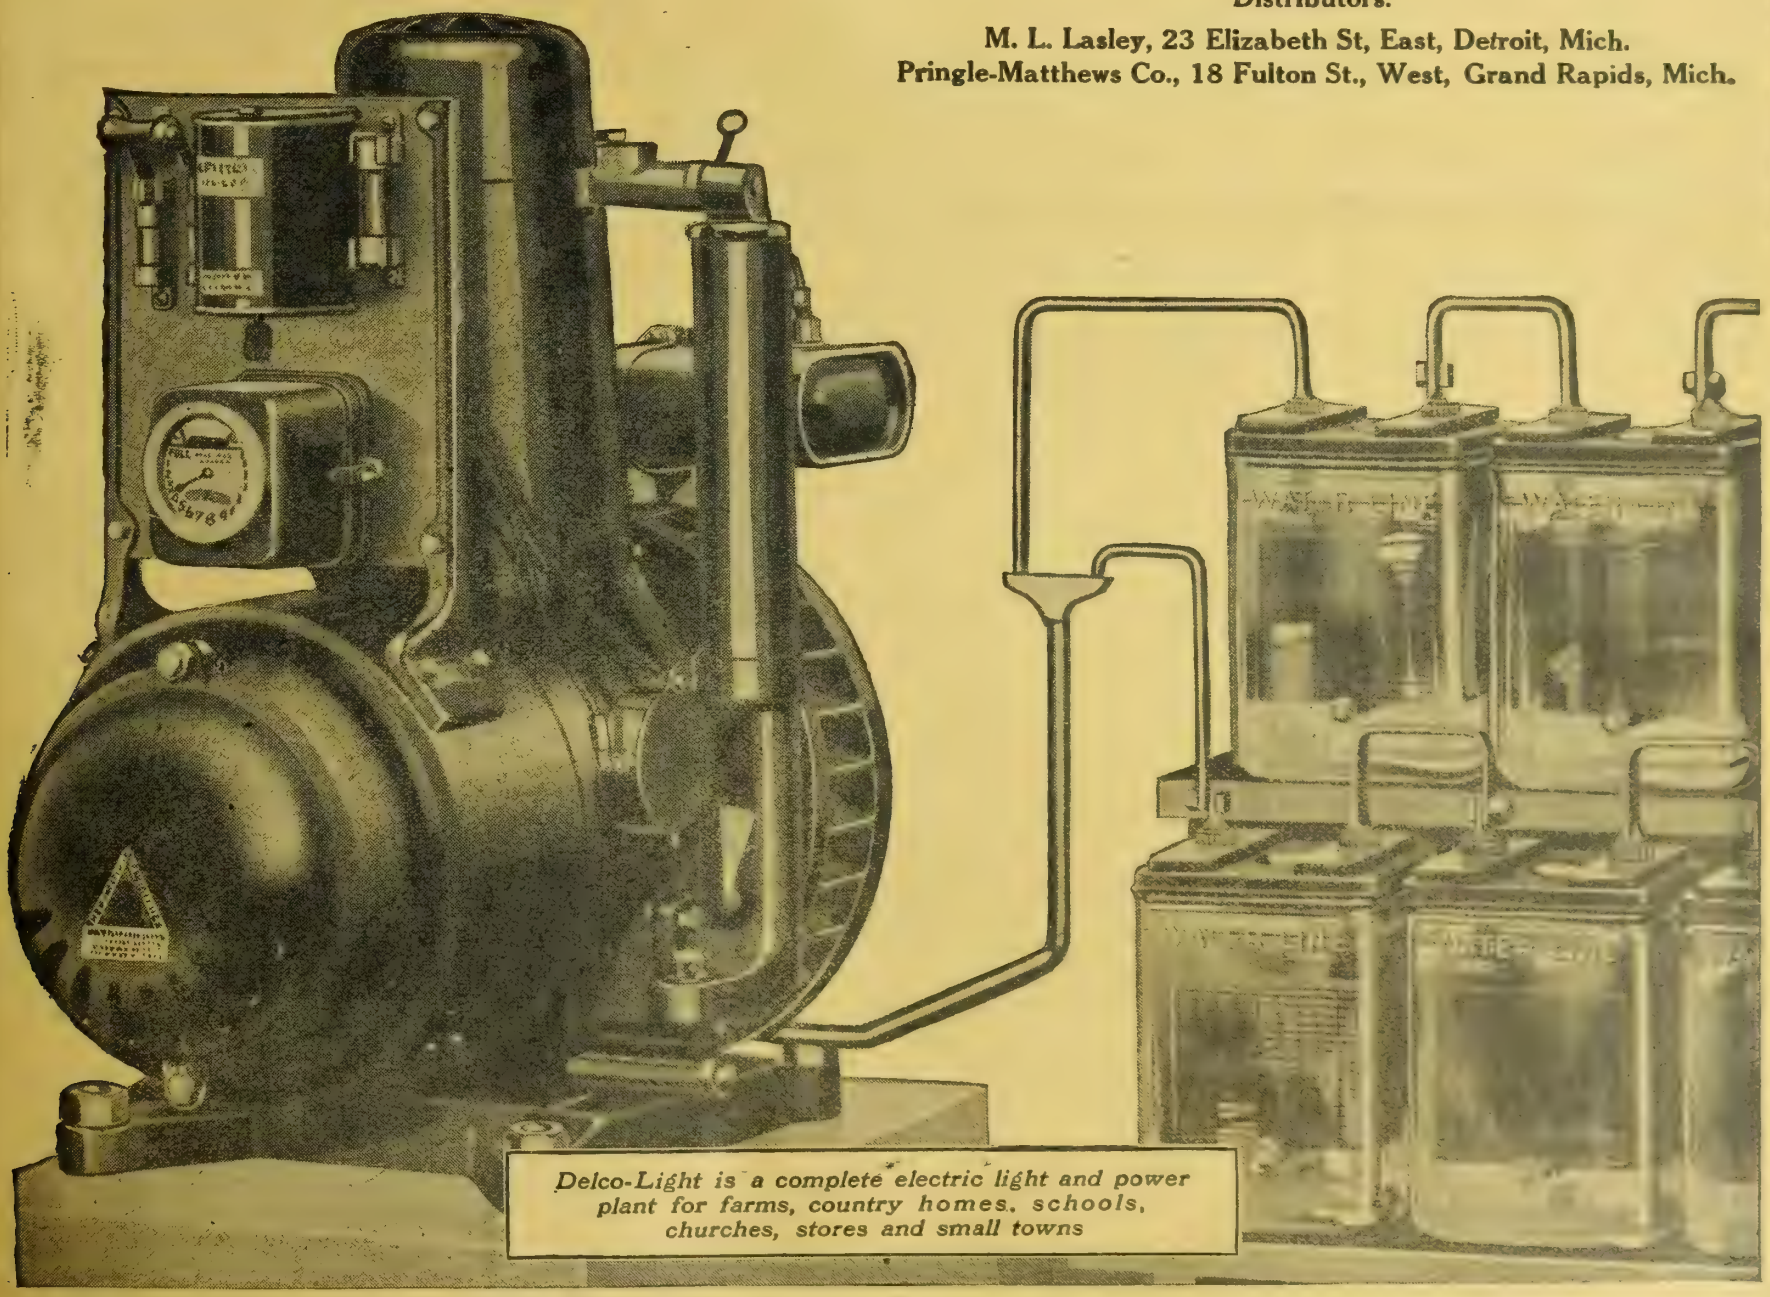
Makers of Delco-Light Products
Dayton, Ohio

Distributors:

M. L. Lasley, 23 Elizabeth St, East, Detroit, Mich.
Pringle-Matthews Co., 18 Fulton St., West, Grand Rapids, Mich.



Delco-Light is a complete electric light and power plant for farms, country homes, schools, churches, stores and small towns

MARKET FLASHES

WEEKLY TRADE AND MARKET REVIEW

In view of the oft-repeated charges that the peace treaty and League of Nations covenant were drawn to suit "Big Business," it was expected that the practical rejection of the treaty by the Senate might affect business conditions adversely .Many were prepared for a stampede in the stock market. But little of any note happened. When the news of the senate's action reached the stock trade centers there was a slight fluctuation and some of the industrial stocks declined, but in a few hours trading resumed its former activity.

The delay in bringing about an amicable settlement of the coal strike keeps business in a state of suspense, any many factories have been obliged to close or curtail their production because of lack of coal. Aside from this business conditions are fairly good.

The failure of the Senate to raify the peace treaty is quite apt to have a detrimental effect upon export business of every kind. No permanent credit arrangements can safely be entered into between this and other countries until the agreement of peace is signed. It is rumored that considerable export business has been placed for American grains, but whether or not the peace treaty rejection will result in a cancellation of this business remains to be seen.

Prices on farm products are generally higher. This applies particularly to corn, wheat, oats, hogs and potatoes. Farmers are either not selling freely or else there is not the stuff in the country to meet the demands. Farmers are showing the best judgment in years in their manner of marketing their products. Nothing helps more to maintain uniform prices than a steady and uniform movement of crops.

STRONG DEMAND FOR WHEAT

WHEAT PRICES PER BU., NOV. 25, 1919

Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.24	2.24	2.35
No. 2 White	2.22		
No. 2 Mixed			

PRICES ONE YEAR AGO

Grade	Detroit	Chicago	N. Y.

No. 2 White	2.20	2.21	2.34
No. 2 Mixed	2.20	2.20	2.33

We realize that most of our readers have lost interest in wheat for this year, most of them have disposed of the crop, but if they will take the time to follow this market from now on they may see some developments which will be a surprise to them. For three months the tendency in wheat has been toward higher prices despite all claims that the large crop would result in lower prices and possibly a huge loss to the government. Notwithstanding the unsatisfactory exchange conditions, huge quantities of wheat have already been exported. Except for an occasional glut at certain terminal points caused by shortage of cars or ships supplies have not been plentiful. The price of wheat is up now several cents above the guaranteed price and mills are having difficulty getting enough to fill their orders. Dealers declare that there is no excuse for a shortage of wheat at milling points with such a large crop on hand and the government holding nearly three hundred million bushels. Most of the wheat is out of the farmers hands and except what the government controls is in the elevators of the speculators who are prepared to make a killing. And they will make a big killing providing the government removes the embargo on wheat exports.

CORN BOOSTED BY EXPORT RUMORS

Talk of export business has still further strengthened the corn market. Promise of an early settlement of the coal difficulties is also counted as a bullish factor. County offerings have been rather light for the past ten days and supplies are not accumulating. As a result buying is active and dealers who have sold short are having difficulty getting enough grain to fill their contracts.

CORN PRICES PER BU., NOV. 25, 1919

No. 3 White	.75	.73	.81
No. 4 White	.74	.72	.79

Chicago reports oats stronger in sympathy with corn but this grain ruled quieter on the Detroit market, the eastern and export demand having slackened up.

Domestic demand for oats is fairly good, the crop having been practically a failure in many of the eastern states. The oat market is generally higher now than it was six weeks ago. The producer continues to hold for higher prices and there is every reason in the world to believe that he will get them. In the event of the next congress ratifying the peace treaty export demand for oats as well as other grains is expected to be unusually brisk.

RYE AND BARLEY

There has been a good export demand lately for rye and offerings on the principal markets have been eagerly taken up. The Detroit price remains slightly above the $1.40 mark for the best grain, though a higher market is looked for in the immediate future providing the eastern and export demand continues.

Barley is firm and the price has advanced a notch or two. The majority of sales made last week on the Detroit market were for $2.90 per cwt.

Pittsburg	28.00 @ 29	28.00 @ 29	28.00 @ 29

There is only a moderate amount of hay moving to market and the supply on hand is working lower. Trade in the East is inactive and markets are only steady. Western markets are strong and higher under good buying and there is some difficulty in securing enough stock to supply the demand. Farm activity is still the cause of the small country loadings in some sections, but prices do not suit producers and they are slow to sell. Good pasturage has kept the demand at a minimum this season and the markets have been sustained by the lack of supplies rather than the necessity for hay.

BEANS DULL

Late last week beans took a slight slump and the Detroit market now quotes $6.85 per cwt. Receipts at country elevators in Michigan are very light, the farmers having learned that the best way to bolster of the market is to hold off selling for a time. It is generally felt that had the farmers not been so eager to sell their beans when threshing was in progress that the market would be in a much better condition than it now is. So few beans have been marketed by farmers in the past thirty days that it is inevitable that the surplus on hand thirty and sixty days ago in country elevators and wholesale houses must soon be exhausted in which event the price will naturally be better. One Michigan elevator, in a report to the Price Current Grain Reporter says: "Out of the estimated total 1919 crop of 4,000,000 bushels it is estimated that 1,200 cars or about 1,000,000 bushels were shipped out of the state during October. While we do not look for 10 cent beans, it is our opinion that inasmuch as about one-quarter of our 1919 crop was shipped out of Michigan in one month, nothing can keep beans from reaching the 8 and 9 cent mark."

The average yield for the state is now placed slightly above 12.7 bushels.

BEAN PRICES PER CWT., NOV. 25, 1919

POTATOES ADVANCING

SPUDS PER CWT., NOV. 25, 1919

	Sacked	Bulk
Detroit	3.00	2.80
Chicago	2.85	2.75
Pittsburg	3.00	2.75
New York	3.00	2.75

PRICES ONE YEAR AGO

Detroit	1.85	1.75
Chicago	1.70	1.65
Pittsburg	2.20	2.00
New York	2.25	2.00

Potato prices have steadily advanced for the last thirty days and there is no telling how high prices may go. Some expect the record prices of 1916 to be broken but others point out that the supply is normal and that there is no reason for abnormally high priced spuds. The car situation is bad in Michigan, but worse in other states according to reports of the past week. Farmers in this state are holding a goodly share of their crops. Those who are members of co-operative commission associations are storing their potatoes in the warehouses of the associations, expecting higher prices While we firmly believe that prices will be higher we would not urge our readers to hold out too long. Canada has some potatoes for export. Just how many we do not at present know, but the several thousand cars that came into this country late last spring were a big influence in keeping down the price. We think it would be well for our readers to dispose of half their present holdings by the first of the year, and speculate on the balance, if they desire. The present favorable condition of the market, in view of the comparatively ample yield seems almost too good to be true.

New York dealers are paying farmers $1.50 per bushel and the talk is for $1.75 to $2 potatoes by the first of the year. We expect that another thirty days will see dealers in Michigan offering $1.50 per bushel, providing they can get cars to move the spuds freely.

FRUIT MARKETS DULL

Fruit markets generally are rather dull with plentiful supplies for most items. The tone was easy in Detroit and elsewhere for apples. Cranberries are in great demand in Southern Michigan, anticipating a Thanksgiving demand, and with supplies too short. Detroit quotes Spies at around $3; baldwins, $2.50; greenings, best, $3.

From Boston there comes an in-

LAST MINUTE WIRES

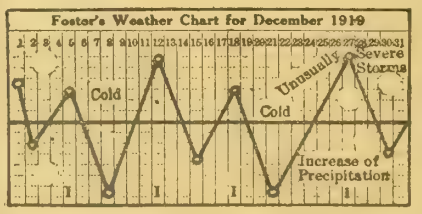
DETROIT, Nov. 25.—Corn temporarily easy with slight changes from last week's quotations, but with bullish factors in the offing. Oats firmer in face of decreasing supply, with gain of 1-2 cent. Wheat quiet and steady. Rye in active shipping demand and advanced 2 cents. Beans, rather quiet, with $6.75 per cwt. the prevailing price. Chicken market weak and lower. Turkeys needed.

CHICAGO, Nov. 25.—Corn bullish, with one to two cent gains, as food industry recovers from coal difficulties. Export corn demand also general bullish factor, boosting hog figures. Oats rise.

(Note: The above summarized wires are received AFTER the balance of the market page is set in type. They contain last minute information up to within one-half hour of going to press.—Editor.

THE WEATHER FOR THE WEEK

As Forecasted by W. T. Foster for MICHIGAN BUSINESS FARMING



Foster's Weather Chart for December 1919
1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29 30 31
Cold
Unusually Severe Storms
Cold
Increase of Precipitation

WASHINGTON, D. C., Nov. 29,'19. —Warm waves will reach Vancouver about Dec. 1, 6 and 11 and temperatures will rise on all the Pacific slope. They will cross crest of Rockies by close of Dec. 2, 7 and 12, plains sections 3, 8 and 13; meridian 90, great lakes, middle Gulf States, Ohio-Tennessee valleys 4, 9 and 14; eastern sections 5, 10 and 15, reaching vicinity of Newfoundland about Dec. 6, 11 and 16. Storm waves will follow about one day behind warm and cool waves about one day behind storm waves.

These disturbances will dominate the weather of North America from near Dec. 1 to 15. That half of the north will be unusually quiet; as the old folks used to say it will be a "weather breeder." A high temperature wave will cross meridian 90 near Nov. 30; following it temperatures will be a little lower following each disturbance till near Dec. 16, when the coldst waves of the month cross meridian 90, moving eastward.

Not for from Dec. 14 signs of a great change in weather conditions may be expected. Weatherwise people will see those threatenings and will begin to prepare for them; but other people, whose perceptive talents are blanks, will arrange for an outing, for an Indian summer excursion and, like the poor mouse, will walk, musingly into the trap. Oliver Wendell Holmes expresses my thot where he says: "This is not an accident but an inevitable result of long incubating causes; inevitable as the cataclysms that sweep away the monstrous births of primeval nature." I might repeat that "Coming events cast their shadows before." If we are not blind to nature's warnings we may see the signs long before. If you cannot see them, go watch the wild birds, they will tell you; or if you are not acquainted with the birds watch the tame goose. The despised spider has saved armies of men from destruction; watch the spider, he will not build any new webs just before the coming storm.

W. T. Foster

teresting story of how American apple exporters lost out on shipments to England. The story is as follows: "The latest report from Liverpool, 'Ikala' and 'Bohemian' cargoes selling, showed big losses to American apple exporters. There was a weak demand and poor clearance. Massachusetts Baldwins sold mainly at $6.60@9.50 with seconds $5.37@6.61; Maine Baldwins, $6.20@8.26; seconds, $4.75@6.20. Slacks sold from 62c to $1.02; bushels box Baldwins sold at $1.86@2.68. Record cargoes went last week from Nova Scotia to Liverpool, London, Glasgow and Manchester, 67,000 barrels bein gthe total. Maine Baldwins are showing up very poorly on the other side.

"In the local market there has been a slow trade this week with prices much easier. Barrels show little change if the fruit is fancy but it has been hard to move inferior quality fruit. Local buyers, like the English buyers, went red, eating apples and will not quibble over paying the prices for such but they do not want the fruit that is plentiful this season but colorless and small. Northwestern apples have held steady best Romes and Spitzbergens bringing $3.50 on extra fancy and $2.50 @3 on fancy fruit. New England boxes are unchanged."

CELERY PRICES SOAR

Detroit early this week reports insufficient spuply of celery and prices generally are higher. Kalamazoo brought around 30 cents per bunch last week and higher prices are quoted at some places this week.

ALSIKE SEED SOARS

Seeds were generally firm according to latest dispatches from the Detroit markets. The biggest rise in price was in the alsike section, which was 25 cents higher this week than last. Prime red clover quotes at $30, spot and December Alsike is at the same figure. Timothy is firm at $5.50.

EGGS SCARCE AND HIGHER

Dairy markets at Chicago, New York, Detroit and elsewhere are quoted steady to firm with much higher prices for eggs at numerous points. Detroit lacks butter supplies and quotes a firm market. Strictly fresh eggs are very scarce in that city, but all poultry lines excepting ducks suffer from a glutted market.

New York quotes dairy and poultry items as follows: Butter, firm, creamery, higher than extras, 73 1-2@74c extra (92 score) 73c; firsts, 63@72s; packing stock current make, No. 2, 50@50 1-2c.

Eggs—Firm; fresh gathered extras, 80@81c; do, extra first, 77@79c; do, firsts, 72@76c; state, Pennsylvania and nearby western hennery white, fine to fancy, 98@$1; state, Pennsylvania and nearby hennery, white, ordinary to prime, 85@97c; do, brown, 85@90c; do, gathered brown and mixed colors, 80@81c.

Cheese—Steady; state whole milk flats, current make, specials, 32 1-2@33c; do, average run, 31 3-4@32 1-4c; state, whole milk twins, current make, specials, 31 1-2@32c; do, average, 31c.

Poultry—Live steady: chickens, 21@24c; fowls, 18@30c; roosters, 20c; turkeys, 38@40c. Dressed steady and unchanged.

DETROIT PRODUCE MARKET

Butter: creamery, 64 1-2@65c; fresh creamery, in 1-lb. bricks, 63 1-2@68 1-2c per lb.

Eggs—Fresh eggs, 66@70c per doz. according to quality; storage eggs, according to quality, 47 3-4@51c per doz.

Cheese—Mich. flats, June make, 33 1-2@34c; Michigan flats, new make, 31 1-2c; New York flats, June make, 31c; Michigan single daisies, 32c; brick, 33 1-2c; long horns, 32c; Wisconsin double daisies, 31 1-2c; Wisconsin twins, 31c; limburger, 32@33 1-2c; domestic block Swiss, 35@38c; domestic wheel Swiss, 42@50c per lb.

BOSTON WOOL MARKET EXCITED

The market was more or less excited as a result of the heavier buying of wool on the part of some of the larger mills. Probably the amount of wool purchased has been magnified in the telling and retelling of the business done but there has been a substantial quantity of wool moved and everyone is feeling much better, especially as regards the position of medium wools which undeniably is much more assured.

Boston quotes Michigan and New York fleeces: fine unwashed, 65@66c; Delaine unwashed, 83@85c; 1-2 blood, unwashed, 80@81c; 1-8 blood unwashed, 66@68c; 1-4 blood unwashed, 65@67c; 1-2, 3-8, 1-4 clothing, 55@57c; common and braid 41@42c.

ONIONS QUOTED FIRM

Spanish onions sold at New York's auction last week included approximately 26,000 crates and 4,500 cases. Demand was strong from the beginning and prices advanced $3 per crate for both 50s and 72s and $7 per case. Quality was good throughout. Cargoes in port and scheduled for early auctions include 39,250 crates, 6,325 cases and 3,325 half cases.

From reports received it is estimated that 47,636 acres of early and late onions were harvested this year in the important onion producing states. Based on an average yield of 269 bushels per acre, the total production is estimated to have been 25,667 cars of 550 bushels each. In 1918 the area harvested was estimated at 64,715 acres and the total production 38,672 cars of 500 bushels each.

Meeting Dates of Farmers' Unions

The Farmers' Co-operative union of Bay County request that we announce the dates of their next fortnightly meetings as follows: Williams, St. Nov. 29; Wawkalin, Thur., Nov. 27; Monitor, Wed., Nov. 26; Merritt, Mon., Dec. 1; Frazier, Sat., Nov. 29; Portsmouth, Wed., Dec. 3; Hampton, Thurs., Dec. 4.

The above townships meet every two weeks. Announcement of future meetings will appear in thes columns.

Additional Markets p. 17

Have You Voted?

THE gubernatorial race is close. Three men are making a neck and neck, with two others running close behind. "We'll support any good farmer candidate" is the sentiment of the voters. The women are showing a keen interest. Where more than one desire to vote for the same man, place as many cross marks after the name of your choice as there are voters. The same ballot may also be used when two or more voters desire to vote for different candidates. If you prefer someone not mentioned write in the name on the dotted line. Then clip the coupon and mail it to Editor Michigan Business Farming, Mount Clemens.

A NOTICE
To Users of
LIMESTONE SULPHATE *of* AMMONIA "U—S" POTASH

DURING the months of November, December, January and February, we will postpone the payments of shipments of Solvay Pulverized Limestone, Arcadian Sulphate of Ammonia and "U-S" Potash.

Shipments made during this period will not be billed until April 1st, 1920, payable at a 3% discount until April 10th, or net on or before July 1st, 1920.

Each Spring we receive a flood of orders that delay shipments simply because the orders are bunched. Ordering during the winter will prevent delay of your shipment.

In addition, figures prove that the highest single cost of handling an application of Limestone is the hauling from the car to your farm. In winter this cost is greatly reduced—the roads are hard—you can better afford your time during the winter than at a busier season of the year—you can better release your horses for this work.

Buying now means saving money, time and insures delivery.

Another Solvay Service

Through a special arrangement with the John Deere Plow Company we are able to offer the Van Brunt Lime and Fertilizer Sower for shipment from stock which we maintain at Sibley, Michigan.

This implement seems to us to be the most solidly built and widely adaptable implement of its kind and we believe that the facilities for prompt shipment, either alone or in carloads of Limestone, which we can offer, will be of assistance to you.

We shall be glad to give full details about the John Deere Van Brunt Lime and Fertilizer Sower and about this special service of ours to you upon request.

SOLVAY PROCESS COMPANY
JEFFERSON AVE. DETROIT, MICH.

Edited by MABEL CLARE LADD

THE AGE OF ELECTRICITY

DAYS SPENT away from the office desk are rare, but recently I had the pleasure of joining a family group about the Sunday evening tea table, in a well-appointed farm home. About the table sat father and mother, two daughters of the impressionable age, a younger son and the elder sister and her husband, the latter just having arrived home from Detroit for a few days' visit. A pleasant gathering indeed, but as the conversation drifted from one theme to another, I soon discerned why so many farm women are yearning to leave the farm home for the city, why so many mothers say they don't want their daughters to do the drudgery of the farm home, to carry water for cooking and drinking to say nothing of washing, scrubbing, etc., (for while their husbands may be perfectly willing to do this hard work for them, every woman knows that a man cannot always be on hand when water is needed,) and why they finally decide that life would be much easier in the city or town where they could have running water, electric lights, etc.

The married daughter in this case made no comparison, indeed she spoke of the pleasure at again being on the farm, of the independence of farm life and the utter dependence of the city dweller upon others for all necessities. But when she spoke of their city flat, of the heating plant, running hot and cold water, electric lights, washing machines and sweepers and admitted that she did not know how she could do without them and as she talked her face lighted up, I could see that her hearers were interested. She had turned the key which set wheels in motion and the picture she painted banished "drudgery" from the realms of her little home.

In the kitchen, after tea, I had a chat with mother and for the first time was able to classify the term "drudgery." Every human being is susceptible to the influence of discouragement, but I have often wondered why we women were just a little more prone to easy discouragement by our material surroundings than men—now I am convinced in the above case at least it was because the surroundings in a material way do not minister their greatest material need. As I looked about me the whole problem was stripped of its mystery and I no longer wondered that women who have no modern conveniences in their homes, who are obliged to clean lamp chimneys and fill lamps, then carry lights from cellar to garret as they go about their duties after dark, wash by hand, crank the wringer, manipulate the churn and many times turn the cream separator, finally decide that life would indeed be worth living where these present day necessities were as much a part of the house as the cupboard, flour bin and dining room.

It is true that while, as a child, I lived upon a farm and today love the farm home, the real problems which the farmer's wife must meet in these present days of scarcity of help were then but little understood. Finally that chat in the kitchen brought me face to face with the facts, and then I understood where real discouragement "creeps in"—it is when the conditions under which others live "creep out," and we make comparisons.

Well the upshot of the whole matter was that I made up my mind that the problem had been presented and in the interest of farm home progress it must be solved. And so I returned to the city to make inquiries. Imagine my surprise to find that the means for dispelling farm drudgery had already been supplied and that its application could only be prevented by the lack of money or the fact that others like myself did not know how simple it all is. Upon my inquiry I was taken to a store and shown the little bit of mechanism, weighing only a few hundred pounds and occupying but a little space, and told that it was so simple that it was as easily operated by an inexperienced woman as a man, when I found that by simply pressing a button the same as I press one in my tiny apartment when I want a light, the whirring wheels and the humming generator set the wires tingling and dozens of electric lights gleaming and in addition sets belts in motion and wheels turning which in turn attacked "farm drudgery" and sent it sailing forever out of the farm home, I was so enthusiastic that I could hardly wait to see one installed in a farm home.

Of course we have these conveniences in the city, but how do we get them—pay for them of course and then never own them—rents climb higher year by year and soon we pay enough to have bought the whole outfit while after installing a system in the farm home you really own your own "water works system" and "electric lighting plant."

Can you afford it? Personally rather than do all the work there is in any home which could be eliminated by this little plant, I would rather go in debt and have it. But not many of our readers would have to go in debt for it, for if you can afford a Ford car you can afford to own your own lighting and water system and personally I would rather have the system first than to rattle to town in the back of a Ford car.

Electricity can make joy out of drudgery.

A power-driven cream separator is a mighty big help.

Women's Opportunities in Politics

A Department Conducted by Judson Grenell

WOMAN BALKS AT ARMY BILL

PERSISTENT efforts to lasso and bring back into the reservation "the lady from Ohio" who jumped the National Democratic Committee a few weeks ago in protest against universal military training have proved unsuccessful up to date. Miss Florence E. Allen, the Ohio member on the National Committee and a prominent woman attorney in Cleveland, has given the following statement:

"My decision is final. I agree with you that my party connection is more than skin deep. There is something in me deeper than party affiliation, however, and that is the determination to fight the causes of war wherever I find them. To my mind compulsory military service is one of those causes. I still fail to see how I could speak my mind upon it and hold the position I occupied, sponsored as the measure was by Mr. Baker.

"I do not consider that I have left the party. I have resigned a position in the party but I expect to work with my party, if, on the whole, they maintain their true principles. But compulsory military service is so subversive of the whole structure of our democracy that I cannot understand how they can propose it."

WOMAN'S reason "Because" has always been a good joke with men, but at last we have them on the run, for since we are to have our say in politics, we want to learn all about the reasons for doing thus and so, and our only way to learn seems to get the opinion of as many men who are supposed to understand these matters as possible, but lo and behold, we find many there are who just know they are right—or it's the thing to do according to the party platform, but for a reason, they simply must revert back to the all—"because." However, we will not be floored, we will find out for ourselves, and so we continue to read all about the subject of voting, as written by men who are in position to know of what they write. The following is a continuation of Mr. Judson Grenell's interesting treatment of the subject given above:

Newspapers

This is a newspaper age. More than ever before, the voter is compelled to rely on the newspapers for information concerning candidates. Still, the woman voter is advised to place little reliance on the partisan newspaper for the whole truth about candidates. The partisan newspaper is a "hired man," who obeys the "boss." It is not a free agent. The political boss is an anachronism in a democracy, and the partisan newspaper is equally out of place.

Not a long while ago newspapers were mostly partisan in their political utterances. This time has happily passed. Independent thinking, on the part of the people, has led to independent voting, and now the majority of newspapers, as business propositions, have joined the "independents" in this respect. They still largely represent class interests, which interests are sometimes aligned with party interests, but they do furnish the public with much of the information that will enable the woman voter to intelligently select her candidates.

Still, in pre-election announcements from any source, the woman voter must read up, read down, between the lines. And then draw her own conclusions.

Civic Associations

Then civic associations having at heart the good of the public are more and more digging into and bringing to the surface and exposing to the light of publicity candidates' records. So long as these are kept free from party control and are not warped by class interests their announcements carry weight, as they should. As a matter of fact, however, class interests are very apt to crop out. The "class" is "nearer home," and strive the members ever so hard, they will give their opinions a twist that hides as well as discloses some things. So it is necessary to know who are "running" these civic associations, and whether all classes are represented in the directorate. Unless all classes are represented, there will be unwitting bias, in spite of honest intentions. And bias warps the truth, politically, socially, economically, religiously.

However, even if civic associations do occasionally favor the least fit candidate ("to err is human") taking it all in all, it will show wisdom to thoughtfully accept the advice offered, carefully weighing it in the scale of right and justice.

Work for the Women's Club

In this matter of "sizing up" the fitness of candidates, the Woman's Club can do invaluable work. Heretofore barred from "mixing in" in political affairs, most of these clubs have been engaged in social activities more than with domestic or political problems. Conditions have changed. Now a great and important task awaits the club woman. The elevation of women to political equality with man has thrust upon her duties to which she has been a stranger, except in a very limited way; and these duties are of paramount importance, intimately affecting her home life and general happiness. She can neglect them only at her peril.

The Knights of Labor once exerted great influence in the world of industry. In their day, they did more to give wage workers, who were members, some inkling of the underlying principles governing the production and distribution of wealth than do ordinary trade unions. And this is ascribed to the fact that their rules of order imperatively demanded that at each session of the assembly at least ten minutes should be given to discussing "labor in all its interests." Mere "business" was to be laid aside ,no matter how seemingly important, in order that the membership might enlarge its mental horizon and be better able to understand the labor problem.

Women's clubs will do well to graft this idea on to their rules and regulations. If at each session ten minutes only is given to studying some phase of political economy, it will be found wonderfully broadening, and wonderfully enlightening. Often the ten minutes will be stretched to half an hour or more, and those who are present will go home clearer minded and better able to vote intelligently.

No Voting is Pernicious

Sometimes all the candidates aspiring to office are seemingly equally fit. In this case the wrong thing to do is to abstain from voting. Always vote; make some selection; vote. Voting is a duty as well as a right. It is dangerous to acquire the habit of not voting because "it makes no difference who is elected." It makes a great difference whether or not the woman voter goes to the polls regularly. To do otherwise is an evidence of mental laziness—disinclination to make up her mind. This is something pernicious that must be fought against and avoided. There is danger that the day will come when the habit of not voting will give unfit candidates their chance to seize offices, or to lay plans to loot the public treasury and get away with something for nothing.

Service

As regards "service for profit," or "service at cost," this is a state and national problem as well as a local question. Suffice it to say at this time in connection with local affairs, that no one can with safety to the community be given a monopoly of

LATEST STYLES and New York Patterns

3027-3004.—Costume for home or business. Waist 3027, cut in 7 sizes, 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 38 will require 3 1-2 yards of 27-inch material. Skirt 3004, cut in 7 sizes, 22, 24, 26, 28, 30, 32 and 34 inches waist measure. Size 24 will require 2 1-2 yds of 48-inch material. The width at lower edge of skirt, with plaits extended is 2½ yards. Two separate patterns.

3029.—Girls' Dress. Cut in 4 sizes, 8, 10, 12, and 14 years. Size 10 will require 4 yards of 36-inch material.

3021.—A Smart coat. Cut in 6 sizes, 34, 36, 38, 40, 42 and 44 inches bust measure. Size 38 will require 6½ yds. of 52-inch material.

3009.—Girls' Dress. Cut in 4 sizes, 4, 6, 8 and 10 years. Size 8 will require 2¾ yards of 36-inch material.

2672.—Ladies' Apron. Cut in 4 sizes; small, 32-34; medium, 36-38; large, 40-42, and extra large, 44-46 inches bust measure. Size medium requires 4 yards of 36-inch material.

any social activity without danger of eventually being exploited. As a general observation, it can be confidently stated that it is not true, everything considered that the community is better served by a private monopoly than it is by its own public servants.

The best method of assessing and collecting taxes for local purpose is fully treated in a chapter under the head of general principles. It is sufficient to suggest here that monopoly and privilege, rather than labor wealth, are the more proper objects from which to draw revenue.

To sum up:

Prime Requirements

1. When making choice of candidates in local elections, the woman voter must read carefully all announcements, whether for or against the nominees.
2. Fit the candidates to the positions, independent of the presence or absence of party "labels."
3. Note how the candidate stands in his advocacy or silence regarding the use of public property for private gain.
4. Scan partisan pronouncements with caution, if not with suspicion.
5. Find out the standing of those with whom the candidate generally associates.
6. Study the community's needs in all its civic activities—schools, paving, sewers, water transportation, fire and police protection, beautification, etc.—and select for your candidates those who measure nearest to your ideals of what is best for the people.
7. Keep in mind the fact that in civic activities wise expenditures bring better results and greater satisfaction than penurious economy, just as it does with the family or with the individual.
8. Look beyond the immediate present when planning civic betterments. The woman who votes only for her selfish and narrow interests is a failure.
9. Never lose sight of the fact that bad local officials and inefficient administration is a blow at the home.
10. In raising revenue, favor the taxation of privilege rather than of wealth.

PREPARE CHICKENS FOR SALE

Starving of chickens is necessary before killing, because if a bird is packed with its intestines loaded with food, it may be quite presentable when leaving the farm, but during transit the food will ferment and a fetid gas is generated which permeates the bird's entire body, spoiling its appearance and its flavor after cooking. These facts are generally known, but are often neglected either entirely or partially. Some farmers believe that by starving chickens lost weight. The loss, however, is not appreciable, and as it is the interior organs which lose what weight is lost during a short period of starvation neither the appearance of a chicken nor its qualities as food are injured by twenty-four hours' starving in winter varying to forty-eight hours in the hottest weather, the exact time depending upon season and temperature.

If chickens are killed by any process which causes bleeding, the pressure of packing will make blood run from the wound in the mouth or throat and discolor the skin. Further, the clot separates from the watery part of the blood and the latter runs away and marks the bird—or other birds—spoiling appearance and lowering selling price.

A method of killing which avoids bleeding is that of "neck breaking." Chick is taken by both legs and wings in left hand, and with fingers of right hand under beak, the neck is stretched till something breaks in vertebral column. This method is rapid and almost painless because the moment the neck breaks, the spinal cord is severed, and whatever movements there may be later the bird's sense of feeling is absolutely nonexistent, although convulsive movements may continue for a short time.

Plucking should begin at once, and a good plan is to hold chick by legs and wings, taking feathers off tail, back, neck and outside of wings. Next pluck inside of wings, sides of body, legs, leaving breast until last. The principal places susceptible to tearing are the fillets on each side of breast.

Feeding Hens for Egg Production

The United States Department of Agriculture has just issued a bulletin on the subject of feeding hens for egg production. It comes at a time when the proble mof raising eggs at a profit is particularly acute. Some farmers can make money in eggs under present conditions, but there are a lot of them yho lose on their flocks every day and don't know it. We quote from the bulletin as follows:

"Good egg production and profitable returns from laying hens are largely the result of properly balanced rations composed of wholesome feeds.

"A balanced ration is a combination of feeds which furnish just the necessary amount of nutriments to produce the highest and most economical egg yields.

"In the experiments on which this bulletin is based general purpose pullets produced a dozen eggs from 6.7 pounds of food, and Leghorn pullets from 4.8 pounds of feed. Old hens require a much larger amount of feed than pullets in producing a dozen eggs.

"To get the most profitable results feed simple mixtures composed of home-grown grains and their by-products, supplemented with meat or fish-scrap or milk, such as a scratch mixture of 2 parts cracked corn and 1 part oats, and a mash or 3 parts corn meal and 1 part meat scrap. Raise all the green feed and as much grain as possible."

The number of this bulletin is 1067. Write the Department of Agriculture for a copy. It is free.

The Graduates

Oh, what a tangled web we weave
When first we practice to deceive
But if we practice till we're stars
We go to selling motor cars.

BAKER'S COCOA
LA BELLE CHOCOLATIERE
BREAKFAST COCOA

Full Address .....

DEAR CHILDREN: With Christmas just around the corner, everyone is getting very excited and making great plans for the celebration. I wish you would write and tell me what you are planning on doing, either in school, Sunday school or at home. Perhaps some one else will get a suggestion from what you are going to do so that it will help them to make the day more happy.

Requests keep coming in for the special Christmas presents which we are giving away. And I want to tell Dorothy Van Stunis, who wrote me this week asking how she could earn a flash light that all she will have to do will be to get two subscribers to M. B. F. at $1 each, and send the names with the two dollars direct to me, in care of Michigan Business Farming, Mt. Clemens, Mich., tell me that you want a flash light and one will be mailed you by first mail. Don't you see how simple it is. Every farmer wants to take the paper and it ought not to be hard for every one of my little friends to earn these beautiful gifts. This week I sent Leslie Harrley, of Kekawlin, one of those Boy Scout knives and I know how much pleasure he will get out of it.

Send your Christmas stories in right away as we have to get them to the printers very early or they will not be in time to be printed before Christmas, and after Christmas is over we are more interested in New Years and other things. Affectionately yours—LADDIE.

OUR BOYS AND GIRLS

Dear Laddies—I have never written to you before but I am going to write. My sister Emma wrote one letter but never saw it in print. I like the children's are queer little people. I read all are queer little people. I read that that about that knife. Well I am going to try my luck to get one subscriber for it. My father was to an auction sale today while I was in school. I am in the 8th grade. I like school fine. It is not so very hard. Our teacher's name is Miss Gouthes. There are 22 pupils in our school. I have three brothers and four sisters, their names and ages are Edwin, 10, George, 20, Cloval 23, and I am 14. Will be 15 the 25th of March. We live on a farm of 148 acres of land. We have 13 head of cattle, 6 milk cows, 5 young cows and three calves, 4 horses, 3 old pigs and six young ones, about 8 weeks old, one dog named Bud, 27 turkeys, 12 geese and about 50 chickens. Well I will say goodbye. Yours truly—Walter Bremer.

Dear Laddie—I wrote to you once before. I am twelve years old and in the 8th grade at school. I have two sisters and four brothers. Their names are Irma, Blanche, Harold, Earnest, Frank and George. My teacher's name is Mrs. Sherman. I will close; from Margaret Cook, Elsie, Mich.

Dear Laddie—I have never written to you before so I thought I would write a few lines to see if I could get a letter in print. We have two horses and two cows and two calves. Our barn burned last fall. It burned two little pigs and all of our tools, but we saved a wagon and a buggy and a hay rake and binder, hay cutter and that is all we saved. I am going to school. I am nine years old and am in the third grade. There are 17 scholars in our school. Our grades go to the 7th grade. I hope to see my letter in print. Louise Martin, Morley, Mich.

Dear Laddie—This is the first time I have written to you. I am 13 years old and in the eighth grade. I like to go to school. I have seven studies. We have twenty-two pupils in our school. We have lots of fun at school. We play out doors on nice days and on stormy days in the school building. Our teacher's name is Miss Chesser. My letter is getting long, so I will close hoping to see my letter in print. Mary Boxey, Gladwin, Mich.

Master Selden Smith is the grandson of Mr. and Mrs Frank Selden, well-known farmers in Ogemaw County Master Selden is an enthusiastic reader of the Children's Hour.

Dear Laddie—I am a little boy 11 years old. I live on a farm of 80 acres. I am in the 6th grade. When I go thru the 12th grade I am going thru college and learn book-keeping. We have pulled our beans. We have two horses, two cows, one calf, two pigs. For pets we have got 12 rabbits and two cats. This letter is getting long so I will close for this time. Wilbur Marshall, Gladwin, Mich.

Dear Laddie—This is the first time I have written to you. I am a boy ten years old and am in the fourth grade. We live on a 40 acre farm. We have two horses, four cows, five calves, six pigs and sixty chickens. I live one mile from school and a half a mile from church. I have two brothers and two sisters.—Gaylord Caszatt, Mt. Pleasant, Mich.

Dear Laddie—I have written to you twice before but have not seen my letters in print. I am twelve years old and in the seventh grade. I have a sister whose name is Elva. My grandmother takes the M. B. F. and likes it very much. As my letter is getting quite long I will close, hoping to see my letter in print. Yours truly, Mildred E. Field, Bangor, Mich.

The Plane, an Important Tool

THE PLANE is one of the most important tools that is used in wood work. It is the most complicated and requires much skill to use it properly and to keep it in good condition for use.

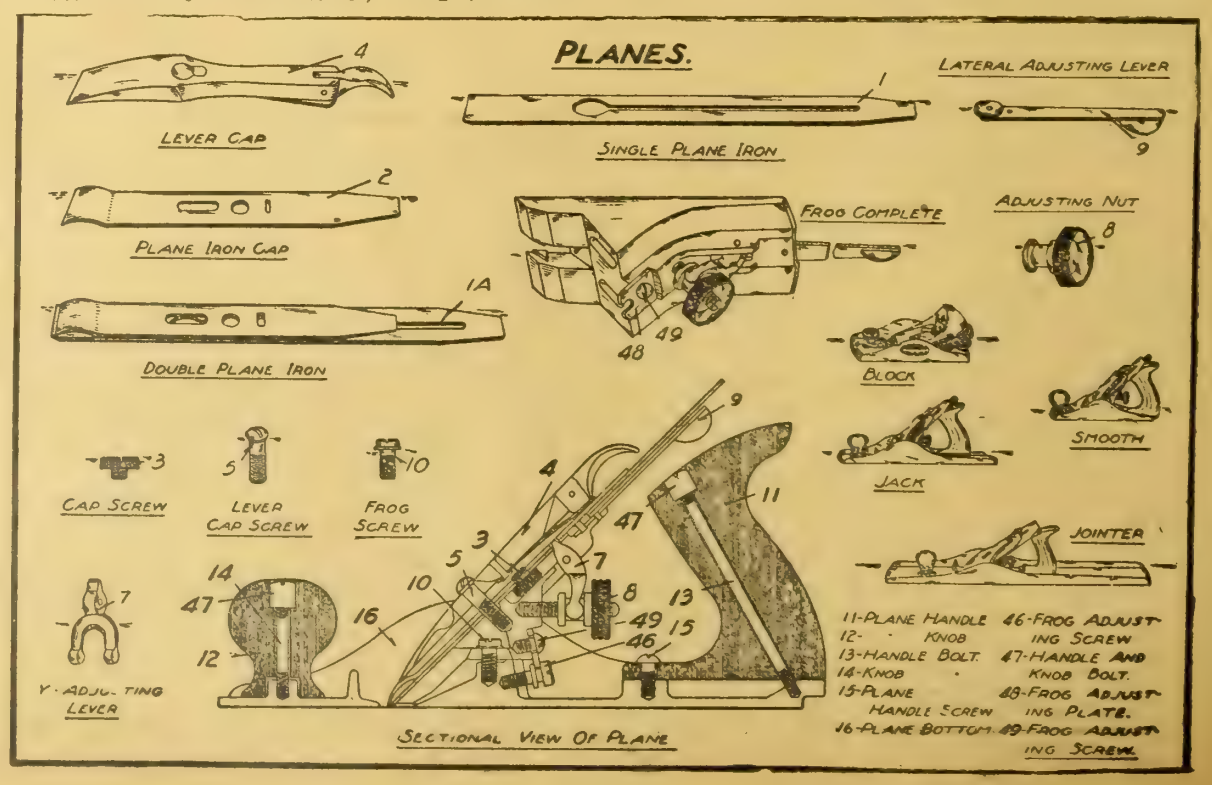
The old style planes were made with a wooden stock and the plane iron base was adjusted by striking it with a hammer. Our modern iron plane, while it will do no better work than the old wooden style, is much easier to adjust. The iron plane also holds its shape permanently, while the old wooden plane needs to have its face jointed from time to time.

There are many kinds of planes, designed for many different purposes, but the principle of their operation is the same as that of the one most in use—the ordinary bench plane. The planes with which the average person is most familiar are the jack, smooth, jointer and block planes. Should it be possible to have only one plane in your equipment, let it be the jack plane. This will answer the general requirements of the average worker.

The uses of these planing implements may be described briefly as follows: The jack plane is used for removing stock in rather large quantities, that is, for making the first or roughing cuts. It is about 15 inches long. The jointer is from 20 to 26 inches long and is used to straighten surfaces. Being quite long it will only cut on the high spots, thereby gradually bringing an uneven surface to one that is true. The smooth plane is 9 to 10 inches long and used only for smoothing surfaces. Being very short it can be used on irregular surface that are not necessary to be perfectly flat, but which should be smooth. The block plane is designed for use on end grain, that is, at right angles to the general direction of the grain.

The construction of the jack, jointer and smooth planes is very much the same, the variation being in the lengths. The sectional view in the drawing shows all the parts in position and the smaller parts are shown separately. Study the drawing thoroughly and note the relation of the parts to each other.

The plane iron and the plane iron cap (when placed together being called the double plane iron) are the most essential parts of the tool. The adjustment of these two with reference to each other is very important. The plane iron cap is often called the chip breaker, for that is what it is designed to do. If it is set with its edge too far from the edge of the plane iron, the shavings are not broken soon enough and the result is a rough cut.



LIVESTOCK DULL—PRICES ARE SLIGHTLY LOWER

CHICAGO live stock market declines led all other big centers of the trade. The receipts were very liberal in nearly all markets in the past several days, and that is blamed as the main bearish factor. The Clay Robinson & Co. report on Chicago market for the past week follows:

"Liberal receipts of cattle this week included a relatively large number of offerings fit for outlet on stocker and feeder account, the result of which has caused a decline in values. Best classes of stockers and feeders got off with the least break, prices showing a drop of only 10 to 15c. Common and medium offerings, however, broke generally 25c to 40c. Cattle appear to be worth the money and as prospects point to a drop in receipts we believe prices will work higher, more especially on high grade stock. We believe it will prove advantageous to prospective purchasers' interests to send in their orders now. The week of the International Live Stock Show, November 29 to December 6, always finds a large number of feeder buyers on hand and generally a sharply higher market. Get in your orders ahead of the crowd."

Chicago quotes hogs: bulk of sales $13.35@13.80; heavy butchers, $13.50@13.85; light butchers, 13.60@13.90; medium weights, $13.50@13.75; heavy and mixed packing, $12.90@13.50; rough, heavy packing, $12.50@12.80; light bacon, 160@190 lbs., 13.60@13.80; light mixed, 130@160 lbs., 13.25@13.60; pigs, 80@135 lbs., 11.50@13.75; stags, 12.00@13.25. A Good Way to Boost !

We will gladly supply any subscribers with enough sample copies of M. B. F. to pass out at any meeting or auction, where a large number of farmers will be in attendance. It is not necessary that you act as our subscription agent if you care to do this as a boost for this weekly. We will, however, be glad to pay you the same cash commission that we pay our agents. Write us, if possible ten days in advance of the meeting and tell us how many copies you can use, they will come prepaid and we will greatly appreciate the favor. Ask for a bundle !

Argentina Removes Restrictions

The embargo on the exportation of all agricultural commodities except sugar, which was imposed during the war, has been removed, cabled the American Ambassador to Argentina, under date of October 1, 1919.

Predict High Spud Prices thruout Season

THE opinion is general among potato trades that old potatoes will keep at high prices thruout the season, and from telegraphic advices from Maine some of the operators are working on this opinion. They shot the price up 50@75c per 165 pound barrel at loading station within the last week. This week they were paying $3.50@3.75 for spot delivery and were making contracts at $4 for January and February delivery.

The crop in Aroostook county is fair in amount. In fact, it is a little below normal but at Maine central points the crop is very light.

In New York state, the crop is much lighter than last year. The acreage was good but the seed did not yield as it should have. The peculiar thing is that state potatoes are of nice size and of good quality, but so many growers report that where they formely got six or seven potatoes to a hill, they have been running three to four, and this makes a vast difference in the total yield when it is general. Then, too, a late blight struck the state crop and did a great deal of damage.

The Michigan and Wisconsin situation has caused considerable conjecture among Eastern operators. From what they can learn, the situation through the Middle West is bullish. State shippers have been sending potatoes into the Michigan territory for several weeks at higher prices than the stock could be sold for in New York city. Many cars of New York state potatoes are going into Western Pennsylvania and Ohio districts which sections wee formerly supplied by Michigan. Those buyers out there are paying $2.80@2.85 per cwt., in bulk and $3 sacked. The best prices New York city would pay are $2.70 bul kand $2.80 sacked and those were the sales that were being made on New York state stock this week. This would indicate that there is a shortage also in Michigan. At New York state points, shippers were paying the growers $1.25@1.50 per bushel.

Eastern Pennsylvania has been shipping a great many potatoes but they have been going mostly to Jersey points. Pennsylvania stock is good this year. Shippers have been getting $2.80@2.90 per cwt., delivered and the stock is selling in New Jersey markets at $5.50@6 per 180 pounds bulk.

Down on Long Island where the crop is light, farmers are getting $1.75 per bushel or $3@3.10 per cwt. loaded on the cars. Most of the Long Island potatoes are being used in Brooklyn but a few are coming to New York. The general price in the yards for Long Islands is $5.75@6.25 per 180 pounds bulk.—*Chicago Packer.*

MAIL LIST REVISION

WE ARE anxious that every subscriber to M. B. F. should receive his or her paper on or before the Saturday of date of issue. To accomplish this and assure every reader of receiving every copy mailed we are revising our entire mailing system, placing all names in type, as shown:

John H Jones Nov 20
Capac Mich R1 22S9

The date shown following your name in the first line is the month to which your subscription is paid in full, in the above example, the subscription would expire with the month of November, 1920. Following the address in the second line, is the date when your subscription was received, this is our key by which we can look up your original order and remittance at any time, should a question regarding it arise.

IS YOUR NAME ON OUR LIST CORRECTLY NOW?

Look at the label on the front cover of this copy, is your name, address and date of expiration correct? Are you receiving more than one copy or is there any other complaint you have to make—

—please write us, clipping the labels referred to in your letter, so we can look them up and make corrections immediately.

IF THE LETTER (G) OR ANY DATE BEFORE (JAN. 20) APPEARS ON THE LABEL FOLLOWING YOUR NAME, PLEASE RENEW AT ONCE, WE WILL THEN PUT YOUR NAME IN TYPE AS SHOWN ABOVE AND GUARANTEE THAT YOU DO NOT MISS ANY FUTURE ISSUES !

GRANGE CONCLUDES SESSION

The National Grange elected officers last Tuesday, November 18. S. J. Lowell, Master of the New York State Grange was elected National Master and the other officers are as follows:

Overseer, B. Needham, Kansas; Lecturer, J. C. Ketcham, Michigan; Steward, Clark Baumgarner, Montana; Assistant Steward, O. L. Martin, Vermont; Chaplain, W. W. Deal, Idaho; Treasurer, L. H. Wright, Indiana; Secretary, C. M. Freeman, Ohio; Gate Keeper, F. A. Rodgers, New Hampshire; Lady Assistant Steward, Mrs. L. J. Taber, Ohio; Ceres, Mrs. C. L. Hunt, California; Flora, Mrs. C. O. Raine, Missouri; Pomona, Mrs. J. A. McSaprran, Pennsylvania; Members Executive Committee, T. C. Atkeson, West Virginia and W. J. Thompson, Maine; Member Board of Managers, National Grange Monthly, C. L. Hunt, Califor-

Resolutions adopted up to this time include recommendations for business an dlegislative co-operation; strict prohibition enforcement legislation; 100 per cent Americanism; orderly government and the rule of the majority; personal and governmental economy; strong government control of corporations, especially those engaged in supplying the necessaries of life; punishment for profiteers by imprisonment as well as fine; opposition to all government price fixing and opposition to taxation of Land Bank Bonds.

The Grange adopted a resolution declaring that the secretary of agriculture should be a practical farmer and pledging its efforts to securing the appointment of a man "fulfilling these conditions regardless of politics." It also adopted a resolution opposing universal military training and a large standing army and deploring "a caste of military authority which has its sole excuse in its shoulder strap."—*A. M. Loomis, assistant to T. C. Atkeson, Washington Representative.*

No Use Wishing for a Dish Set !

We have made hundreds of wives and daughters of real business farmers happy by giving them a beautiful American china set of dishes, which could not be duplicated in the local stores, absolutely free. We ask only for a few new or renewal subscriptions to M. B. F. If you would like to earn a set, just drop a postal card to the Circulation Manager, Mt. Clemens, Mich., asking him about the dish offer. There is no obligation on your part and not a penny for you to spend, whether you earn the set or not.

Tax Problems

By Judson Grenell

I should like to have a personal talk with someone who advocates site-value taxation. Is that the same as "single tax?"—L. F. E., Oceana County.

ANS.—You will find a "single taxer" right in your own locality; a Mr. S. E. Russell, living near Pentwater. "Wildwood Farm," I think his place is called. Site-valuation taxation is the equivalent of single tax. Some prefer the phrase, "location value." They all mean the same thing—the value created by the community independent of the labor of man.

I built a log house and homestead 40 acres in Iosco county, last winter and this spring the assessor put me on his book for taxes. Is that right? —P. O'M., Iosco County.

ANS.—That is the law. People who make improvemonts are sure to be fined—no, excuse me, taxed, for them. Evidently the state wants to discourage people making improvements. Of course, from my point of view, it is not right.

Berrien County has got to fork over $8,322,675.76 more state taxes this year than last. How in Heaven's name the farmers are going to get this back off the land I can't see. What are we coming to?—George Cotton, Berrien County.

ANS.—You are coming to tenant farming. Twenty-five per cent of southern Michigan farms are already farmed by tenants, which is a bad thing for the land and for the future prosperity of the state. In my opinion this conditon is due to in great part to unjust taxation.

The matter came up in the Grange meeting the other night, as to why everything should not be taxed and so bear its fair burden of government. I wasn't enough well posted to butt in, but I'm inclined to think improve-provements shouldn't be taxed. What is the quick answer to that proposition?—W. K., Oakland County.

Ans.—It is hard to give a short answer to an involved problem. In every community are to be found two kinds of values. One kind is created by the labor of man. The other kind is created by the community collectively. The first is labor value, the second is location value, or, it may be called site value. At any rate it is the proper source from which to draw revenue for taxation purposes, leaving the labor value to its producer. Taxing labor value discourages industry; taxing community value simply returns to the community an equitable source of revenue.

SHEEP TARIFF HEARING

The U. S. Tariff Commission is engaged in a systematic study of sheep and wool industry in this country as related to tariff legislation. The Commission will conduct hearing in relation to this subject early in December, supplementary to hearings which have recently been held in the range states of the west. Commissioner W. S. Culbertson will conduct these hearings which will be held in Columbus, Ohio, and Chicago, Illinois. The hearing at Columbus will be held on December 3rd in the hearing room of the State Department of Agriculture in the State House beginning at 10 o'clock A .M. The hearing at Chicago will be held on December 5th in the Stock Yards' Inn beginning at 10 o'clock A. M.

These hearings will be entirely public in character and will be open to all persons who care to attend them. Those who are interested in the subject matter are especially invited to present all available related facts and to discuss them fully before the Commissioner.

International Livestock Show

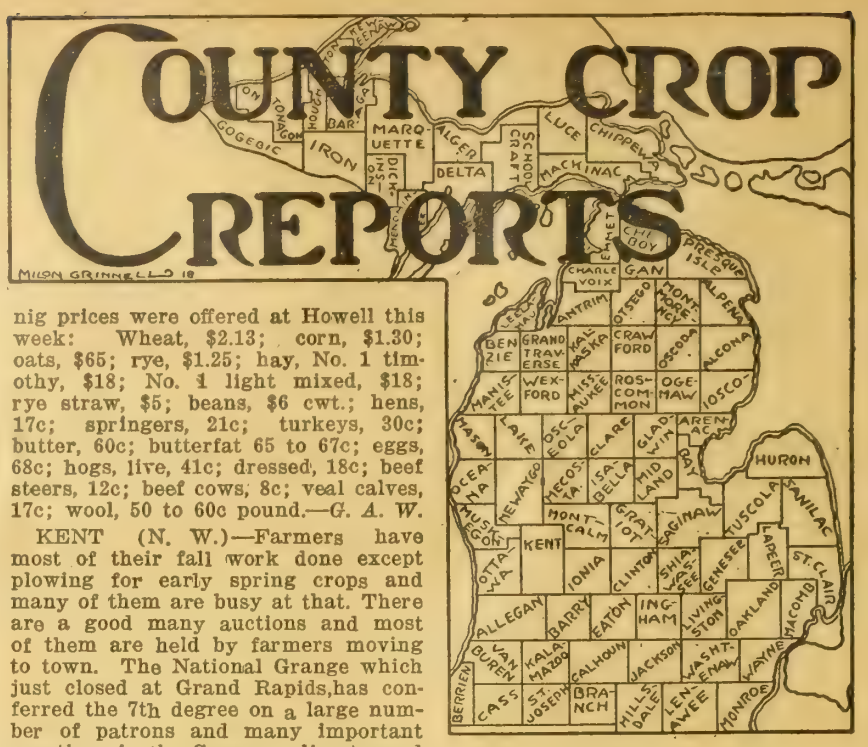
Going to the reunion at the Twentieth Anniversary of the International Live Stock Exposition at Chicago the first week in December? There will be a chance to see what an English judge thinks of our American Herefords, as Mr. William Smith, The Leen, Pembridge, England, will make the awards for this breed.

Summary of Crop Reports

FARMERS generally are busy with the chores of early winter such as getting in the supply of wood. There are reports from many crop reporters this week of general farm work such as plowing where the ground and weather permit. Some corn is being husked and cloverseed is being cared for. Numerous auctions plaster the countryside with their posters, but prices are said to be improving in some places. Many farmers are moving to town.

Crop reporters tell of movement of considerable grain to markets. Practically no reports of building are coming in, although minor activities in the home improvement line are noted, such as the installing of a furnace and so on.

Farmers generally are getting a little more time to show interest in their fraternal and public affairs. Reports by counties follow:



JACKSON (N.E.) — Most farmers are having their work completed, but at this writing many fields of corn await huskers, but mostly the power kind. Winter wheat looks splendid, and rye close behind. Stock-shipping has begun owing to a slight increase in price. The grains, except wheat, are still too low,but prospects are good for an increase, especially corn. Quite a number of cattle are being fed. Some plowing is being done, as the ground thaws for a day or two.—*A. F. W.*

MONROE (N.E.)—Fall work quite generally done although there is some corn to husk yet; weather is nice for this time of year. Very little moving to market. A few pigs, chickens and some cows changing hands. Lots of auction sales and most every other farm is for sale, which shows that farmers are not satisfied with conditions as they are; they are ready to support a farmers' ticket regardless of politics.—*G. L. S.*

CALHOUN (N.)—Farmers have fall work about done; there is some corn to husk yet. Some hay and straw moving. Lots of sales this fall. The weather is fine; lots of rain. Crops look good. There is not much building this fall. Prices offered in Battle Creek are: Wheat, $2.13-$2.15; oats, 75; rye, $1.25; hay, $25-$26; rye straw $12; potatoes, $1.50; hens, 18; springers, 20; butter, 60; lambs, 10-14; hogs,, 13; beef steers, 8-10; beef cows, 517; veal calves, 10-12.—*C. E. B.*

ARENAC (E)—Many acres of sugar beets were frozen in last week and the prospects for them to be taken out are slim; shortage of help the cause. Many farmers marketing their cattle, sheep and hogs. Some difference in price compared to a year ago. Hogs around 11½ and the price of lambs has been around 9 and 10. Cattle away down. Beans are up 25c cwt. Auction sales have been numerous and things seem to demand good prices, excepting horses which are a drag.—*M. B. R.*

MANISTEE (N)—The farmers are attending sales, getting winter wood supply; some are plowing, drilling, husking and hauling corn stalks to feed, butchering hogs and doing other odd jobs. The weather is yet stormy with continuous rains. The soil is moist. Farmers do not seem to be selling much at present. Some rye and pork going to market and chickens for Thanksgiving trade. Following prices were offered at Bear Lake this week: Butter fat, 71c; butter is still 55c and eggs 54c; potatoes $2; navy beans, $10.50 per cwt; rye, $1.15 per bu.; wheat, $1.95; buckwheat, $2.25 per cwt.—*H. A.*

MONROE (W.)—We have had some cold weather. It stopped plowing for a day or two. There is some corn in the fields yet to be husked. There is quite a little fall plowing being done. The wheat in this part of the county is looking fine. The farmers who raised sugar beets are busy hauling them to the cars; the beets are of fine quality this fall. Buckwheat has been a fair crop this fall and brings a good price.—*W. H. L.*

LIVINGSTON (N. W.)—Farmers finishing their fall work husking corn with machines and plowing for spring crops. Nice weather most of the time. The ground is quite dry for this season of the year. Quite a good many are baling hay and selling it. Work has stopped on the Grand River cement road for this fall with about half of the cement laid. The following prices were offered at Howell this week: Wheat, $2.13; corn, $1.30; oats, $65; rye, $1.25; hay, No. 1 timothy, $18; No. 1 light mixed, $18; rye straw, $5; beans, $6 cwt.; hens, 17c; springers, 21c; turkeys, 30c; butter, 60c; butterfat 65 to 67c; eggs, 68c; hogs, live, 41c; dressed, 18c; beef steers, 12c; beef cows, 8c; veal calves, 17c; wool, 50 to 60c pound.—*G. A. W.*

KENT (N. W.)—Farmers have most of their fall work done except plowing for early spring crops and many of them are busy at that. There are a good many auctions and most of them are held by farmers moving to town. The National Grange which just closed at Grand Rapids,has conferred the 7th degree on a large number of patrons and many important questions in the Grange policy toward the country as a whole seem to have been decided. The next meeting will be held in Massachusetts, their invitation having been accepted. There is not a great amount of marketing being done. A great many feeding cattle have been shipped in from the west. The Local Stock Shipping Association has shown itself to be a success.—*F. E.*

Farm Loan Question Box

For what purposes can a loan be made?—The money may be borrowed to discharge existing indebtedness, for the purchase of land, and for the purposes specified in the Law, such as the purchase of live stock, or for any kind of productive improvements, for fertilizer, for needed buildings, drainage, and for proper equipment.

What is a farm?—A farm to be considered as security for a Federal Farm Loan must be of suitable area and sufficiently improved to enable the owner to make his living and meet his amortization payments therefrom. No loan can be made on an unimproved farm.

What is the first step in securing a Federal Farm Loan?—Inquiry should be made of the Federal Land Bank of Saint Paul (or of your county agricultural agent, if there is one in your county) as to the headquarters of the National Farm Loan Association in your county and the name of the secretary-treasurer. The secretary-treasurer will furnish you with an application blank, which you will execute, giving the facts fully as stated therein. The Loan Committee of the National Farm Loan Association will then appraise your farm, make written report, upon receipt of which the secretary-treasurer will in turn forward it direct to the Federal Land Bank of Saint Paul. At the earliest opportunity, a Federal Government appraiser is sent to appraise your farm.

Must I subscribe for stock in the National Farm Loan Association in order to get a loan?—Yes, you must subscribe for stock in the National Loan Association to the amount of 5% of the face of your loan. The payment for your stock can be taken out of your loan. When you have completely paid your loan the Federal Land Bank will buy your stock back at what you paid for it, or you may turn it in as final payment on your loan.

The Federal Land Bank System is a true co-operative movement in which the farmers, who are borrowers, will own the capital stock. If the capital stock was sold to private individuals, they could arbitrarily fix the rate of interest to suit their personal desires. The borrowers under the Federal Farm Loan System, by virtue of the fact that they are stockholders, are not subject to arbitrary fixing of interest rate for privae gain.

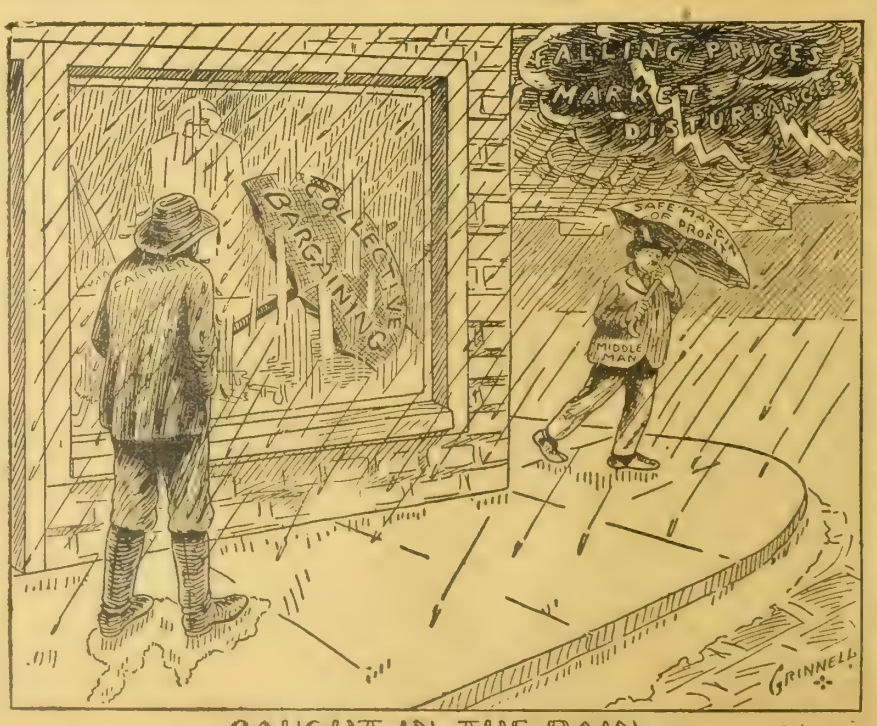
By making a Federal Farm Loan you secure your money at cost and protect your esate in case of death.

Therefore, you can see that in a very real sense the Federal Farm Loan System is a system of the farmers, for the farmers and by the farmers.

Before you make your loan investigate the Amortized Long Term—Low Rate Federal Farm Loan.

Please tell me where the Federal Farm loan bank for Michigan is located? Mrs. E. P., Standish, Mich.

St. Paul, Minn. Michigan is one of a number of states in this district A Michigan man, Mr. H. K. Jennings, of Charlotte, is secretary of the bank.



CAUGHT IN THE RAIN.

CHIPPEWA—This is strictly a hay growing country. And farmers grow little aside from hay and oats. In re, the straw vote for a candidate for governor, I know little of the men. The following prices were offered at Brimley: Oats, 80c; hay, No. 1 timothy, $25; No. 1 light mixed, $23; wheat oat straw,$12; potatoes, $1.50 to $1.80 per bu.; hens, 25c; springers, 25c; butter, 50c; butterfat, 70c; eggs, 60c; hogs, 19c dressed—*J. L. R.*

OSCODA (S. W.)—The fall work is nearly completed and men with their teams are working on the road. Mr. Royce had a furnace installed in his new bungalow, which is a credit to the carpenter, M. H. Colvin. The following prices were offered at Oscoda: Wheat, $2; oats, 80c; rye, $2; hay, No. 1 timothy,$25 to $38; rye straw, $10 to $12; potatoes, $1.50; onions, $2; cabbage,8c per lb.; hens,28c; springers, 30c; butter, 68c; butterfat, 70c; eggs, 60c; sheep, $11.50 to $14; lambs, 10c; hogs, 18c; apples, $2 bu. —*M. E. C.*

HURON—Farmers are nearly all through beet hauling. Roads fine; considerable grain going to market. Farmers have been very busy. The following prices were offered at Caseville: Wheat, $2.20; oats, 65c! No. 1 timothy, $16; light mixed, $15; potatoes, $1.50; onions, $3.05; cabbage, $3 cwt.; hens, 17c; springers, 22c; ducks, 30c; geese, 27c; butter, 65c; butterfat, 70c; eggs, 58c; hogs, 13c; beef cows, 7c; veal calves, 16c; apples, $2.50; plums, $5; pears, $2; grapes, $2.—*C. G.*

GRAND TRAVERSE (W.)—Are having fine fall weather. Farmers are putting up wood, butchering and hauling a few potatoes. A carload of cattle is being shipped from Williamsburg at this writing. The following prices were offered at Williamsburg: Wheat, $2.10; corn, $1.80 oats, 90c; rye, $1.20; potatoes, $2.25 cwt.; onions, $2 per bu.; hens, 16c;; springers, 18c; butter, 55c; butterfat, 73c; eggs, 55c.—*C. L. B.*

GENESEE—Farmers are threshing beans and cloverseed, husking corn and plowing. We are having good weather now and farmers are getting ready for winter. The soil was frozen too hard for plowing for a couple of days last week but the soil is O. K. now. Some farmers are selling some potatoes and beans but the majority are not. Corn is turning out good in most instances. Rye and wheat are looking good. Auction sales are still plentiful but prices received are not so good as formerly. Potatoes did not turn out very good, the average yield being below 100 bushels per acre. Following prices were offered at Flint: Wheat, spring $2.23; white, $2.11; red, $2.13; corn, $1.50; oats, 80c; rye, $1.23; No. 1 timothy, $19 to $21; beans (C. H. P. Pea) $6.25; red kidney, $11; potatoes, $1 to $1.75; onions, $5; cabbage, $3 per bbl.; cucumbers, $2; hens, 20c; springers, 20c; geese, 18 to 22c; butter, creamery, 70c; dairy, 65c; eggs, 54 to 56c; sheep, $7 to $8; lambs, $10 to $11; hogs, $14.25 to $14.75; beef steers, $7 to $8; beef cows, $6 to $7; veal calves, $16 to $17; apples, $1.50 to $2.—*C. W S.*

MIDLAND—The weather has been very nice this week, thus letting the farmers continue with their fall work. Farmers are husking corn, hauling same, also shedding. Farmers are not selling much on account of prices so low. The silos are filled. There are a large number of auction sales this fall. The soil is in a good condition to plow yet. The wheat and rye which was planted this fall looks fairly well.—J. H. M.

MASON—Some corn to be husked yet. Fall plowing has been hindered by the wet weather and recent heavy freezes. Potatoes are moving freely to market. Lack of cars is delaying the movement somewhat. Most of the potatoes are being marketed through the Mason Co-operative Association which gives the same privileges to non-members as members. This plan is working out well as many are joining who otherwise would not. Auction sales are falling off in number. They have been very plentiful this fall.—B. M.

ST. CLAIR—Farmers plowing and doing fall work. Farmers selling butter fat, poultry and some hay. Not much building being done at present. More auction sales this fall than ever before, many farmers moving to the city.—I. C. J.

How the Experience of Years Saves Money in This Post-War Maxwell

THE run of 300,000 Maxwells to date saves you many a worth while dollar in the new Post-War Maxwell. Those 300,000 saved in many ways.

More miles per gallon
More miles on tires

1. They taught "short-cuts" in manufacturing.

2. They eliminated all experimental work—you don't have to pay for a single engineering mistake.

3. They developed quantity production which has reduced "overhead."

4. They enabled quantity purchases; and better materials are bought at lower costs.

5. They taught how to build an almost trouble-proof car; you seldom take a Post-War Maxwell to a repair shop.

6. They taught how to get the most mileage out of a gallon of gasoline, a pint of oil and a set of tires.

7. They taught how to build a car that the less skilled driver would find simple to operate and take care of.

8. They taught that it was better to build more and take less profit per car rather than build less and take more profit per car.

9. They taught how to put more and more value in the car without increasing its cost.

This Post-War Maxwell is next year's car. It contains features developed during the war, many of which will find their way into other cars in the summer of 1920.

Short Time Test of Value to All Producers

How this Test has Helped Thousands to Get Rid of the Non-Producing Cow.

By D. D. AITKEN

Pres. Holstein-Friesian Association of America.

(Continued from last week.)

I think we will best be able to appreciate what the short time test has meant to the Holstein-Friensian cow if I can carry you back in memory to twenty years ago when many people were not registering their Holstein cows because there was no market for them. Other breeders had raised the question against the black and white that her milk was blue. The breeders of other animals said you could see a silver dollar in the bottom of a full pail of Holstein-Friesian milk because it was so clear, and there was no butterfat in it. They were having a wonderful success at the expense of this old black and white dame that we all now delight to honor. Some persons, however, connected with the Holstein Friesian industry said the color of this milk does not indicate anything. The color of the milk of the Holstein-Friesian is white and the butter fat in it is white, and we will adopt a system here and go in and demonstrate to you that the Holstein-Friesian cow can do. We realize that she is the cow of the shirt-sleeve farmer, the dairyman, who does his own milking, and we have got to provide a plan whereby he can demonstrate the capabilities of this cow. They went into the short time test and demonstrated the ability of the Holstein-Friesian cow to produce profitable milk for the butter makers as well as the cheese makers.

Fifteen years ago there were 151 owners of Holstein-Friesian cattle who made tests recorded in the 16th Volume of the Advanced Registry and these 151 owners made 1,198 tests and only 30% of them were milked by the owners. Last year there were 1,722 Holstein-Friesian breeders made 8,619 tests of which over 42% were milked by the owners. There were 703 cows in long time test last year, 180 of which were milked by the owners, 250 were milked under the owner's supervision, and the rest were owned by men who do not live on the farm and hire superintendents. The indications are that this year there will be a great increase in both the long and short time tests. The number will, to a considerable extent, depend upon the ability of the colleges to furnish them supervisors, and then the question arises whether they should furnish supervisors to the fellow who milks his own cows on the farm who is making the short time tests, or to those who are largely hiring their cows milked who are making the long time test, and in which capacity will the college best serve the interests for which it was created.

I talked with one of the milk commissions of Michigan, probably as well informed as any man in this country on the cost, quality and production of milk. He advised me that 80% of all the milk that was used as whole milk in the Detroit zone was from Holstein and grade Holstein cows, and this same relation would probably pertain quite largely to the states of New York, Wisconsin and Illinois, each having great central communities consuming milk in large quantities. Twenty years ago there was not 15% of the milk used in the Detroit zone from Holstein and grade Holstein cows, and still now there is 80%. My contention is that the Holstein cow's merit was never known until the association exploited these short time tests and demonstrated to a moral certainty that sufficient fat was in the milk to make it the most desirous for human food, and demonstrated the fact that the color of the milk had nothing to do with the fat contained, doing away entirely with the prejudice that was against the Holstein-Friesian cow because of the whiteness of the milk.

My contention is that these members of the American Dairy Science Association owe it to the public to put no impediment in the way of promoting the success and welfare of this great breed. The public is not interinterested in the production of milk at the lowest possible cost because it represents practically 20% of food of the country and that 20% of the most necessary. This question of breeds is ultimately going to be a survival of the fittest, and there is no occasion for them to have any altercation among themselves. Certainly a good pure breed of the poorest dairy breed is far and away ahead of the scrub that has descended from nothing and produces a like amount.

The Holstein-Friesian Association has ever been interested in the colleges supervising official tests. The association has felt that the colleges would be interested in maintaining the integrity and the sacredness of the records; that the college would come in contact with the best young manhood of the states and thus make more certain the accuracy of the records, because after all it depends upon the integrity of the supervisor and the man behind the cow, the great bulk of whom are absolutely above reproach. The colleges readily entered into the plan and it has been the means of bringing them in contact with thousands and tens of thousands of homes all over the United States, the breeders have paid the entire expense of it, and to say that the state or the college could only supervise tests of 300 days or over puts it practically without the pale of the ordinary dairy farmer. What would be the difference in saying to the dairy farmer, "We will not test your cows and supervise them unless we can do it for the whole year even though you pay your own expenses of having it done." Would it not be just as well to say to the grain farmer, "We will not supervise or encourage a small plat of land to determine production of a single acre unless you will put your whole farm into the scheme, because what we are interested in is in the whole farm production and not in the single acre." But he says to you, "My idea was that what the college wanted was to educate me, to show us what could be accomplished, because if we cannot raise a lot of potatoes, or a lot of corn, or a lot of wheat, or a lot of oats, or a lot of barley, on a single acre it is a cinch we cannot raise a lot on each acre of the whole farm" and if a cow cannot make a reasonable amount of milk and butter in seven days it is a sure thing she cannot make it for the whole year, and if it was only an evidence of what could be accomplished for the whole year it would still be an education as

The good lookers are not always the best milkers. The short test soon spots the cow that "eats her head off" but does not pay her owner for her keep.

to the value of the animal that produced it, the same as it would be an idea of the value of the farm. It inspires the farmer and it inspires the dairyman to do better. He learns how to feed the cow and he learns how to feed the soil. He learns how to feed the pig to bring the greatest amount of gain from a given amount of food, and he knows how to balance the ration by giving the pig protein in order to get the greatest result from the fattening food he feeds. This is all done by experimental work, and there is no question about the value of it all, notwithstanding some members of the American Dairy Science Association may not be able to comprehend it. It may be they will wish, in the interest of the beef and pork science men, to do away with all this pig and calf club nonsense that the farmers are insisting upon.

In summary, there are animals that will make big 7 and 30-day records that will not make a correspondingly big yearly record, or a correspondingly big 10 months' record, but if they will make a good 7-day record, and a good 30-day record, they are far and away superior to the one that will not make any kind of a record, and it is absolutely certain that they cannot make a yearly record or a 10 months' record excepting they can make a good 7 and 30-day record.

There is no question in my judgment about the necessity of continuing the 7 and 30-day tests in the interest of the breed and of keeping up the interest among the breeders. If the association has to establish its own agencies of supervision it would have to establish a school of instruction in Dairy Husbandry to the extent of fitting the students for properly testing the animals. This has been talked of on various occasions but the general opinion has always been that the breeders of Holstein-Friesian cattle in the United States were intensely interested in the state agricultural colleges and they preferred to do all this work through the college itself, and that has been the prevailing judgment of the association's management since the outset.

Uncle Rube Spinach Says:

INVESTIGATIONS AN' PICKLES

Ain't investigations wonderful? an' aged too—why investigations an' investigatin' commitees are older'n Ben's dog—older'n the' hills, durn nigh and generaly useless to b'gosh! 'bout th' first investigation I remember anything about commenced shortly after that long wet spell our younger readers hear of as the great flood—the one you know, where Noah (I don't remember his last name) made a record for himself as a boatman—I can't just recall the year it happened but it wuz 'bout the time I think that Bill Bryan first started running for president—Well, anyway 'bout that time there wuz an investigation started to determine who wuz responsible for all that water—why you know, lots of crops wuz ruined an' everything—an' they had to fix the responsibility some where—hence the investigatin' committee. Well's near's I can recollect this committee never got anywhere with their findin's—the water wuz there and folks would just have to wait 'til it went away again'—nobody seemed to blame an just as present day investigations—the thing finally died a natural death. However an' not withstandin' it was darned easy to find where the water went to—most of it at least—it went into Standard Oil, railroad, packing house, sugar and other high flyin' stocks an' by ginger the people have been payin' dividends an' the dum stuff ever since.

Now in after years, owin' to the success of this investigation, other investigations sprung into bein', Congressional, Senatorial, Trusts, Railroads, Mines, Prize fights, police graft, war, embalmed beef, packing houses, cold storage, 2 3-4 per cent beer—everything has been investigated an' by gosh everything has seemed to thrive an' grow an' do well—except mebbe, the ultimate consumer—the one who pays the final bill—an' the farmer the one who makes it possible for all this graft an' profteerin' to exist—makes it possible because bein' unorganized or so nearly so—he becomes the easy prey of every profiteerin' crook in the world—every body is after the farmer's scalp an' darned if they ain't a gittin' it, too.

In the investigation now goin' on into the high cost of livin' who's gettin' it in the neck right along? Look where the price of hogs has gone to and yet we're a payin' just as much for pork as we did before the investigatin' started.

Why right here in B— C— we have a food dictator, a sealer of weights an' measures—he knows all an' sees all, as the feller said. Well a short time ago he published what he claimed to be fair prices for meat. Now I know a feller here who runs a butcher shop an' by the accident of marriage an' other things, he happens to be both my brother an' brother -in -law—you know a man can lie to his brother an' its all right, but he can't do that to his brother-in-law—it would get him in trouble right away—see?

Well I took the afore said fair price list an' called on my brother cac'latin' to pull him down a peg—but I didn't—I found that the price list called fair by the food sharp was on an average, 4 cents a pound higher than the butchers were chargin' and that the fair prices as advertised were only being charged by one market in the city of Battle Creek an' their prices were exactly identical with the "fair" prices as published by our food dictator. Funny was'nt it?

Our investigation of the H. C. L. tell us "the solving of the whole problem is entirely up to the people themselves—if the prices seem too high—don't buy—wait till the price comes down, prices will soon adjust themselves if the people will use judgment in buyin'" that's what we get from the great food investigation that has been going on now for some time, no one to blame for high prices except the producers—the farmers—so they cut down the price of hogs, the packers do that of course, you see they are bein' investigated too an' have got to make a little somethin' out of it; oh the farmers are the goat alright—they are the profiteers, all the rest are lily white A No. 1, real genooine philanthropists, and if it wa-ant for the awful prices the farmers are a gettin' livin' wouldn't cost us anything—hardly. Now jest to show how the farmers are gouging the people I want you to follow me while we chase a barrel of cucumber pickles around a bit—just common little "cukes" spines an' all.

Last spring this aforesaid brother et al of mine bought a barrel of pickles—three bushels of the little fellers—all pickles an' fixed up nice—mebbe a couple dollars worth of vinegar an' slices an' such, but it's the "cukes" 'emeslves I want to mention.

For the three bushels in that barrel the farmer that raised them, without any effort on his part 'ceptin' of course to furnish the land, fertilize, plow, harrow, plant, cultivate, thin, hoe, pick an' deliver the cukes, got the magnificient sum of $3.75—$1.25 per bu. an' was told he was gittin' a big price; my brother for the same three bushels an' the vinegar an' spices ($2.00) paid the tidy sum of $38. He charged 15c per dozen an' there wus 416 dozen of 'em total $62.40 to the consumer an' that's about the way the ol' farmers profiteer on everything, ain't it?—*Uncle Rube.*

OUTSTANDING BOARS FOR SALE

C. A. KING JOE 290831, sired by King Joe 251257, by King of Wonders 205757, by (Old) A Wonder 107353; Dam, Monarchia 3rd 622512 by A Monarch 213293, by A Wonder 107353. He is bred by W. B. Wallace Bounceton, Mo. His individuality is equal to his pedigree, which a very critical breeder will have cause to admire. He stamps his get, in line with his ancestors, which fact makes him a breeding boar, worthy to go into a very select herd.

BUSTER HALFTON 298225, sired by Great Big Half Ton 261243, by Big Half Ton 217217, by Hillcroft Half Ton 172551. Dam, Mollie Buster 622612, one of the best and biggest sows ever sired by Giant Buster 210357. "The Epoch Maker," by Dishers Giant 240055. If you like the top notchers, this great boar has the blood in his pedigree. Come and look them over or write for my price. Be quick, for I have placed them to move in order to make room for a new boar I have ordered, to cross their get with. Look for classy stuff next spring.

C. A. BOONE, Blanchard, Mich.

A New Herd Boar

(his name) Big Bob Mastodon

sired by Caldwell Big Bob, champion of the world in 1917. His dam is Mastodon Josie; she is a daughter of A'S Mastodon the Grand Champion at Iowa State Fair in 1917. Ready to ship boars. (Come and see him.)

C. E. GARNANT, - Eaton Rapids, Mich.

LEONARD'S Big Type Poland China Boars, all ages. The kind that makes good. Call or write.

How Shall Farmer Educate the Consumer?

Ignorance of City People on Cost and Difficulties of Producing Food a Handicap to Agriculture

By FORREST LORD

IT IS truly astounding how little the people who live in the large cities and consume the major quantities of the foodstuffs raised on farms know about the cost and difficulties that are encountered in producing them. Some folks have a sort of hazy idea that all the farmer needs to do is to tickle the soil with the hoe, drop the seed and go auto-riding or picnicking until the crop has come to maturity. Then he takes a few days off from his pleasures, harvests and markets the crops, buries his gold in a strong-box, and resumes his indolent habits until it is once more time to tickle the soil and repeat the cycle of growing, harvesting and gathering in the sheckels.

This ignorance of the real facts of farming works an incalculable harm to the farmer. In many cities, for instance, people who have been schooled to believe that the farmer is a profiteer and will charge all the traffic can bear, have declared boycotts against milk in the hopes of forcing the farmer to accept a lower price. Times without number farmers have been unable to secure a fair price for their products because the buying public has been so overwhelmingly opposed to higher prices. No one can estimate what the campaign against the high cost of living has cost the farmer. Investigations and propaganda have been conducted with an absolute disregard of the factors of costs. The whole purpose has been to lower prices to the consumer regardless of the investments and profits of the farmers and those who deal in farm products. I venture to say that had the people of this country been intelligently informed as to the cost of raising food products there would have been no outcry against the high cost of food and no propaganda to drive the prices of farm products down to less than the cost of production.

Daily Press Spreads Misstatements

One needs but to read the newspapers from day to day to gain an idea of how complete is the ignorance of people who ought to know better upon the subjects of farm costs and profits, or to realize the injury that is done by the publication of false statements. One of the most conspicuous and flagrant cases that has come to my attention in recent months was an article published in the Detroit Journal setting forth the opinions of Detroit wholesale and retail grocers upon the alleged profits and practices of farmers. The occasion was a meeting of a committee appointed by the Detroit city council to investigate the high cost of living. A member of this committee is Thomas Marsden, vice president of Lee & Cady, the large wholesale grocery firm. Another member is Mr. Parker, head of a chain of retail stores. According to the Journal the conversation ran something like this:

"It is the wholesaler who is getting the exorbitant prices, not the retailer," said Mr. Parker.

"You can bet that's just it," said another retailer.

But Mr. Marsden, the wholesale man, passed the buck to the farmer. He said, "None of these prices we are charging these days are fair. However, it is the farmer who gets the long price. We have to pay what he asks and we are glad to get the stuff."

Eleven Cents Held Fair Bean Price

The subject of beans was taken up. One retailer thought that 12½ cents was a fair price for navy beans; another that 11 cents was about right. The price finally agreed upon was 11 cents. There is nothing recorded in the report of the meeting that the committee knew or cared that the farmer was receiving only 5 1-2 cents a pound for these same beans.

"Farmer Mixes Dirt With Sugar Beets"

After declaring that it was the fault of the California growers that the price of raisins is so high, Mr. Marsden took up the subject of sugar and once more placed the blame for high prices upon the farmer.

"The sugar beet men want 10 1-2 cent sugar just as much as the people do," he said. "They want it now for now is the time for them to quote next year's prices to the farmers. And here again the farmer comes in. The government permits him to sell by weight and when I was talking to a beet man the other day he said that figures showed the farmers were furnishing 500 pounds of dirt to every ton of sugar beets, and of course in the end that boosts the prices."

Ridiculous? Absurd? False? Of course, but what are you going to do about it? How is the city consumer to know that every load of sugar beets is tested for tare and that the samples are carefully cleaned, scraped and freed of dirt and leaves? But isn't it going to be necessary some day to tell him the truth?

Talk with any man who has lived all his life in the city and the burden of his complaint will be that the farmer is responsible for the high cost of food and is getting fat off other people's pocket books. Get into the smoking compartment of a parlor car and as you whiz by the farm houses along the way note the words of wisdom that issue from the mouths of well-fed and prosperous looking gentlemen. They will tell you the most amazing things about farmers and farm life. You wonder how you could have lived all your life among farmers without becoming familiar with the fabulous profits of farming which these gentlemen talk about so glibly. One of them will say, "I called on a farmer relative of mine a few weeks ago. He met me at the station in a new motor car and drove me out to the farm house. It was a great big roomy house, heated by steam, lighted with electricity and everything modern and convenient. They even had a bath room and a phonograph." And when you meekly suggest from your corner of the compartment that not all farmers are so favorably situated and anyway farmers ought to have all those things, the whole bunch glares at you and snaps out, "What d' you know about it?" It is of no use to argue further with them, so with a few more feeble attempts to set them right, you sink back into your corner and go to sleep to dream of farmers wearing silk plug hats and diamond-studded watches, riding in plush-lined limousines, and giving orders to well-fed servants who bear a striking resemblance to your acquaintances on the train.

Getting down to brass tacks, just how, Mr. Farmer, are you going to get the truth before your city cousins? There are two great ways to right the age old wrongs which have worked against agriculture. One is to organize to top notch efficiency and reap the benefits which splendid organization can bring, politically, economically and otherwise. Second, there is publicity. Ontario farmers bought and are running a big daily newspaper. Polls and publicity, then, offer answers to our question.

Agricultural Profits vs. Manufacturing Profits

System of Fixing Selling Price Makes Enormous Profits Possible in Some Lines of Manufactures

By FREDERICK J. HASKIN

WHAT DOES it cost to make the manufactured articles which you use every day?

You have no idea. Well, . here is an example. It is said that a certain popular safety razor which sells for $5 is made at a shop cost of less than one-tenth of that amount.

Shop cost includes labor, materials interest on the actual investment in machinery and the amount involved in the deterioration of the machinery. It does not include the salaries o fexecutives, and other purely administrative expenses. It is the actual cost of making the article.

Made to Sell for $1

It is said that the man who designed and first made this razor for less than half a dollar, intended to sell if for a dollar. He could have made a nice profit at that figure and could have done a certain amount of advertising which is, of course absolutely necessary.

His business associate expressed the opinion that the razor could be sold for much more than a dollar. The inventor disagreed. They ended by forming two corporations—a manufacturing company and a sales company. The sales company bought the output of the manufacturing company at $2 for each razor and sold the razors for $5 each. Moreover, it sold millions of them all over the world. African chiefs and South Americans and Russians have corroborated the judgment of the sales manager that the public would pay $5 for a 50-cent razor just as quickly as it would pay $1.

Of course to the shop cost of less than 50 cents must be added the profit, and all costs of selling and distribution. But these things form an economic viewpoint should not amount to ten times the cost of producing the articles. And that this razor can be retailed for much less than $5 is conclusively demonstrated by the quartermaster of the army, who sells it in his stores (in a khaki case with six extra blades) to soldiers for $1.75.

In a word, the price for which this razor is sold represents an enormous percentage of economic waste. It brings home to us two things. In the first place we have no idea what most of the things we buy are really worth and for that reason the price often bears little or no relation to the value of the article. And in the second place we have a wasteful system of distribution.

Of course, no one blames the promotor of this razor for selling his product for $5. There are no reflections to be made upon his personal integrity or that of his firm. It is merely the economic principle that is questioned.

Case Is Not Exceptional

And the case of the razor is not exceptional. A brief examination of the matter of shop cost shows that the American people pay for the manufactured goods from six to 50 times as much as it costs to make them. The significance of this fact scarcely needs emphasis. Here, surely is one paramount factor in the high cost of living. Why prosecute a Greek corner grocer for making an extra penny on a pound of sugar when the prices we pay for many articles of daily use have no relation whatever to their value?

Some Other Drains

The fact is that this enormous leak is drainging the pockets of all of us. This difference between making cost and selling cost reaches its peak in the case of certain luxuries. A certain eyewash is reliably said to cost the manufacturer $1 a gallon and to sell, in very small bottles at $125 a gallon. A certain cream, which is supposed to beautify the complexion costs the manufacturer 14 cents a pound, and sells at your drug store at 50 cents for a three-ounce jar. You can figure the difference for yourself.

Carbon tetra chloride is a chemicla used in fire extinguishers of the cheaper sort, which, incidentally, are of little value in fighting fires. Under a patent name, mixed with another chemical of no more value than it has, this substance is sold for several times what it brings under its rightful name.

An ointment which consists of a certain irritant chemical mixed with a small amount of oil sells for 50 cents a small bottle. It costs about seven and a half cents a bottle to make.

These examples could be multiplied almost indefinitely. They show that for toilet articles and patent medicines you pay seldom less than seven times as much as it costs to make the article, and often 50 or 100 times that amount.

But these things are not as important as the necessary articles. Take typewriters for example. The shop cost of making a high grade typewriter to sell for $100 is estimated by experts as from $12 to $18 each.

Certain makes of typewriters the regular price of which is $100, are frequently offered on some special selling plan at little more than half that amount. This strongly suggests that a good typewriter can be marketed profitably for less than $100.

What is true of typewriters is also true of sewing machines, bicycles, guns and of most other articles in the hardware class. The selling price is from 600 to 1,000 per cent higher than the shop cost.

In nearly every American home there is a little electric meter for which you pay when you have the wiring installed. Usually you pay in the neighborhood of $6. Such a meter can be made for about $1.

What is the remedy for this situation?

Where Makers Err

One expert in shop costs to whom this question was put, said: "I think the manufacturers are taking the wrong track. They are following the well known business method of making 'the price all the traffic will bear' and I believe they are losing money by it. There is one maker of automobiles in the United States who sells his cars for a little more than half what other cars of the same weight and quality cost. He has

(*Continued on page* 17)

Who Are the Profiteers?

AS WE pointed out in a recent editorial there are "profiteers" in every line of business and vocation. Some are profiteers by chance; but many are profiteers by deliberate planning and control of prices. The kind of profiteers discussed in this article are of the latter class. Farmers cannot deliberately profiteer whenever they choose. Manufacturers of commodities in which there is strong competition cannot profiteer except through illegal agreements to hold the prices of their commodities up to a common level. There are several classes of manufacturers who can and do profiteer. First, there is the trust. Second, the manufacturer of luxuries or semi-luxuries in which there is little competition. Third, the manufacturer who by patent controls an improvement on a useful article which makes it so much more useful that the public is willing to pay a price far in excess of what the improvement actually costs.

Profiteers of all kinds are in bad repute these days and there are hopeful signs that profiteering manufacturers are beginning to see the "handwriting on the wall," and to reduce their profits to a fair return on the investment. We caution our readers against putting all manufacturers in the profiteering class. The failures in the manufacturing game show that the run of profits are not exhorbitant, and that it is only a comparatively few who are "milking" the public.—Editor.

"Save the Peace Treaty" is Plea of American League to Enforce Peace

Failure of Senate to Ratify League Covenant Held Injurious to Interests of the American People

BECAUSE of the stupidity, stubbornness, partisanship, or whatever you may call it, of fourteen senators the treaty of peace with Germany and the League of Nations covenant was rejected, and America stands today the laughing stock of the rest of the world, tax-ridden, profiteer-infested, plagued with social unrest and torn by partisan politics.

The League to Enforce Peace, of which Wm. Howard Taft is president, has sent out an appeal to newspapers and thinking people all over the country urging that they take immediate action to force the next session of Congress to adopt the peace treaty immediately upon convening. We quote as follows from the appeal of a League that knows no politics, but is comprised of men and women of all political faiths whose battle-cry is, "our country first:"

"Save the Peace Treaty!

"The defeat of ratification has been received by the country with surprise and indignation. The people want Peace. They want Peace and they want a League of Nations to guard the Peace. Whose name it bears, which party brand it wears, they care not at all. They longed for and expected ratification before adjournment of the Senate.

"The making of peace is no more a party question than was the making of the war. The American people, without regard to party, stood behind the war until the day of victory. With like unanimity they now stand behind the Treaty.

"Shall the small minority who oppose a League of Nations in any form defeat ratification? Shall fourteen Senators decide where America will stand in this world crisis? Eighty Senators have shown by their votes that they favor the great principle of the League of Nations. The fate of the Treaty rests in their hands. They have the votes. They have the power. Theirs is the responsibility. They must get together.

"The failure to ratify the Peace Treaty has encouraged social unrest both at home and abroad. Europe must have supplies or it will face starvation and anarchy this winter. Our farmers, cotton planters, live stock raisers and manufacturers have large surplus production of which they can market only in Europe. The rates of the exchange already demonstrate the collapse of any national credits. These credits, resting upon commerce and international securities, are the foundation of our continued prosperity and are vital to the maintenance of order and life in Europe.

"Men and women of America, this is your problem. Your interests, your welfare, the honor and the future of your country are involved. Your will is the supreme command for the men in Washington entrusted by your votes with guiding the nation along the paths of peace and victory.

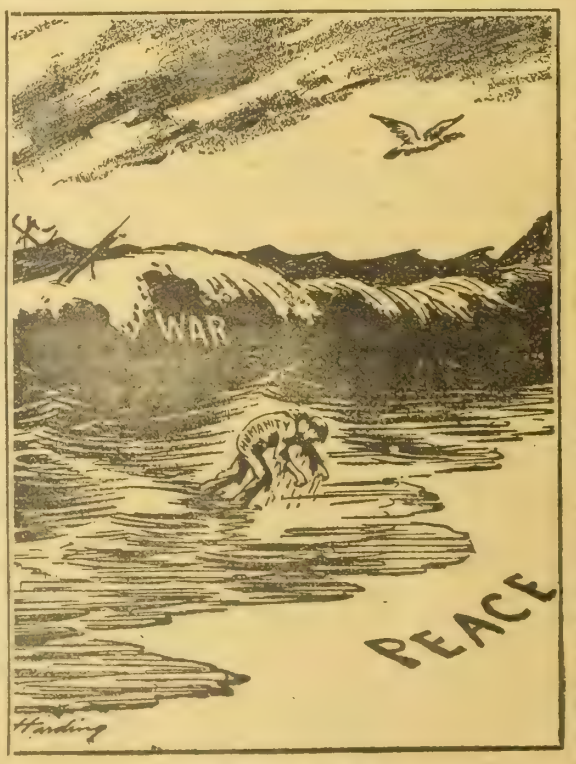
"The Allied Nations established during the war a practical union which is being succeeded by the League of Nations. To refuse to join this League is to lose numberless benefits, and to invite the development of a league that will hurt us in feeling and in policy. The League of Nations gives the promise of a world cooperating for the puropses of peace and protecting itself by concerted action against war and the threat of war. The ideal is American.

"The men and women who gladly dedicated their sons and their substance to the cause of obtaining peace through the defeat of the German menace refuse to believe that they have made an empty sacrifice.

"The Treaty should be ratified at the earliest possible moment after the Senate reconvenes on December 1st. In the name of thousands of Americans who have died to bring peace and end war and of millions of Americans who have toiled and sacrificed to that end, we call upon the Senate to forget prejudice and partisanship and agree upon a resolution of ratification couched in terms that will permit the other signatories of the Treaty to acquiesce in the conditions of our ratification. Save the peace treaty! Let us have peace."

"Act with all the vigor of a great purpose rising to meet a great responsibility. Visit your Senators! Write strong letters to your newspapers. Write and wire your Senators demanding action on the treaty immediately after December first.

"Drive home to every one you meet the pitiable spectacle we now present to the world as a result of partisanship in an international matter where common sense, patriotism and a "decent respect for the opinion of mankind" demands that we be just Americans. Demand for yourself and urge everyone to also demand that the eighty senators meet in a spirit of "get together" and on the common ground of adherance to the principle of a League of Nations proceed to the consideration of the covenant in order that we and the waiting world may have peace."



COMING ASHORE

Annual Session of the Michigan State Grange

Farm Organization to Hold Convention at Saginaw December 9, 10 and 11th

MICHIGAN STATE Grange will open in form at 10 a. m., Tuesday, December 9, in Masonic Temple, Saginaw. All officers and delegates should aim to be in their places at that hour, ready for four days of good hard work—interspersed with play in the form of music and social intercourse. Below are some of the special points of information.

Railroad Instructions

Reduced railroad fares will be granted all persons in attendance upon State Grange according to the certificate plan. The following directions are submitted for your guidance:

1. Tickets at the normal one-way fare for the going journey may be obtained on any of the following dates (but on no other date): Dec. 5 to 11. Be sure that, when purchasing your going ticket, you request a certificate. Do not make the mistake of asking for a "receipt."

2. Present yourself at the railroad station for ticket and certificate at least 30 minutes before departure of train on which you will begin your journey.

3. Certificates are not kept at all stations. Ask your local agent what is the nearest place on your route where you can obtain a certificate; buy a ticket to that point and then buy another and ask for a certificate to the place of meeting.

4. Present your certificates at State Grange to the Secretary, Miss Jennie Buell, for endorsement on Dec. 11 and 12. When returned to you, the certificates entitle you to buy return tickets for one-third regular fares. This applies to tickets that cost 75c or more. Your certificates entitle you to this reduced rate up to and including Dec. 16.

Notice—You may buy tickets and get certificates Dec. 5 to 11; and may obtain reduced fares on your certificates Dec. 11 to 16.

Hotels and Rooms

Arrangements are being completed to make everybody as comfortable as possible while in Saginaw.

Hotel Bancroft will be Headquarters at a rate of $1.50 per person, two in a room. All should report at this hotel for assignments to hotels and rooms. Saginaw Patrons will meet trains Monday afternoon and evening and direct you; Boy Scouts will assist you in finding your rooms when they have been assigned to you.

For rooms in hotels or private homes, address Mr. Chester Howell, Sec'y Board of Commerce, Saginaw, Mich. See him or his representative at the Bancroft, Monday evening, to ascertain what your assignment is or to make one if you have not written in advance.

Full Program Arranged

The program of the week, while not comqlete in all details will be a full one. Opening at 10 a. m., Tuesday, will be followed by greetings from former officers and others and by informal reports on the Big Grange Drive. Come prepared to report what your county has done in the drive.

Tuesday afternoon the Master reads his annual address, and announces committee appointments. That evening occurs the public meeting when Saginaw welcomes her Granger guests and we accept her hospitality. Wednesday will see reports of officers and presentation of resolutions from the delegates; in the afternoon the Lecturer's report and open program, when noted farm specialists will be heard. That evening occurs the social love feast at a real banquent; after which short talks will answer the burning question, "What Do Michigan Farmers Want?" Thursday and Friday at 8 a. m. are Lecturers' conferences; also at 8 a. m. on Thursday will occur the election of officers. Thursday and Friday will be filled with reports of committees and regular order of business. Thursday evening will be conferring of the fifth and sixth degrees, and Friday evening installation of officers.

The above outline of the annual State Grange meeting gives one but a bare glimpse into the vast amount of detailed work and pleasure which will confront those who attend this session.

There will be addresses by men and women, who are prominent both in and out of the Order upon far-reaching topics. There will be resolutions brought by delegates from their home Granges or originated by themselves which will reveal the pulse of thought among the rank and file of farmers over Michigan. There will result discussions and new resolutions will grow out of this coming together of many minds. Some of the big, throbbing questions are sure to come up for careful analysis and earnest action. Among these questions will doubtless be consideration of bills now before Congress, like the Capper-Hersman to legalize collective bargaining, and the Kenyon-Anderson to regulate the packers; the Grange's part in bringing producers and consumers in closer touch; relation of the Grange to other farm organizations; how to publish more widely the actual cost of production of food products; the farmers' right to cost of production plus a reasonable profit; what sort of rural schools are needed today; study of home sanitation and economics; and many others which the critical times suggest. In addition, there will be much time and discussion given to best means of building the Grange stronger and wider.

Sugar beet growers among our Grange people, will be interested to know that the annual mass meeting for growers of sugar beets is called to convene at Masonic Temple, Saginaw, Monday, at 1 p. m., December 8th.

Better Seed for Michigan Potato Growers

By C. W. WAID
Extension Specialist, M. A. C.

MANY POTATO growers in the State of Michigan are producing potatoes at an actual loss and mayn others with very little profit. On the other hand there are a good many growers who are making a fair return from their investment and labor.

One of the factors which has much to do with the profit and loss in connection with potato growing is the kind of seed used| If it were possible to secure records which would give a comparison between the kind of seed used and the profit or lack of profit, observation has led the writer to believe that it would be possible to determine in a general way whether a man is going to make any money growing potatoes when it is known as to the kind of seed he is using.

Realizing the importance of good seed and at the same time that many growers are still indifferent as to the kind of seed used, a committee was recently appointed by the county agents who were in session at Cadillac to confer with the Board of Directors of the Michigan Potato Growers' Exchange and together work out a plan which would enable a much larger percentage of the members of the Exchange to secure first-class seed. The Board of Directors of the Exchange gave the plan their hearty indorsement and have agreed to let Mr. C. W. Cribbs, who is now working as field man along organization lines to devote a portion of his time to the putting of this plan into operation. The committee which is headed by William F. Johnston, of Roscommon, will continue to work with Mr. Cribbs continue to work with Mr. Cribbs.

In brief the plan is to have each local potato growers' association grow at least five acres of potatoes and to have the same distributed pro rata among the members of the association. In all probabilities a bushel of this high class seed stock will be exchanged for each bushel of table stock. The first year it will not be possible to get a sufficient amount of seed which has been carefully tested out in comparison with other seed to enable the growers to get all of the A No. 1 seed.

Federal Grand Jury of Farmers Indicts Truman H. Newberry and Aids

United States Senator From Michigan Charged With Fraud, Corruption and Conspiracy

THE FEDERAL grand jury which has been in session at Grand Rapids since Oct. 21st hearing evidence in support of the alleged violation of election laws by Truman H. Newberry, last Saturday returned an idictment charging Mr. Newberry and 134 aids with serious criminal offenses against the laws of Michigan and the United States. Corruption, fraud and conspiracy are charged in the indictments. Warrants have been issued for the arrest of the men indicted and their arraignment has been set for Monday, Dec. 8th.

The evidence submitted to the grand jury showed that between $500,000 and $1,000,000 has been illegally spent by Mr. Newberry and friends in advertising, motion pictures, and other propaganda, and in salaries and wages to hundreds of men who performed some service or other in the furtherance of Mr. Newberry's campaign for United States Senator.

An Associated Press dispatch to the Detroit News Tribune says: "Government officials assert that the testimony presented to the Newberry grand jury revealed a political scandal that in many respects it without parallel in American annals. They say it extends from the most populous wards of Detroit to the Indian reservations where aborigines were voted according to the behest of the Newberry campaign organization. It is alleged that voters were bribed, election boards corrupted, editors subsidized and moving picture theatres bought up in the endeavor to defeat Henry Ford, first in the primaries of both parties, and later when he had won the Democratic nomination, in the election.

It has been officially stated that the investigation of the Newberry senatorial compaign was instigated upon the information contained in complaints filed with the Department of Justice at Washington and by Lieut.-Governor Dickinson's public charges of "graft and corruption." It will be remembered that immediately following the primaries the lieutenant governor issued a scathing denunciation of the Newberry methods, but before the election practically "ate his words" and urged the election of Mr. Newberry as the Republican nominee.

Despite the enormous sums spent in his behalf and the magnificient political organization which fostered his candidacy, Mr. Newberry won the election as United States senator by less than 10,000 votes. A few weeks after the election when it was broadly hinted that more money was spent by Mr. Newberry than the law alowed, certain irregularities such as the burning of ballot boxes in several upper peninsula precincts were discovered, Henry Ford petitioned the United States senate for a recount, but up to the present time the Senate committee on privileges and election has refused to sanction a recount. The indictment of Mr. Newberry, or his possible unseating from the United States senate, will, it is understood, have no effect upon Henry Ford's standing. As the votes stand today he was defeated and unless a recount should later prove that there was an error in the canvas of the votes, Mr. Ford cannot have the job. The unseating of Mr. Newberry would leave a vacancy which would have to be filled by the appointment of Gov. Sleeper or the legislature.

Over half of the men constituting the grand jury which returned the indictment against Newberry are farmers. Sixteen of them are claimed to be Republicans and seven Democrats. Judge Session, of the federal district court of Grand Rapids has a high reputation for non-partisanship, and it is held that the methods pursued in uncovering the evidence, the examination of witnesses and the findings of the jury were entirely non-predujicial, and conducted with the utmost fairness.

THE NEWBERRY CAMPAIGN

As Viewed by Michigan Business Farming

IN OUR September 7th, (1918) issue we made the following explanation of our opposition to Mr. Newberry's candidacy: "The people who voted for Mr. Ford and the people who voted for Mr. Osborn; yes, and the people who voted for Mr. Newberry will want an accounting of the $150,000 that was spent to nomniate Mr. Newberry. Not even their high regard for Mr. Newberry's unquestioned patriotism or his sterling Americanism will blind them to the bare fact that Mr. Newberry's friends if not Mr. Newberry himself have violated the laws and traversed the very principles of Americanism, of right and equality, upon which Mr. Newberry's campaign was made." Again in our Sept. 14th issue we said: "This expenditure of $176,000 was in itself a violation of the law. It was in effect the price which Mr. Newberry's friends paid for Mr. Newberry's nomination. It violated every principle which gave birth to the primary law. It corrupted men's opinion's, as money has a habit of doing, and it insulted the very intelligence of the great body politic of the state of Michigan."

As Viewed by Judge Sessions

"In returning these indictments you have decreed that a large number of men shall be placed upon trial for an offense which, if committeed, strikes deeply at the foundation of our form of government as surely and certainly as the doctrines of the men who follow the red flag.

"If the result shall be one of acquittal, it will be a most fortunate and happy one for the accused. If, on the other hand, a conviction shall follow the result will be unfortunate and unhappy for the men who are indicted and yet it would be a vindication of the majesty and supremacy of the law of our land and whatever the result, it will be for good because already the truth and the conviction has been driven home to the minds of all thoughtful persons that is unsafe to tamper with the rights of the people."

Co-Operative Cow-Testing Work is on Increase

Ten New Associations Now in Process of Organization Indicate Progress of Movement in This State

MICHIGAN was the first state in the union to organize a co-operative bull association. The success of this first association inspired farmers all over the state to get together in groups and purchase pure bred bulls for the improvement of their herds. Of equal importance, if of more recent origin, is the cow-testing association.

Fifteen months ago there were only five co-operative cow testing associations in Michigan. Today there are thirteen associations with 349 members owning 4,205 cows. At the present time ten more associations are in process of organization in the following counties: Livingston, Washtenaw, Macomb, Genesee, Cheboygan, Emmett, Osceola, Gladwin, Wayne and Barry. Associations organized up to the first of November are located in Oceana, Eaton, Van Buren, Branch, Lapeer, Wayne (2) Tuscola, Nashville, Kent, Oakland, Berrien and St. Joseph.

J. A. Waldron, dairy extension specialist of the M. A. C. is in charge of the cow testing association work in the state, and farmers interested in the plan should communicate with him at East Lansing.

SINCE the cow testing associations came in, the poor producer is being weeded out to make room for the profit-maker.

By J. W. WALDRON

Dairy Extension Specialist, M. A. C.

A COW testing association is a co-operative organization the purpose of which is to provide its members with records that show the relative merits of their cows, and to aid them in the more economical production of milk and butterfat. The first organization of the kind was formed in Denmark in 1895, since that time there have been 500 associations organized in this small country, about the size of the lower peninsula of Michigan. There were over 2,000 in Europe before the war. The first association was formed in this country in Michigan at Fremont in 1905 and is still in operation. There are 500 associations in the United States.

The association is usually composed of about 26 members so that each member may have the services of the man in charge of the association one working day each month. A man is employed by the year at a stated salary to take charge of the association. As stated above he spends one working day on the farm of each member each month and while there he makes a complete feed and production record on each individual cow in the herd. He weighs the milk from each cow both night and morning and takes a sample for testing. The milk is tested for butterfat. The cow is then credited for the butterfat produced at the price received. The feed of each cow is weighed and she is charged for it at the local market prices in the barn. The difference between the value of the products and the cost of the feed shows the profit or loss on the cow for the month. At the end of the year a summary is made of the twelve months' records of each cow and of the herd as a whole, so that the owner knows just what his herd did and what part each cow played in the year's work.

The supervisor in charge is also supplied with skim milk testing bottles so that he is able to detect defective separators. Often many dollars are saved by simply making small adjustments in the separator. He also can often aid the farmer to feed more economically by helping him to balance his rations more perfectly and to feed according to production.

What It Will Do

1. Show the value of individual cow in the herd by furnishing a yearly record on every cow in the herd. Often one or two cows may be cutting down the income of the whole herd until it is unprofitable. One man milking ten cows found by cutting out three unprofitable ones that he was able to increase the average profit per cow by 95 per cent.

2. Gives a basis for building up a dairy herd. Points out pitfalls in the business. One man in one of the associations in Michigan found one purebred cow was kept at a loss of $32.03 while her daughter a mature cow was kept at a loss of $25.11 after paying her yearly feed bill. He was shown the folly of building on that kind of a foundation.

3. Increases the value of cows and young stock at least 20 per cent. There are instances where it has increased it much more. One man sold a grade cow valued at $125 before he became a member of an association for $200 at a public sale after her yearly record had been made.

4. Promotes interest in dairying by putting it on a more business-like basis.

5. Tests out herd sire. It is the best method to measure progress along breeding lines. We never profit by our mistakes or successes unless we have a means of determining them. One man found after belonging to an association for one year that he had one cow that produced 471 pounds of butterfat at a profit of $78.79 over feed cost, her daughter produced 514.5 pounds at a profit of $108.44 over feed cost, and her granddaughter produced 540.8 pounds at a profit of $99.85 over feed cost. This fact demonstrated to him that he was using sires that increased rather than decreased the production of his herd. It showed him that he was successful in his breeding operations.

6. Aids members to feed more economically. The following table gives the results of balancing the ration and feeding according to production in a herd of 10 cows in one of the Iowa associations: Dec., total milk yield, 5,133.6 lbs.; total fat yield, 225.5 lbs.; total feed cost, $80.60; total profit over feed cost, $2.47; Jan., total milk yield, 5,697.1 lbs.; total fat yield, 253.8 lbs.; total feed cost, $48.66; total profit over feed cost, $40.39.

7. Promotes community life because it brings men of like interests and desires together for a definite purpose.

8. Co-operative buying of feed also often creates a saving to members. One association in Michigan saved over $15 per ton by buying feed early in car lots.

9. Interests boys in the farm.

What It Will Cost

The cost of the association is the salary of the tester. He is boarded and lodged at the homes of the members and is transported to his next place of work by the man for whom he worked last.

The required books are furnished by the United States Departement of Agriculture and the testing outfit has been furnished by the Extension Division of the College for one year work in each association.

A sum sufficient to pay the tester and meet incidental expenses is usually raised by charging each member about $3 per month. This amount may be varied depending on the number of cows in the association and the size of the herds of the members. It is usually planned to have at least 350 cows represented in the association.

Supervisors and Organization

All business is in the hands of the members of the local associations. Communities are aided in organizing these associations by County Agents and representatives of the Extension Division of the College and of the United States Department of Agriculture and the tester's work is under the supervision of these departments.—*J. A. Waldron, Dairy Extension Specialist, East Lansing Mich.*

Campbell Leads in Business Farming's Straw Vote for Governor

Simpson, Baker and Helme Are Running Neck and Neck in the Race for Second Choice

EARLY returns in Michigan Business Farming's straw vote for Governor give Milo D. Campbell of Coldwater a substantial lead over all other candidates. Nathan F. Simpson appears to be quite a favorite and is leading Sen. Herbert Baker of Weadock and Jas. Helme of Adrian for second place. Sentiment seems to be fairly evenly divided on the other farmer candidates.

It should be stated that the returns thus far received are so meagre as to offer no basis for forecasting the final result. A few scattering votes are of little value in determining the strength of the several candidates, and it is entirely possible that the present standing of the candidates may be materially altered when the vote is completed. It is our purpose to advise our readers from week to week of the relative position of the candidates in the race but the number of votes received by each candidate will not be published for some time. If the votes come in for the balance of December at the same rate as during November we should be able to announce the result of the first canvass in our January 3rd issue. The sooner our readers vote the quicker we will be able to publish the returns.

We are highly pleased over the interest our readers (both men and women) are showing in this contest. It proves conclusively that the farm folks of the state are waking up to their responsibilities as citizens and are determined to take a hand in the next campaign. Subscriber H. E. S., of St. Charles writes, "Find enclosed straw vote for Milo D. Campbell. I believe he would be a very good Governor and a man the farmers of Michigan should support. I appreciate the good work you are doing for us. I believe the day is near at hand when the farmers will be represented as they should be. Yours for success."

S. C., of Stanton declares. "We want not only a farmer for Governor, but as many farmers for senators and representatives as the Lord will permit."

G. M. G., of Allen says, "We have four enthusiastic votes for Mr. Campbell. I will also take an active part to support Mr. Campbell. He is the right kind of timber."

"Four votes in our family for Nate Simpson and one for L. Whitney Watkins," writes C. S., of Fenton.

A Riggsville family signs three names, one of them "our soldier boy," to this brief declaration: "Will say there are three votes in our house for H. F. Baker."

As previously noted a considerable number of votes have been received for Grant Slocum and scattering votes for others whose names are not published among the list of candidates. No votes have yet been received for Denby, Groesbeck or Osborn. Six votes are for Ferris, two for Earle, one for Green, one for Waters, two for Dickinson, showing beyond a doubt that the farmers want a "farmer" governor.

Mr. A. B. Cook of Owosso writes us that while he appreciates the high honor of being mentioned as a candidate, he is "not a candidate and will not be a candidate for governor in 1920 under any circumstances."

Others who disclaim any present intention of becoming candidates are N. P. Hull of Lansing. Chas S. Osborn, of Sault Ste. Marie, and W. N. Ferris, of Big Rapids.

The straw ballot will be published each week throughout the winter or until the farmers through some organized voice announce their choice of candidates. Then it will be our duty and pleasure to help put that candidate into the Governor's chair. Please help us to make the straw vote a success. We want to show our city cousins where the farmers stand.

ARRAYED like a convoy on the road to the front in the war, this chain of autos started out in a show-down of motor efficiency from Saginaw for a tour thru the "Thumb" district.

AT Vassar, the first stop on the ship-by-truck tour, the crew lining up for the photograph shown above. Hundreds of farmers turned out in the rainy weather to witness the parade.

Ship-By-Truck Method Spreads Over Country

Estimated That This Mode of Transportation Will Effect Saving of 33⅓ per cent. in Next Five Years

TRANSPORTATION experts at Washington are responsible for the statement that, with the present progress of road building, it would be possible within five years to cut out 33 1-3 per cent from the cost of freight transportation in the United States through the use of automobile trucks. Engine, tire, and body builders now come forward with the statement that this will be done.

"The farm community," says a recent department report, "should be linked with the city market. Railway, waterway and motor truck service should be effectively co-ordinated. Farm products such as milk, eggs, poultry, fruit and vegetables can, on seventy-five per cent of the farms, be carried in small containers and sent direct into the cities by truck ,thus relieving the burden on the railroads."

Upon reading the report the question which naturally arises is, are the farming communities awakening to the need of doing their share in creating the channels by which their products may flow smoothly from "farm to table."

An array of facts and figures are brought forth by E. Farr, director of the Firestone Ship by Truck Bureau, at Akron, Ohio, to support his affirmative answer. The bureau, which has 63 branches in the United States keeps in touch, through these branches and its special investigators, with all matters affecting the motor truck and its uses.

"Motor trucks on improved highways," says Mr. Farr, "offer the farmers of the nation their best opportunity of starting products on a smooth flowing movement from 'land to men.'" And today the United States is carrying on the biggest highway improvement campaign in its history and in the history of the world. At the same time the factories are turning out an increasingly large number of motor trucks, most of which will go to farmers or into the service of farmers. It would appear, then, that the farmer is awakening fully to his opportunities in this respect. He is simplifying his end of the distributive system by making it possible to speed his products to market, thereby lessening the number of agencies through whose hands these products will pass, with the consequent narrowing of the circle of those who might be tempted to add to the price which will be paid by the consumer.

"Figures recently announced by the International Shipping Digest show that during the current twelve months $375,000,000 will be expended on road improvements and maintenance of roads in the United States. From reliable sources it is estimated that in the same period the country will manufacture 180,000 motor trucks.

"It is significant that the states which will spend most freely for better highways and which manufacturers depend upon to buy the most motor trucks are states in which farming is the most predominant among the occupations.

"It is estimated that Kansas, which will spend $8,000,000 on bettering its roads, will buy 20,000 motor trucks in the same period.

"Minnesota has a road building program calling for the expenditure of $11,127,986. As an illustration of what the farmer in this great state thinks of the motor truck might be cited a statement recently issued by the Northwestern National Bank in Minneapolis in which it is said that 'trucks in large numbers, intended for immediate use in marketing the grain are being sold to this large buying class' (the farmers,) and elevator scales in many places are being revamped to accommodate the growing fleet of farmers' trucks.'

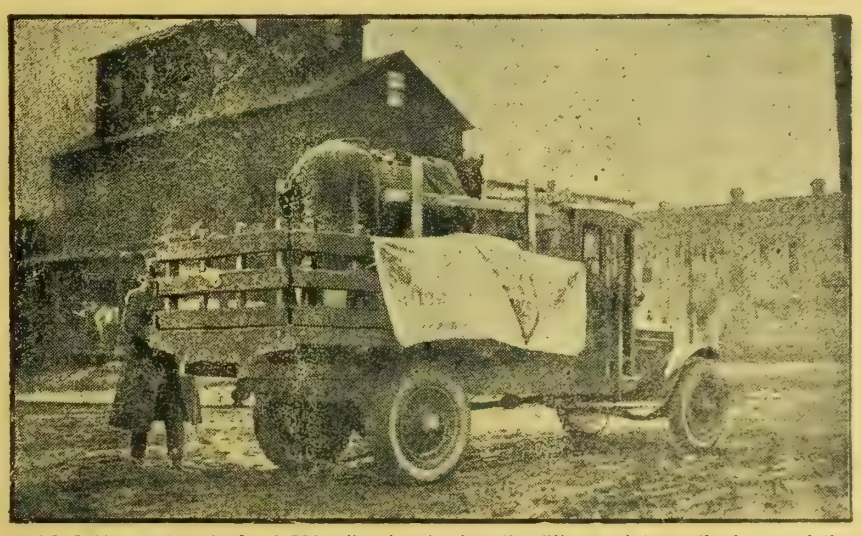
"Iowa, potential buyer of many motor trucks, will spend $20,498,534 on better highways.

"Thus it goes. In the farming communities the coming of the motor trucks has made the era of good roads talk give way to the era of good roads construction. The farmer is doing his full share, to the best of his ability, in linking his community to the city market."

TRUCK TOUR IN "THUMB"

DRIVING home to farmers the importance of shipping by truck and thereby getting their products to market quicker and in better shape and at the same time conserving their own labor by being able to stay home through the trucks driving up to their very farm doors, preaching to the small town merchants the great lessons of bringing him within a few hours shipment of the wholesale markets from which he gathers his products and over all expounding the importance of continuing the good roads movement, so that the foregoing points may be brought out, Saginaw Automobile Dealers Association co-operating with the Board of Commerce has just concluded a two days Ship by Truck tour, an innovation in a way and put on at a time when weather conditions were the most adverse that could be encountered during the year and with but a few days publicity and greeted by hundreds of farmers who stood in the rain and listened to the messages of the speakers in all the cities along the route. Twelve trucks ranging from three quarter ton to three and one-half ton capacity jobs and two automobiles, the official cars left Saginaw promptly on schedule at eight o'clock in the morning and visited Vassar, Caro, Cass City and Bad Axe, being the first day's run. Caro was the noon stop. The roads, in spite of the drizzling rain were found to be in good condition. Every truck that started got through without any mechanical or tire trouble and the schedule was followed as it was laid out. Caro, the noon stop, was reached on time and Bad Axe, the night control, found Mayor George T. English, who is also State Oil Inspector, and a large number of citizens of the enterprising Huron County metropolis out to greet the tourists. Amsdens Band of twenty-six pieces made the trip and in all the personnel of the party numbered sixty people. Chester M. Howell of the Saginaw Board of Commerce was tour manager and with Richard J. Zoat of the Firestone Ship by Truck Bureau delivered the speeches in the different towns. The tourists started from Bad Axe the second morning three minutes ahead of schedule visited Elkton, Pigeon, Kilmanagh and Sebewaing reaching the latter city forty minutes ahead of schedule. In all of these bristling centers of the rich thumb district there were large audiences out to greet the tourists. As was true of the first day, speeches were given and the band played from one to three selections at each stop. Excellent hotel arrangements had been made and not one unpleasant feature marked the day's run. Saginaw was reached on schedule at night, the afternoon run consisting of Unionville, Akron, Fairgrove, Gilford, Reese and Saginaw.

The thumb district is one of Michigan's garden spots. It abounds in many centers of population, short distances from each other and whipped together by good roads and offers a most fertile field for Ship by Truck service and out of this tour and its lessons have come several routes that are to be started. There is no doubt but that the Ship by Truck movement is going by leaps and bounds and in the next few years will see Michigan, wherever good roads abound, traversed by such companies. It is logical; it means that the farmer will save his own labor and labor is the greatest problem that the farmer has to contend with today. It is going to get in just the same way that the telephone and automobile and flying machine have done and it is the economic solution of our short haul transportation problem. Shipping by truck was fostered by the National Council of Defense as a war measure but with peace it looms up as an extreme necessity and far greater peace time measure than it was needed during the war. Ship by Truck routes covering routes of up to three or four hundred miles are already in operation in many centers of the United States where the good roads movement has been exemplified to a high degree and these Ship by Truck tours are going to make farmers and merchants of the smaller cities just that much more anxious to develop their highways to a point of excellence where heavy trucks can visit them and place them within a few hours transportation service of markets and wholesale districts.



OLD Dobbin made the trip of 200 miles, just to show the difference between the horse and the truck, the old age of transportation and the new.

More Money in Dual Purpose Breeds, Claim

By GEORGE B. SMITH

WITH prime baby beef selling at 20 cents per pound, the possibilities to farmers in Southern Michigan in combining milk and beef production, demand attention at least.

The dairy cow, besides producing a calf to take her place in the stall when she has passed her usefulness can supply the world with prime beef, as well.

Farmers, as a rule, have learned from experience how to produce a calf of beef type and tendency, from a cow of the opposite type and tendency, to convert her food into milk rather than flesh.

The use of pure bred sires of the extreme dairy breeds, for the first time is still fresh in the memory of many farmers in Southern Michigan. The prepotency of the pure bred in throwing type to the calf, especially when mated with cows of mixed breeding, which applies to the extreme beef breeds as well as dairy breeds, affords a solution of the first problem the dairy farmer has to face who desires to make double profits with his herd.

The second problem is not so easy to solve, how to raise the calf to marketable age as baby beef, without sacrificing the milk check.

Farmers who grow hogs for market know that the cheaper gains are made on the younger animals, and the tendency is to breed for the pig that will be fat and ready for market at six months old. Likewise there is greater profit with the calf that will make prime beef as a yearling, rather than as a two year-old provided the cheaper class of feeds can be used in putting the calf in proper flesh at that age.

At Glenwood Farm experiments have been made in calf raising with the cheaper feeds for a number of

MARKET FLASHES

WHEAT RECOVERS SLUMP

WHEAT PRICES PER BU., DEC. 6, 1919			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.31	2.31	2.38½
No. 2 White	2.28	2.29	2.34
No. 2 Mixed			
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.22	2.21	2.34
No. 2 White	2.20	2.21	2.34
No. 2 Mixed	2.20	2.20	2.33

Wheat completely recovered from the slight slump of a few days ago and early this week advanced several cents per bushel. The only marked slump had been in the higher grades of wheat. One of the lowering factors of prices has been the inflow of considerable Canadian wheat much feared at first by many wheat men in this country. But the wheat crossing the border to the United States has not had much weakening effect. Wheat rose four cents on Monday alone in the Detroit market due to a general bullish sentiment urged on by active buying by dealers and millers. In connection with the wheat market, it is of interest to note that flour is quiet and firm with good demand for mill feeds, and with nearly all mills working steadily filling chiefly old orders.

The wheat crop is almost entirely out of the farmers' hands now, and where the profits are being made they are being made mostly by dealers. A few farmers, of course, are reaping the reward for having waited, especially in case of the better grades of wheat.

CORN MARKET BULLISH

CORN PRICES PER BU., DEC. 6, 1919			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow	1.55	1.60	1.71
No. 3 Yellow	1.54		
No. 4 Yellow	1.50		
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow	1.47	1.38	1.65
No. 3 Yellow	1.45	1.38	1.61
No. 4 Yellow	1.40	1.35	1.56

Coal shortage which is causing increasing anxiety in industry, has worked for higher prices in the corn markets in Chicago, Detroit and elsewhere. Gains of as high as three cents or more occurred in Chicago the opening of this week. Export demand is another sustaining feature of the corn deal. Unusually small stocks of corn feature the corn news from Detroit, where the corn market has been rather quiet.

In regard to the coal shortage it is of interest to note the seriousness of the situation which has caused scores of great industries to shut their doors in the West, and many will stay closed for several weeks until the situation is improved. There have been numerous bearish factors tearing down the prices, but when the market rises in spite of these it shows the inherent strength of the corn outlook. The bearish features were, in part, the breaking of foreign exchange to new low levels; heavy stock market; excellent weather conditions; larger receipts at the biggest terminal markets and so on. There seems, however, to be no rush at present on the part of most producers to sell their corn.

From the West come reports of rapid increase of farmer organizations with a great deal of sentimental effect on their attitude toward selling. It is their firm belief that $1.25 should be the very lowest price paid for corn at the country loading stations, and that a much better price should be secured.

OAT PRICES CLIMB

OAT PRICES PER BU., DEC. 6, 1919			
Grade	Detroit	Chicago	N. Y.
Standard	.82	.81	.90
No. 3 White	.81	.80	
No. 4 White	.80		
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
Standard	.76	.75	.85
No. 3 White	.75	.74	.83
No. 4 White	.74	.73	.80

Strong foreign demand for oats and decrease in the amounts reported for the visible supply have done much to keep the oat market firm, and the price of oats rose from one to two cents in some of the big markets the opening days this week. The upward trend was also encouraged by a bullish action in the corn sector, where anxiety over the coal shortage caused rising prices.

There seems to be a belief among certain market experts that the price of oats is too low, when compared with corn, barley and rye. Domestic shipping sales have been liberal. A lowering in the rates for ocean freight has opened up new buying of oats in the United Kingdom and other countries in Europe. Another bullish factor on the horizon is the fact that Argentine grains, notably oats, are pulling down higher prices in European markets than are the American grains.

RYE AND BARLEY HIGHER

Rye prices rose about one cent in the Detroit markets the opening days this week. Barley also presents a firm condition. The persistent and increasing foreign demand is undoubtedly the strong bull in the rye and barley trade. The upward tendency of corn, has had a further strengthening to most grains. Detroit has exactly seven times as much rye on hand as it has corn; there are 21,000 bushels of corn and 147,000 bushels of rye.

In the face of low rates of exchange, the German mark and the Austrian crown have declined almost to nothing. Nevertheless, the purchases of other countries keep up, including those of the British Isles and countries which had been neutral in the war.

Detroit quotes rye, cash No. 2, $1.49. Barley, cash No. 3, $280@2.90 per cwt.

LAST MINUTE WIRES

DETROIT, Dec. 4.—All grains go higher, corn oats and rye advancing mainly because of small receipts. Active demand for seeds of all kinds. Beans, inactive and steady. Potatoes easy. Hay in good demand; offerings scant. Live stock higher than last week.

CHICAGO, Dec. 4.—Hogs drop about 25 cents, but close firm, following rising prices earlier in week. Cattle also slightly lower. Potatoes easy. Corn, oats, rye and barley bullish.

(Note: The above summarized wires are received AFTER the balance of the market page is set in type. They contain last minute information up to within one-half hour of going to press.—Editor.

President's Message Confuses Trade Outlook

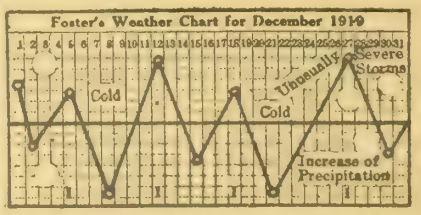
PRESIDENT WILSON stepped into the limelight again in the world of business and trade this week with his message to Congress. Some of the measures advocated by the president were: a budget system, simplifying of taxes, a trade which no longer allows America to be isolated from the rest of the world, aid for returned soldiers, laws to encourage the dye industries in America, increased production of food and the necessities of life, speedy return to normal conditions, politically, socially, industrially, etc., strong food control additions to present laws, sanction for collective bargaining, regulation of length of time produce can be kept in storage, fighting of the extreme Reds, etc.

The result of the message, the chief factor in Wall street this week, was dull and confusing trade conditions. Disappointment was felt in financial headquarters because of neglect in the message of remedies for the rail situation.

There are many other factors in the world of business and trade which need to be watched closely. The foreign exchange has collapsed to a record low level, and this may have very harmful effects in parts of the export trade. Adoption by the government of stringent regulations to prevent coal famine also will have their bearing in the grain markets, whose rises have often been due recently to the coal situation. The chief manufacturing concerns show little worry about the outcome of the fuel restrictions but it is admitted that further shortage of fuel and transportation is coming.

THE WEATHER FOR THE WEEK

As Forecasted by W. T. Foster for MICHIGAN BUSINESS FARMING



WASHINGTON, D. C., Dec. 6, 1919—Warm waves will reach Vancouver about Dec. 6, 11 and 18 and temperatures will rise on all the Pacific slope. They will cross crest of Rockies by close of Dec. 7, 12, 19; plains sections 8, 13, 20; meridian 90, great lakes, middle Gulf states, Ohio-Tennessee valleys 9, 14, 21; eastern sections 10, 15, 22, reaching vicinity of Newfoundland about Dec. 11, 16, 23. Storm waves will follow about one day behind warm waves and cool waves about one day behind storm waves.

These disturbances will dominate the weather of North America from near Dec. 6 to 25 and will include two cold waves that will be on meridian 90, moving eastward near Dec. 8 and 21. The reader should always have Foster's large weather map for ready reference. There maps are sent free on receipt of 1-cent. Always address: W. T. Foster, 1625 1-2 N. Capitol St., Washington, D. C.

December will bring in another important weather feature. It is now being demonstrated that the principal cause of the changing locations of drouths and floods, of all precipitation, is a regular change in the places where the sea waters are evaporated, from which evaporation the moisture comes to water the continents. One of these changes occurs first ten days of this month. The period of these changes is about 165 days and these evaporations occur near the same places at irregular intervals separated by years. The calculations are difficult and the knowledge should be in possession of the government in order that it might be worked out more thoroughly.

W. T. Foster

BEANS REMAIN INACTIVE

BEAN PRICES PER CWT., DEC. 6, 1919			
Grade	Detroit	Chicago	N. Y.
C. H. P.	9.00	10.00	11.50
Prime	6.85	7.50	7.25
Red Kidneys	11.50	13.00	13.50
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
C. H. P.	9.00	10.00	10.50
Prime	9.00	9.00	9.75
Red Kidneys	13.50	12.00	11.25

The bean market remains inactive and steady, according to reports from Detroit. Little activity has been occuring for some time in the Detroit market. Interesting news, however, comes from various parts of the bean world. Birch Run, Michigan, reports a fairly healthy market, with receipts extremely light and with a fair demand. The Birch Run dealer is reported as declaring the crop to have been fifty per cent moved thus far, and the crop is said to be held by strong hands among the farmers who expect to wait until they can get a price above the cost of production. This sentiment seems to be fairly general in many parts of the bean belt of Michigan.

Colorado reports an increase of 50 cents per cwt. in the price of beans. California farmers and others are pooling their bean crop to some extent. Farmers everywhere seem to be awakening to the need of organizing in order to prevent glutted markets followed by price soaring after the crop is mostly into the dealers' hands.

POTATOES INCLINE EASIER

SPUDS PER CWT., DEC. 6, 1919		
	Sacked	Bulk
Detroit	3.00	2.80
Chicago	2.85	2.75
Pittsburg	3.00	2.75
New York	3.00	2.75
PRICES ONE YEAR AGO		
Detroit	1.95	1.85
Chicago	1.95	1.85
Pittsburg	1.93	1.80
New York	2.35	2.20

Potatoes are reported as easy in many markets at present with less activity in the trade. Detroit reports an easier condition, although receipts are no larger. Prices hover around $3 and above for 100 lb. sacks. Crop reporters of Business Farming tell of better prices for potatoes generally to farmer. The increased use of the motor truck has saved the day for many potato growers who wanted to sell during the car shortage. Frost and dry rot have played a certain amount of havoc with potatoes in transit in Michigan and other states.

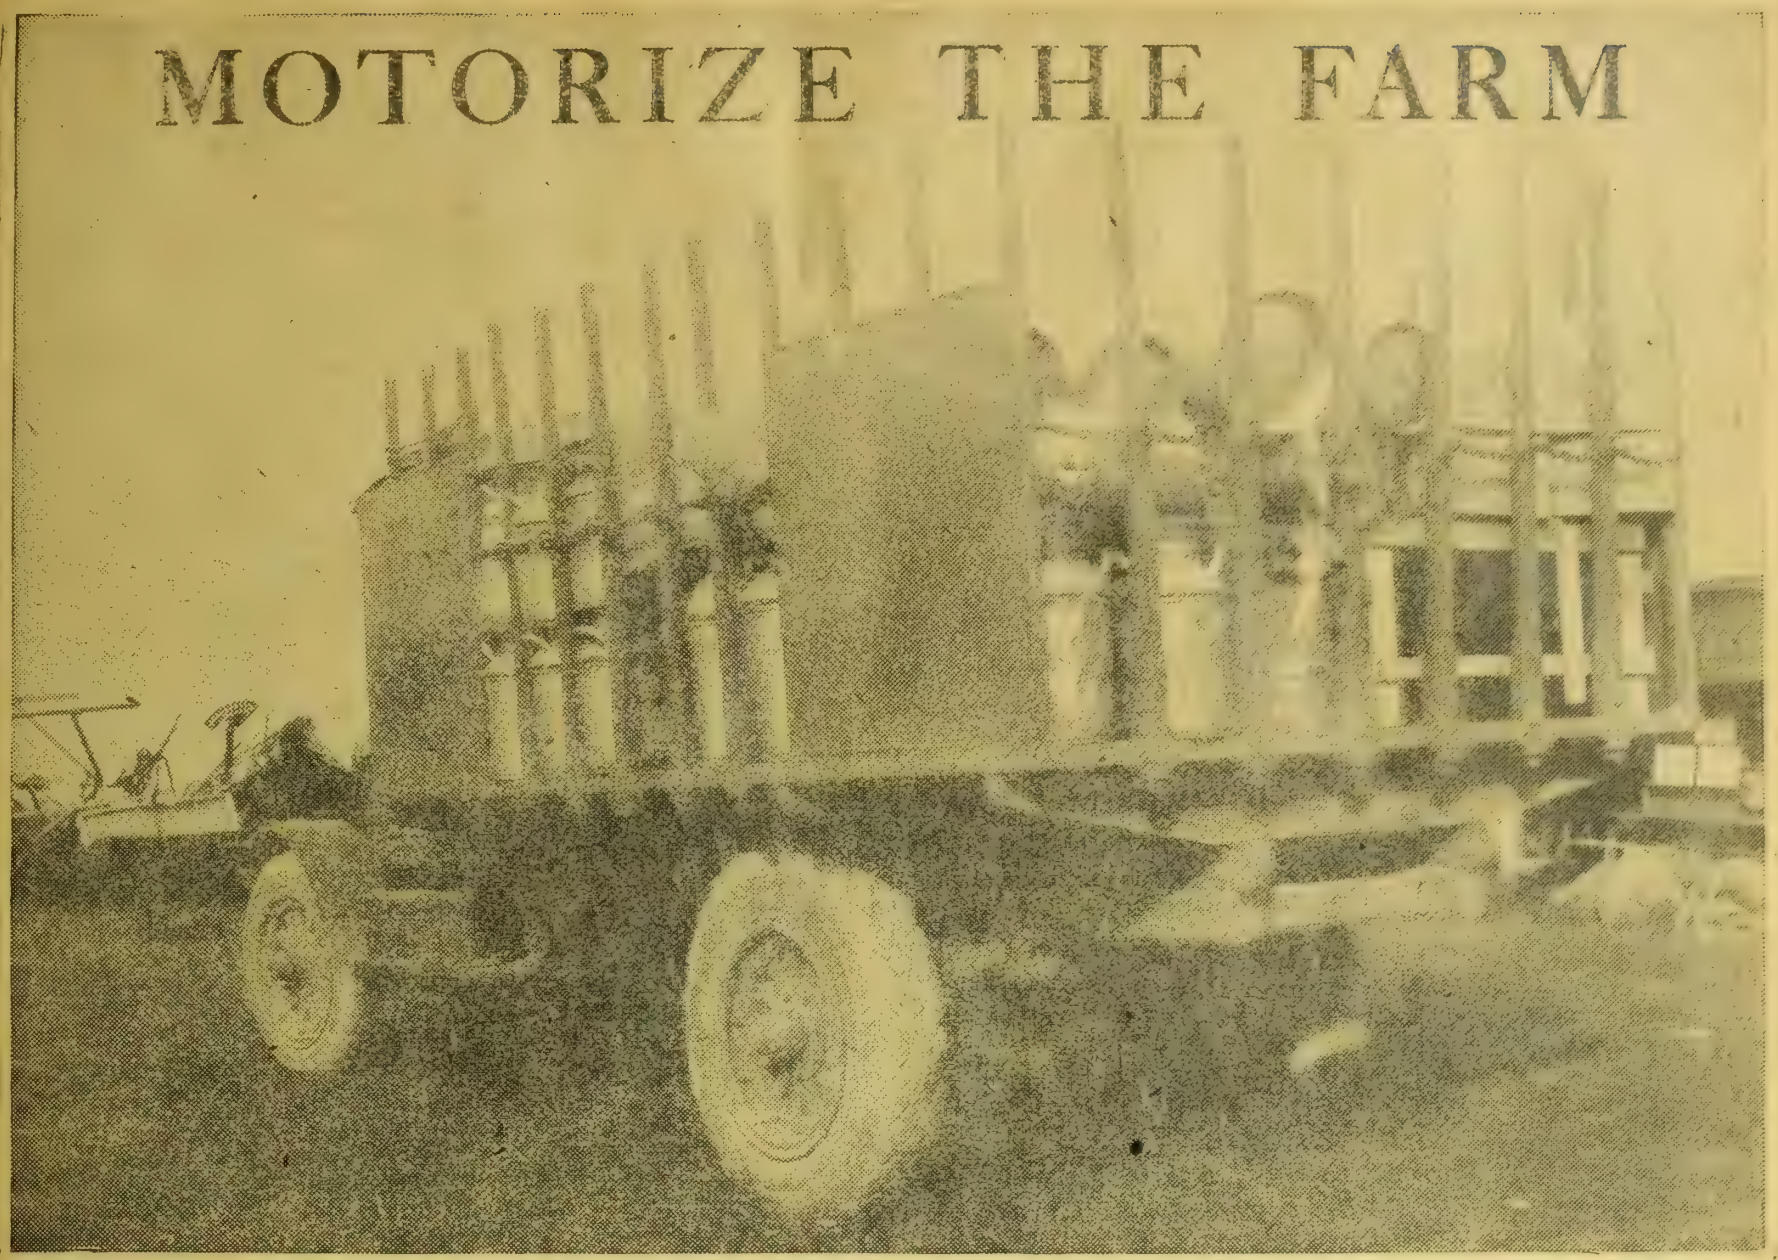
Chicago sends a message of an easier potato market at present. Thanksgiving week had its usual effect of reducing the amount of buying, following by an easier market. A recovery, however, is confidently hoped for by the spud bulls. The greatest decline was only 15 cents per cwt. and an upward jump is predicted in Chicago and other markets. Farmers should not be surprised to see another slump around Christmas week, when lighter trading usually makes for an easier market.

POULTRY MARKET LIFELESS

Michigan's poultry markets generally lack life this week, inasmuch as the Thanksgiving business took the wind out of the sales of the trade. In Detroit and elsewhere much of the poultry offered was left over stock and there was little urgency on the part of the buyers. Detroit quotes: LIVE POULTRY: spring chickens, large, 25@26c; leghorns, 20@22c; hens, 26@27c; small hens 18@20c; roosters, 16@18c; young geese, 25@26c; ducks, 30@32c; turkeys, 36@37c per lb. DRESSED POULTRY: turkeys, 38@43; chickens, 23@28c; ducks, 38@40c; geese, 28@30c per lb.

ADDITIONAL MARKETS ON PAGE 17

MOTORIZE THE FARM



AFTER doing much of the market hauling of thirty-two farmers around Eden Prairie, Minnesota, with a motor truck on Goodyear Cord Pneumatic Truck Tires, Mr. C. P. Page states: "I would not use solid tires again under any consideration. Hills, mud and storms don't stop the big, tractive Goodyear Cords. Their cushioning is saving truck repairs and depreciation. They also are saving gasoline and oil. I now haul more milk and other loads in less time, find the work far easier, and note that the pneumatics save our roads. Several people have adopted them as a result of my experience with Goodyear Cords."

THE experience described above affords an excellent example of what pneumatic truck tires are accomplishing for farmers. Every limitation hitherto placed on the farm use of motor trucks by solid tires has been removed with the perfected pneumatic tire. For this reason, Goodyear's pioneer work in developing cord pneumatic truck tires has been extremely opportune; it has led to the more extensive use of farm trucks during a serious scarcity of farm labor. Now, farmers are finding it extremely advantageous to employ Goodyear Cord-equipped trucks with other time-saving motor units and, thus, to motorize their work quite completely. Special information concerning the use of pneumatic-tired trucks on farms may be obtained from The Goodyear Tire & Rubber Company, at Akron, Ohio.

CURRENT AGRICULTURAL NEWS OF THE WORLD

GRINNELL'S

SURPLUS WAR EXPLOSIVES MAY CLEAR MICHIGAN LAND

Cheap explosives for clearing land in Michigan may be secured in the near future. There is said to be a probability of the war department distributing a large quantity of T. N. T. for this purpose, in much the same manner that quantities of this explosive have been sent to various states for use in road building.

Sec'y Marston, Bay City, wrote development bureau officials in the state, to the agricultural agents of the railroads to the state agricultural college and the public domain commission, suggesting that each one get in touch with congressman and senators from the state and get them interested in securing an allotment of this explosive for use in the north Michigan stump lands.

The response was quite general. W. P. Hartman, agricultural agent of the Grand Rapids & Indiana railroad got Congressman Mapes interested in the proposition; Congressman Currie got busy on it at once after receiving a letter from Secretary Marston at Bay City, and others have also been working on the proposition.

Congressman Currie writes that he has some encouragement that he will succeed in getting an allotment of 200,000 pounds for experiments in Michigan and also that a government bulletin is to be is to be issued in a short time giving information concerning the use of T. N. T.

Soil Improvement Body Enlarges

The work of the Soil Improvement Committee of the National Fertilizer Association in middle western territory has constantly grown, and in order to keep pace with the growth two agronomists have recently been employed to help carry on the work.

One of these men in Ove F. Jensen, who, for the past three years, excepting for the time spent in military service has been connected with the Farm Crops Department of the Iowa Experiment Station at Ames, Iowa. Mr. Jensen is a graduate of the Michigan Agricultural College in the class of 1914. During his college course and after graduation he worked in the Fertilizer Division of the Experiment Station, and is especially trained for fertility work.

The other man recently engaged is H. R. Smalley of Fort Wayne, Indiana. Mr. Smalley was raised on an Indiana farm, is a graduate of the College of Agriculture of Purdue University in the class of 1911 and has specialized in Agricultural Chemistry and Soil Fertility subjects. For a time he was connected with the office of Farm Management U. S. Department of Agriculture and in this work had an opportunity to come in contact with some of the best types of farming in the Middle West. For the past four years he has been a county agent in Indiana. Both of these men will take up their work with the Chicago office of the Soil Improvement Committee at any early date.

New Features Announced for Farm Census

AMONG the new features included in the approaching 1920 census of agriculture will be a series of questions relating to the amount of corn and other crops raised for silage purposes. These statistics on silage, which are to be collected by the Bureau of the Census in accordance with the recommendations made to that Bureau and to Congress by the United States Department of Agriculture, are expected to furnish accurate and comprehensive figures on this important phase of farming which have heretofore been lacking. The facts and figures gathered in the census on this subject will be tabulated, so as to show what each county as well as what each state produced in the way of silage during the year 1919.

The Census Bureau also announces the inclusion in the farm schedule of questions to show how many farmers own tractors and automobiles and how many have heating and lighting plants and telephones in their homes. These questions are designed primarily to make known the better living conditions and modern improvements on farms in all sections of the country. The Census Bureau, in including these questions for the 1920 census, was guided by suggestions from leading farm economists as well as by communications from farmers' organizations. The Department of Agriculture is also interested in these questions and gave its endorsement to the plan.

Copies of Schedules for Farmers

To secure co-operation on the part of the farmers and interest them in the census, the Bureau of the Census has distributed more than a million copies of the agriculture schedule through the medium of several farm publications which have a wide circulation. The farmers who received these copies will thus have an opportunity to study the questions in advance and be ready to give prompt and accurate information to the census enumerator when he calls during the month of January. Any farmer who desires a copy of the agriculture schedule in advance may secure one by writing to the Bureau of the Census, Washington, D. C. An extra supply of the schedules has been printed for this purpose.

That the individual farmer will realize the advantage of keeping a more accurate tab on what his farm is yielding is one result of the census hoped for by the Department of Agriculture. The schedule of questions which will be used in the approaching census will help the farmer in getting started in this work inasmuch as it sets forth the subjects in which the government is interested and thus provides a model which any farmer can easily adapt to his own needs.

When Reports Will be Ready

The published results of the 1920 census will be issued by the Census Bureau as rapidly as possible. No precise time can be set in advance as to when the first reports will appear, but it is thought that the preliminary bulletins will be issued within three months after the completion of the enumeration. Later a series of bound volumes appropriate for use as reference books in libraries and schools will be published.

These publications will show for each county, for each state, and for the country as a whole, the number of farms, the total acreage of farm lands, the value of farm property, the numbers of the different kinds of live stock, the acreage and production of all the important crops and many other items of interest connected with the farming industry.

The bulletins of the Census Bureau will be widely distributed and every effort will be made to make them of the greatest possible value to the farmers who furnished the information which they contain.

Farm and Labor Confers

"Cut out the middleman!" This was the slogan for war on high cost of living declared by the joint conference of farm organizations and labor representatives at Chicago.

The conference was called by Herbert F. Baker, president of the Farmers' National Council, and Dalton T. Clarke, president of the National Co-operative Association, to line up labor and the farmer behind the big reconstruction program of legislation to be placed before congress.

Herb Baker sounded the keynote of the conference in his address.

"By holding this co-operative conference in advance of the labor conference called for December in Washington," he said, "the co-operative plans worked out here can be submitted to the conference with reasonable expectation of its receiving indorsement and adoption as the co-operative policy of all labor.

U. S. to Lift Wheat Embargoes

Embargoes on wheat and wheat flour will be lifted Dec. 15, it was announced by the United States Grain Corporation recently.

Lifting of embargoes on both exports and imports followed the action of President Wilson in signing a proclamation completely terminating the embargo control which has been in effect more than two years.

Control over embargoes first was exercised by the War Trade Board to protect the supplies of wheat and wheat flour for the Allies. Later control was taken over by Julius H. Barnes, wheat director, under the Wheat Guarantee Bill.

Discussing the lifting of the embargo, Mr. Barnes said:

"This is one step in the necessary reconstruction of trade facilities broken by the war, which must function when the Grain Corporation terminates its three years' work. While ocean transport conditions and also disorganized international finance probably will prevent free trading between merchants of the various countries for some time, it is expected that, step by step, international trade may be reknit.

NEWAYGO ENDORSES ITS FARM BUREAU SYSTEM

At a spirited session of the Board of Supervisors which closed the adjourned October term at the county seat, the Newaygo County Farm Bureau was saved from death by a vote of 20 to 4.

That the farm bureau has been one of the greatest productive factors in farm life in this country, but there has been opposition to its continuance. Miles Barton, of Big Prairie, offered the resolution providing for the maintenance of the institution. The resolution of the board provided for the levying of a tax of one-tenth of one mill on the assessed valuation which will provide an appropriation of $2,100 annually for the support of agricultural research and demonstration work in the county. Wm. Hilton of this city, Louis Ruprecht, of Bridgeton and R. H. Brownyard of Ensley were appointed a committee to have charge of this fund and look after its expenditure. The county is now without a farm agent, Simon Harkema, who has had charge of the work for the past two years, having resigned October 1st.

Gleaners Rally in Van Buren

One of the best attendance records in the history of the organization marked the meeting of the Van Buren County Federation of Gleaners held at the I. O. O. F. hall in Hartford. All of the arbors in the county affiliated with the federation were represented and the hall was filled to its capacity at both the afternoon and evening sessions. The afternoon session was attended by the general public.

The new officers of the county federation elected at the morning session are, James M. Stafford, of Lawrence, Chief Gleaner; Adolph Dankard, of Bangor, Vice Chief Gleaner; Mrs. Jennie Disbrow, of Toquin, Secretary-Treasurer; Carl Winslow, of Mattawan, Lecturer; Mr. and Mrs. Edward Clark, of Almena, Conductor and Conductress; Truman Stratton, of Hartford, Inner Guard; Harry Winslow of Mattawan, Outer Guard.

FREE FARMERS' BULLETINS

A copy of any of the publications listed below may be obtained free upon application to the Chief of the Division of Publications, United States Department of Agriculture, Washington, D. C., as long as the department's supply lasts.

Cattle Fever Ticks and Methods of Eradication. By W. P. Eilenberger and Robert M. Chapin. Pp 32, figs. 5. Contribution from the Bureau of Animal Industry. (Farmers' Bulletin 1057.)

Unfermented Grape Juice. How to Make it at Home. By Charles Dearing, Horticulturist, Office of Horticultural and Pomological Investigations Pp. 32, figs. 20. Contribution from the Bureau of Plant Industry. Farmers' Buletin 1075. This bulletin is intended solely as a manual for the home preparation of unfermented juice. Supersedes Bulletins 175 and 644.

Packing Case for Wintering Bees

By B. F. KINDIG, State Inspector of Apiaries

"I have four swarms of bees and as I have never had any experience with bees, I would like to know the best way to store them for the winter."—*S. A. C., Marion, Mich*

POOR wintering is the great cause of loss of bees in Michigan. Sufficient packing insures the use of less stores, and is, therefore, a saving, and at the same time insures strong colonies in spring, if there were plenty of young bees in the fall. No amount of packing can compensate for weak colonies in the fall, or for insufficient honey for wintering. The entrances should preferably be away from the prevailing winds. The apiary should be located at a place where it is well protected from the winds of winter. If the snow should cover the packing cases, leave it there. Snow is excellent protection from the cold. Always remember that the bees must keep a temperature in the cluster very little below that which is comfortable for you in the living room during the winter. In order to do this, they must be given the best of protection, both from the cold and wind. The large entrance commonly used, is one of the chief avenues through which the bees lose the heat of the cluster. Could you heat your home in winter with the door standing open?

In traveling over the state, I have met with a demand for the specification for a packing case for two colonies, instead of the standard one and four colony cases. It seems that many feel that the two colony case is better adapted to the needs of most bee keepers. In nearly every yard, the colonies face in one direction, and it is very easy to bring two colonies together for packing. The chief objection to the one colony case is that more time and material is used per colony. The dimensions are given as a result of a study of a number of two colony cases found in various parts of the state. It is of such size as to accommodate almost any of the single or double-walled hives found in the course of our work. It is designed primarily for the standard ten frame single wall hive, using Hoffman frames. In cases the deeper frame is used, the packing case should be correspondingly higher.

The bottom board. Dimensions 2 ft. 10 in. by 4 ft. This should be made of one inch rough lumber, because it has to support the weight of the hives and packing, and should be rigid enough, so that it will not easily get out of shape. The boards used should be 2 ft. 10 in. long. They should be bound together with at least three 4 ft. strips 2 in. wide. The 2 in. strips should be nailed to the lower side of the bottom board. On the upper side of the bottom board, two 2x4 pieces 3 ft. 10 in. long are nailed ten inches from the sides. These help make the bottom board rigid, and support the hives, and allow for four inches of packing under the hives.

The Sides. For one story hives, the sides should be 4 ft. long and 2 ft. 3 in. high; for story and one half hives, they should be 2 ft. 9 in. high; and for two story hives, they should be 3 ft. 1 in. high. The sides may be made of any light lumber that is convenient for use. Half-inch lumber is sufficient, as there is very little strain on the sides. If light lumber is used, at least three strips should be used to bind the boards firmly together. Store box or crating lumber, old siding, or cheap waste lumber can be used for the sides.

The ends. If one inch lumber is used for the sides, the ends should be 2 ft. 8 in. long. If half-inch lumber is used for the sides, then the ends should be 2 ft. 9 in. long. The height corresponds, of course, to the sides. Hooks can be used for fastening the sides and ends together, when set up. Some prefer to nail them together.

The cover. The cover should be made with a rim around the edge, not less than an inch wide. This prevents the wind from lifting it. The cover should measure 2 ft. 10 1-2 in. by 4 ft. 1-2 in. inside of the rim. It can be made of half inch or inch lumber, but if made of light lumber, it should be well reinforced, to prevent sagging in the middle. The lumber need not be of a very good quality as it should be covered with a very good quality of felt roofing.

The tunnel. This is the part that connects th eentrance of the hive with the entrance of the packing case. This should be made the regular width of the full entrance of the hive. No entrance blacks should be used in the hive when packed. The tunnel should not be made as a part of the packing case, but should be made to fit against the inside of the entrance of the packing case. A small strip of wood can be nailed on the inside of the packing case. A small strip of wood can be nailed on the inside of the packing case, just below the entrance for the tunnel to rest upon. The entrance through the packing case should be nothing more than a 1-2 in. or 3-4 in. auger hole. This is plenty large enough for all of the needs of the colony during the time that the packing cases are used.

Care should be used, to see that the hives are well packed beneath. It is easier to put in the bottom packing before the sides are put in place. During the summer, the cases that are not needed for holding packing, should be piled up in such a way that none of the boards may become bent. With reasonable care, such packing cases should last many years.

Grangers Figure Cost of Producing Wheat

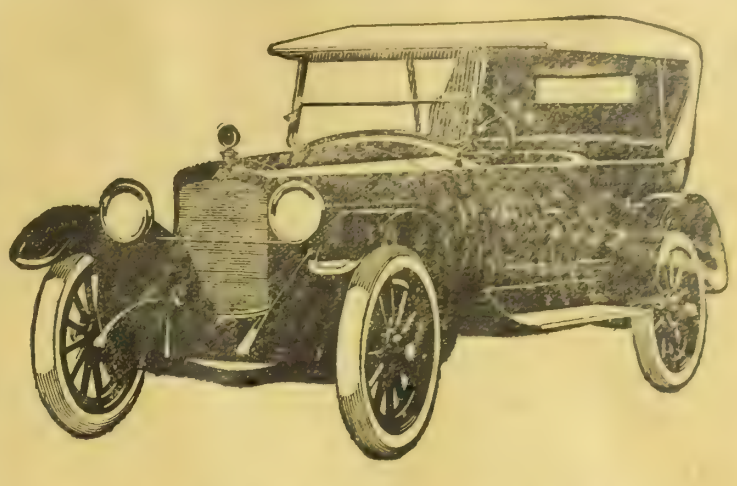
MRS. DORA Stockman, lecturer of the Michigan State Grange, has supervised the getting out of a lecturer's handbook in which costs of production are figured for the various products of the farm. The following table computes what the Grange sets forth as being the production cost of certain growers who got 25 bushels per acre:

Wheat 10 Acres Specific Cost Sheet

Plowing 4 days, 3-horse team @ $6.00	$ 24.00
Harrowing, 3 spike, 1 spring tooth	15.00
Rolling 2 times	5.00
Fertilizer, 2,500 pounds, 14 per cent @ $26.00	32.50
Applying same	
Manure	
Applying manure	60.00
Cleaning seed	1.00
Seed, 1 1-2 bushels per acre @ 2.12	31.80
Drilling	5.00
Cutting	12.50
Twine	4.50
Shocking	6.00
Threshing, 250 bushel at 5c	12.50
Threshing help	23.75
Boarding threshing help	8.00
Fuel	2.50
Delivery to market	10.00
Total	$254.05
Per acre cost	$ 25.40
General farm overhead	27.67
Total per acre cost	$ 53.07
Total per bu. cost 25 bu. per acre	$ 2.13
10 per cent proft	.21
Cost per bu., 1918, fair price for wheat	$ 2.34

Fourteen bushels average yield per acre in Michigan, 1918.
What did the average bushel of wheat cost the farmer?

BUILT TO SERVE YOU WELL



GRANT SIX

There is a world of confidence back of our conviction that the Grant Six is the car you want. This confidence is based on the fact that it is built for your needs —built to serve you well.

Keen buyers who look below the paint, varnish and trim and want to know how the car performs, how it rides and how it stands up, are the quickest to appreciate this fact. They recognize the Grant Six as a wonderfully fine car.

The Grant Six has the smart beauty of a sport model; its lines are long, low and rangy, yet it is a true five-passenger touring car. It has plenty of room, its seats are the right depth and height for comfort and it is substantial and well built.

Its overhead valve motor is powerful, flexible and economical. It takes the car as fast as most men dare to drive.

And it is a fact that you can ride over country roads at better than ordinary speed with a Grant Six because its long springs, correct weight distribution and perfect balance keep it comfortable at speeds and on roads simply impossible for an ordinary car.

The Grant Six is easily handled, it is "light on its feet," and yet it has extraordinary strength and endurance.

But you will have to see the new Grant to really appreciate its character and ability. Go and see it now. See it before you buy any car.

Five Passenger Sedan $2450
Coupe . . $2450 Roadster . $1495
Five Passenger Touring Car . . $1495

JUST BETWEEN OURSELVES

"I CAN'T understand," writes one of our readers, "why the President's Industrial Conference failed to at least consider the grave questions presented for consideration." Simply because of the fact that the conference encountered an unsurmountable barrier at the outset. The President appointed as members of that congress President Gary of the Steel Trust and Samuel Gompers, president of the American Federation of Labor. These two gentlemen were leaders in a bitter fight between capital and labor when they entered the conference. In clearing the way for action, the question of organized labor was brought up and President Gary immediately declared that there "was no such animal." He represented organized capital, but refused absolutely to recognize organized labor. This decision at once removed the real serious question the conference had to consider, and the next step was to close the conference and go home—there was no alternative. And so the people are still being ground between the mill stones of Gomperism and Garyism.

The public, though most interested in the problems before the conference, did not even have an opportunity to rise to a point of order; capital said "You shall not;" labor answered "You shall." Labor said "We will;" capital retorted, "You won't," and the conference was over. The people should be able to regulate capital and curb organized labor, but at the moment no constituted authority dares take these two extremes and crack their heads together until they are willing to acknowledge that the interests of the whole are paramount to the selfish interests of the few.

* * *

DURING the first Roosevelt administration miners thruout the anthracite coal regions of Pennsylvania went on a strike and the mine owners refused to consider their demands and immediately called on a lock-out. The supply of coal for the approaching winter was in jeopardy. President Baier of the coal combination, simply said that the companies he represented were mining this precious fuel from God's store-house and that they had the divine right to operate their business as they pleased and without either direction from the Government or dictation by labor unions. "Divine-right Baier" was the title bestowed upon this short-sighted capitalist. It will be remembered that Roosevelt told Baier that if his companies did not get to digging coal within a given number of days Uncle Sam would shoulder pick and shovel and get busy. The strike ended within the alloted time.

I visited the mining village of Latimer during that strike. The miners lived in rude steel shacks on the bleak hill-sides—not a blade of grass or a tree in sight. The miners were paid in company script, good only at the company store and saloon. Miners were never out of debt to the companies no matter how hard they toiled. It was sad to contemplate how the half-clothed little children and sad-faced mothers must swelter in those steel shacks in the summer and half freeze during the bleak days of winter, helpless and hopeless, while discouraged husbands and fathers toiled on—shackled to the company store and saloon.

I was through the coal regions of the Virginias during the past summer. True, there has been an improvement in the conditions surrounding the mine worker, but conditions still exist which should not be for one moment tolerated. Not a single reader would go down into the bowels of the earth, brave the dangers of blasts and cave-ins and work as the miners are obliged to work for double the wages these underground workers receive. "Booze" has been banished; the miner is thinking with a clear brain. He knows what it costs to mine coal. He knows the amount of real capital necessary to successfully operate a mine and he knows what the people are obliged to pay for the products of the mine. And knowing this he is discontented, and discontent leads to action; action demands progress; progress suggests the use of the best means to secure results—the miner has recourse to but one element of strength—strike. We are all inconvenienced by the miners' strike; perchance some of us may be obliged to shiver—but keep in mind the fact that there are always "two sides to every question." A principle is involved—no question is ever settled until it is settled right.

* * *

Grant Slocum: The farmers of Michigan are practically unanimous in their demand for a governor who understands the needs of the farmer, and is big enough to represent all of the people. Now friend Slocum, I have felt for a long time that you are the right man for us, and now as others mention your name in this connection, I am going to write you.

I am no orator, neither would I cut much of a figure as a campaigner, but if you will agree to become a candidate for governor, I will pull off my coat and do my best.

Sincerely yours,
JOHN McCALLUM.

Gagetown, Mich., R. No. 3.

THANK GOD for friends. Those fellows we meet and greet as we pass on life's highway, who somehow journeyed along with us, who, overlooking our limitations and our faults are forever after FRIENDS. I have received many letters from friends regarding my entering the primaries next fall as a candidate for governor, but did not feel it necessary to state my position until this morning a letter advises me that at a public meeting held in Huron couny, the matter was discussed and a request for my decision made. I greatly appreciate the confidence imposed in me by these friends, and feel that here and now I should make my position clear. I would not, under any circumstances become a candidate for any political office in the coming campaign. I feel that whatever influence I may have will be much more effective as a soldier in the ranks, where, untrammelled by promises or pledges; with no enemies to punish or friends to reward, I can fight the good fight for the common good. Let it be understood that this declaration carries with it no hint or suggestion that I am not interested in the affairs of state or that I do not realize that good citizenship demands the active, earnest participaion in all governmental affairs, by every man and woman entrusted with the ballot. On the contrary, it is because of my interest in a government of, for and by the people that I feel that every man should be stationed where he can render the most efficient service for the common good—my place, then, in the coming battle, is with you, my friends—with the rank and file, who must win all victories, and who suffer most in defeat. Let others have the glory—none can prevent the fruits of victory from being shared by all.

GRANT SLOCUM.

* * *

TIME PASSES rapidly enough, gracious knows, but the farmers of the nation would be willing to have Father Time throw the machine into high gear in order that Secretary of Agriculture Houston's time might sooner expire. Somehow David simply can't get the farmer's viewpoint. At the Chicago meeting of the National Commissioners of Agriculture, Secretary Houston said: "There should be just enough farmers to produce what the world would take at a profitable cost." Here indeed we have the problem solved. Limit the number of farmers; profitable prices forever after. Just how David would limit the number of farmers has not been explained.

Possibly David would use a "sling" and thus make away with the number of farmers in excess of "just enough." Probably he may advocate farmer race suicide to prevent an excess above the "just enough" level. Surely the Secretary of Agriculture has painted a very rosy picture for the future of agriculture in this country. No suggestion of simplifying the old, out-grown, expensive machinery of distribution; no thought of government warehouses, or terminals; no hint that gambling in food products should be curtailed, or a reduction in the number of middlemen—no, nothing constructive, just a suggestion that this nation can not have an unlimited number of farmers—but "just enough farmers to produce just what the world would take at a profit!" Oh, piffle!

* * *

WHY SHOULD we be in a hurry to turn the railroads back to the owners? You can give a half dozen reasons why, but listen. Did you know the official reports of the Railroad Administration for July and August, 1919, show that the roads were paying all operating expenses, including maintenance, as well as the rental charge of $900,000,000 a year? They did this and more, for in July they earned a surplus of $2,316,501, and in August, $16,296,025 in excess of all charges. And mind you, the people will get no reduction in freight and passenger rates if the roads are returned to the former owners. Indeed, in discussing the question in Washington the former owners have stated that rates must be increased at least 25 per cent above present rates or they will be unable to operate them.

It is also well for you to remember, Mr. Farmer, that the railroads under private ownership, have received more than $700,000,000 in the shape of actual cash grants by cities, counties, and states and aside from this they have been endowed with 129,000,000 acres of land. Now, if we go a step further we find that the actual cash put into these roads was at least fifty per cent less than the present bond issues—in other words, half cash and half water. And it is upon this sort of a valuation that the people are obliged to pay dividends.

Now, let's get a little nearer your own farm. Trucks have all but ruined the short-haul freight business. The auto and the electric interurban lines have grabbed off the short distance passenger business. This means that the long haul freight and passenger traffic must carry the burden—and the farmer is the real long-haul freight payer, for the simple reason that he must reach the terminal markets. Under private ownership railroads are operated for profit. This being true these arteries of commerce must subsist upon the country they pass through.

Suppose the rural delivery and mail system and parcel post were dependent upon the business from each route rather than from all the routes of the nation—do you think that in that case the route which serves you would be continued? And yet we have said nothing about labor troubles and strikes. Has the government had any real trouble in keeping the United States mail service in operation? Think these matters over, Mr. Farmer, for you are the nation's heaviest freight payer. Would it not be better to consider this question carefully before returning the roads to the manipulators? What's the hurry?

* * *

As soon as the remnants of the Thanksgiving turkey have been consumed we will put away all thoughts of our thanksgiving obligations for another year. For that is the way of the world.

Railroad legislation is a matter that vitally affects every farmer in the United States. We urge readers to advise their representatives in congress of their wishes on pending railroad legislation.

Grant Slocum

Dig Dollars from the Farm Subsoil

By PROF. M. M. McCOOL

SUBSOILS markedly affect the productivity of soils. It was stated in an earlier report that the subsoil is the section that extends from about the depth of the furrow slice downward. Since the root system of most crops extend several feet into the subsoil its nature must play an important role in crop production.

Subsoils Vary

The nature of subsoils, that is with respect to texture and structure or physical nature and composition, is as variable as the surface soils, in fact in some regions far more so. In the glaciated region broadly speaking, there are two groups of soils, those made up of unassorted material laid down by the glacier and the assorted or soils composed of material that was reworked by water after deposition. The subsoils of the former are very variable ,in some instances they are very compact and almost impervious to water and roots of crops while in others they are very desirable being sufficiently fine in texture to retain water and elements of plant food yet drain freely and are easily penetrated by the roots of plants. In still others they are quite sandy and, therefore, somewhat droughty and leachy. Usually the subsoils of the assorted deposits are composed of strata or layers of different texture and thickness but usually they are coarser in texture than the other group. Where the soils were formed or deposited in lakes, especially the larger ones, the subsoils are generally very fine in texture and present serious problems of drainage.

Hardpans are troublesome in some subsoils. There are two kinds of hardpan in nature, namely, those that are very fine in texture and compact and others that contain considerable gravel but sufficient fine material to be almost impervious to water and roots of plants as the former, and in addition layers of different thickness that are held together by time, compounds of iron or other cementing materials. Those cemented by lime may be recognized by their color and the action of muratic acid on them while those held together by compounds of iron are reddish or brown in color.

The first group in some instances are the result of fine material being carried downward from the upper layers of soil and also in others of the processes of soil formation and in addition the breaking down of a somewhat granular structure by the weight and sliding action of the plow and tramping of the horses in the bottom of the furrow when the soil is too wet. This condition is generally known as a "plow sole." The second group were usually formed by the washing or cementing material from the upper layers of soil and being deposited below the surface where their descent was arrested in some manner.

Many attempts have been made to improve the structure of subsoils. A discussion of these raises the question of the use of deep tillage implements and explosives. I shall discuss

(*Continued on page* 20)

Jap's Milla Garfield, Hall of Fame Nominee

IF ONE GREAT year's record helps to make a cow famous, then five great year's records should entitle Jap's Milla Garfield to a prominent niche in the hall of fame.

One of the notable features of her career has been the steady increase in butter fat production and the making of her best record at nine years and nine months of age. The latest record puts her close to the top of the list both as a milk and butter fat producer.

Her records and the order in which they were made follows:

Milk-Lbs	Fat-Lbs.	Yrs.	Mos
6245.2	349.6	2	3
10345.6	548.6	4	1
10464.5	560.0	5	8
16398.5	890.6	8	2
17234.5	941.0	9	9

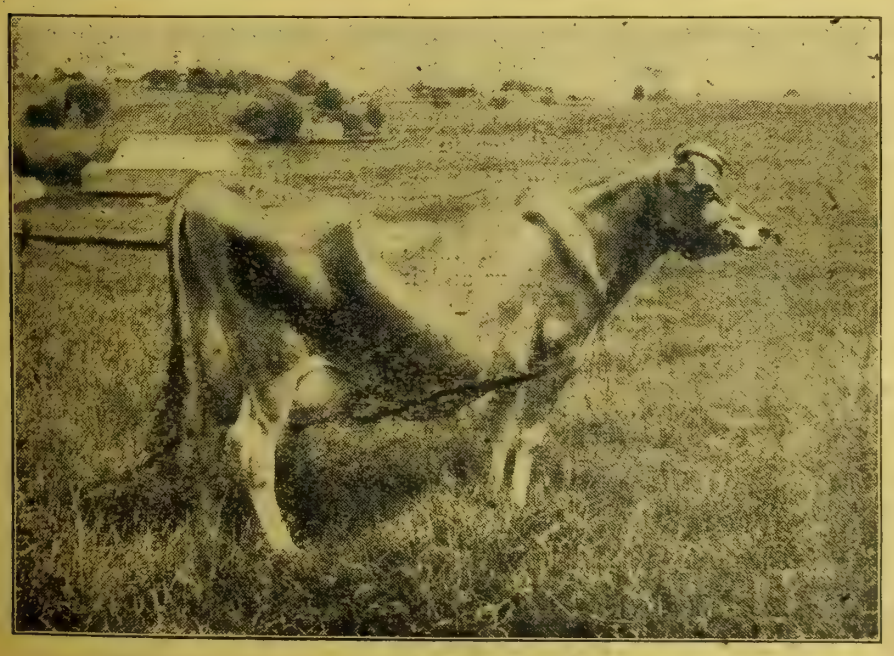
A glance at the pedigree of Jap's Milla Garfield is sufficient to show the source of her producing ability. In the top line of her pedigree are found such bulls as The Imported Jap, Eminent's Raleigh and Eminent; in the lower line, Fontaine's King and Financial King.

The Imported Jap is the sire of Jap's Milla Garfield. He is one of the eight gold medal bulls of the Jersey breed. Thirty-one of his daughters and three of his sons are in the Register of Merit. One of these daughters, The Jap's Santa, is the dam of Interested Jap's Santa, the Jersey champion of California, which produced 15,569 pounds of milk and 940 pounds of butterfat in one year.

The Imported Jap's sire and grandsire are Eminent's Ralenigh and Eminent, respectively. Eminent's Raleigh has twenty-six daughters and seven sons in the Register of Merit. Raleigh's Fairy Boy, Grand Campion at the National Dairy Show in 1910, is a son of Eminent's Raleigh. Eminent has the distinction of having thirty-one daughters and twenty sons in the Register of Merit.

The dam of Jap's Milla Garfield is King's Milla Garfield. He sire, Fontaine's King, with eleven daughters in the Register of Merit, is a son of Financial King. Financial King is the sire of Financial Countess, which was at one time the champion milk and butter cow of the Jersey breed. That was when her record of 13,248 pounds milk and 795 pounds butterfat in one year was unequalled by any other cow of the breed.

Jap's Milla Garfield is owned by Meridale Farms, Meredith, New York Many other Jerseys, famous as great producers, such as Spermfield Owl's Eva, Jap Sayda's Baroness, etc., are her stable mates at Meredith.



Jap's Milla Garfield has run up an official record of 17,234.5 lbs. of milk and 941 lbs. of fat

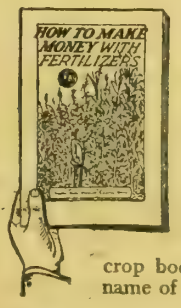
Measure the Land & Weigh the Crop

An accurate knowledge of yields is the best guide to improved farm practice. High prices furnish the incentive to produce more;—high wages make it necessary to keep down the cost per bushel. Increased production and lower cost per bushel can be accomplished by selecting fertilizer on the basis of accurately measured results.

A difference in yield too small to be noticed in the field, often is found large enough when measured to pay the whole fertilizer bill. And frequently gains big enough to pay the bill several times over, result from the use of more and better fertilizer. You can grow bigger crops, and you can cut the cost of production by using the kind of fertilizer that your crops need and that suits your own soil conditions. If you measure the land and weigh the crop,—if you make your selection on the basis of accurate tests,—you will choose an

A·A·C· Fertilizer

Our Agricultural Service Bureau has been carrying on such tests for many years, on farms in many states. These tests were made on all kinds of soils and under a great variety of conditions of rainfall and climate. This Bureau is therefore well equipped to point out a practical solution of your fertilizer problem. It has helped many farmers to determine the best fertilizer for their purposes—and it can help you. Dr. H. J. Wheeler, for many years Director of the Rhode Island Agricultural Experiment Station, is in personal charge of the Bureau. This service is free to you.



"How to Make Money with Fertilizers"

is a valuable book of 56 pages—full of practical information on fertilizers, crops and soils. There are 46 illustrations. It tells you how to select fertilizer for most profitable results—what errors to avoid in buying and using fertilizer. It is a complete fertilizer manual. Every farmer needs it. Our nearest office will be glad to send it free, if you will mention this paper when writing for it.

If there is an agent near you ask him for our crop books. If there is no agent in your town, write us for the name of our nearest agent, or ask for an agency yourself.

The Newberry Indictment

IT IS perfectly natural that those who were indicted with Truman H. Newberry for violation of the election laws should cry "politics." This is not the first time that defense has been made by those who have burned their fingers in political intrigues and election frauds. We expect the same public-be-fooled methods that were used with such success during the Newberry campaign will again be brought into play to convince the voters of Michigan that the indictment against Mr. Newberry and his aids was a gigantic plot of the Democratic administration.

It matters little what the motives have been for pushing the charges against those who spent the Newberry money. It was politics that called forth the expenditure of vast sums far in excess of what the laws allowed to elect Mr. Newberry, and it is difficult to understand why it should be considered a more despicable brand of politics to insist that Mr. Newberry and his aids be brought to trial and the majesty of the law upheld.

If Mr. Newberry committeed an offense, it was an offense against the people and the law of a Republican state. It was likewise an offense against Osborn, his Republican opponent in the primaries. The principal charges upon which the federal investigations was based were made by a Republican lieutenant-governor who in 1916 received the largest majority ever given a candidate for a state office in Michigan. The majority of the grand jury which heard the evidence and made the charge that Mr. Newberry committed acts of fraud, corruption and conspiracy were Republicans. And lastly the judge who presided over the hearing is a Republican and was elected on the Republican ticket.

The Newberry managers themselves admitted the expenditure of over $176,000. This statement of itself shows a clear violation of the law. But the evidence submitted to the grand jury indicates that between $500,000 and $1,000,000 was actually spent to secure the nomination and election. Nor was all this vast sum spent to advertise Mr. Newberry to the voters. According to the grand jury a part of it was used to influence voters, bribe election boards and for other corrupt purposes.

The indictment of Mr. Newberry is not politics. It is justice. To have suppressed the charges would have been neither wise, just nor charitable. It was necessary in order to preserve the inviolability of the law and prevent a repetition of the Newberry offenses, to investigate and upon the evidence presented to indict. And if the indicted men are found guilty when they come to trial there will be no other course open but to punish them. How else can the purity of elections be maintained?

Better Potatoes for Michigan

IN CO-OPERATION with Prof. C. W. Waid, M. A. C. extension specialist, the Michigan Potato Exchange have made plans for a systematic year-to-year selection of potato seed which if carried out will mean better potatoes, bigger yields and more money for Michigan growers.

Considering the excellence of our potato soil and the quality of potatoes produced Michigan ought to be ashamed of her comparatively small annual average yield. Thousands of farms produce less than sixty bushels to the acre; a few hundred farms over two hundred bushels. But consider the vast majority of farms that produce between eighty and ninety bushels to the acre to make up the average for the state of less than ninety-three bushels. On the face of the average yield it looks as if more farmers are losing than making money on potatoes.

Prof. Waid has made painstaking investigations into Michigan's potato soils, the variety best adapted to the soil and climate, the diseases that attack the crop and the best methods of seed selecion. The major knowledge the farmers of the state now have upon these important details of potato culture has been gathered from Prof. Waid's contributions upon the subject, and his latest work in inducing the Potato Exchange to adopt a thorough method of seed selection must bring excellent results. The plan is discussed elsewhere in this issue.

Through the efforts of the Potato Exchange to standardize the variety and grade of potatoes grown by its members and to advertise the brand to the consuming public, a special demand for Michigan potatoes is being created. With increased production through the use of disease-free seed and improved methods of cultivation, a ready market for both first-class and cull stock, the potato industry bids fair to become the state's most important cash crop.

Freedom of Speech

FREEDOM of speech is in danger. Encouraged by the ease with which the war-time sedition law was used to silence critics of the government, politicians, notoriety seekers and others who wish to force unjust laws upon the people and protect special interests under the arm of the government are clamoring for a peace time sedition bill that will limit the rights of free speech and a free press. Bills for this purpose have been introduced in both houses of congress.

The Constitution guarantees to the people of the United States no more sacred privileges than freedom of speech and the press. The people of the old hemisphere suffered religious and economic oppression because they dared not preach or write against it. Many are the martyrs who braved the fatal displeasure of monarchs by violating the royal edicts forbidding the people to discuss the law and religion of the land. It was this very denial of the right of thinking men and women to make known their views upon matters of public welfare that drove our forefathers to this new world where the utmost freedom of public discussion was not only tolerated but encouraged. And nothing has contributed more to the perfection of our democracy and the education of our people than this free and uninterrupted interchange of views.

Naturally this latitude of speech has attracted to our shores thousands of cranks, theorists, radical socialists, anarchists and other dreamers who have convinced themselves that the only vicious forms of government and social life are those now in existence and that Utopia lies just the other side of revolution in which all property-owning classes must bow the knee to the proletariat. Professing to fear the effect of these doctrines of violence upon the mind of our body politic, the protectors of the people seek laws to suppress them. Let us think twice before we permit our legislators to pass such laws. Let us remember that for two hundred and fifty years our government has successfully withstood the attacks of the demagogues. Foreign agitators have flocked to our doors; soap-box orators have harangued and disappeared; radical newspapers have flooded the country; socialists and communists have been elected to our legislatures and congress; but against them all the Constitution has presented an impenetrable front and has never been changed except by the legal mandate of the majority of the people.

Nor will it ever be altered except by legal and peaceful amendment. Let the ranters rant. They move us not. Their mouthings fall upon the body politic like sprinkle of rain upon the bosom of a quiet sea. Freedom of speech and the press must not be restricted. It is a heritage from our forefathers and in a nation of intelligent and law-abiding people it can bring us no harm.

The City Press and Farm Politics

THERE has always been a tendency on the part of the city press of the state to scoff at the farmer's political ambitions. As if speaking for the people of the cities who in times past have had the major representation in our legislative bodies, the city press has discouraged the agricultural communities from entering more freely into state politics. But now that there is a very definite movement on foot to launch a campaign for a farmer governor and farmer members to the legislature, with fair chances of success, there is a decided change of front on the part of many city newspapers.

Commenting recently upon the attitude of the Grange toward political affairs, the Detroit News had this to say:

"One drift of straws may be taken as an accurate indication of coming events in Michigan—the Grangers are said to be pretty well convinced that a farmer governor for Michigan would be desirable. What the farmers want in that respect they are likely to get."

The New Labor Party

HERBERT F. Baker, of Weadock, Michigan presided at the opening session of the joint labor and farmer conference which was recently held in Chicago and out of which has grown a new labor political party with farmers playing the second fiddle. The new party is made up of the more radical branches of organized labor and farmers with the Chicago Federation of Labor and the Non Partisan League playing the leading roles. It has been denied the official support of the American Federation of Labor, and the more powerful farm organizations and unless it can bring a considerable majority of the members of these associations under its wing, the new party is not likely to succeed.

The clashes between the Labor delegates and the farmer delegates to the convention were many, we are told. Labor hinted strongly that it would like to pass a resolution against prohibition. But the farmers wouldn't stand for that. The farmers were willing to adopt a program favoring the nationalization of almost every industry, but when labor suggested that agriculture be put on the nationalization program there was an uproar. Finally a compromise was effected by declaring for the nationalization of all "unused" land.

According to the theory of some well-meaning folks the interests of wage-earners and farmers are "identical," but it is only when the two are gathered around a conference table that they realize how wide the gulf between them actually is. There are no doubt many things in common between the two but it so happens that the issues upon which their leaders are trying to unite them for political and legislative action are the very issues upon which there is the greatest divergence of views and interests.

If Governor Sleeper has been correctly quoted as saying that he is not in favor of the suggestion made by the state association of prosecuting attorneys that he call a special session of the legislature for the purpose of passing food legislation, because "we have already had too much legislation, ad legislation will not solve the problem," we want to commend the governor for his stand.

Funny how the coldest spells bring out the hottest arguments on marketing and politics and almost anything else.

WHAT THE NEIGHBORS SAY

ONTARIO ELECTION RESULTS

There is one phase of the situation in Ontario which may be of interest to you. Four of the farmers elected to the Ontario legislature are graduates from the Ontario Agricultural College. Mr. Drury is also a graduate, and when he secures a seat in the house, will make a fifth. It is rumored that Manning Dougherty, one of the defeated farmer candidates, will be given a Cabinet position, and will secure a seat. Mr. Dougherty is a graduate of the college at Guelph, and was once on a teaching staff. That will make six. Then in the federal by-election, J. Wilfred Kennedy was returned to the Dominion House from Stormount-Glengarry. Mr. Kennedy is a graduate of the O. A. C.

The significance of all this is that these are the boys who, after graduating from the college, returned to the farm. I attended that institution, and know from personal experience, therefore, that the general impression among students has been that the man who went back to the farm consigned himself to oblivion. This has in the past been only too true. For the first time, however, the college men on the farms have had an opportunity for getting into public life, and that opportunity has been provided by the farmers' movement. Previously with political machine control, the lawyers, doctors and business men were able to almost completely monopolize the seats in the legislature.

You will note that most of the members-elect are substantial farmers, and that a large number of them have had local experience in public life. The farmer-members belong to that class of men who have been conducting the municipal affairs of Ontario, and those of us who have lived in that province know that municipal affairs have been conducted a whole lot better than provincial matters.—*R. D. Colquette., Associate Editor Grain Growers' Guide, Winnipeg, Manitoba.*

This letter expresses nicely the general character of the average farmer who can be prevailed upon to accept public office. There is a feeling among "city folks" that farmers are ignoramuses and not fit to take a hand in matters of government. While it is true that comparatively few farmers are college graduates, it does not follow that they are not intelligent and able men. Some of the brightest men in the United States received their "college" education from the school of life. We already have too many educated fools holding down public jobs. Let's have a few men who have not neglected their heart while training their head.—Editor.

.. LABOR'S OPPORTUNITY ..

Labor with intelligent and aggressive leadership could make tremendous strides just now were its opportunity brighter. It has the fine excuse for appealing to public favor because in the war it was promised by official spokesmen of the government no less than by unofficial leaders of conservative thought that its status would be radically improved following the war. It is fine that these promises are valueless so far as the sincerity of those who made them goes out. Nevertheless they constitute a great justification in the eyes of honest thinking citizens. The fact is, it is generally recognized by all classes excepting those directly exploiting labor that the workers are entitled to an entirely new deal. The people are prepared for great changes in society and industry. The organized workers themselves are more radical than ever before and are prepared to go to the utmost lengths in enforcing industrial justice. Their power is supreme and unquestioned, all they need is the proper leadership. They can not only greatly advance their conditions, but they can really revolutionize things if they will, but they are held back by their leaders, who have the sloth of official position, who are more inclined to conservatism, who in many instances are not educated in economics, and in these stirring times of endless possibilities show no disposition to go further than the question of hours and wages, that have always occupied their thoughts, refuse to take advantage of the stragetic situation that confronts them. It is to be feared that settlement of the wage demand of the railway men is now made forever impossible—*S. H. S., Wexford county.*

What constitutes "industrial justice?" I am asking for information. Do you claim that all wage earners are suffering from injustice, and that there must be some sweeping change in the wage system before the laboring classes will get justice? By what standard do you gauge a man's worth to society? There are thousands of workmen who have never spent a dollar nor sacrificed an hour to improve their capacity for service but who nevertheless receive bigger wages than our instructors in the public schools and executives in government service. And as a general rule the value of the service to mankind performed by the latter is infinitely greater than the value of the service rendered by the former. We want to see justice given to all kinds and classes of people alike, but we are honestly concerned as to how we are going to know when the proper balance of rights, benefits and privileges is struck.—Editor.

REDUCTION OF PROFITS

Enclosed you will find our choice of candidates for Governor. As you say there is sure some good timber presented and it's kind of hard to decide, but any farmer ought to be able to pick his favorite from the many farm men presented. What we must do is to back the final choice to the limit. Now, Mr. Editor, if you have time just a few thoughts on the present industrial situation. As it stands now labor and capital seem to be trying to shift the high cost of living onto each other's shoulders and there is no doubt that the ultimate result will be that labor will get an increase in wages and capital will continue to declare large dividends and the "vicious circle" will still go round.

Now capital represents possibly five million of our people and it looks to me that it would work the least hardship on the least number if capital in all lines would forego their profits and continue production and sale at cost. The capitalist would in that way set a good example before his employee and it would show labor that capital was interested and honestly wished to reduce old H. C. L. Prices would soon begin to drop and in a short time wages could be lowered without a hardship on the laborer. This plan would produce the least hardship and that only on the class that can best stand it. Of course, there are many people who depend on their interest earnings for a living but as there is plenty of work they could find employment. Now you know there is a great deal said too about increasing food production but I believe that if our government would honestly try to rebuild our system of distribution and eliminate about half of the middlemen and their profits and also the great amount of waste that food prices to the consumer could be lowered without hardship to the producer and that there would be plenty of food for all.

Now, if the capitalist would forego his profits farm machinery ,etc., would be cheaper and the farmer could soon be satisfied with lower prices for his produce and soon everything would be back to a pre-war basis.

Capitalists would no doubt call this plan Bolshevistic and our government would never adopt such a plan which goes to show how much this is a government of, by and for the people. Like M.B.F. very much; stick to your good work and will stick by you.—*N. T. V., Kewadin, Mich.*

Your plan for reducing the high cost of commodities seems sensible and fair, and would probably cause less hardship than any other practical plan. It seems to be a trait of human nature, however, that the man least able to give is the most willing, and vice versa. It is doubtless true that the thousands of manufacturing concerns could afford to forego or materially reduce their profits for a limited period. But we have not as yet seen any material disposition to do this thing. I have found by investigation that as a rule those who complain the most about the unrest among the laboring classes are the least willing to make voluntary concessions which they can afford to make, and would bear the harder upon the industrial classes if they did but dare. Until employers of capital show a much greater inclination than at present to do their share toward remedying labor's justifiable grievances, we may expect a continuation of the conditions which you mention.—Editor.

FRIEND OF ORGANIZED LABOR

I was somewhat surprised and disgusted a couple of weeks ago when I read in M. B. F. that the milk producers of a certain organization in Michigan went on record as denouncing organized labor. This was a slap in the face of organized labor and a fool piece of business, because it serves to irritate the laboring class and cause them to antagonize the efforts of the farmers for needed legislation and furthermore was absolutely uncalled for and unnecessary.

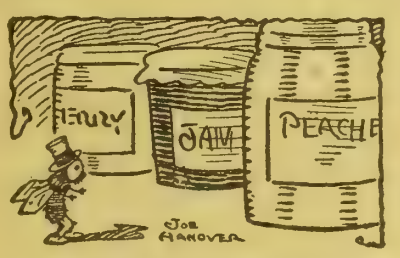
The union laborer is no more a grafter than is the farmer. It is big interests and middlemen who are robbing the farmer, and the real farmer is as much a laborer as the union man of the city, yet this resolution serves to drive a wedge between two branches of the laboring class and any milk producer who has a teaspoonful of gray matter in his cranium knows that union labor buys more of his milk than all the capitalist class and middlemen put together and upon the prosperity of the laboring class depends the prosperity of the farmer in general. This kind of work is getting common in farmers' conventions and its object is to divide the masses of the people against each other so they are defenseless before this capitalistic enemies.

Now how about the men who bunco steered this resolution thru? Were they doing it for the milk producers good? I fail to see any good in it, and I am a farmer who works his own farm and has studied farmers' problems for years, and if any of those gentlemen can explain how it is any benefit let them get right up and talk. Now it looks to me like the work of politicians who get into our organizations for the purpose of betraying us, that they may curry favor with the big interests that control political favors. They are lawyers, bankers, etc., and farmers last of all. Wolves in sheep's clothing of whom we should take notice and beware.

Now a word more. I would like to vote for a farmer for governor but it will depend who that farmer is. Some of the worst disappointments we have had in the legislature have been some of the before-mentioned class who have been elected as farmers, and I would rather trust a fair-minded capitalist any time to one of those simps. Now it is time for the farmers to make up. They have been made d—— fools and jackasses to draw such fellows' burden long enough, but it seems to be the hardest thing you can ask of the average man, to just do a little thinking. —*E. P., Williamston.*

Mr. Subscriber, your argument is fairly good. We have noticed ourselves that all that is needed to get most any kind of a resolution through a farmers' meeting is to have a "stand in" with the resolutions committee. By the time the committee is ready to make its report, the crowd is impatient to leave and usually passes the resolutions presented with a "hooray, boys, let her go, it's time to go home." But don't make the mistake of thinking that all who are opposed to extreme radicalism in the labor ranks are enemies of organized labor. All the resolutions that may be presented by farm organizations against red radicalism, etc., do not a whit of good except to serve as propaganda in the hands of selfish interests to prove to the world that farmers are against organized labor There is a safe middle ground where the farmer may assist organized labor to secure its rights by peaceful and lawful measures. The only question that Business Farming has ever raised is how far farmers should go to treat with organized labor an dassist it to secure its rights by peaceful and lawful measures.—Editor.

Sense and Nonsense



VERY THOUGHTFUL

Fly—My, how thoughtful of that housewife to put up these nice preserves for me.

The Proud Congressman

Representative Mudd of Maryland told at a Baltimore banquet a story about a new congressman.

"When this gentlemen was elected to the house of representatives," said Mr. Mudd, "his pride knew no bounds. He—even he—was a congressman! Waking and sleeping, he rejoiced.

"One night in the small hours his wife gave him a sharp nudge and whispered:

"'Joseph, Joseph, there are burglars in the house!'"

"Joseph cleared his throat and answered:

"'You are mistaken my love, quite mistaken. In the senate, yes—that I admit. But in the house—no, no! The suggestion is preposterous!'"

Very Little Doing

Sales Director Hare of the War Department was talking about certain firms that had offered to buy back their surplus products from the government at 25 or 30 per cent of what the government had paid them.

"I don't feel very lenient towards those firms," he said. "In fact, I feel a good deal like the deaf banker.

"A speculator called on the banker one day and asked for a large loan.

"'I'd like to borrow fifty thousand,'" he said.

"The banker, whose deafness was sometimes very convenient, put his hand behind his ear.

"'Speak louder,'" he said "'and cut down the amount.'"

A Warning

"We are at peace with Germany," said Representative Homer Hoch, of Kansas, "but we must keep a sharp eye on her none the less."

"A Marion boy came home the other day with a big lump on the back of his head.

"'Johnny,'" said his mother, "'you've been fighting.'"

"'No I ain't nuther.'"

"'But somebody hit you Johnny.'"

"'No, nobody hit me, it was an accident.'"

"'An accident? What kind of an accident?'"

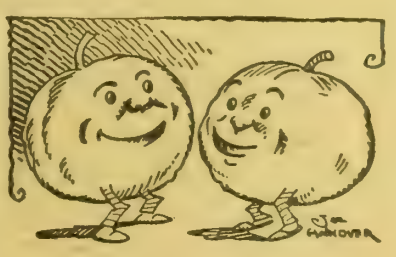
"'Well, you see, I was sittin' on top o' George Peabody and I forgot to hold his feet.'".

A Little Too Far

In New England there lived a good housewife who was so painfully neat that she made life wretched for her family. One of her rules was that all the members of the household must remove their shoes before entering the house.

"Bill," she whined one day to her husband, "I found a grease spot on one of the dining room chairs, and I think it came off those pants you wear in the shop."

"Well, Mirandy," shouted Bill, his patience exhausted, "for the last 15 years I've taken my shoes off every time I came into this house, but I'll be hanged if I'm goin' to go any further."



H. C. L.

Old Sour Apple—Just think, they used to throw us to the pigs, now we're thirty cents a quarter peck.

How many Germs in the Kitchen Sink?

Don't let the family get sick from germs which breed in your kitchen sink. Sift some Eagle Lye into the sink and drain pipes; this will make them sanitary and odorless; germs cannot live with Eagle Lye. Good grocers sell Eagle Lye 15 cents the can.

We'll Rebuild Your Lamp Into a "Quick-Lite"

If you have an old style torch-generating gasoline table lamp with good fount, send it to us by Parcel Post and have it fixed up. We will make it into a "Quick-Lite" match-lighting lamp that will give you years of satisfactory service. We will also clean and test your lamp, returning it in perfect working order.

The Quick-Lite burner costs $3.00, the cleaning and testing is FREE. The Quick-Lite burner.

Lights With a Match No alcohol torch. Does away with expense and bother of alcohol. No delay hunting 'round for torch. You merely hold a lighted match under the patent coil and in an instant you have a wonderful, brilliant, strong, white light, mellow and restful to the eyes.

Send your lamp and $3.00 at once to nearest house, and have it made over better than it was when new.

The Farm Home
A Department for the Women

True Christmas Spirit

By MABEL CLARE LADD

CALLED to Detroit recently on business, an influential man from the northern part of Michigan whom many of you would know should I mention his name, picked up the evening paper and was attracted by the picture of four little children who had just lost their mother and were left to the tender mercies of a big city.

"Who shall I call up to find out about those orphans?" he asked of the man in whose office he sat.

Upon being informed that the office where information might be obtained had been closed some time earlier, he left word to have the office called and arrangements made the next morning to send all four of them to his home in the north.

"But," asked the man to whom he was talking, "surely you don't mean that you will adopt all four of these little children?" "Well, certainly they have little enough in life to look forward to now without being separated," said he. "Wife and I have been discussing adopting two for some time, and I guess we have enough to care for four just as well, and I figure that we will get enough joy out of it to repay us in the end. For instance, Christmas is coming, and we were just discussing what we would do this year. At heart I'm still boy enough to like to have a Christmas tree and to make pop corn balls, but I wouldn't have any more excuse to do so without some children in the home than I would to go to a circus without borrowing a boy to take."

How many homes are there this Christmas to whom this holiday will be bereft of its true meaning because of this same lack. True, the little folks may mar the furniture and play havoc with the prim preciseness of the living room, but think of the joy of making fried cake dolls, pop corn balls and then the night before Christmas, all plans well laid and with the little folks safely tucked away, to fill the tiny stocking and trim the tree!

Just a few weeks ago in New York the owner of an apartment house sought to evict a family because there were some small children in the house and the baby had left the mark of his tiny hands on the wall paper. The judge before whom the case was tried dismissed the case and said this very fine thing:

"This would be a happier world to live in, if baby fingers could only make their imprints on the hearts of men and women. I would rather see the prints of baby fingers on the walls of my home than have them adorned by the world's masterpieces.'

We pay taxes and lend our financial support in this manner to the upkeep of the various state institutions for the little homeless children, and we know that they are warmly clothed and well fed. But no matron of an institution can give the individual care to hundreds of babies which is every child's right to have. These institutions must have set rules to go by else they could not handle all the work which they have to do, but in so doing the individuality of the little folks is submerged. They can't go out with father while he milks and learn all about the cows and chickens first hand, nor is there any one of the superintendents of the home who has the time to sit down and take a little one on her lap and read aloud to them.

WHY NOT a home for me? Is the question of several boys, from six to twelve years old, at the Children's Home, St. Joseph, Mich.

They are bright of eye, active of brain, tender of heart, quick of hands and feet. They want love and a mother and a father and a home each one for his very own. Are there not a dozen men and women in Michigan who read this paper, potential fathers and mothers, with hearts big enough to receive a dozen of these little men in the making and thus help along the greatest cause in the world? Anyone interested in helping may write to the Michigan Children's Home Society, at St. Joseph.

Miss Elsie Janis, probably the best loved of all of the actresses who entertained the doughboys over seas has returned with a little Italian boy of fourteen—a war orphan. When asked how she ever thought she could attempt so much she answered "oh, that's nothing, everybody adopts war orphans these days. We have a selfish motive in it. Mother and I knew we were not eating enough for our good and it is proving a great stimulus to appetite to see a healthy, fourteen-year-old boy eat."

In one of our big daily newspapers they are running a series of articles purported to be from the pen of a "Lonesome Woman," and of all the effort she makes to find something in life to interest her, when if she would just open her home to one of Michigan's little homeless ones, the heart hunger of which she complains would have no place in her busy life.

Make This for a Gift

This block design is of one of the most charming and novel yokes for underwear. The work is commenced at the bottom edge of the front and crocheted to the point where the side and straps begin. One side is then made and the second joined, and then the back finished, to the lower edges. The edges are finished with a single crochet and picot edge.

Medicinal Plant Gardens

DURING THE year there has been conducted at the University of Michigan a series of experiments which may prove to be of considerable importance and value to the future of the United States in general and the state of Michigan in particular. Under the direction of Dr. Henry Kraemer of the University of Michigan College of Pharmacy, there were grown about 20,000 medicinal plants of great variety and wide scope of usefulness. In spite of the scarcity of labor, the inadequacy of the facilities for harvesting and curing, and the very newness of the project, the results obtained were gratifying as they were surprising. Out of the 20,000 plants grown, but a very small percentage were lost, and the harvested and cured plants were of an exceptionally high grade and strength.

The subject of growing medicinal plants in Michigan was first called to active attention by the enormous rise in prices of crude drugs during the war. It was then found that America had been almost entirely dependent on foreign sources for her supply of many drugs. When these were suddenly cut off, high prices and an absolute scarcity of many necessary principles brought home to us our criminal neglect in not providing a sufficient national resource to depend on in such times. And this is not the only reason for desiring to establish drug farming in this country. Heretofore, most of our raw drug materials were gathered from wild plants, but these are now becoming very scarce, seriously threatening this source of supply. It is also of great importance that the farming of drugs will make possible a greater uniformity in the raw materials, for the diversity of materials as now gathered at different seasons and places, and by unskilled collectors, is one of the serious drawbacks in pharmaceutical manufacturing.

It is often suggested that the difference of climate and soil will make it impracticable to raise a very great variety of medicinal plants in Michigan, but there are many instances at hand in which plants have grown and flourished in widely different parts of the world, far from their original habitat. Last summer's experiments at the Botanical Gardens show that Southern Michigan muck lands and temperate climate are eminently fitted for the cultivation of a great variety of plants heretofore not found in these regions. These experiments already so successful, will be continued with the generous financial assistance of Frederick Stearns & Company, Manufacturing Pharmacists, Detroit, Michigan, under the direction of Dr. Kraemer. The

work in the future will aim at the determination of many factors necessary to the obtaining of the best results in the cultivation of medicinal plants of all kinds. The results of the use of various kinds of fertilizers will be examined with reference to their action on different plants, and their bearing on the quantity and quality of the active principles produced. Various methods of propagation will be used to determine the relative advantages of reproducing by means of seeds, rhizomes and rootstocks, all of which can be successfully utilized in certain plants. Systems of seeding, transplanting and hothouse forcing will also be worked out, and the most desirable methods of harvesting and curing the drugs will be looked into.

TIMELY POULTRY MARKETING

By Herbert Hartwig, M. A. C.

THE farmers and poultrymen of Michigan are losing money in the marketing of poultry. Money that should go into their pockets is swelling the bank accounts of the wholesale poultry dealers in the cities. This is true because most farmers sell their poultry at the time that the market is almost literally flooded. They sell their fowls at that time without stopping to consider whether the birds are in prime market condition—whether they will pay the maximum profit if sold at that time or if sold at some future time.

When a farmer has sheep, hogs, or cattle to sell, he tries to have his stock in the best possible market condition at the time that he can command the top price, but this is not true in the case of poultry. Only a few of the better business men among farmers have learned to study the poultry market.

Men who watch the market know that along about the time that taxes are due, each year there is an abundance of poultry on the market, and that at that time, poultry is lower than at any other time during the year. Farmers have expenses to meet; so they are penning-up the fowls they wish to dispose of, feeding for a week or two, and then selling them, whether they have the desirable degree of fatness or not.

Too often birds are fattened in this manner before they have their growth of frame. Unless the market is due to drop, it is advisable to allow the birds to develop as large a frame as possible before fatening. However, in doing this, it is well to remember that the nearer the bird is to maturity, the more each ounce of gain will cost.

A study of the Detroit poultry market during the last three years would reveal the fact that farmers evidently desired to dispose of their poultry as early as possible each fall. The fact that this has been true has made it advisable and profitable to do the other thing—keep your birds for the high prices that are bound to follow when the supply is reduced. The wholesale poultry dealer is taking advantage of this fact and is buying all he can at the low prices. It is at this time that cold-storage plants are being filled to capacity with birds that only await the jump in price that comes when most of the farmers have sold their poultry.

Very few farmers hold any poultry until after the holidays and, as a result of this, a very noticeable feature of the poultry market has been the jump of about 5c per pound in dressed poultry almost immediately after New Years.

Many people are surprised upon visiting the establishments of wholesale poultry dealers to find entire floors devoted to pens where fowls that come to market in a very lean condition are fattened at a neat profit to the wholesaler. These same pens are used to keep live birds for the rise in prices that invariably follows the holiday season.

If the farmer can continue the development of the frames of his fowls profitably—and a few of the best business farmers have—and start the fattening process at a time that will enable him to get the advanced price he is going to get the extra margin that the shrewd wholesaler now gets. And why shouldn't the farmer get it? If the farmer will keep his eye on the market and try to produce fowls at that time when the other farmer has none to sell, he will, undoubtedly, greatly increase his returns from poultry.

WOMAN'S VOICE IN POLITICS

"LIVING in this country of ours is not only a privilege," says Prof. Wenley, of the University of Michigan, "but it carries with that privilege a grave responsibility. You have absolutely no right to criticise the manner in which the affairs of state or nation are run, for the men who run these affairs are yours—yours by choice, and if you would have them run differently, then elect the men whom you know will uphold

A house on a farm doesn't have to be elaborate to be a good farm home. The above is a tenant farm house in Shiawassee ounty.

the principles you stand for."

Right now is the time to decide who you want to head the affairs of your state—and the question of a Governor who will be the friend and champion of the farmers rights—one who actually knows what those rights should really consist of—as well as the right man for all the people, is a problem to settle right now. And so M. B. F. has decided to take a straw vote—but the editor tells me that the votes of the women readers is strangely silent. Let's show the men that we have a mind of our own—and knowing what we want, that we are not afraid to step right out and say so. On another page will be found a straw vote ballot. Do not delay—just take your scissors right now, clip it out, check the man of your choice or if your choice is not there, indicate it in writing, and send the coupon in direct to the M. B. F. editor, at Mt. Clemens.

USE YOUR EMPTY HOTBEDS FOR STORING VEGETABLES

THE EMPTY hotbed and coldframe may be used to good advantage during the fall and winter for storing vegetables, says J. T. Ross, Jr., of the University of Missouri College of Agriculture. The empty pit is then available for storing in bulk potatoes and root crops of all kinds. Celery and cabbage also can be stored here by pulling the plants with the roots on and setting them closely together in the upright position with the roots embedded in a few inches of loose, moist soil in the bottom of the pit.

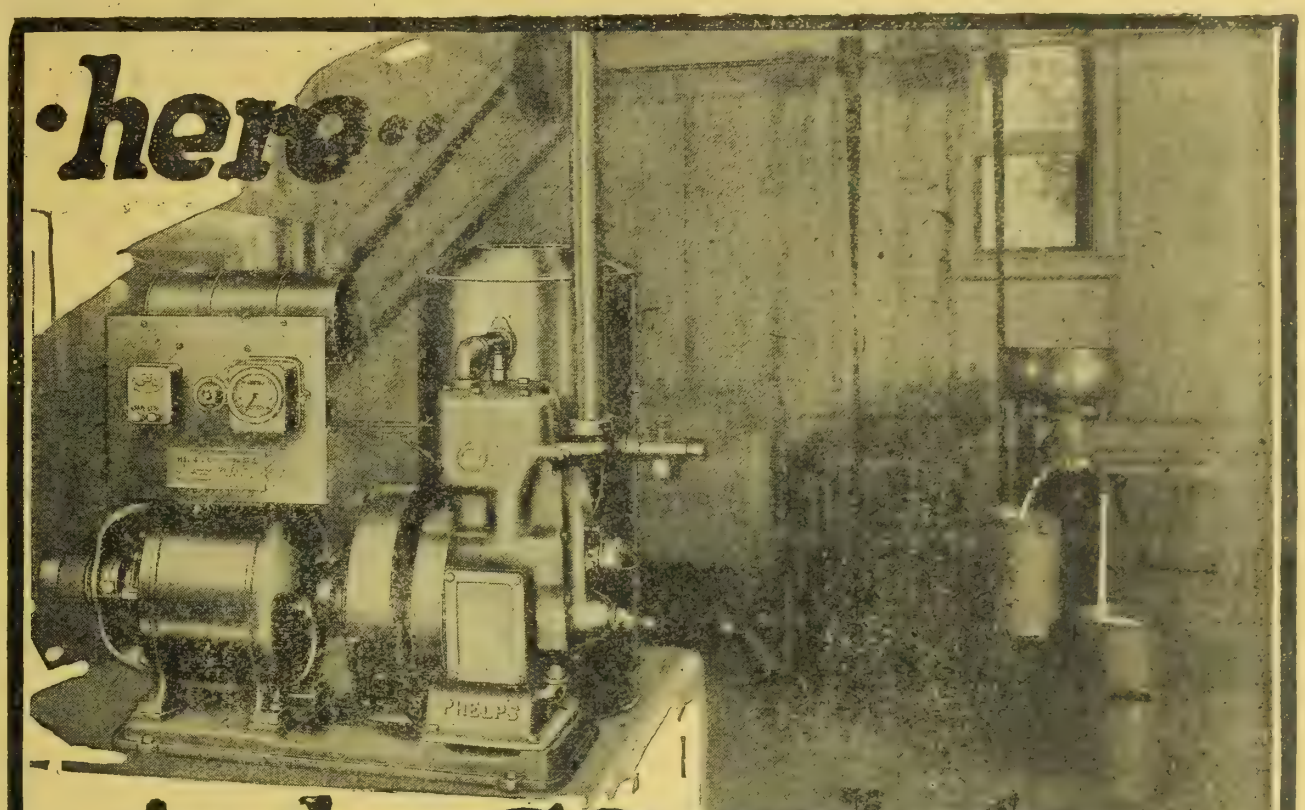
The cold-frame is used in the same way as the hotbed; but since it has no pit, its capacity is limited. The regular glass sash can be used to cover these structures when used for vegetable storage, but they must be supplemented with board shutters, straw mats, or loose straw to protect the contents from sunlight and from freezing and thawing.

The walls on the outside should be well banked with soil or manure.

JOY IN LIVING

There is lots of joy in living if you strike the proper gait;
If you always come up smiling in the face of every fate.
If you're keeping step and whistling some lively little tune,
You'll be living gay and happy as a summer day in June.

Keep a level head, don't worry, help your brothers on the way;
Let the sunshine of good humor shine upon you ev'ry day!
Speak a cheerful word at all times—never "knock" your fellow man
And you'll surely be rewarded—just keep doing all you can.



is the Complete POWER and LIGHT PLANT

Delivers 1500 watts electric power to motors in the house, barn and outbuildings for all electric power chores. Generator capacity, 100 bright, steady, safe, FIFTEEN watt electric lights.

And in addition, this bigger, better farm power and farm light plant delivers 3½ H. P. to the line shaft for all belt work on the farm not in the tractor class. Send for illustrated folder showing

PHELPS Power and Light

pulling, from its belt pulley, a 280 foot deep well pump 16 hours a day *and at the same time* storing 1240 watts electric power in the batteries for individual power motors and lights. Study carefully this masterful achievement.

PHELPS Farm Power and Farm Light Plant is built complete in the big PHELPS factory—an assembled unit could not begin to give equal service. Time and field tested. Oversize generator. Greatest capacity light plant batteries. Simplest switchboard, no rheostat to turn, no clocks to watch, automatically controls lightest and heaviest loads. Cut-off switch permits the use of belt pulley when batteries are charged to capacity. Burns gasoline or kerosene. Self starting. Automatic stop.

Free Catalog Tells All

Know how the sturdy, quiet, smooth running PHELPS pays for itself in labor saved and luxuries provided. Address nearest distributor or factory. Write Today.

138-140 West 29th Street
NEW YORK CITY

NEW FUR COATS

cost money these days. Your old fur coat can be relined, New Fasteners and Rips sewed and wear a good many seasons yet. Our Catalogue, samples of linings are free.

We make a specialty of of repairing and making over old fur garments for men and women.

The Blissfield Tannery,
W. G. WHITE CO.,
Blissfield, Mich.

LET US TAN YOUR HIDE.

Horse or Cow hide. Calf or other skins with hair or fur on, and make them into coats (for men and women), robes, rugs or gloves when so ordered. **Your fur goods will cost you less** than to buy them and be worth more.

Our illustrated catalog gives a lot of information. It tells how to take off and care for hides; how and when we pay the freight both ways; about **our safe dyeing process** on cow and horse hide, calf and other skins; about the fur goods and game trophies we sell, taxiderm y, etc.

Then we have recently got out another we call **our Fashion book**, wholly devoted to fashion plates of muffs, neckwear and other fine fur garments, with prices; also **fur garments remodeled and repaired.**

You can have either book by sending your correct address naming which, or both books if you need both. Address

The Crosby Frisian Fur Company,
571 Lyell Ave., Rochester, N. Y

Tanners of Horse and Cattle Hides

All kinds of skins with the fur on. We make up and line robes, coats, gloves, mittens and ladies furs. We mount deer heads. Tell us the kind of fur you want tanned and we will write you fully

W. W. WEAVER, Custom Tanner,
READING, MICH.

SKUNKS

Minks, Coons and Muskrats our specialty. Get higher prices and quicker service by shipping your furs to the old reliable, the house that made St. Joseph famous as a fur market. Send name for shipping tags and market letter.

ST. JOSEPH HIDE & FUR COMPANY
108 Q. 2nd Street, St. Joseph, Mo.

(2)

$5 to $10 Tonight
From One Trap

That's what this boy will make, if he catches a mink or a skunk. Many a young man makes as much as $15 to $25 in a single night while he sleeps. It's easy to clean up a few hundred dollars during the trapping season—if you only know how, and ship to get the big prices we are paying this season.

Lincoln Trapper's Guide—sent FREE—a big new book explaining how to set traps to get best results—how to prepare skins to get highest prices.

LINCOLN HIDE & FUR COMPANY

The Children's Hour

DEAR CHILDREN: I want to tell you this week about the trip I made to toy land a few days ago. I had gone into one of our big stores to find some suggestions of gifts which I might offer my little friends for getting subscriptions, and found that they had cleared a whole floor of all its regular list of clothing and had placed thereon just multitudes of toys and then how I wished that all my little friends of the Children's Hour could have been with me, for it makes one get the Christmas spirit long before the day, just to wander through toyland and see all the wonderful new toys—things they never thought of having when I was a little girl.

I asked the clerk about it: "you don't seem to have such useless toys any more," said I. "You formerly had glass pigs for banks; and a whole lot of little painted tin animals, while now I see animals stuffed to look like the real, honest-to-goodness animals one sees in the barnyard—and the wagons are practical which you display for sale. They will run—the engines the built just like an actual steam engine, while guessing games which had no practical value are not to be found now but in their place have come the educational games." "The explanation is simple," said the clerk. "Formerly we bought our Christmas toys almost entirely from Germany—now people refuse to accept German made toys and of course there were none to be had during the war so our own men took up this trade, and Americans are natural inventors, you know, so our men who made these toys made exact reproductions of the larger articles, like the engine you see. Now a boy who gets that engine will have a very good idea of how an engine workers before he is old enough to go to school even, while the children who receive the walking dolls, the bible games and the cut-outs maps will learn something from them of actual value. Of course we sell thousands of sleds and skates aplenty."

I wonder if you realize the wonderful opportunities you are enjoying, my little friends, in this Twentieth Century. Surely when you grow to be men and women you will be a great deal wiser than are your fathers and mothers now, if you just take advantage of every opportunity to learn. Affectionately yours.—LADDIE.

THE JUNIOR COOK

Quince Conserve

Peel, quarter and core four quinces and four apples.

Chop lightly or run through the course cutter of a meat grinder. The grinder is much better than chopping, as the work can be done so quickly the fruit will not discolor.

Save every bit of juice and mix with ground fruit.

Measure and put in saucepan over a slow fire.

After it has simmered for fifteen minutes add as much sugar as you had fruit. (If sugar is scarce, one cupful of a good grade of corn syrup may be used instead of one cupful of sugar. The rest must be sugar.)

Stir the sugar in and boil slowly for 25 minutes. Stir occasionally so it does not stick to bottom of pan.

Add one cupful of seeded raisins.

Add one-half cupful nut meats chipped fine and cook 15 minutes—very slowly.

Take up in jelly glasses and when cool, seal with melted parafin.

Fine for school sandwiches or to spread on crackers for afternoon tea parties.

WHAT IS IT?

COULD you tell anything about this animal? It is a Holstein or a Hereford? Is it a grade, scrub or a purebred? Why is it? Prove it. These are all things that the young folks on the farm are expected to know. So Children's Hour soon will begin a series of diagrams to show you how to judge stock. Watch for it.

OUR BOYS AND GIRLS

Dear Laddie—This is the first time I have written to you. My father takes the M. B. F. and he likes it fine. I live on a one hundred acre farm, we have five cows and twelve young cattle, thirteen pigs and two hundred hens and two ducks. For pets I have a black dog and a black and white kitten. I have a brother and one sister. My brother is married and he lives in Port Huron. I am ten years old the 9th of December. I am in the fifth grade and I walk a mile and one-half to school every day. I will close hoping to see this letter in print.

Dear Laddie—I've never written to you before, so I thought I would try my luck. I live in the country and like it very much. I have two sisters and two brothers. One sister is ten, her name is seven, the other brother is two, his name is Ellen. One brother is Lester, he is seven, the other brother istwo, his name is Fay. Mamma and papa are both living. We live on a 181 acre farm. Papa works another farm where he has a married man living and we also have a hired man who boards with us. Papa has three cows, two horses which stay with us all the time then two on the other place and two which stay at either place. Papa has a load of sheep and also a load of cattle on some land which he is renting. Mamma has several hundred chickens. We have just had an electric line go near here, so we have electric lights, we enjoy them very much. We children go to school but Fay and Ellen. I am 11 and in the seventh grade. Papa takes the M. B. F. and likes it very much. I am especially fond of the Children's page. I will close for this time. Yours truly, Beatrice Munger, Clinton, Mich.

FREE! SCHOOL OUTFIT TO ANY BOY OR GIRL

This dandy outfit is just the thing you need, it contains 3 Pencils, 1 Pen Holder, 1 Combination Pen and Pencil, 12 Pen Points and Holder, 1 Pencil Sharpener, 1 Ink and Pencil Eraser, I Aluminum Collapsible Drinking Cup, all packed in a beautiful box.

Yours for a Little Extra Work!

All we ask you to do is to call on two of your friends and get them to subscribe to Michigan Business Farming for one year at $1.00 each. Have them sign their names and address on the blank below, mail it to us and the OUTFIT will be yours.

Get your Father, Mother, Big Brother or Sister to help you.

In consideration of your offer to give the boy or girl whose name appears below a School Outfit for two new yearly subscriptions, I hereby subscribe to Michigan Business Farming for one year.

Seein' Things

I AIN'T AFEARD of snakes, or toads, or bugs, or worms, or mice,
An' things 'at girls are skeered of I think are awful nice!
I'm pretty brave, I guess; an' yet I hate to go to bed,
For, when I'm tucked up warm an' snug an' when my prayers are said,
Mother tells "Happy Dreams!" an' takes away the light,
An' leaves me lyin' all alone and seein' things at night.
Sometimes they're in the corner, sometimes they're by the door,
Sometimes they're all a-standin' in the middle uv the floor;
Sometimes they're a sittin' down, sometimes they're walkin' round
So softly an' so creepy-like they never make a sound;
Sometimes they are as black as ink, an' other times they're white,
But the color ain't no difference when you see things at night!
Once, when I licked a feller 'at had just moved on our street,
An' father sent me up to bed without a bite to eat,
I woke up in the dark an' saw things standin' in a row,
A-lookin' at me cross-eyed and pintin' at me—so!
Oh, my! I was so skeered that time I never slep' a mite—
It's almost allus when I'm bad that I see things at night!
Lucky thing I ain't a girl or I'd be skeered to death!
Bein' I'm a boy, I duck my head an' hold my breath;
An' I am, oh, so sorry I'm a naughty boy, an' then
Gran'ma tells me that's the only way to make it right
When a feller has been wicked an' sees things at night.
An' so when other naughty boys would coax me into sin,
I try to skwush the tempter's voice 'at urges me within;
An' when they's pie for supper or cakes 'at's big an' nice,
I want to—but I do not pass my plate f'r them things twice!
No. Ruther let starvation wipe me slowly out of sight
Than I should keep a-livin' an' seein' things at night.

EUGENE FIELD.

Hay markets in nearly every part of the country this week are firm with prices edging upward. This rise applies to nearly all grades of hay. In the Mississippi Valley markets the receipts were large at some points, and prices could not stay firm at those markets, even though the demand was almost strong enough to handle the glutted situation. Chicago has had but few receipts and has made sharp gains in values. In the East farmers are holding hay for higher prices, and are just barely supplying the present demand. The fact that the consumers lack activity prevents a big boost in hay values. Detroit reports small supply for nearly all lines of hay and the market is quoted firm.

NEW YORK BUTTER MARKET

For many years those who are familiar with the arguments advanced by the general run of farmers when an attempt has been made to convince them that they should make a greater effort to produce cream of better quality, have heard that it is not profitable to attempt to keep cream sweet and clean as there is not enough difference between the price paid for sweet and sour cream to make it worth the effort. Even the most skeptical would be convinced at the present time that it would pay to use every possible means to produce good cream if he would but spend a few days in this market. The quotations shown below should be convincing. One sees from them that an extra, which scores 92 points, is quoted at 73 to 73½c, but he also sees that top firsts, which score 90 to 91 points, are selling at 66½ to 72c. It seems unreasonable that butter scoring 90 points, which is a good piece of butter, should sell at a price 7c below that paid for a butter scoring 92 points. It is not only true that such a condition exists, but it is also true that while a 92 score butter will sell as soon as it arrives the 90-point butter sells only to a chance buyer. Low fruits, which score 88 to 89 points, are at a still greater disadvantage.

Receipts of fresh butter are at the lowest figure so far this season. It has been expected that there would be a slight increase in production because of the usual fall freshening of cows but the influence of that factor is not as yet being felt A few cars of fresh Canadian butter are being received weekly. Held buter is moving freely, better than 1½ million pounds of such butter being taken from storage each week Stocks that were purchased by exporters some time age are being shipped in considerable quantities regularly Centralized butter is dragging 66 1-2c being about the highest price paid for good 90 score quality. Held butter selling at a price about 3½c under that of fresh butter Prevailing prices today are as follows: Extras, 73 to 73½c; higher scoring than extras, 74 to 74½ firsts, (90-91 score), 66½ to 72c; firsts (88-89 score), 62½ to 65c; and, seconds, 57 to 61c

The creamery which receives the highest price for its butter is the one which has seen the tendency of the times and has educated its patrons to the value of high quality production.

BIG WOOL CONSUMPTION

Manufacturers used about 69,000,000 pounds of wool, grease equivalent in October, 1919, the greatest amount consumed in any one month since May, 1918, when the wool textile industries' capacity was taxed by the war's demand, according to the monthly wool consumption report just released by the Bureau of Markets, United States Department of Agriculture.

Of the amount used in October, 34 per cent was fine, 18 per cent 1-2 blood, 17 per cent, 3-8 blood, 16 per cent 1-4 blood, 4 per cent. low, 10 per cent, carpet and 1 per cent, grade not stated. More fine wool was used in October than in any month since the monthly wool reports were inaugurated. The heavy consumption of fine wool reflects the great demand for the finer qualities of wool which has been so pronounced during the last six months, say the Bureau of Markets' specialists.

Massachusetts still holds the lead with 25,612,133 pounds of all kinds, classes and conditions, followed by Pennsylvania, 8,979,814 pounds; Rhode Island, 6,936,621 pounds; New Jersey, 5,738,314 pounds and New York, New Hampshire, Connecticut, Ohio and Maine in the order mentioned.

The total amounts used, by condition were: grease, 49,506,856 pounds, scoursed, 8,561,958 pounds; pulled, 1,949,601 pounds.

Detailed monthly wool consumption reports will be sent to anyone addressing a request to the Bureau of Markets, United States Department of Agriculture, Washington, D. C.

LIVESTOCK MARKETS

DETROIT, Dec. 3.—Cattle: Canners and bulls steady; all others 50c higher; best heavy steers, $11.50 to $12.50; best handy weight butcher steers, $9.50 to $10.50; mixed steers and heifers, $8.50 to $9; handy light butchers, $7.50 to $8.25; light butchers, $6.50 to $7.25; best cows, $8.50 to $9.50; butcher cows, $6.75 to $8; cutters, $5.50 to $6; canners, $5 to $5.50; best heavy bulls, $8.50 to $8.75; bologna bulls, $6.50 to $7; stock bulls, $5.50 to $6.25; feeders, $9 to $11; stockers, $7 to $8.75; milkers and springers, $65 to $150. Veal calves: market 50c to $1 higher; best, $19 to $20; others, $10 to $18. Sheep and lambs: market steady to 25c higher; best lambs, $15 to $15.25; fair lambs, $13 to $14.50; light to common lambs, $7 to $11.25; fair to good sheep, $7.50 to $8; culls and common, $3 to $4.50. Hogs: 1,956; market strong; pigs, $13.50; mixed hogs, $14 to $14.25.

EAST BUFFALO, Dec. 3.—Dunning & Stevens report: Cattle: market, 25 to 50c higher; prime heavy steers, $16 to $17; best shipping steers, $13.50 to $14.50; medium shipping steers, $11.50 to $12.50; best yearlings, 950 to 1,000 lbs., $16 to $17; light yearlings, good quality, $13 to $14; best handy steers, $10.50 to $12; fair to good, $10.50 to $11; handy steers and heifers mixed, $9.50 to $10.50; western heifers, $10.50 to $11.50; best fat cows, $10 to $11; butcher cows, $7.50 to $8.50; cutters, $6 to $6.50; canners, $4 to $5.25; fancy bulls, $9 to $10.50; butchering bulls, $7 to $8; common, $6 to $7; best feeding steers, $10 to $11; medium feeders, $8.50 to $9.50; best stockers, $6.50 to $7.50; light to common, $5 to $6; milkers and springers, $75 to $150. Hogs: Market 50 to 75c higher; heavy and yorkers, $14.50 to $14.75; pigs, $14.25 to $14.50. Sheep and lambs: market higher; top lambs, $16; yearlings, $11 to $12; wethers, $9.50 to $10; ewes, $8 to $8.50. Calves: market strong; tops, $22; grass calves, $5 to $8.

CHICAGO, Dec. 3.—Hogs: Estimated tomorrow, 70,000; 50 to 65c higher; closed weak; bulk, $14.10 to $14.50; top, $14.60; heavy, $14.10 to $14.55; medium, $14.15 to $14.60; light, $14.10 to $14.50; light lights, $13.50 to $14.25; heavy packing sows, smooth, $13.50 to $14; packing sows, rough, $12.75 to $13.50; pigs, $13 to $13.75. Cattle: estimated tomorrow, 25,000; unsettled; beef steers, medium and heavy weight, choice and prime, $18.75 to $21; medium and good, $11.25 to $18.65; common, $9 to $11.25; light weight, good and choice, $14.25 to $20.25; common and medium, $7.75 to $14.15; butcher cattle, heifers, $6.65 to $15; cows, $6.50 to 13.50; canners and cutters, $5.50 to $6.50; veal calves $16.25 to $16.75; feeder steers, $7 to $13; stocker steers, $6 to $11; western range steers $7.50 to $15.25; cows and heifers, $6.50 to $12.75. Sheep: estimated tomorrow, 27,000; strong; lambs, $13.75 to $15.75; culls and common, $9.50 to $13.50; ewes, medium, good and choice, $7.50 to $9; culls and common, $3.75 to $7.25; breeding, $6.75 to $11.25.

MAIL LIST REVISION

WE ARE anxious that every subscriber to M. B. F. should receive his or her paper on or before the Saturday of date of issue. To accomplish this and assure every reader of receiving every copy mailed we are revising our entire mailing system, placing all names in type, as shown:

John H Jones Nov 20
Capac Mich R1 22S9

The date shown following your name in the first line is the month to which your subscription is paid in full, in the above example, the subscription would expire with the month of November, 1920. Following the address in the second line, is the date when your subscription was received, this is our key by which we can look up your original order and remittance at any time, should a question regarding it arise.

IS YOUR NAME ON OUR LIST CORRECTLY NOW?

Look at the label on the front cover of this copy, is your name, address and date of expiration correct? Are you receiving more than one copy or is there any other complaint you have to make—

—please write us, clipping the labels referred to in your letter, so we can look them up and make corrections immediately.

IF THE LETTER (G) OR ANY DATE BEFORE (JAN. 20) APPEARS ON THE LABEL FOLLOWING YOUR NAME, PLEASE RENEW AT ONCE. WE WILL THEN PUT YOUR NAME IN TYPE AS SHOWN ABOVE AND GUARANTEE THAT YOU DO NOT MISS ANY FUTURE ISSUES !

BOSTON WOOL QUOTATIONS

Michigan and New York fleeces are quoted in Boston as follows: Fine unwashed, 64@65; Delaine unwashed, 80@83; 1-2 blood unwashed, 78@80; 3-8 blood unwashed, 66and 67, 1-4 blood unwashed, 65@66; 1-2, 3-8, 1-4 clothing, 55@57; common and braid, 41@42.

PRODUCE MARKET LIFELESS

Slight changes have occurred in the produce markets in the current week, little action being noted on the part of sellers or buyers. In Detroit fresh butter and eggs are scarce and in good demand, and the trade is obliged to cut deeply into the stored product. There is not much doing in the apple line nor in any other line of fruit. Good cranberries in Detroit are bought at $10.50 per bbl.

APPLES, spies, top at $3.50 per bu.; Baldwins, $2.75; Greenings, $3.25; Cork imperials, $2.75; No. 2 fruit brings $1.25@1.50 per bu.

CELERY, Kalamazoo, brings 50@60c per bunch.

POPCORN, shelled, 12c per lb.

HONEY, white comb, 32@35c per lb.

ONIONS, $5.50@$6 per 100 lb. sack.

CABBAGE, home grown, $1.25@$1.50 per bushel.

DRESSED HOGS, best, 17@19c per lb.; heavy, 15@16c.

DRESSED CALVES, fancy, 24@25c; choice, 22@23c per lb.

DETROIT BUTTER AND EGG PRICES

DETROIT, Dec. 3.—Butter: Fresh creamery, 64 to 64 1-2c; fresh, creamery, in 1-lb. bricks, 64 to 68 1-2c per lb.

Eggs—Fresh eggs, 72 to 90c per doz., according to quality; storage eggs, according to quality, 47 3-4 to 51c per doz.

AGRICULTURAL PROFITS VS. MANUFACTURING PROFITS

(*Continued from page 2*)

made more money than any of the rest of them. He has done it, not by putting the price as high as possible, but by putting it as low as possible. I think that any manufacturer who wants to make more money would do well to consider with an open mind the question whether he can do this best by raising prices or by lowering them."

Another student of the price question said: "In my opinion some way must be devised for ascertaining the actual cost of an article in labor and material. Accounting systems are of no value in solving the price question. The bookkeepers seem to be able to get almost any result they wish, and no one but a bookkeeper can understand the work when it is done. The thing needed is scientific determination of how much man-power and how much steel, for example, is necessary to make a plow. Steel and man power can then be translated into money at its current value. Cost of distribution, overhead and other factors can be added, and an estimate of the price at which the farmer should get his plow, allowing a reasonable profit to all concerned in the work of producing and distributing it.

"In its efforts to reduce the cost of foodstuffs the government is trying to learn costs of production, and to allow reasonable profits. In fixing transportation rates, the method is the same—to learn the actual cost based on physical valuation, and then add a fair profit.

"The principle is rapidly being established that the consumer has a right to every commodity at a price which bears a fixed and fair relation to the cost of producing it. In my opinion, that principle must be applied to manufacturing for the benefit of both manufacturer and consumer. The consumer should know what the fair price for a bar of soap or a typewriter is just as he now knows that 11 cents a pound is a maximum fair price for sugar."—Submitted by a Flint subscriber.

MORE MONEY IN DUAL PURPOSE BREEDS, CLAIM

(*Continued from page 5*)

years, and our conclusion is that good calves can be raised with comparatively little milk and put in good flesh for market inside of one year, by keeping the calf confined in a pen by itself and giving it a mixed ration of grain and hay.

The calf at an early age does not have the digestive fluids necessary to convert starch into sugar, hence starchy feeds must be avoided in the beginning, though not entirely excluded, as the secretion of starch transforming fluids is hastened by the accessability of these starchy feeds, such as corn and oats, from the beginning, without forcing the calf to eat them as a steady, regular diet, which would certainly cause indigestion and possible stunting of the young thing for its entire life.

Parched meal, like toasted bread, is easily digested by the calf because the parching converts the starch particles into sugar (grape sugar.) Oil meal contains very little starch and also supplies the protein necessary. A New York dairyman to whom I once suggested using parch meal, told me that he was getting very good results with the use of Blackstrap Molasses. Feeding molasses is comparatively cheap this season on account of prohibition which threw the distillery molasses on the market.

I am using molasses this winter because of its cheapness and because I have a short hay crop and by sprinkling a solution of molasses and water on my wheat and rye straw. I can make it more palatable, more nutritive and the molasses also aids in digestion and prevents impaction which I must guard against in the use of coarse, fiberous feed.

The molasses I get comes direct from the Southern cane mills from this year's crop, and is fresh and wholesome food for man or beast, may be used for making molasses cakes after the old fashioned recipes, but it is not as nice for table use as some of the later glucose mixtures.

BETTER SEED FOR MICH. POTATO GROWERS

(*Continued from page 3*)

prove one of the most helpful lines of work along production lines which has been undertaken. Growers are coming to realize as they never did before they began their own marketing, the fact that the production of quality stock is the first step in successful marketing. They also are realizing the fact that low yield per acre as a rule means high cost of production and that high yield per acre, lower cost of production. The latter is especially true when the yield per acre is influenced by the quality of seed used.

PRINCE ALBERT

Copyright 1919 by R. J. Reynolds Tobacco Co.

Toppy red bags, tidy red tins, handsome pound and half pound tin humidors—and—that classy, practical pound crystal glass humidor with sponge moistener top that keeps the tobacco in such perfect condition.

PUT it right up to Prince Albert to produce for you more smoke happiness than you ever before collected! P. A.'s made to fit your smokeappetite like a glove. It has the best flavor and coolness and fragrance, ever!

Just what a whole lot of joy Prince Albert really is you want to find out the quickest way you know how! And, put it down how you could smoke P. A. for hours without tongue bite or parch. Our exclusive patented process cuts out bite and parch.

Realize what it would mean to get set with a joy'us jimmy pipe, or the papers and to fill 'er up every once and a while. And, puff to beat the cards! *Without a comeback!*

Just as sure as you're reading this, P. A. will hand you everything you ever yearned for in tobacco joy! Why, it's so good you feel like you'd just have to eat that fragrant smoke!

R. J. Reynolds Tobacco Company, Winston-Salem, N. C

BUSINESS FARMERS' EXCHANGE

5 CENTS A WORD PER ISSUE. To maintain this low rate, we are compelled to eliminate all bookkeeping. Therefore, our terms on classified advertising are cash in full with order. Count as one word each initial and each group of figures, both in the body of the ad and in the address. The rate is 5 cents a word for each issue, regardless of number of times ad runs. There is no discount. Copy must reach us by Wednesday of preceding week. You will help us continue our low rate by making your remittance exactly right.—Address, Michigan Business Farming, Adv. Dep't, Mt. Clemens, Michigan.

FARMS & LANDS

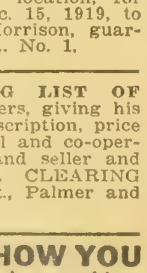
186 A. HIGH-GRADE CORN FARM, $15,810. Unusually good stock farm, all natural blue grass land, about 70 acres rich creek bottom A-1 corn soil. Near big R.R. town, only 17 miles city of 90,000. 110 acres for the plow full of fertility; abundantly watered, well-fenced blue grass pasture for 50 head; much fruit. 9-room house, painted barns, &c. Highest quality and lowest price describes this bargain at $15,810, terms. Details page 73 Strout's Fall Catalog Farm Bargains 23 States; copy free. E. A. STROUT FARM AGENCY, 814 B. E., Ford Bldg., Detroit.

FARM BARGAIN—240 ACRES GOOD clay land, 150 acres cleared. New 11-room house, large barn with basement, sheep barn, water piped to house and barn. On stae reward road, 5 1-2 miles from Bad Axe. One of the few large up-to-date farms in good location, for sale. Must be sold by Dec. 15, 1919, to close up estate. James Morrison, guardian, Ubly, Mich., R. F. D.. No. 1.

FARMS FOR SALE—BIG LIST OF farms for sale by the owners, giving his name, location of farm, description, price and terms. Strictly mutual and co-operative between the buyer and seller and conducted for our members. CLEARING HOUSE ASS'N, Land Dept., Palmer and Woodward Ave.

ASK US TO SHOW YOU how you can make several hundred EXTRA dollars this winter sawing wood with a

DIXIE PORTABLE DRAG SAW



You can cut 25 to 40 cords day after day with only 2 gallons of gasoline—easy to operate—the best built. Make big money cutting wood for yourself and your neighbors. Free descriptive folder, etc.

Is Your Farm for Sale?

Write out a plain description and figure 5c for each word, initial or group of figures. Send it in for one, two or three times. There's no cheaper or better way of selling a farm in Michigan and you deal direct with the buyer. No agents or your farm, send in your ad today. Don't commissions. If you want to sell or trade just talk about it. Our Business Farming Farmers' Exchange gets results. Address Michigan Business Farming, Adv. Dept., Mt. Clemens.

FARMERS SERVICE BUREAU

(A Clearing Department for farmers' everyday troubles. Prompt, careful attention given to all complaints or requests for information addressed to this department. We are here to serve you.)

RIGHTS OF ROAD COMMISSIONERS

A—Does the township highway commissioner have authority to appoint overseers of road districts or should they be elected at town meeting? (b)—Can the highway commissioner or overseer dig a ditch in front of your house to change the water course down along the highway and remove a culvert across highway that has been in there thirty years, putting water down ditch in front of my house to my damage? (c)—can the highway commissioner furnish cement pipe or other material to put a private crossing to any farmer's place? (d)—Can the highway commissioner or overseer move dirt from ditch in front of my place down the highway and put it on private property twelve rods from the place of removal?—C. B.

(a) Overseers of the highway are to be elected. In case of vacancy for any cause the Highway Commissioner appoints to fill the vacancy. (b) I think the Highway Commissioner has authority to dig the ditch to remove the highwayand to remove the culvert if it does not stop the natural flow of the water, or, if it is not taken care of with the new ditch. He would not have authority to dig a ditch and throw the water upon another's premises. He must provide for its care. He can not dig the ditch except for the improvement of the right of way. If the digging of the ditch was lawful and proper for the commissioner to do then the fact that the ditch is an inconvenience to you and a damage in the sense it is such a damage that you can not recover for. If, however, the damage is from the water in an unusual quantity or manner then he is liable for the damage. (c) I think it would be in the discretion of the Commissioner to furnish the title if it was for the protection of the highway. Otherwise from that reason the adjacent owner provides his own egress and ingress. (d) The Commissioner may take material within the boundary of the highway for improvements except that he shall not take within eight feet of the sides unless necessary to maintain grades. He could use it only for the improvement of the highway and not for private purposes. —W. E. Brown, legal editor.

FORCING A ROAD OPEN

I am thinking of purchasing a farm lying on a section and town line. About 1-2 mile of road is unopened this being my nearest way to market, about one mile as it is. I have to make a detour of 2 1-2 miles to reach town. There is a river, swamp and railway on this half mile, which they object to crossing, I understand. All three are quite easily crossed. Can I force them to open the road? If so, what would be the necessary steps? Do both townships stand half the expense? I would like to know before purchasing this land if I can get road open.—F. H., Clare County.

The methods of procedure are given in C. L. 1915, sections 4288 and following. The first step is a petition of seven or more freeholders addressed to the commissioner of either township. The commissioner to whom addressed must notify the commissioner of the adjoining township and they jointly fix place of meeting as described in section 4297. If the commissioners refuse to lay out an appeal may be made to the joint boards and if they refuse and a sufficient amount is at stake a further appeal to the circuit court may be made. Appeal is the only compulsion that can be exercised.—W. E. Brown, legal editor.

LAW GOVERNING RENTAL

What is the law governing the rental of farms and allowance for use of land? If a dispute between owner and tenant, how best settled.—M. E. C., Sanilac County.

The law governing the rentals of farms and allowance for the use of land is the general law of contracts and applicable to real estate. Whatever contract the landlord and tenant make is binding upon both parties if lawfully made. The law does not undertake to say what shall be paid for the use of land where parties agree upon the price. It is only where the parties do not agree upon the price that the "law" steps in and says the tenant shall pay to the landlord what it is reasonably worth. This is a question of fact and the jury would decide what it was reasonably worth. If a dispute arise between landlord and tenant it is my opinion that it can be best settled by arbitration. Three good neighbors can do better in their informal way than can be accomplished by litigation.—W. E. Brown, legal editor.

TITLE EXTENDS TO LOW WATER

What are my rights in regard to the beach? I have 160 acres along the lake shore, and every year I am annoyed by hunters who pay no attention to signs and say I can not keep them off the beach, as I can only claim to high water mark.—J. W., Huron County.

It has been held by the courts "that the owner of land bordering on the Great Lakes took title to low water mark only and that he had no ownership in land covered by shallow waters of the lake."—W. E. Brown, legal editor.

MIGHT GET DAMAGES

The city of M——built an electric dam on Cedar Creek which overflows part of my farm and the city won't pay me anywhere near what same is worth Is there any way that I can make them take the water off from my farm or can I make them remove the dam? Please give me your advice on that question—A Reader.

I once defended a similar case. The judge refused to order the dam abated, very largely because the owner of the farm had witnessed the construction of the dam and saw a very large amount of money expended in its construction that would be worthless if he entered an order of abatement. However, he assessed the damages for the overflow of the land and compelled the builder of the dam to pay it and also fixed the highest point at which the owner of the dam could maintain the water. I think it was good law. There are, however, so many things that may vary the rule that it is not best to rely upon so short a statement of facts as you give. There are cases in which the courts have restrained parties from overflowing the land. You need the advice of a good attorney after a full and careful statement of facts.—W. E. Brown, legal editor.

WHAT IS A LAWFUL FENCE?

There are 80 rods of fence, my half 40 rods being the east and a neighbor's 40 rods being the west. His fence is in bad shape. The posts are heaved from one to two feet out of the ground and my sheep get under the fence and on his wheat. I have taken my sheep out, but he will not repair his fence and says he does not have to fence for sheep.—H. M.

A lawful fence is one that is "four and one-half feet and in good repair." From the description given I would be of the opinion that the fence "was not in good repair." He is obliged to fence against sheep and should your sheep enter his premises through his part of the fence, by reason of its defective condition, then he can recover no damages by reason of what damage your sheep do.—W. E. Brown, legal editor.

GOVERNMENT LAND SURVEYS

Is there another description of land in the United States the same as the following: The S. W. 1-4 of Section 19, Town 35, North of Range 2, East? I know the Supreme Court has rendered a decision in the matter. It states the description is incomplete because the county and state is not mentioned. Now what I really want to know is , is there another town and range of the same number in the U. S.?—J. R.

So far as I know every state is surveyed on the same plan as Michigan with a base line and a meridian line. I do not have any authority at hand from which to determine. I think that if you wrote your congressman, Hon. Frank D. Scott, Washington, D. C,. he would ascertain from the government surveys whether any other state had such a description.—W. E. Brown, legal editor.

LAND RENTER'S RIGHTS

If A rents a farm from B, money rent, and pays rent in advance, and B sells his farm, can he compell A to sell his crops to B or can A work the farm until his term is up?—F. S.

If the owner of the farm did not reserve the right to cancel the lease upon sale of the farm then the renter can hold the farm until the expiration of his time. The owner of the farm can not compel the renter to sell his crops nor can he take possession until the expiration of the lease unless he reserves such power when he rented the farm.—W. E. Brown, legal editor.

PETITIONING FOR A DRAIN

When a drain is petitioned for, to be deepened and widened and survey and profile made accordingly, can the contract be let for a partly new ditch, and what can be done about it?—Subscriber.

Generally a drain commissioner would not have authority to construct a new drain on a petition to deepen and widen an old one, but there are circumstances under which he might be justified and have authority to arrange to make part of the drain "new." The statement of facts are not complete enough to warrant a more definite opinion.—W. E. Brown, legal editor.

WHEN THE LAKE DRIED UP

A piece of property on lake shore (a small inland lake) read: "beginning at a point on sec. line at high water mark on east side of R Lake, thence east about 400 ft., thence north 100 ft., thence west to high water mark of R Lake, thence south to place of beginning. Now the question is if the lake recedes (as it has) can the owner of above described lot go to the water?—W. S.

It is my opinion that your boundary goes to the lake whether the water in the lake raises or falls.—W. E. Brown, legal editor.

GETTING PUREBRED'S PEDIDGREE

I bought a young Holstein bull and have got only the certificate of registration and would like to have a tabulated pedigree but don't understand just what to do to obtain them. Will you please inform me through your paper what to do?—A. D. G.

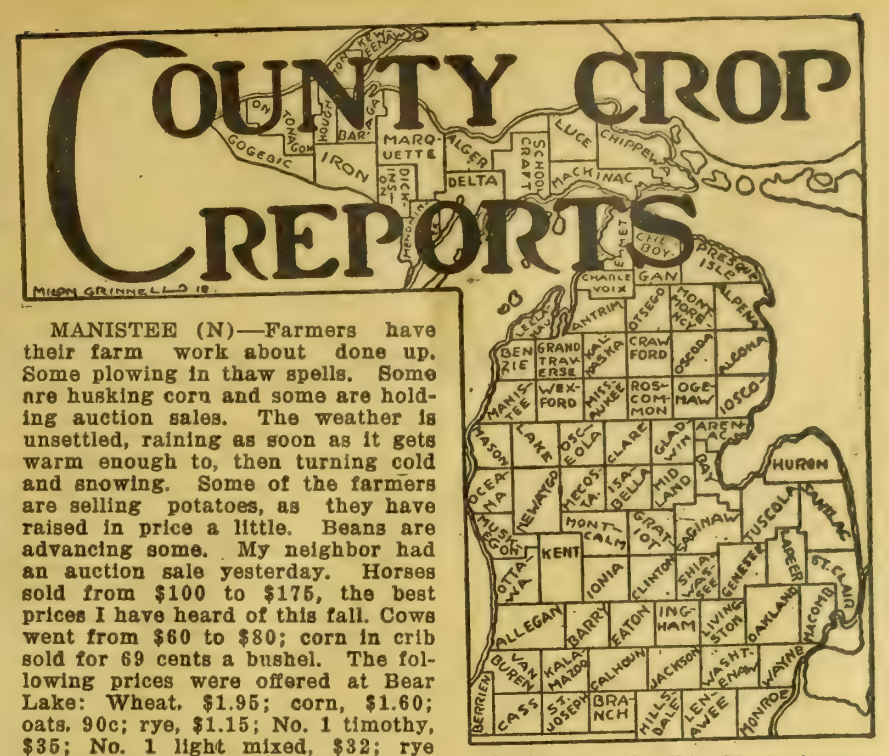
We suggest that you write first to the party who sold you the bull. If no satisfaction is obtained write to D. D. Aitken, president Holstein-Friesian Association of America, Flint, Mich.—The Editor.

DAMAGES FOR KILLING A DOG

When I was moving my dog was following the load and an auto ran over him and killed him. Can I secure damages, and if so how shall I proceed?—Reader.

It is a question of whether the driver of the auto was negilgent in his driving. If he was not negligent he would not be liable, but if he was negligent he would be liable for the value of the dog, to be recovered by suit at law for the damages. —W. E Brown, legal editor.

COUNTY CROP REPORTS



ANTRIM, (W.)—Farmers in this section are doing a little of everything, threshing, hauling potatoes, etc. Quite a number of auction sales during the past three weeks, generally well attended and prices fair. The weather is variable, with about four inches of snow at present. Farmers selling potatoes as fast as association can get cars to ship them in. Marketing association here shipped a carload of cattle the 22nd. George Hockridge's auction sale on the 10th set a high mark for total receipts and attendance. Total receipts were over $25. Local bankers charge 5 per cent discount for handling notes taken at sales; also charge 7 per cent interest. 12 per cent on money loaned. No wonder they smile. Labor and industrial unrest don't seem to affect the farmer in any way, although they have more reason to be so than the city laborers. If the city laborer was as industrious as the average farmer, worked as long hours and was as economical in every way, old H. C. L. wouldn't bother him at all.—The following prices were offered at Elk Rapids:--Wheat $2,05; corn, $1.40; oats, 80; rye, $1.15; hay, baled, $28; beans, $6; potatoes, $2; hens, 15 to 18; springers, 18; butter, 55; butterfat, 71; eggs, 55; sheep, 6 to 8; lambs, 12 to 14; hogs, 12 to 13; beef steers, 6; beef cows, 5; veal calves, 13 to 18; hides, 25.

GENESSEE (S)—We are having colder weather now and the ground is slightly frozen and covered with a thin layer of snow. Farmers have been husking corn, plowing, threshing beans and cloverseed, and doing some team work. Most farmers have their work nearly finished and are getting ready for winter weather. Quite a lot of fall plowing has already been done and considerable more will be done if the weathher permits. Wheat and rye are looking good in most instances. Auction sales are very plentiful and prices are working lower. Farmers will be "solid" in support of the farmer candidate for governor. Prices offered at Flint are: Wheat, white,$2.11; red, $2.13; corn, $1.50; oats, 78c.; rye, $1.20; hay, No.1 timothy, $22.00 and $25.00; No.1 light mixed, $2000 and $22.00; beans, (C. H. P. Pea) $6.25; red kidney, $11; potatoes, $1.65 and $1.75; onions, $4 to $5; cabbage, $2.00 per bbl.; cucumbers, $2.00 per bu.; hens, 20 and 21c.; springers, 21c.; geese, 18 and 22c.; creamery butter, 68 and 70c.; dairy, 60 and 65c.; eggs, 68c.; sheep, $7 and $8; lambs, $10 and $11; hogs, $14.50 and $15.00; beef steers, $9 and $10; beef cows, $6 and $7; apples, $1.75 and $2.50.—C. S.

INGHAM (C)—At present we have fine weather. Men are plowing and finishing up fall work. A good deal of poultry of all kinds is going to market at good prices, but the farmer is hit hard on the price of hogs, the corn fed is worth more than the hog will bring in some cases. Pork and beans, the farmers' money crop, is away off. Some are looking for timber for fire-wood as coal is hard to get and high in price. The following prices were offered at Mason: Wheat, $2.02 to $2.10; oats, 65c.; rye, $1.30; hay, No. 1 timothy, $18; No. 1 light mixed, $18.00; wheat-oat straw, $8.00; beans (C. H. P. Pea) $6.00; potatoes, $1.25; cabbage, $1.50 cwt.; hens, 26c.; springers, 28c.; turkeys, 28 to 30c.; butter, 55c.; butterfat, 64c.; eggs, 62c; sheep, $3 to $7; lambs, 14c.; hogs, 13c; beef steers, 7 to 12c.; beef cows, 5 to 8c.; veal calves, 16c.; wool, 55c.; apples, $2.00.—C. I. M.

MONTCALM (N)—Most of the farmers are plowing and stumping. Some are hauling in potatoes as fast as they can to get rid of them. It seems that the most of the time there are sales, from one to three a day, and the farmers are changing lands, some selling and others renting and moving to town. Some are changing horses for cows. There is a lot of good roads being built and men and teams are working for $4.00 a day and board to get their teams wintered. The following prices are offered at Lakeview: Wheat, $2.25; corn, 65c.; oats, 80c.; hay, No. 1 timothy, $25.00; No. 1 light mixed, $20.00; rye straw,$11.00; wheat oat, $16.00; beans (C. H. P. Pea) $6; red kidney, $9.00; potatoes, $2.30 cwt.; onions, $2.00; cabbage, $10.00; cucumbers, $2.00 cwt.; hens, 20c.; springers, 22c.; ducks, 14c.; geese,18c; turkeys, 25c.; butter, 60c.; butterfat, 72c.; eggs, 58c.—G. B. W.

MANISTEE (N)—Farmers have their farm work about done up. Some plowing in thaw spells. Some are husking corn and some are holding auction sales. The weather is unsettled, raining as soon as it gets warm enough to, then turning cold and snowing. Some of the farmers are selling potatoes, as they have raised in price a little. Beans are advancing some. My neighbor had an auction sale yesterday. Horses sold from $100 to $175, the best prices I have heard of this fall. Cows went from $60 to $80; corn in crib sold for 69 cents a bushel. The following prices were offered at Bear Lake: Wheat, $1.95; corn, $1.60; oats, 90c; rye, $1.15; No. 1 timothy, $35; No. 1 light mixed, $32; rye straw, $10; wheat-oat straw, $12; bean (C. H. P. Pea) $5.40 cwt.; red kidney, $10.50 cwt.; potatoes, $2 cwt.; hens, 18c; springers, 18c; butter, 60c; butterfat, 71c; eggs, 56c; hogs, 13c; beef steers, 6c; beef cows, 5c; veal calves 12c.—C. H. S.

SAGINAW (W)—We have had a nice fall for doing farm work. There is some corn yet. It is being husked with the huskers. There is a lot of fall plowing done and the weather has been fine for the work. The winter wheat is looking fine.—G. L.

LAPEER, (S. E.)—Most farmers have their fall work and a goodly lot of fall plowing done. Corn about all taken care of. Some fields husked as much as 100 bu. to the acre and were nice and hard. Lots of steers going to be fed this winter, and quite a number of lambs. Some hogs moving and some stock. Auction sales nearly every day and going good as a rule Cows selling good from $75 to $125 as a rule. Horses are cheap; other stock selling good.—C. A. B.

CALHOUN, (N. W.)—Farmers are not doing much but chores. We had a snow for Thanksgiving but it all went with a rain. Potatoes are going up and hogs going down. Farmers are holding potatoes for more money. —C. E. B.

BAY, (S. E.)—The fall weather has been good, though quite cold lately. Farmers have not been loafing on the job. Sugar beets mostly all delivered to the stations and loading up now. The farmer boys who work in the mines are not idle. Some are loading beets. The roads have been good lately. Farmers threshing beans, shredding corn and plowing. Not much produce going to market. Some farmers working away from home and getting more pay. Some selling out. Sales go well, except horses.—J. C. A.

SANILAC, (S. E.)—Many farmers are not through plowing. Some beets have to be drawn. Hay, oats, barley and rye are on the rise. Not much poultry left in the country after Thanksgiving. Some cattle and horses are moving; milch cows selling high. Weatheris changeable, freezing and thawing, followed by a heavy rain from the southeast which is expected to turn into snow.—N. J. Mc.

CHIPPEWA, (N)—The ground here is frozen hard and there is almost enough snow for sleighing. Many farmers who can get away are going to the woods now. Others are jobbing in a small way as prices of timber are high. Sales are not as frequent and prices are down. Best hay now selling for $24.50 and some farmers are holding for higher price. Lots of hunters here this fall from lower Michigan, sometimes shooting at one another, and sometimes taking a crack at a native. The following prices were paid at Brimley:—Oats, 80; hay, No. 1 timothy, $24.50; No. 1 light mixed, $23; wheat-oat, $12; potatoes, $1.50 bu.; hens, 20; springers, 22; turkeys, 25; butter, 55; butterfat, 70; eggs, 60; hogs, $19.

CHARLEVOIX, S. W. —Farmers are hauling wood and getting ready for winter. Soil is full of water. Fall plowing about all done. Not much being sold now except at auction. Joe Moore and Chas. Murphy are both building houses this fall. Quite a number of farmers started with a few registered cattle this year, mostly short horns, Guernseys and Holsteins.

LIVINGSTON (N. W.) — Everyone busy getting ready for winter. Cold, cloudy and damp weather. Ground frozen hard and covered with snow. Farmers are marketing their hay and holding their beans. Howell township voted on bonding the county for good roads two to one against. Prices as follows at Howell: Wheat, $2.13; corn, $1.30; oats, 65c.; rye, $1.30; hay, No. 1 timothy, $18.00; No. 1 light mixed, $18.00; rye straw, $5.00; wheat-oat straw, $5.00; beans, (C. H. P. Pea) $6.00 per cwt.; potatoes, $1.25; hens, 17c.; springers, 21c.; turkeys, 30c.; butter, 62c.; butterfat, 65 to 67c.; eggs, 70c.; hogs, live, 13c.; dressed, 18c.; beef steers, 12c.; beef cows, 9c.; veal calves, 17c.; wool, 50 to 60c.—G. H. W.

TUSCOLA (C)—Farmers are all ready for winter. There is a little corn out yet, but they are pulling it to the barn to husk later. Beans are a bigger crop than we looked for; some going 30 bushels per acre. Ground is frozen too hard to plow. Lots of farmers are working at the Caro sugar factory. Not much going to market now but beans. Lot of sales now. Cows bring a good price but hogs have taken quite a fall.

GRATIOT, (E.)—Cold wave with a little snow here. It makes beet pulling a little out of order. Corn husking and hauling clover are the order of the day. Most of the farmers are shipping their own stock. Lots of auction sales this fall from 12 to 16 every week, and everything selling well except horses.—J. W. The following prices were paid at Ithaca:—wheat, spring, $2.20; winter, $2.06; oats, 67; rye, $1.25; beans, $6.25; potatoes, $1.25; hens, 18; springers, 21; ducks, 24; geese, 22; turkeys, 33; butter, 55; butterfat, 70; eggs, 60; sheep, 55; lambs, 12; hoge, $12.50; beef steers, 10; veal calves, 16.

Investments, Wise and Otherwise

HARROUN STOCK

Friend Slocum—I have a chance to secure some Harroun Motor Stock at a very low price. Would you advise me to buy it?—W. W. S., Bellaire, Mich.

I would not advise you on the purchase of any stock. You buy, you take a chance—if you win you are happy, aren't you? if you lose, I don't want you to cuss me. But on the stock mentioned I would say that this stock would have to be very cheap to attract a buyer. The company did considerable war work; Uncle Sam owes them on this contract we understand; but as a going concern manufacturing automobiles, nothing doing as an investment.

MICHIGAN INVESTMENT COMPANY

Friend Slocum—Will you kindly advise me if you think an investment in the Michigan Investment Company would be safe. They are offering common stock, with a present of a very liberal amount of preferred.—C. J., Brighton, Mich.

You did not give me the address of this company. There are several hundred companies with headquarters in Detroit now "beating the bushes" throughout Michigan for farmers who have a little money in the bank. Personally I don't like the idea of selling stock worth 100 cents on the dollar and then throwing in some preferred stock for full measure. Send along a circular from the Michigan Investment Company.

SECURITIES COMMISSION RECOMMENDS NO STOCK

Mr. Slocum—Agents are selling stock in the Kirby Investment Company in this vicinity, and their agents state that this stock is recommended by the Michigan Securities Commission. Has the state approved this stock as an investment?—J. S., Conklin, Mich.

The Securities Commission of this state knows nothing about the real value of any stock as an investment. In fact this commission merely has the authority to see that stocks offered for sale conform to certain regulations—in other words they start the race fair; but after the stock salesmen are let loose, and finally after the stock has been sold, they are out of the game, and you take your chances with the fellows who own a majority of the stock. I know nothing about the Kirby Investment Company, and can give you no further information unless you give me their address—however, don't put the least dependence in the fact that the sale of any stock has the approval of the Securities Commission—the fellow who told you that the state recommended this stock ought to be in jail.

Mr. Slocum—I have been corresponding with a company that makes moving picture films, and they have just informed me that I have been selected to take a part in a new film called "Determination." They say that they will pay my expenses to the place where the films are to be made and return, but that I must take stock in the company—twenty-five shares at $5 per share—before I can take part in the play. I would like to get into the movies and can borrow the money. Please tell me if you think this is all right.—Lillian B. McL., Calhoun County.

I trust, Lillian, that you will have a sufficient amount of "determination" to turn down this offer. That film company is after your $125, and if you send it to them there isn't one chance in a hundred, that you will ever hear from them again. If you will send me the correspondence you have received from this firm we will get after them through the postoffice department. There are thousands of young ladies anxious to get into the movies, but very, very few, however, succeed. If you have talent as a movie actress, some day you will have opportunity to give it a trial; but don't send a dollar to the fake concerns which agree to make screen artists through such schemes

UNION MORTGAGE COMPANY

Mr. Slocum—Will you please advise us in regard to the Union Mortgage Company of Detroit. Their agent is selling stock here at $125 per share which is guaranteed to pay seven per cent, and with each share you receive eighty per cent common stock at $125 per share. You are asked to pay 20 per cent down and the balance in 20 monthly payments.—W. D., Saginaw, Mich.

We have received many inquiries, asking about stock in the Union Mortgage Company, and this leads me to think that their salesmen are busy throughout certain portions of the state. The Union Mortgage Company of Detroit, is organized under the laws of the state of Delaware. Capitalization $10,000,000; six million of which is 7 per cent cumulative, participating and four million common. The company buys, sells and otherwise deals in mortgages, land contracts, etc., secured by Detroit improved real estate. My report on the personnel of the officers is as follows: "Representative business men of Detroit are on the board of directors; I know nothing of the figures and operations of the company." So far I have been unable to learn why this company is organized under the laws of another state; no doubt, however, but what the laws of Delaware give them a wider scope for doing business.

From The Healthy Dairy

the milk truck always takes a full load. As soon as disease creeps in the milk yield will show it. Cows that do not milk as they should are usually suffering from a run-down condition of the vital organs of production. Medical treatment is needed to restore health and vigor.

KOW-KURE is the best known and most used medicine for treating the "poor milker." It is unfailing in the prevention or treatment of Barrenness, Abortion, Retained Afterbirth, Bunches, Scouring and Milk Fever. It should be kept wherever cows are raised for profit. KOW-KURE comes in 60c and $1.20 packages at feed dealers' and druggists'.

Michigan Now One of the Champion Jersey States

MICHIGAN is so famous for her Holsteins that her splendid Jersey record is not always as widely known. Just one phase of Michigan's Jersey history is the fact that Eminent's Bess, 209719, of W. S. Prickett, Sidnaw, Mich., became world's champion Jersey in 1913.

More than twenty years ago the world greeted the first world's champion Jersey. On February 24, 1899, Dollie's Valentine completed her year's test with 10,218 pounds milk and 578 pounds butterfat, which was the best official record ever made by a Jersey up to that time.

During the twenty years that have passed since Dollie's Valentine record was made, eleven other Jersey cows have been acclaimed "World's Champion Jerseys" on the strength of their production records. Some of the cows were fortunate enough to be able to hold their titles for a number of years. Others were displaced within a few months. The longest any Jersey ever held the world's champion record was five years and eleven months. Dollie's Valentine completed her record in February, 1899, and it was not until January 1905 that her record was passed.

Eight states can claim the honor of having been the home of World's Champion Jerseys. They are Maine, Massachusetts, Illinois, Colorado, Kentucy, Oregon, New Hampshire and Michigan. Two of these states, Massachusetts and Oregon, have each been represented no less than three times. Two Jersey breedres, Est. of W. S. Ladd, Portland, Ore., and C. I. Hood, Lowell, Mass., have each been the owners of two world's champions.

The advancement of the Jersey breed may well be estimated by the increase in production of the present champion, Vive La France over Dollie's Valentine. Vive's record of 1031 pounds of fat is almost 100 per cent increase over the one made by the first champion. Twenty years ago 578 pounds fat in 365 days was the best official record ever produced. Now in 1919, records equal to that are being reported to the Register of Merit department daily.

What the record will be twenty years from now time only can tell. With the increased knowledge of scientific feeding and breeding, there seems to be no limit to the possibilities. The more cows that are tested, the more likelihood there is that world's champion Jerseys will be developed with greater frequency and higher records made. There may be other Jerseys in the country who are producing or who can produce more that 1031 pounds fat in one year, but there is no proof of their ability to do so. They have not been given the opportunity to make a name or themselves and their owners because they have never been officially tested.

More testing opens the gateway for more scientific breeding and feeding. If figures are available that prove that a certain cow is a good producer, she can be bred and fed more intelligently. This will result in higher-producing Jerseys, more record-breaking Jerseys, and will increase the value of every Jersey in the country.

A list of the twelve world's champion Jerseys with their owners and records is given below.

Present world's champion Jersey—Vive La France 319616, Pickard Brothers, Marion, Oregon, 14,925 lb milk, 1031.6 lbs. fat, class AA, Ma 24, 1919.

Past world's champion Jerseys—Sophie's Agnes, 296759, Ayredal Stock Farm, Bangor Me., 16,212. lbs. milk, 1000.00 lbs. fat, class A Nov. 30, 1918; Sophia 19th of Ho Farm 189748, C. I. Hood, Lowe Mass, 17,557 lbs. milk, 999.1 lbs. fa class A, Jan. 20, 1914; Eminent Bess, 209719, W. S. Prickett, Sidna Mich, 18,728.9 lbs. milk, 962.8 lb fat, class A, Sept. 11, 1913; Jacob Irene, 146,443, A. O. Auten, Jerse ville, Ill., 17,253.2 lbs. milk, 952. lbs. fat, class A, Jan. 24, 1909; Ad laide of Beechlands, 168699, Est. W. S. Ladd, Portland, Ore., 15,572. lbs. milk, 849.6 lbs. fat, class A Nov. 24, 1908; Financial Countes 155100, C. E. Parfet, Golden, Colo 13,248.1 lbs. milk, 795.2 lbs. fat, cla AA, June 7, 1908; Olive Dunn, 18 832, A. F. Pierce, Winchester, N. H 9,930.3 lbs. milk, 671.9 lbs. fat, cla A, Sept. 30, 1907; Peer's Surpri 144248, Est. of W. S. Ladd, Portland Ore., 14,452.2 lbs. milk, 653.6 lb class A, Jan. 31, 1907; Emma's Ro ena, 146877, C. I. Hood, Lowe Mass., 10,383.6 lbs. milk; 638.3 lb fat, class A, Oct. 31, 1905; Magy land's Temisia, 134765, R. A. Sible Spencer, Mass., 10,419.3 lbs. mil 638.1, lbs. fat, class A, Jan. 23, 190 Dollie's Valentine, 105049, Kentuck Agricultural Experiment Statio Lexington, Ky., 10,218.3 lbs. mil 578.7 lbs. fat, class A, Feb. 24, 189

Note—Nineteen Jersey cows, a told, have made records exceed 900 pounds fat. The above table re resents only those listed as Worl Champions in their line.

Deep Plowing Aids Beet Growing; Explosives Used to Aid Fertilit

(*Continued from page* 11)

these in the order they are given.

Numerous claims have been made for deep tillage and subsoiling. It has been maintained that such practices are desirable because the structure of the subsoil will be improved thereby providing better ventilation or aeration of it, increasing the water retaining capacity and increasing the amount of available mineral elements of plant food. Several agricultural experiment stations have provided us with reliable information concerning this question. In 1907 the Illinois Station began a series of investigations to determine the value of subsoiling on a silt loam soil underlaid by a tight clay subsoil. The implement used loosened the subsoil in the bottom of the furrow made by the ordinary mold-board plow but did not throw it upon the surface. The eight year average yield reported for corn grown on the part of the field plowed as usual was fifty and one-half bushels per acre and forty-six and one-fifth bushels on the subsoiled portion. The investigations also show that the acre yields in the very dry seasons of 1913 and 1914 on the subsoiled land was less than one bushel greater than on the other. Or in other words, the effect on the water retaining capacity and other properties of this soil was negligible.

The Pennsylvania Agricultural Experiment Station began an investigation of the relative value of plowing a silt loam soil seven and one-half and fifteen inches deep respectively. Those who conducted these trials state that the difference in yield of corn, barley, oats, wheat, alfalfa, clover and timothy were negligible and when the draft of the plows was considered deep tillage resulted in an appreciable financial loss. The draft per square foot of cross section of the furrow was found to average 1,113 pounds for the 12 inch plowin, and 724 pounds for the 7.5 inch

Williams and Welton of the Ohio Station reported in 1915 the results of five years work in which comparisons were made of 7.5 inch 15 inch and subsoiling on a rather heavy soil. These results reported are given in the following table:

Treatment (15 Year Test)

Crop	7.5 In.	15 In.	Subsoil
Corn, bu.	60.1	61.1	63.1
Oats, bu.	45.1	43.1	45.1
Wheat, bu.	23.1	33.1	34.1
Clover, tons	2.4	2.3	2.3

The results show that there was not a sufficient difference in the yields to justify the expenditure of the extra amount of energy required to perform the deep tillage operations.

Crock No. 1 shows plants which grew from seeds in ordinary soil without preliminary soaking. Crock No. 2 shows plants resulted from seeds planted at the same time, but their germination was hastened because the seeds were soaked for several hours in warm water.

Deep tillage or subsoiling in the Great Plains as a whole does not increase yields of crops. Chilcott and Cole who conducted tests covering a wide range of crops, soils and conditions in ten different states sum of the function of plowing as follows:

"It is mistaking or failing to recognize the purpose of plowing that leads to the belief that its efficiency increases with its depth even though that depth be extended below all practical limits of cost and effort. Plowing does not increase the water holding capacity of the soil, nor the area in which roots may develop or from which the plants may obtain food. Plowing removes from the surface either green or dry material that may encumber it, provides a surface in which planting implements may cover the seed, and removes or delays the competition of weeds or plants other than those intended to grow, and in some cases by loosening and roughening the immediate surface, checks the run-off of rain water. All of these objects are accomplished as well by plowing to ordinary depths as by subsoiling, dynamiting, or deep tilling by any other method. There is little basis, therefore, for the expectation of increased yields from these practices, and the results of the experiments show that they have been generally ineffective."

Where root crops such as sugar beets are grown it is generally conceded that somewhat deeper plowing is better than it is for other crops inasmuch as the improved structu of the subsoil results in a smooth lot of roots.

Results of investigations of t best depth to plow sandy soils a lacking. Observations lead us conclude, however, that light so that carry their vegetable matter the first three or four inches a sometimes plowed too deeply, pecially if the particles composi the lower layers fall apart when posed, wind erosion becoming a se ous matter. Owing to their rath porous or open condition it see that it is not so necessary to pl sandy soils so deeply as the fine te ured ones.

It is desirable to break up "pl soils." Where compact impervio layers of soil exist within striki distance of the plow or other imp ment they can be broken up to s vantage. As a rule the so-call "plowsole" is a thin layer that l within eight inches of the surface a can be done away with and avoid by altering the depth of plowing

Can the subsoil be improved means of explosives? We have great deal of reliable informati concerning the value of explosives the improvement of soils. It h been asserted that most soils can materially improved in this wa Some of the claims are the struct is improved resulting in better ve ilation and drainage, elements plant-food are made available a injurious insects and plant dise may be controlled—rather elabora claims it seems.

The Kansas Experiment Stati has rather exhaustively investigat the effect of dynamite upon the p sical condition or structure of rath plastic clay subsoils. They fou "when a charge of dynamite is ploded in a plastic clay soil the su den expansion of the gases forces soil back from the center of charge, producing in the soil a c ity, the size of which is determin partly by the size of charge and co position of the powder used, a partly by the moisture content a physical nature of the soil. The s particles driven out from the cen of charge are forced into the po spaces between the soil particles the mass of soil adjoining. Thus cavity is formed, the walls of whi consist of a hard, compact mass soil. This cavity, with its surroun ing mass of soil, is often spoken of the "dynamite jug."

Uncle Rube Spinach Says:

ROBBERS—AN' EV'RY THING

BEIN' as there's so many robberies an' so much stealin' goin' on, not only here in Battle Creek but all over the state an' the hull durn world purty nigh. I've kinda been studyin' the matter for some little time an' I got quite a little bit of information not known to the general public, so to speak.

I've got a friend livin' over to Marshall who works here in the same place I do an' so see him every night an' I'm learnin' a lot of things from him that may be useful to me when I get old enough to have judgment an' have reached the age of discretion—if there is such an age, which, of course is doubted by a good many folks, while a few still believe it exists.

Well this feller's name is Tingay—Tom Tingay, an' while he ain't no great shakes to look at he knows quite a lot, consider'n that he lives in Marshall. Marshall you know is the home of one John Bean an' John Bean—Uncle John, most everybody calls him, is the oldest constable in point of service in the state if not in the world—50 years at the business an' still goin' well as I said Tom lives near him an' so of course knows a hull lot about crime an' robbers an' every thing an' jest naturaly Tom imparts a good deal of his knowledge to me—I bein' about the only one that's foolish enough to lissen to him, that is, I mean, well I'll jest let it go at that. Talkin' about the robbin' that was goin' on here, I sez to Tom "the police say its amatoors that's pullin' off these stunts, their methods are crude an' done in such a bunglin' fashion we known professionals are not engaged in it at all."

That's jest it Tom sez, of course it's am'teurs 'at's doin' it, an' that's what makes it so hard to catch 'em, professional am'teurs, Tom sez, works sly an' at night, when policemen are sleepin' on their jobs—They don't come right out and hold a fellow up at the point of a gun and demand 'your money or your wife," or anything like that, they jest walk right in when folks are asleep an' take what they want an' then keep their mouth shut an' jolly the officers a bit an' git away with it all right Tom sez.

"But," sez Tom, kinda yawnin' a little as if the subject was becomin' tiresome, "their methods are crude at that, an' hard too, they have to work an' climb porches an' sneak aroun' in dark places, oh it's a hard life, he sez, an that's why nearly all the ol' timers have quite the bizness—it got so it didn't pay very big, wuz a little unsafe an' kinda darned slow—an' so they quit that way of doin' business an' that's why there's so many professional am'teurs at the present time, Tom sez.

Well I sez to 'im, "what has become of all the ol' timers be they all dead?" I sez.

"H——l no," Tom answ'red, "gash I say they wasn't dead! Why they have multiplied and increased an' prospered and now are livin' in fine houses, ridin' in automobiles, wearin' the best of clothes, belong to church, are leaders in society, an' are the high mucks mucks of every community—they are the elite, the, the, well purty night the salt of the earth now an 'the police can't bother 'em any more cause they're protected by law, but an' here Tom winked his other eye, the only good one he has—the other being weak—b'gosh they're still playin' the game, still robbin' the people an' they're a doing a nice job at it too—a slick job, right in broad day light an' with the victims' eyes wide open, oh, they're a doin' a land office business, defying the gover'ment, laughin' at the law, hoodwinkin' the courts, why they're just a comin' in money an' by ginger there don't seem to be any way of stoppin' them either. Here Tom stopped a minnit, took a fresh chaw of the weed that is not in good repute where he works, an' then he blurted out "Am'teurs! why sure they're am'teurs—every man who will stick to the old method of robbin' now" he sez "is not only a am'teur, he's a dam fool."

But Tommy I sez to 'im tell me, I sez what is this new an' wonderful way? What are these men doin' now that life has become so lively an' to whom the world has grown so bright tell me Tom, I pleaded. Tell me what are they doin' now. Tom looked me in a kinda sorrowful way for quite a spell threw out his chaw of tobacco an' lit his pipe, took a few puffs, looked at me a'gin an' then, just as he started for the car to go to his home in Marshall he put his hand on my shoulder an' sez "Rube, ol' boy, you better wake up—go up town, he sez and you'll see the guys an' see 'em working too. Why you poor ol' fish he sez, the old' timers are in business now and robbin' everybody, no partiality bein' shown everybody stands their share an' its bein' done every day an' everywhere, goodbye—Uncle Rube.

Feed Hens Balanced Ration for Egg Yield

FEEDING is one of the most important factors in egg production. On poor rations hens will live and even keep in fair health; but well-balanced, palatable feeds are necessary to get good egg production. The additional cost of a good ration compared with a poor ration is repaid many times by the extra eggs obtained. As a rule the simplest feed mixtures composed of home-grown grain and their by-products, supplemented by sweet or sour milk or some animal feed rich in protein, such as meat scrap, will prove most profitable and will produce eggs at the lowest cost.

There is no one best ration for all conditions, but many of the grains can be fed interchangeably, depending on their availability and price. The rations described in this article are recommended as the result of extensive feeding experiments conducted at the Government farm at Beltsville, Md.

Corn, wheat, oats and barley are the principal grains fed to poultry; kafir corn and buckwheat are used also, but are not so generally available and usually cost more. Corn and wheat are the two best grains and are about equal in value as poultry feeds, although wheat can be fed alone better than corn, which is inclined to be fattening. Oats and barley, on account of their hulls and higher fiber content, are not so good as corn or wheat. Rye is not well relished by fowls and is seldom fed. Wheat screenings or slightly damaged grains sometimes may be bought to advantage, their value depending entirely upon their quality and condition, but as a rule only sound grains in good condition should be fed to poultry, and mouldy grains should never be used. The locally grown grains which poultry will eat freely may generally be used to the best advantage. A scratch, mixture, consisting of whole or cracked grains made of a combination of any two or more of those mentioned, can be fed to advantage. It is not advisable to feed continuously any single grain especially corn, owing to its fattening properties already mentioned.

A mash made of ground grains, mill products, and meat scrap should be fed usually in addition to the scratch mixture. Corn meal, wheat bran, wheat middlings, and meat scrap form the basis of a good mash, while corn chop, corn-and-cob meal, ground oats, and low grade flour also may be added or substituted to advantage. Just as good results can be obtained from a simple mash containing 3 or 4 ground grains and meat scraps as from a highly complicated mash containing 10 or 12 products.

A large number of commercial mixtures both of scratch grains and of ground grains are prepared for poultry feeds, but the value of any mixed commercial feed depends upon its composition and the quality of grains used in its preparation. If a poultry raiser does not produce any grain and keeps a comparatively small number of fowls it is often better to buy commercial feeds.

It's not fat—it's EGGS you want

Are your hens just boarders? Fat and lazy? All their food going to flesh? Nothing left for egg production? Madam,—Your hens' egg organs are dormant, and if you are going to be satisfied to let nature bide its own time to revive these dormant egg organs, it will be Spring eggs, not Winter eggs, for you. But why wait on nature? You can speed up egg production—you can make your hens lay now by feeding

Dr Hess Poultry Panacea

It contains *Nux Vomica* and *Quassia,* the best nerve, appetizing and digestive tonics known to the *Materia Medica*—tonics that promote a hen's digestion—tonics that tone up the dormant egg organs so that the proper amount of food goes to egg production, and not all to flesh, and fat, and laziness, when it's action, and eggs you want.

Pan-a-ce-a supplies the additional iron for the blood, which is essential to the speeding up process. It contains certain forms of lime that supply the needed material for making egg shells.

Dr. Hess Poultry Pan-a-ce-a insures a healthy, singing, laying, paying poultry flock, Winter as well as Summer.

Always buy Pan-a-ce-a according to the size of your flock. Get it from a reliable dealer in your own town. Tell him how many fowls you have, and he will supply you with the proper sized package, which is guaranteed. 30c, 75c and $1.50 packages. 25-lb. pail, $3.00; 100-lb. drum, $10.00. Except in the far West and Canada.

OUTSTANDING BOARS FOR SALE

C. A. KING JOE 290831, sired by King Joe 251257, by King of Wonders 205757, by (Old) A Wonder 107353; Dam, Monarchia 3rd 622512 by A Monarch 213293, by A Wonder 107353. He is bred by W. B. Wallace Bounceton, Mo. His individuality is equal to his pedigree, which a very critical breeder will have cause to admire. He stamps his get, in line with his ancestors, which fact makes him a breeding boar, worthy to go into a very select herd.

BUSTER HALFTON 298225, sired by Great Big Half Ton 261243, by Big Half Ton 217217, by Hillcroft Half Ton 172551; Dam, Mollie Buster 622612, one of the best and biggest sows ever sired by Giant Buster 240657 "The Epoch Maker," by Dishers Giant 240655. If you like the top notchers, this great boar has the blood in his pedigree. Come and look them over or write for my price. Be quick, for I have placed them to move in order to make room for a new boar I have ordered, to cross their get with. Look for classy stuff next spring.
C. A. BOONE, Blanchard, Mich.

A New Herd Boar
(his name) **Big Bob Mastodon**
sired by Caldwell Big Bob, champion of the world in 1917. His dam is Mastodon Josie; she is a daughter of A'S Mastodon the Grand Champion at Iowa State Fair in 1917. Ready to ship boars.
(Come and see him.)
C. E. GARNANT, Eaton Rapids, Mich.

POLAND CHINAS I WAS AT ASHLEY, Ind., Nov. 6th and saw Jossie Giant sell for $1,610. She is a litter mate to my Michigan Buster. Boars and gilts by him and also by Bob-O-Link.
O. L. WRIGHT, Jonesville, Mich.

LEONARD'S Big Type Poland China Boars, all ages. The kind that makes good. Call or write.
E. R. LEONARD, St. Louis, Mich.

Farmers from Michigan Win Many Prizes at International Live Stock Show—See Story on Page F.

Farmers Ask for Better Sugar Beet Contract

Unanimous Opinion That Growers Should Receive One-Half of Profits Over Those on "9c Sugar"

"FIFTEEN dollar beets" was the demand of a large number of farmers who attended the mass meeting of sugar beet growers held at Saginaw last Monday. "We can't grow beets for less than that, and unless we get $15 we'll turn to some other crop," was the declaration of a large delegation from the Bay County Farmers' Union.

"We come here instructed to ask for $15 beets," said a member of a Genesee county delegation. Various other expressions from the crowded hall showed that the majority of the farmers present or those whom they represented will not be satisfied to sign the same kind of a contract as they had last year.

Before the meeting had proceeded, however, it was evident that some farmers in several counties had signed up on last year's basis. A. B. Cook, of Owosso, reported that while he personally had not yet signed nearly all of his neighbors had. Delegates from Gratiot county reported that in a few sections the farmers had signed almost to a man. Discussion brought out the fact that those who had signed had had an exceptionally good yield last year, and in the absence of any information as to any action that the growers might take to negotiate with the manufacturers for a higher price, had offered no objection when the contracts were circulated. The total number of farmers who were satisfied with the old price was held to be comparatively small and not considered an insurmountable obstacle in the way of the other farmers trying to get a better price, at least sufficient to pay them cost of production.

Because existing laws expressly forbid farmers to "collectively" bargain to secure a fair price on their products, the beet growers named a committee to present their claims to the manufacturers and negotiate with them for a better contract. This committee consisted of the following men:

John C. Ketcham, Hastings, chairman; John L. Shepherd, St. Clair county; C. E. Ackerman, Shiawassee county; Bert Mellinger, Gratiot county; John Purtell, Bay county; Fred Holland, Genesee county; Robert P. Reavey, Tuscola county; T. C. Price, Saginaw county; D. S. Herriott, Clinton county; Godfried Gettle, Huron county.

Why a Better Price for Sugar Beets?

The average yield of sugar beets in Michigan for last year was seven and one-half tons. A few farmers produced as high as twelve to twenty tons to the acre, but they were the exceptions. The average farmer on an average farm—and it is the average farmer who supplies the great bulk of our food products—lost money on beets last year. According to best available figures on this subject it cost $109.49 to grow one acre of beets last year. On the average yield in 1918 the average grower should have received better than $14 per ton just to break even. To have made a profit of 10 per cent which is considered a very reasonable profit he should have received about $16 per ton for his beets. Of course, there were farmers as we have said who had a better than the average yield and made a little money, just as there are manufacturers who for various reasons make more money than their competitors at the same selling price of their commodities. Instead of getting $16 per ton, the farmer got $10 per ton, and it is very clear that most of them lost money. Yes, it is true, dear critic, that $10 per ton would have looked like a gold mine five years ago. So would $10 shoes. But that isn't today. If $10 was a fair price last year which it wasn't, it's not a fair price this year by a long shot, as the cost of production has been on the climb with everything else and must be met by higher prices on beets. The sugar manufacturers have announced an increase in the labor cost which will approximate $6 per acre, or 80 cents per ton, figured on last year's yield. Of course, this increase must come out of the farmers.

Mr. W. H. Wallace, of the Michigan Sugar Company, when asked if the manufacturers would not be willing to increase the price per ton at least enough to care for this larger labor expense, replied: "No, it cannot be done. We couldn't possibly give the farmers a better contract this year. We are not anxious to secure acreage as we are afraid of next year's market. We expect that the labor to be supplied next year will be so much more efficient than last year that the extra cost will hardly be felt."

It is not supposed that either the Michigan Sugar Company, nor any other sugar company will of their own accord offer the farmers a better price. The history of the sugar beet industry in Michigan fails to record a single instance of the manufacturers coming forward voluntarily and boosting the price in the contract. They simply aren't cut out that way. They have always proceeded on the theory that the farmers had to grow the beets and as long as farmers would sign contracts at the manufacturers' terms and figures it was poor business to make a better contract. What concessions the sugar beet growers have received from the manufacturers, they have wrung from them and judging from the latest attitude of the manufacturers, the farmer will have to continue to wring and squeeze if he is to make any money on his crop or receive any of the handsome profits which the manufacturers are reaping from it.

Last year's beets tested 16 per cent sugar. That means that from every ton of sugar beets the manufacturers extracted 320 pounds of sugar. At the prevailing wholesale price of 9 cents the manufacturers received $28.80 from every ton of beets. To the farmer they paid $10. To extract the sugar, pay interest, depreciation and profits they had left $18.80. This takes no account whatever of the presumably large value of the pulp, molasses and other by-products, from the sale of which the farmer receives not a cent.

Quoting C. W. Bramble in the Grange year book for 1919, the federal Trade Commission reported that the cost of the beets constituted 72 per cent of the entire cost of putting the refined sugar upon the market. If this statement is correct, the total cost of putting on to the market the sugar extracted from one ton of beets last year was $14, not including interest and selling cost, which left to the manufacturers the exceedingly comfortable sum of $14.80 per ton of beets to pay interest, selling cost and profits. We caution our readers against accepting these figures at face value. We cannot vouch for their authenticity. Undoubtedly the cost of manufacture has increased enough to have made a substantial decrease in this margin. But making all allowances for these exceptions we are nevertheless confronted with the fact that the manufacturers made some staggering profits on the farmers' beets last year.

Is the 50-50 Division Fair?

Last year's contract guaranteed the growers $10 per ton and $1 per ton additional for every cent per pound increase in the wholesale price of sugar over 9 cents. As we have already shown the manufacturers received $28.80 from every ton of beets last year, with sugar at nine cents per pound. Had sugar been sold for 10 cents instead of nine, the farmer would have received $11 per ton for his beets and the manufacturer would have received $32.00 per ton. In other words, the increase of one cent per pound would have meant an *additional* return to the farmer of $1 per ton and to the manufacturer of $2.20 per ton. Which is to say that less than one-third of the increased sum which the consumer would have had to pay for the sugar would have gone to the farmer and over two-thirds to the manufacturer.

Let's take the coming crop year and the contract which the manufacturers have presented to the farmers. A preliminary test of the beets shows that the sugar content will average at least 14 per cent, and the manufacturers estimate that the average price of sugar for the months of October, November, December and January will be high enough to enable them to pay the farmers $12.50 per ton. To do this, the average price must be 2 1-3 cents above the basic price of 9 cents named in the contract. This increase per pound of sugar means an increase of $7 per ton of beets. Of this amount the manufacturer will pay the farmer $2.50 and keep for himself $4.50. Every increase of one per cent in the sugar content with sugar at 9c brings to the manufacturer $1.80 more per ton but is of no benefit whatever to the grower.

It is presumed from these figures that the manufacturers of beet sugar are making very large profits and that they can afford to divide these profits with the farmers. L. W. Oviatt, well known Granger and sugar beet grower of Bay county, insists that the companies should divide equally with the farmer all net profits received from such sugar as is sold for more than 9 cents per pound. Under this plan, assuming that 13 per cent beets and 9 cent sugar is taken as the basis from which the division of profits should start, 10 cent sugar would bring the farmer $11.30 instead of $11 as under last year's contract. Fourteen per cent sugar beets would insure him $12.30; 15 per cent, $13.30; 16 per cent, $14.30. The farmers return would also automatically increase as the price of wholesale sugar went up. Eleven cent sugar would mean another dollar per ton on the beets, etc., sixteen per cent sugar beets, yielding sugar that would sell for 11 cents a pound would represent a total return, not counting the by-products, of $35.20 per ton. If the profits were split as above outlined, the farmer would receive for these beets exactly $15.90.

The reader should bear in mind that these computations were made by the editor merely for the purpose of showing how fair a 50-50 division would be to both grower and the manufacturer. We have no reason to believe that the manufacturers would ever agree to such a proposal as this except as a last resort to prevent farmers from forsaking sugar beets for some other crop. Possibly there are errors in our figures and our conclusions. We invite the manufacturers to scrutinize them and we will be glad to correct any statement which they prove is incorrect.

What Some of Our Readers Think of the Sugar Beet Contract

The first intimation we had that the farmers were not satisfied to sign up acreage on last year's basis was contained in letters received from readers who grow sugar beets. Typical of these letters are the following:

J. H., of Reese, Tuscola county, writes: "Will you write a few lines in the paper about the sugar beet contract that is out for the year 1920? This year the farmer made a few dollars on beets at $10 a ton and the sliding scale. The farmer pays $22 an acre for labor. This year the sugar company wants to charge $26 an acre, 50 cents an acre for house rent, and at the same price as last year, $10 per ton. If the company wants to charge $26.50

(*Continued on page 20*)

Prices Farmers Would Receive under Proposed 50-50 Division of Profits:
(Basis for determining division of Profits, 13% Beets and 9c Sugar)

Sugar%	Wholesale Price of Sugar						
	$0.09	$0.10	$0.11	$0.12	$0.13	$0.14	$0.15
13% beets .	10.00	11.30	12.60	13.90	15.20	16.50	17.80
14% beets .	10.90	12.30	13.70	15.10	16.50	17.90	19.30

Next Year's Sugar Supply

THE MANUFACTURERS claim they are afraid to contract for a large acreage on the grounds that prices may go lower. But all the evidence that is procurable points to much higher prices. We wired the U. S. Sugar Equalization Board asking for a report on the probable supply and prices for next year. The following is their reply:

Editor, Mich. Business Farming, Mt. Clemens, Mich.:

Present indications point to a supply of sugar next year that will be inadequate for the demands of the world and materially higher prices will accordingly rule. Impossible to forecast what the price or even a fair average price will be depending upon the absorption power of this coutnry and the amount required to supply even the restricted demands of Europe.—U. S. SUGAR EQUALIZATION BOARD.

Attention, Sugar Beet Growers!

Unless you are careful you are going to sign a contract that may not pay you cost of production but which will yield enormous profits to the sugar manufacturers. You are entitled to a fair share of the profits derived from the sale of beet sugar. A committee has been appointed to represent YOUR interests in negotiations with the manufacturers. If you are entirely SATISFIED with last year's contract, well and good. But if you are not satisfied wait until your committee reports before you sign. Don't sign a contract unless you know it has the approval of your committee.

Fruit Men Plan Fight Against Orchard Enemies

Saving of Millions of Dollars in Michigan Horticulture Urged at Detroit Convention

By VERNE E. BURNETT

STATIONS to be of service to the farmers with orchards were planned upon along with other valuable forces by the forty-ninth annual meeting of the Michigan State Horticultural Society, which drew 500 to its three-day convention in Detroit recently. Concerted action against the many pests besetting Michigan's orchards was vouched for by a goodly number of the men attending the meetings.

"Three fourths of the apple trees of Michigan are not doing anywhere nearly the work they ought to do," according to a prominent orchard farmer. The ravages of the codling moth were complained of as getting worse every year, by numerous growers of apples, pears and quinces, and some of the state's greatest experts on the subject were on hand to give some tips which would save millions of dollars, if properly carried out by the orchard men. Many valuable facts also were given on the leaf curl and other difficulties in horticulture in this state.

The codling worm, according to C. P. Halligan, of East Lansing, makes cocoons on the boxes in which the apples or pears are stored and even though spraying has done away with the pest in the orchard, and brood hatches from the nests in the boxes. The worms also spin their cocoons on the walls of the barn or shed or warehouse where the fruit is kept. Fumigation was recommended as a cure for this trouble by Prof. R. H. Pettit, of East Lansing.

I. T. Pickford, in the closing afternoon of the convention gave some important figures on horticulture, in connection with the work he has been doing as extension horticulturist of the M. A. C. More than $14,000,000 worth of Michigan cherries, grapes, apples and pears are reported to have been marketed in the last season alone.

Some of Mr. Pickford's statements caused comment which showed that there is an increasing cost of all elements in the production of fruit. One member spoke as follows:

"In the fruit growing business we seldom realize on any one crop every year. There are many losses, and when a big turnover with a fair profit may occur a certain year, city folks sometimes raise an unfair howl that fruit men are profiteers when they aren't."

Mr. Pickford painted a glowing picture of the untouched wealth in fruit growing in Michigan. "The total turnover this year though commendable, is only an inkling of what it can be," he said. He suggested that farmers might do much to boost Michigan's fruit prospects outside the state by making more attractive and efficient orchards. Growers are merely scratching the surface as compared with what can be produced.

Expect to Establish Stations

It was the sentiment of the convention at the closing session that stations might profitably be established at numerous points in the state where there is a wealth of orchards. C. P. Halligan, of East Lansing, suggested that such stations might well be placed in or near Benton Harbor, Grand Rapids, Ludington, Traverse City, Manistee and some points in eastern and southern Michigan where orchard interests run fairly high.

Station men from the college at East Lansing and county agents offered to make analysis of infected fruit for any farmer in the state, and otherwise help out the problem. A case was cited of Mr. Hopkins, of Bear Lake, who hired a helper to spray for the codling moth. In spite of the careful spraying, a second brood hatched. Careful investigation revealed that the cocoons had lodged inside the apple crates and thus a new set of the worms infected the orchards.

War to Death on Corn Borer

Levi R. Taft, state inspector of nurseries and orchards, gave a stirring talk about the rapid spread of the European corn borer, which, he says is carried like the wind. It has worked through ninety townships in Massachusetts, and prevention work is being carried on by the government in only five townships infected. Every farmer in Michigan, he said, should watch for the breaking of the tops of the young corn, for the perforating of the corn leaves, and other signs of deformity in the corn. The eggs are laid upon the leaves, in tiny white clusters. Mr. Taft appealed for all farmers to be on the lookout to keep the European corn borer from getting into this state.

The methods used to prevent its spread are the burning over of infected fields, plowing and raking the corn butts into piles to be burned or steamed out, or burying of the butts under manure. The great danger of the corn borer is that it gets into 95 different kinds of plants on the farm, including nearly all grains, potatoes, beans, and anything which has a pulpy inside to its stems.

Due to the light crop of apples this year and the shortage of labor, which was greatly complained of during the sessions, the usual apple exhibit was not held this year. Nevertheless the exhibitors of all sorts of spraying devices and nursery stock were on hand with some interesting material. The use of dust sprays was considerably discussed at the convention. According to Frank D. Wells, of Romeo, deputy state inspector of nurseries and orchards, there seems to be rather differing opinions among some of the fruit growers.

Against State Warehouses

One of the officers said, in regard to resolutions at such conventions, that a motion set before the delegates is often rushed through without any discussion to speak of, and frequently a convention is put on record for things which the individual members would like to think over. Thus the resolutions at the Detroit convention last week are interesting, but some of the paragraphs are thought to have been slipped through without reflecting the sentiment of the majority of the farmers represented.

For instance, a negative motion was railroaded through, which put the convention on record as being against state-owned terminal warehouses as a solution for some of the farmer's marketing troubles Countless letters from individuals and groups among the farmers have assured leaders of the warehouse amendment movement that most farmers believe in state-owned terminal warehouses.

The officers of the past year were re-elected by the delegates The officials of the organization follow: President, James Nicol, South Haven; vice-president, George Hawley, Hart; secretary, George M. Low, Bangor; treasurer, J. Pomeroy Munson, Grand Rapids. Executive Board: C. P. Halligan, East Lansing; E. J. Ver Duyn, Novi; A. J. Rogers, Beulah; A. M. Bullock, Lapeer; George Friday, Coloma; Geo. Hawley, Hart. Trustees of Lyon Memorial Fund: President, C. J. Monroe, South Haven; secretary, J. Satterlee, Lansing; treasurer, Hon. Chas. W. Garfield, Grand Rapids.

The whole convention was full of pep and interest and it was two or three times the size of the meeting last year. The increased interest augurs well for the mid-winter meeting billed for Benton Harbor, as well as for the future of the splendid organization.

The program was arranged as follows: Tuesday a. m., Round Table Talks. These informal talks have proven of so much importance that it was decided to start the meetings in this way. Experiences in the past season were given.

Tuesday afternoon: "Freight Rates," by F. B. Coombs, secretary Michigan Traffic League, Benton Harbor. Mr. Coombs is one of the best informed traffic men in Michigan today.

"Legislation, as it effects Fruit Grower and Shipper," R. G. Phillips, secretary of the International Apple Shippers' Association, Rochester, N. Y. Mr. Phillips has just returned from Washington where he represented the shippers in a new proposed refrigeration rates.

"Spraying," by W. C. Dutton, Investigator on Spraying Experiments, M. A. C. Mr. Dutton's work has taken him over every fruit growing section in Michigan the past season.

Wednesday morning: Students' Speaking Contest. This contest was in charge of C. P. Halligan, head of the Horticultural Department of the Michigan Agricultural College. This contest originated at M. A. C. and has since been copied by several other states. Five-minute talks given by this year's seniors of the Horticultural Department. Judges awarded cash prizes, first, second and third best talks.

Business meeting. Most members arranged to be present at this session as some very important business was brought before the society at this time. The election of officers (all re-elected) occurred, and the committees on Resolutions submitted their report.

Wednesday afternoon: "How to Make Strawberry Growing Both Pleasant and Profitable," F. E. Beatty, Three Rivers. Mr. Beatty is one of the best advised authorities on commercial strawberry growing in the Middle West.

"The Relation of Orchard Practices to Fruit Bud Development," by E. J. Kraus, Madison, Wis. Mr. Kraus is a graduate of M. A. C., has spent several years as horticulturist with the State College in Oregon, and is now with the University of Wisconsin.

"Collective Bargaining," by Hon. Charles S. Deneen, Chicago, Ill. Former Governor Deneen, o Illinois was attorney for the producers in the recent trial of "The Chicago Milk Producers' Association." The decision rendered in their favor is largely responsible to his efforts.

Thursday morning: "When is Pruning Profitable," by E. J. Kraus, Madison, Wis.

"The New World Urge," by J. Bradford Pengelly, D. D., Flint, Michigan.

KEEP ON is a mighty proud Hereford. He made away with the grand championship for his breed at the Michigan State Fair. Jay Harwood, of Ionia, is the owner.

Macomb Cow Testing Brings Good Results

MACOMB Co. Cow Testing Association No 1 has been in operation for two months, with some good results. This association consists of 25 herds which average 14 cows each quit dairying by guess work and are working on beasts actually found in their barns.

The tester visits each farm once a month and takes a test and weighs both night and morning milkings. These weights and tests are used to complete the month's record of each cow. Each cow's record is entered in the members' herd book and at the end of the year all the boarder cows are going to a new boarding place.

During the month of November there were 29 cows that produced over 40 lbs. of butter fat; 10 produced over 50 lbs. fat; 30 produced over 1,000 lbs. of milk and 16 produced over 1,250 lbs. of milk.

The highest testing Holstein herd was that of Oscar Hartsig, which averaged 4%. The herd having the highest average fat production was that of Jacob Hartsig with 7 cows that averaged 39.6 lbs. of fat. Highest Jersey herd was that of Frank Cotton, 9 cows averaged 5.9%.

The most of the members have started their winter feed rations and the next few months the milk production of most of the herds will increase with the large number of winter freshening cows.

The men of the cow testing associations are making good use of feed this winter and are feeding no boarders. They are using the most economical rations that meet the needs of the cows, and are feeding grains to cows individually according to production, thereby creating a saving. They are realizing that good care means more money. Production records show them that milk production is an inherited ability, thus showing the value of pure bred sires from bred-to-produce females. They are using the best sires obtainable.

The testing association takes the guess work out of dairying. No longer can the camouflage of a fine appearance protect the low-producing cow. Confirmation indicates performance, but the Babcock test and milk scales always tell the true story.

Knowing the true feed and production records of each cow, the dairyman eliminates with certainty all low producers and feeds the remainder according to known production.

A list of members of Macomb County Cow Testing Association members follows:

John A. Rinke, Warren; Jacob Hartsig, Warren; Oscar Hartsig, Warren. Louis Busch, Warren. Tom Reddick, Warren, Geo. A. Freidhoff, Warren; Jos. C. Murphy, Utica; Cec.-Treas., Geo. Eppler, Utica; Cody Brothers. Mt. Clemens; Pres., Dr. Fred K. Lenfestey. Mt. Clemens; Ed. Schultz, Mt. Clemens; Louis Bannon, Mt. Clemens; F. E. Cotton, Mt. Clemens; August Collins, New Baltimore; Robert E. Knight, New Baltimore; H. E. Becher, New Baltimore; Jos. H. Fuller, New Baltimore; R. Axtell, New Baltimore; Wm. Gottschalk. New Haven; Harry Nunnelley, New Haven; Albt. Luchtman, Washington; Harry J. Green, Washington; Wm. C. Schoof, Washington; R. Kollmorgan, Warren; Schlaff Creamery Co., of Mt. Clemens.—*Eugene G. Barrett, Tester.*

State Grange Repudiates Policies of National

Takes Counter Action on Affairs Which National Organization Viewed with Reactionary Eyes

THE RESOLUTIONS adopted by the Michigan State Grange, in annual session last week at Saginaw, constitute a virtual repudiation of the action taken on the same measures by the National Grange a month ago. As noted previously in these columns the National Grange committed itself to extreme conservatism and disappointed the entire country by its lack of understanding of the spirit and needs of the time. Fortunately, the National organization did not reflect the views of the Michigan Grange except in one or two particulars and the farmers of the United States who believe in progressive and constructive reform will be vastly pleased over the majority of resolutions adopted by the State Grange.

The Grangers held their initial session on Tuesday last and the work of the convention was completed on Saturday. The big feature of the convention was the public meeting Wednesday afternoon and the public banquet in the evening at which nearly four hundred and fifty guests were entertained. The topic of the evening was: "What farmers of Michigan want, socially, economically, co-operatively, educationally and politically." These subjects were handled in an able and entertaining manner by fifteen or twenty speakers of both sexes. Arguments were presented in favor of the consolidated rural school, broader investigations into the cost of production, closer co-operation in the solution of marketing problems, a better social spirit, more frequent gatherings, election of a farmer governor and legislature, all of which were enthusiastically endorsed by the gathering.

The report of the executive committee which reflects the spirit of the resolutions adopted was unanimously adopted. A portion of the report follows:

"Since last we met in State Grange Session a new era has dawned upon the world.

"Out of the night of war, out of the turmoil and slaughter, out of the confusion and despair, we have emerged into the light of a new day—a day of comparative peace, but of new and unfamiliar conditions of changed relationships and seemingly impossible readjustments.

"Problems are before us whose meaning we do not comprehend and for whose solution we have no rule. The methods used in other days no longer apply; precedents are thrown to the winds and established usages are rejected as valueless in the light of present day experiences. Thrones have toppled and scepters have fallen, nations have disappeared, and from the ruins new nations have emerged to take their places; boundary lines have been erased and a new map of the world is in process of construction.

"The very foundations of civilization have been shaken and the whole structure has seemed on the verge of ruin. At such a time we may well remember that God reigns and out of chaos and turmoil of the present will come in the end a new world in which dwelleth righteousness with liberty and justice for all.

"Since we last met, Michigan has been making history that will read well when we who have had a part in it will have passed on to the great majority. The adoption of State-wide prohibition, the extension of the right of suffrage to include the women of our state, and following that, the overwhelming defeat of the liquor interests in their attempt to revive the saloon by the so-called Wine and Beer Amendment indicate the growth of public sentiment in favor of a high moral standard, and give assurance of better things in the future.

Legislation

"Your Executive Committee has endorsed every outstanding measure in State or National legislation that had in it a promise of benefit to the farmer. The marketing question is one of the most important and perhaps the most difficult that the farmer has to meet. To give opportunity to the people of this state, both producer and consumer, to have a part in working out a solution, your Committee advocated the plan of terminal warehouses in the large cities of the state. Such an Amendment to the state constitution, as would provide for such warehouses, was introduced in the state senate by Senator T. H. McNaughton and was endorsed by your Committee. This measure passed the Senate but was defeated in the House by the interests opposed to the control of such matters by the people. Many of the farmer members were presented with the charge of radicalism from supporting the measure, but we wish here to thank the Granges of the State for their support and the many indications of their approval of the work of the Committee. We note with interest that the Association of Prosecuting Attorneys approved the principle for which we labored in the last legislature, and favor the submission of the amendment to the people at a special session of the legislature which they propose to ask the Governor to call early in the new year.

"The Grange may have been somewhat in advance of public opinion, as it frequently is, but we believe that sentiment in favor of this proposition is rapidly increasing and that now is the time to act. If this question is not submitted to the people within the next two months by the legislature, we favor the submission of the proposed amendment to the people by the initiative provision of our state constitution The Farmers' Clubs, the Gleaners and many people in the cities will join with us in the attempt to narrow the gulf between producer and consumer to the mutual advantage of both. 'The states,' said ex-president Theo. Roosevelt in speaking of action along this line, 'the states are the natural laboratories for trying out these experiments,' which, he declared could do no harm and might accomplish great good.

"But, the Warehouse Amendment was not the only matter of legislation in which we were interested. Dangerous legislation often begins by the enactment of the laws not harmful at the time but which may be used as a precedent in succeeding years to the public detriment. The attempt to foist upon Michigan the principal of classification of property which has resulted in other states to the injury of agriculture was met and successfully defeated as recounted by the Worthy Master in his address to this body.

"Amendments to the law establishing a State Board of Equalization of property by placing the members of the State Tax Commission on that board and making certain that at least one member shall be a farmer or closely connected with agriculture, has assured the farmers of the state of fair and reasonable consideration."

Grange Boosts Warehouse Measure

According to the tenor of several resolutions introduced the Grange will get actively behind the warehouse measure which was smothered at the last session of the legislature, and will not support a single candidate for office who does not pledge his support to the measure. The warehouse bill was supported by the legislative committee of the Grange. Gleaners and Farmers' Clubs but they were unable to muster sufficient support in its behalf. These farm organizations, with the possible assistance of the Farm Bureau, will no longer depend upon "any old candidate" to support the measure, but will go out in the next election and secure men whom they know can be trusted to represent the people. In the event that no special session of the legislature is called the Grange would have the warehouse amendment initiated by petition and submitted to the people at next fall's election.

Would Give Government Another Chance With Railroads

Quite the opposite of the action taken by the American Federation of Farm Bureaus and the National Grange was the resolution adopted by the State Grange recommending a further trial of government operation of the railroads. Master John Ketcham was instructed to wire Michigan's senators and representatives urging that the roads be retained under federal control for two years. It was conceded by the Grangers that government control thus far has not been a fair criticism of future control because of the handicaps placed upon the government by the war. The action of the Grange in this respect parallels the action of the Farmers' Clubs a week previous.

Taxation Measures

Resolutions were adopted favoring more stringent methods of ferreting out taxable property and making it to bear its just proportion of taxes. The Grange would have tax "inquisitors" appointed for this purpose. The Grange also opposes the taxing of timber land at current land values and then placing an additional heavy tax on the timber as cut.

Corrupt Practices Assailed

A resolution that was introduced demands that additional laws be enacted, if present ones are inadequate, "to prevent lavish and corrupt use of money to obtain public office," and was plainly a slap at the Newberry campaign methods. A law similar to that now in force in Oregon to limit campaign expenses was endorsed. Features of this law were contained in a bill introduced at the last session of the legislature by Herbert F. Baker which failed of passage. The Grange has taken a large part in the passage of reformative election laws and is unmistakably opposed to the violation of those laws.

Grange Opposes State Constabulary

At nearly every recent farmers' meeting of any importance someone has introduced a resolution endorsing the Michigan State Constabulary. Inasmuch as the Constabulary was created by law and has been given a handsome appropriation it is not entirely clear why it should be thought necessary for all the farm organizations of the state to pass a resolution "favoring" it. Michigan Business Farming has opposed the Constabulary proposition for the reason that it is a useless expense from which the farmers receive no benefit. For many years the farmers of Michigan have lived peacefully and safely without police protection and it has never been satisfactorily explained why all at once this need has arisen. It has been charged that the constabulary organization was created for no other purpose than to provide a political machine for the politicians who forced it through the legisla-ture

What the State Grange Wants

1. A farmer for governor and more farmers in the State Legislature.
2. State-owned terminal warehouses. The Grange will not support candidates for office who will not endorse the project.
3. Retention of railroads under government control for two more years.
4. Fortification of corrupt practice laws to prevent repetition of recent political scandal.
5. Building of roads by taxes instead of bonds.
6. More effective tax laws to discover "hidden" property.
7. More comprehensive investigations into cost of production The Grange appropriated $1,000 to assist in the work to be taken up in co-operation with other farm organizations and state and federal agencies.

What the Farmer Wants for Christmas

Michigan Shines at International Stock Show

Breeders From Wolverine State Win Many Prizes at Chicago's Greatest Livestock Exposition

By ARTHUR W. JEWETT

(Special Correspondent Michigan Business Farming)

THE International Live Stock Exposition held in Chicago from November 29 to December 6 was considered by those in authority to be the greatest live stock show ever held in this country.

This was the twentieth anniversary of the "International" as it is popularly known throughout the country, and this year a new feature was added in shape of the International Grain and Hay Show. Cash premiums to the amount of $10,000 was given by the Chicago Board of Trade to farmers of the United States and Canada.

In the breeding Shorthorn class, C. H. Prescott & Sons of Tawas City, Michigan, took fourth place in Junior bull 2 years old and under 3, 12th place in Junior yearling bull class, 6th place in Senior bull class, 3rd place in Junior bull calf class, and 12th place for the best Senior yearling heifer exhibited at the show.

William E. Scripps, of Orion, Michigan, took the following prizes with his Aberdeen-Angus cattle: 6th place on a bull 3 years or over, 3d on senior bull calf, dropped between September 1, 1918 and January 1, 1919, 4th on junior bull calf, 4th on cow or heifer, 2 years and under 3.

The Woodcote Stock Farm, of Ionia, Michigan, had one of the largest and best herds of Angus cattle at the show. Besides taking first place on calf herd, consisting of one bull and two heifers, the following prizes went to the Ionia man: 2d for the best senior yearling bull, 1st for the best junior yearling bull, 4th for the best senior bull calf, 1st for the best junior bull calf, 5th for the best cow 3 years or over, 5th for the best cow or heifer 2 years and under 3, 7th for the best junior yearling heifer, 8th for the best senior heifer calf and 7th for the best junior heifer calf.

Floyd Frazier & Son, of Cornell, Michigan, exhibited four Suffolk horses. He took 2d place on a three-year-old mare. There was strong competition in this class and very little difference between Mr. Frazier's mare and the one winning first place.

Michigan Strong With Swine Winners

Herbert W. Mumford, of Ann Arbor, Michigan, a prominent breeder of Duroc Jerseys, won 1st with a sow 18 months old in the aged class, 3d in the 2-year boar class, 3d and 4th for the best boar over 18 and under 224 months, 2d for the best boar over 6 and under 12 months, 3d for the best boar and 3 sows over 1 year, 3d for the best four swine, get of same boar. At present, Mr. Mumford is professor in the Animal Husbandry Department at the University of Illinois, which is located at Urbana.

A. J. Adams, of Litchfield, Michigan, who is one of the leading breeders of Chester White swine in the state, had animals entered in nearly every class. He took 3d place in yearling boar class, 2d for boar under 6 months, 3d for a sow under 24 months, 4th for a sow under 18 months and 2d in the rest of the following classes, sow 6 and under 12 months, sow under 6 months, boar and 3 sows over 1 year, boar and 3 sows under 1 year, four pigs under 6 months, produce of the same sow, four swine, get of same boar.

W. S. Adams, of Litchfield, Michigan, had the largest and best exhibit of Tamworth's at the show. Mr. Adams has shown at all the larger fairs in the United States and in every case has had the grand champion sow in the breeding Tamworth class. Besides winning this honor, he took first place in the following classes: boar 18 and under 24 months, sow 12 and under 18 months, boar under 6 months, sow 2 years old or over, sow 12 under 18 months, sow 6 and under 12 months, boar and 3 sows over 1 year, 4 pigs under 6 months, produce of same sow, four swine get of same boar.

Michigan Takes Rye Prize

In the grain and hay division there were samples exhibited from nearly every state in the union. There were also samples from Canada.

ABERDEEN-Angus breeders made a great showing. The above Angus, Idolmere, owned by Dr. J. J. Higgins, of Danbridge, Tenn., won the laurels of grand champion bull at the International. Woodcote Stock Farms, Ionia, Mich., and William E. Scripps, Orion, Mich., won prizes on their Angus displays.

Michigan placed in nearly every class and the following awards are published for the first time.

For the best half bushel of rye: 1st, J. J. Davis, Jackson, Mich.; 2d, John Lucas, Alta, Can.; 3d Swartz Bros., Waukesha, Wis.; 4th, L. A. Sedgwick, Parma, Mich.; 5th, Peter Postinen, Chatham, Mich.; 6th, J. W. Beckman, Cokato, Minn.; 7th, Gifford Patch, Clarks Lake, Mich; 8th Reinhold Kressin, Jackson, Wis.; 9th, Sauerman Bros., Crown Point, Indian; 10th, Noyes Raessler, Beloit, Wis.; 11th, G. E. Reagh, Cass City, Mich.; 12th, H. M. Queal, Hamburg, Mich.; 13th, P. Kuzyk, Oak Lake Man., Can.; 14th Otto Wolf, LaCrosse, Wisconsin; 15th, L. L. Lawrence, Decatur, Mich., 16th, L. H. Laylin, Mason, Mich.

For the best half bushel of white wheat: 1st, John Howell, Montrose, Colo.; 2nd, James Stephens, Balcarries Sask., Canada; 3rd, George Peek, Fairfield, Id.; 4th, Geo. Miles, Bozeman, Mont.; 5th, Joseph Keekley, Marysville, Ohio; 6th, D. C. Lawrence, Coshocton, Ohio; 7th, Tom Nash, Bozeman, Mont.; 8th, Theo. Rattan, Ontario, Can.; 9th, Jay Lawrence, Coshocton, Ohio; 10th, Ross Lawrence, Coshocton, Ohio; 11th, E. A. Ross, Sharon, Wash.; 12th, Cliff Martin, Muncie, Ind.

For the best half bushel of soft red winter wheat: 1st, I. B. Keeley, Marysville, O.; 2d, John Dunbar, Rudyard, Mich.; 3d, R. B. Caldwell, Cumberland, O.; 4th, A. W. Jewett & Sons, Mason, Mich.; 5th, Jacob

Of the horse section of the International, Percherons made the finest showing with more than three hundred head. The above Percheron, Jasmine of Severn & Son, was grand champion.

Ind.; 18th, C. E. Heinberger, Petarkaia, O.; 19th, Will Royer, West Milton, O.; 20th, John Veitengruber, Frankenmuth, Mich.; 21, Spruce Pine Farms, Sangamon, Ill.; 22nd, F. P. Drake, Lexington, Ky.; 23rd, L. T. O'Brien, Eastor, Mo.; 24th, Geo. Durset, Waverly, Ill.; 25th, John H. Roads, Bainbridge, Ohio.

For the best half bushel of two rowed barley: 1st, Seagor Wheeler, Sask., Can.; 2nd, Jos. Meyers, Freeport, Ill.; 3rd, Samuel Larcombe, Man., Can.; 4th, Geo. Lewis, Manhattan, Mont.; 5th, John Howell, Montrose, Col.; 6th, Jay Lakrence, Coshocton, Ohio; 7th, C. E. Troyer, La Fountain, Ind.; 8th, A. W. Jewett & Sons, Mason, Mich.; 9th, John Hans, Jefferson, Wis.; 10th, H. P. West, Ripon, Wis., 11th Roy Hayward, Bay City, Mich.; 12th, Willie Stifter, Cokato, Wis.

For the best half bushel of 6-rowed barley: 1st, L. L. Young, Nampa, Ida.; 2nd A. Bohl, Beaver Dam, Wis.; 3rd, Otto Wolf, LaMundell, Frankfort, Ind.; 6th, Jay Lawrence, Coshocton, O.; 7th, Aaron Hagenbuck, Three Rivers, Mich.; 8th, Wm. Ottney, Jackson, Mich.; 9th A. H. Crosby, New Buffalo, Mich.; 10th, A. B. Read, Rickland, Mich.; 11th, H. D. Cummings, Dallas City, Ill.; 12th, Cliff Martin, Muncie, Ind.; 13th, L. H. Laylin, Mason, Mich.; 14th, W. M. Beattie, Sparta, Wis.; 15th, John Howell, Montrose, Col.; 16th, J. E. Mummart, Ostoria, Ill.; 17th, Sauerman Bros., Crown Point, Crosse, Wis.; 4th, John Dunbar, U. P. Mich.; 5th, Frank Gasper, Rockland, Wis.; 6th, W. F. Tullar, Warren, Minn.; 7th, J. L. Krause, Reesville, Wis.; 8th, Wm. Bell, Arlington, Wis.; 9th, W. F. Otcheck, Grinnell, Iowa; 10th, H. W. Whitehead, Rockland, Wis.; 11th, Elmer Schmat, Wrightstown, Wis., 12th, H. P. West, Ripon, Wis.; 13th, Paul Sheffler, Rockland, Wis.; 14th, Edward Groseh, Mendota, Ill.; 15th, Joseph Muskavitch, Shewano, Wis.; 16th, Frank Coughlin, Credition, Ont., Can.; 17th, John Hans, Jefferson, Wis.; 18th, Wm. Warren, Bilbeck, Can.; 19th, Edward Groset, Mendota, Ill.; 20th, John Hamilton, Kelwood, Man., Can.

For the best half bushel of black oats: 1st, H. P. West, Ripon, Wis.; 2nd, Thos. Totter, Ont., Can.; 3rd, A. W. Jewett & Sons, Mason, Mich.

For the best half bushel of white or yellow oats: 1st, H. W. Whitehead, Rockland, Wis.; 2d, Frank Gasper, Rockland, Wis.; 3d, B. Brubaker, Washburne, Wis.; 4th, Morum Bros., Hollock, Minn.; Ernest Peterson, Harmont, Iowa; 6th, H. E. Rosenow, Oconomanwoc, Wis.; 7th, Walter Nystrom, Worthington, Minn.; 8th, H. M. Krause, Riesville, Wis.; 9th, L. L. Lawrence, Van Buren, Mich.; 10th, Thos. Totter, Woodslee, Ont.; 11th, Wm. Bell, Arlington, Wis.; 12th, Anton Bohl, Beaver Dam, Wis.; 13th, Geo. Emerich, Saginaw, Mich.

For the best 20 ears of white dent corn: 1st, Ed. Peters, La Crosse, Wis.; 2nd, J. Emmitt Brunker, Ridgeway, Wis.; 2nd, Geo. Brueck-Tracy, Minn.; 4th, Otto Wolf, La Crosse, Wis.; 5th, Henry Meinhard, Sherburn, Wis.; 6th, John Rasmussen, Freeburn, Minn.; 7th, C. L. Blanchar, Sherburn, Minn.; 8th, Theron Thorpe, Beloit, Wis.; 9th, Geo. Washington Farm, Mankato, Minn.; 10th, Ernest Carson, Chatfield, Minn.; 11th, Edward Stricker, Jefferson, Wis.; 12th, Wm. Bell, Arlington, Wis.

For the best 20 ears of Yellow Dent Corn: 1st, Jos. A. Bunker, Ridgeway, Wis.; 2nr, Geo. Brueckner, Jefferson, Wis.; 3rd, John Bardel, Jr., Stoddard, Wis.; 4th, H. C. Brueckner, Jefferson, Wis.; 5th, G. E. Kitleson, Ceylon, Minn.; 6th, C. Laughlin, Three Oaks, Mich.; 7th, Lewis Scott, Fairmont, Minn.; 8th, Peter Scott, Fairmont, Minn.; 9th, A. H. T. Shakheim, Gotham, Wis.; 10th, A. I. Wringle, Beresford, So. Dakota; 11th, Peterson Bros., New Rickland, Minn.; 12th, Lewis Hanson, Mandovi, Wis.

For the best single ear of corn: 1st, Lewis Scott, Fairmont, Minn.; 2nd, H. C. Lau, Tracy, Minn.; 3rd, G. A. Radke, Tracy, Minn.; 4th, Mrs. Leo P. Kelly, Beloit, Wis.; 5th, Sam Carlson, Elk Point, S. Dakota.

For the best 50 pound bale of timothy: 1st, Geo. Sterling, Salesville, Mont.; 2nd, Lewis Hanson, Mondovi, Wis.; 3rd, Frank Lendley, Fox Lake, Wis.; 4th, John Monfoster, Bozeman, Mont.; 5th, H. A. Parrot, Spencerville, Ind.; 6th, L. H. Laylin, Mason, Mich.; 7th, Robt. Futon, Utica, O.; 8th, Chas. Schweer, Gordonville, Mo.; 10th, Frank Cult, Bethalto, Ill. 11th, A. W. Jewett & Sons, Mason, Mich.; 12th, August Walters, Ewen, Mich.; 13th, L. H. Laylin, Mason, Mich.

For the best 50 pound bale of red clover: 1st, Atkins Bros., Salesville, Mont.; 2nd, John Dunbar, Rudyard, Mich.; 3rd, Allen Sales, Bozeman, Mont.; 4th, Paul Poscharskey, Princeton, Ill.; 5th, W. F. Otcheck, Grinnell, Ia.; 6th, L. H. Laylin, Mason, Mich.; 7th, A. W. Jewett & Son, Mason, Mich.; 8th, Chas. Schweer, Gordonville, Mo.; 9th, Frank Lendley, Fox Lake, Wis.

For the best 50 pound bale of alfalfa: 1st, Swartz Bros., Waukesha, Wis.; 2nd, Jacob W. Willett, Hillsboro, O.; 3rd, E. C. Matthens, Sikeston, Mo.; 4th, Allen Sales, Bozeman, Mont.; 5th, Geo. Firedings, Manhattan, Kansas, 6th, W. F. Olcheck, Grinnell, Ia.; 7th, O. N. Atkins, Salesville, Mont.; 8th, G. W. Atkins, Salesville, Mont.; 9th, J. H. Swanzey, Ridott, Ill.; 10th, Frank E. Culp, Bethaldo, Ill.; 11th, Paul Conger, Anderson, Ind.; 12th, S. T. Sunnett, Muscatine, Ia.; 13th, Geo.

(Continued on page 21)

ONLY a grade, yet this Hereford was declared grand champion steer at the International. He is Junior Lad, 11 months old, weight 1,025 pounds, and his owner, M. Armentrout, of Botna, Iowa, sold him for $2.62 a pound for a Hereford barbecue. It is the highest price ever paid for a steer.

Financing the Michigan State Farm Bureau

Advisability of Accepting Money From Coalition Committee Called Into Question by Farmers

By FORREST LORD

EARLY LAST September Mr. C. A. Bingham, secretary of the Michigan State Farm Bureau, sent out a letter to thirty-five or forty farm leaders and others interested in Michigan agriculture to attend a luncheon at the Fort Shelby Hotel on Sept. 13th, for the purpose of discussing plans for the future of the State Farm Bureau. The writer was among those invited without being given an inkling of the real purpose of the meeting.

The list of those in attendance included the following: Mark T. McKee, secretary of the Coalition Committee for Michigan; Henry M. Leland, president of the Lincoln Motor Company; L. M. Robertson, attorney for the General Motors Company; several other representatives of industrial corporations, all members of the Coalition Committee; a state senator; a state representative; two members of the State Board of Agriculture, one of whom is the editor of a farm paper; several men employed in the extension department of the agricultural college, county agents, representatives of county farm bureaus and members of executive committees of two farm organizations. None of the officers of the Grange, Gleaners or State Association of Farmers' Clubs was present.

Following the luncheon, Mr. McKee made an address in which he spoke of the desire of the Coalition Committee to assist the work of the Farm Bureau, and, in behalf of the committee, offered to loan the Bureau the sum of $15,000 for the purpose of conducting a membership campaign. Various farm representatives who had previous knowledge that the loan was to be tendered at the meeting spoke in favor of accepting it, and the unanimous opinion of all present with the exception of the writer was that it would be a fine thing to have recourse to the funds of the Coalition Committee.

Before the vote was taken the writer spoke against accepting the loan on the grounds that the Farm Bureau ought to be supported wholly by farmers, and that it should not put itself under obligations to the Coalition Committee by using its money. The writer and many others were given to understand that the transaction was to be a loan, but if the Farm Bureau's membership campaign was not a success the Bureau would not be obliged to repay the money. In other words, that the return of the money was optional with the Bureau, making the loan virtually a gift, so far as the Coalition Committee was concerned. In opposition to the plan, the writer said:

"The Farm Bureau to succeed must be of, by and for the farmers. To perform its proper service to the farmers along marketing and other co-operative lines it must take action that may trespass upon the toes of members of this committee, who are interested in elevators, warehouses, banks, etc. The Farm Bureau can be financed without this money. Why put the Bureau and the farmers who belong to the Bureau in the position of a debtor to this Committee? The farm organization that cannot stand on its own feet ought to fall and will fall. For the good of the Farm Bureau, I plead with you to reject this money, and our paper, myself, and I am sure all the men present at this gathering will be glad to take off their coats and help to make the membership campaign a success."

But this line of argument did not appeal to those who had previously made up their minds to accept the loan. The question was put and unanimously passed, the writer not voting. Following this action, the writer stated to the gathering that he would not presume to put his judgment against the judgment of so many men who had been active in Michigan agriculture for so many years and ought to be trusted to know what was the best for the farmers, and since it had been their unanimous decision that the money should be accepted and used to pay the expenses of the membership campaign he would bow to their judgment and do what he could to help.

The next day the writer addressed the following letter to Mr. Bingham, the secretary of the Bureau:

"Since leaving your meeting Friday afternoon, I have contemplated very thoughtfully the action of the farm representatives in voting to accept the loan proffered by the Coalition Committee for Michigan to assist in the membership drive for the State Farm Bureau, and I regret to say that I am more than ever impressed with the grave consequences which I believe are involved in that acceptance. Moreover, I cannot refrain from stating to you in detail my reasons for this conviction.

"The Coalition Committee, as you know, is composed of several industrial heads of this state. Its purpose, to quote its own printed language, is to combat "industrial and agricultural unrest." As I stated in my talk yesterday, I met with certain members of this committee over two months ago, to learn, if possible, what means they expected to employ to combat agricultural unrest. I wanted to make sure that these methods would not be destructive or repressive. I wanted to make sure that this committee did not intend to interfere with the natural, legitimate and wholly constructive efforts of the organized farmers to better their financial conditions. The members were very courteous, assured me that their efforts would be above reproach, etc. At that time I suggested that instead of the committee carrying on an expensive and exaggerative propaganda, they invite industrial and agricultural representatives to meet with them, and discuss the pressing problems of the day with them. I note at Friday's meeting some suggestion was made of the farm bureau appointing two members to the Coalition Committee. Representation on such a committee would, of course, be of no value to the farmers unless it were equal to the representation of the industrial heads. I am now very sure that the proffering of this loan is the committee's first step to combat "agricultural unrest." It connotes an interest in agricultural problems which it is most unnatural for this committee to have. I cannot accuse the committee of having ulterior motives and yet I can see no other reason why its members should give a luncheon, pay the expenses of the guests and spend their valuable time in urging upon the State Farm Bureau the acceptance of $15,000 of their money. (Mr. Bingham later assured us that the expense of the luncheon and the traveling expenses of the guests were paid from Farm Bureau funds.)

"To succeed, the state farm bureau MUST represent the wishes and interests of its members at all times. Large membership and financial resources cannot long sustain an organization that is not responsive to its members. The farm bureau cannot at all times stand free and independent and carry out the wishes of the farmers if it is under any obligations whether expressed or implied to any group of men outside the farming business. In my judgment the acceptance of this money as a loan, without security, implies an obligation which the committee may, if it so desires and would be perfectly justified in so doing, insist be carried out. Let me ask this question. Would you, or any officer of the State Farm Bureau, be as free to carry out your program which sooner or later may embody some objective inimical to the interests of some member of the committee,—would you, I ask, feel as free to act knowing that it was the money of these men that gave you your start, as you would if your entire support came from the farmers?

"I would be most happy to be convinced that this committee is acting in a wholly unselfish spirit. I pray that the developments in this situation may be such as to prove beyond peradventure that my doubts and fears were futile. Surely, such a spirit of helpfulness and co-operation would be beyond anything that has ever come to our attention, and would usher in an altogether new and different era of good fellowship and brotherly love. But there is inculcated within the spirit of man certain primordial instincts from which there is no escape. Self-interest and self-preservation are among them. These may be held in reserve and control, but it always happens when one individual uses those instincts all others follow suit.

Farmers Finance Their Own Organization

AT THE annual meeting of the Michigan State Association of farmers' clubs, held at Lansing on Tuesday and Wednesday of last week, the integrity and purpose of both State and National Farm Bureaus was attacked by leaders of a fraternal beneficiary and a labor organization. In these attacks it was charged that the movement was supported by political and corporate influences, with a view of controlling its activities. The method of financing the initial work of this organization in Michigan was also called in question by one who was present by courtesy at the conference of prominent and well-known farmers representing more than a score of counties, and at which the plan for financing this work was formulated and unanimously approved by the representative farmers present. In view of this unwarranted attack, I desire, as secretary of the Michigan State Farm Bureau, to give the widest publicity to the facts.

The objects and aims of the Farm Bureau movement as a business organization with county, state and national units, which could attack with some hope of success the problem of protecting the farmer's interests during the trying reconstruction period of bettering his business through its general as well as its local activities has been thoroughly and generally discussed for many months. The public knowledge of the proposition created by this discussion attracted the attention of the Coalition Committee for the state of Michigan, composed of representatives of other business organizations of the state, whose avowed purpose is promoting the best interests of the state of Michigan and all its people, and particularly the promotion of high ideals of Americanism to combat the radicalism and Bolshevism which is rampant throughout the world.

Considering that a strong organization of farmers with the aims and purposes of the Farm Bureau would be another means toward the accomplishment of these ends, this committee volunteered to loan to the State Farm Bureau a portion of the funds required to make the plan of organization a success. A conference of farmers who had been strongly interested in the possibilities of the Farm Bureau movement was called as above noted, and after thorough discussion of the proposition from every angle, they unanimously approved the plan, with an equal amount raised on collateral notes signed by interested farmers and endorsed by the secretary, the work was adequately financed in a manner to make the membership campaign a success and to enable participation in the formation of the American Federation of Farm Bureaus recently organized by delegates from 32 states who assembled at Chicago for the purpose. As a further result of this conference, the Michigan State Farm Bureau has named A. E. Illenden and L. Whitney Watkins to represent agriculture on the Coalition Committee for the state of Michigan.

The success of the organization work has thus been assured, and the loans through which it was financed will be promptly repaid, leaving the funds of the organization adequate for all possible needs. In the meantime the books of the organization which are audited monthly by the finance committee composed of R. G. Potts, of Macomb County, J. Pomeroy Munson, of Kent County and James Nicol, of Allegan County, are open to inspection by any interested member.—C. A. BINGHAM, Secretary Michigan State Farm Bureau.

How to Make the Farm Bureau a Force in Michigan

THE FARM Bureau movement is spreading. The membership campaign inaugurated in Michigan is meeting with wonderful success. The best type of farmers in the state are paying in their $10 a year to become members. Directed along right lines the Farm Bureau, as a 100 per cent farmers' organization, financed and controlled by bona fide farmers, can become a substantial power for good in this and other states. To remove all suspicion that the Farm Bureau is being "supported by political and corporate influences, with a view of controlling its activities," the following things should be done:

1. Return every dollar received from the Coalition Committee at the earliest possible moment.

2. Recall Mr. L. Whitney Watkins and Mr. A. E. Illenden as members of the Coalition Committee.

3. Remove Jas. P. Powers as publicity manager of the Farm Bureau. Powers is a staff correspondent of the Detroit Free Press, stockholders of which are members of the Coalition Committee.

4. At the next annual meeting of the Bureau elect ONLY such men to executive positions as make their principal living from farming or whose record shows their interests are ALL with the farmers.

5. Amend the constitution and by-laws of the State and National Farm Bureaus to make the organizations thoroughly democratic.

6. Avoid passing upon resolutions unless assured that the action taken represents the wishes of the majority of the membership.

7. Give the older farm organizations which have done the pioneer work and prepared the soil for the larger co-operative effort substantial representation in the State and National Federations, that they may protect the work they have already accomplished and carry out their future plans unmolested.

(These are all constructive suggestions intended to purge and strengthen the Farm Bureau for greater service to the farmers.)

Facts Crop Out

IT appears that a few who attended the Detroit meeting and voted to accept the money were unable to keep the good news to themselves and told their friends about it. The information gradually "leaked" out over the state. Letters began to come into our office asking if it were true that the Bureau was being financed by industrial heads. Some of those who voted to use the money when approached upon the subject evaded or deliberately denied the allegation, and it became altogether too apparent that the Farm Bureau officers and agents did not want the farmers to know where they got their money to finance their campaign.

As Secretary Bingham states in his letter on this page the subject came up at the meeting of the State Ass'n of Farmers' Clubs at Lansing two weeks ago. It is not strictly true that the farm organization leader to whom Mr. Bingham refers attacked the motives or integrity of the Farm Bureau. He merely warned the farmers against affiliating themselves with any organization that was organized "from the top down" as he expressed it. He made no direct mention to the Farm Bureau. The "attack" to which Mr. Bingham refers was exclusively the action of Mr. Carl Young, president of the Michigan Federation of Labor and a member of the legislature, who charged that Mr. Bingham's remarks sounded as if they came from the Michigan Manufacturers' Association. In justice to Mr. Bingham it should be said that he made no reference to organized labor to which exception could be taken, and nearly all present, with the exception of Mr. Young, thought that Mr. Bingham's remarks were very fair. Mr. Young advised Mr. Bingham that he had information that the Farm Bureau was getting its support from members of the Michigan Manufacturers' Association, and asked him if it were true. Mr. Bingham replied: "No. The books of the Bureau are at Birmingham and open to inspection and you can come over and see where we got our money." Realizing the gravity of the position in which Mr. Bingham was unconsciously placing himself by his unintended denial, the writer who was present, cleared up the matter by saying that the Farm Bureau had VOTED to ACCEPT $15,000 from the Coalition Committee, but could not say as to whether any of the money had actually been received. Mr. Bingham then stated that about $7,000 had been borrowed but was to be paid back in the immediate future. Mr. Bingham was indignant over Mr. Young's attack and as he stated later, did not "feel called upon to answer Mr. Young."

Following the Lansing meeting the writer urged Mr. Bingham to make a public statement of the facts, and later repeated the request in a letter. Two days later Mr. Bingham's statement which is published herewith was received.

The above are the true and complete facts so far as we know them surrounding the loan transaction between the State Farm Bureau and the Coalition Committee for Michigan. It has ever been our opinion and still is that the Bureau made a mistake in using the money of the Coalition Committee to finance its membership campaign. We believe the rank and file of our readers are sufficiently intelligent to understand

(*Continued on page* 19)

CURRENT AGRICULTURAL NEWS OF THE WORLD

GRINNELLS

INTERNATIONAL CONFERENCE DISCUSSES EGG PROBLEMS

The recent conference of the International Egg and Poultry Instructors and Investigators held in London was attended by American Agricultural Trade Commissioner Edward A. Foley, who has forwarded the following report:

"The first subject under discussion was the new railway rule that each egg should be separately packed in its own compartment before the railways will accept the case for shipment at company's risk. This means that at the present time no eggs will be accepted at company's risk. Neither the American, as well as as Canadian, Danish nor Irish eggs are so packed as to bring them under the conditions of this rule.

"Danish eggs are placed in wood wool; Irish in straw, and American and Canadian in cardboard containers. The American container would be acceptable if each egg were wrapped in paper before being placed in its section in the container. A resolution was adopted protesting against this rule as impracticable and as imposing an unnecessary hardship on the shipper.

"A resolution demanding that expert freight handlers be used by the transportation companies was also adopted. Considerable evidence of serious damage to eggs through the careless or inexpert handling by the railways was presented.

"The merits of the Irish, Danish, and American methods of packing were then brought up. The Danes were well satisfied with their form of case, claiming that with proper packing it was less liable to damage, because its size and weight necessitate its handling by several men, whereas one man can handle the Irish or American case."

O. M. SOBER, of Fowlerville, when asked to produce a picture of one of his sheep, provided us with the above prize-winning animal picture.

Bay County Union Forms

The Bay County Farmers' Union has been organized with a capital stock of $15,000 "to secure laws providing for a more equitable system of taxation; to study and promote systematic methods of distribution and to eliminate speculators and bring producers and consumers closer together." The principal places of business of the organization are to be Bay City, Auburn, Linwood, Pinconning, Munger, Mt. Forest and Essexville.

Seek Strong Candidate in Chippewa

Eighteen members of Chippewa County Pomona Grange have been named as a committee to select a candidate for the state legislature "who will listen to the voice of the common people in matters of vital concern to them." The committee consists of the following: R. G. Crawford, W. P. McDonald, H. A. Ranson, William McKinnon, John S. Donnelly, William Hardy, S. A. Cuthbert, Art Bailey, John Rusk, Bert Sutton, Dave Knox, Ed. Thompson, H. W. Smart, Carl Gowan, John P. Adams, Andrew Robson, Roy Weller, J. H. Smart, W. H. Miller and Joseph N. Welst. This committee was named by W. H. Miller, worthy master of Pomona Grange, as the result of a resolution adopted at the Grange convention held at Strongville in September.

Gleaner Elevator for Sandusky

A Gleaner clearing house will be established in Sandusky. At the meeting held in the court house recently N. P. Simpson, general manager of the Gleaner Clearing House, Detroit, talked along the lines of clearing houses. Before the meeting adjourned it was decided to establish a clearing house at Sandusky. One of the sites that is being favored is the Bickle mill property.

American Farmer Leads World

The American farmer leads the world in individual production of crops, says Secretary Houston in his annual report. While countries such as Belgium, under intensive farming, get a higher acreage yield taking both the acreage and the yield to the acre into account, the American agriculturist produces two and a half times as much as his Belgian or German rivals, 2.3 times as much as the British farmer, 3.2 times as much as the French and more than 6 times as much as the Italian.

The result of this and of the American farmer's war work is shown in the 1919 American crop production, placed at three times greater in value than the average annual output in the five-year period preceding the World War.

LIVINGSTON COUNTY HOLDS PUREBRED CATTLE RECORD

The pure bred live stock record for Michigan, and probably for the entire United States, is held by Livingston county, according to results of a cattle census. A widespread movement to improve the breeding of dairy and beef cattle has been going on throughout the country during recent years. Of the 424 bulls in service in the county only 2 per cent are rated as scrubs, 76 per cent being registered stock, and 22 per cent classifying as "grades." The census shows 321 herds of registered live stock, with a total of 3,668 animals, not including bull calves. Holsteins are the predominant breed in the county. County Agent F. S. Dunks supervised the census. There are 275 registered Holstein herds, with 656 registered Holsteins sires. Shorthorns rank next in the list, while there are seven other breeds that are represented by two or more pure bred bulls. The scrub bull list has already been reduced to 10 individuals and they hope to eliminate these during the coming year. This will leave the county 100% pure bred.

College Preparing Farmers' Week

Farmers' Week, at the Michigan Agricultural College, is to be held this year from February 2 to 6. Dr. E. V. McCollum, of John Hopkins University; H. C. Taylor, chief of farm management, Washington, D. C.; Dean Vivian, of Ohio State University, and others will speak. Annual meetings held at East Lansing at the same time include the Michigan Crop Improvement Association, Michigan Maple Syrup Growers, Michigan School Commissioners, Michigan Horticultural Society, Michigan Muck Farmers, Michigan Potato Producers' Association.

Explosives, When Rightly Used, May Increase the Fertility of the Soil

Numerous Types of Soils Are Not Benefited by Use of Dynamiting; Others Improve Only Slightly

By PROF. M. M. McCOOL

This Takes You Straight Into the Story

LAST WEEK, under the heading of "Digging the Dollars from Your Subsoil," Prof. M. M. McCool, head of the Soils Department, M. A. C., was deep in the discussion of using explosives in order to bring subsoil fertility to the surface. He had just told of experiments on Kansas and Pennsylvania farms where dynamite has been exploded three feet below the surface. In some cases, he believes that explosives may be of great help in the matter of fertility. But now read the rest of what he says and be sure to watch for his concluding articles in coming issues of Business Farming.

THE second season following dynamiting, corn planted over dynamited holes make satisfactory growth, but there is a tendency for the roots to spread less, especially in the surface soil, than is the ones with roots of plants growing in a normal soil.

It is evident from these observations that dynamiting does not crack and loosen plastic clay subsoils. In fact, the opposite effect is produced. The soil, instead of being shattered and cracked, is compacted and puddled, and the soil is left in poorer physical condition than before the dynamiting was done. The area of soil influenced by the charge of dynamite is so small, even when the charges are placed at 10-foot centers that there is no noticeable effect on the yield of succeeding crops, but if the dynamite charges were placed close enough together that the jugs produced would occupy practically the entire subsoil, very detrimental results would undoubtedly follow.

In one experiment one-half stick of twenty per cent "Red Cross" dynamite placed at a depth of three feet produced a cavity twelve inches wide and fifteen inches deep, the walls of which varies from two inches to six inches in thickness. The thickness of the walls and the compactness of the soil composing them produces a jug which is almost impervious to water and through which the roots of plants penetrate with difficulty.

Walls of dynamite jugs vary in thickness with size of charge and character of powder used, with the texture and moisture content of the soil, and with the depth of the charge. In the Oswego Silt Loam soil, one stick of twenty per cent "Red Cross" dynamite placed at a depth of three feet produced a cavity of eighteen inches wide and twenty-one inches deep, the walls of which varied from 4 to 8 in. in thickness.

The walls are not only very hard and badly puddled but are so changed in physical condition from the rest of the soil mass that it is possible to dig away the soil surrounding and separate it from the walls of the jug without difficulty.

The moisture content of the soil at the time the dynamiting is done is a very important factor in determining the effect of the dynamite upon the physical condition of the soil. If the ground was reasonably dry it is doubtful if the dynamite jugs such as those explained here would not be found. But it is impossible under field conditions to find absolutely dry soil, and it is doubtful if a heavy clay soil could be found under field conditions in a humid climate with such a low moisture content that the soil surrounding the dynamite charge would not be connected and puddled.

It is the opinion of the writers that heavy plastic clay soils will seldom, if ever, be found dry enough under field conditions in humid climates to be shattered or cracked by explosions of dynamite, and that the physical condition of such soils will usually be injured rather than benefitted by dynamiting."

The influence on the yield of several crops has been studied. The Pennsylvania Experiment Station exploded dynamite three feet from the surface of two heavy soils. The charges were exploded every 15 feet lengthwise of the rows of corn. The yields were about the same on the treated and untreated soils and according to the authors if dynamiting caused any increase in fertility by aeration, by increasing the available plant-food, or in any other way the amount was quite small.

Explosives Help In Kansas

The Kansas workers used dynamite on a number of farms. They found that "the crop planted on dynamited soil produced a higher yield in four instances. The greatest increase in yield on dynamited soil was obtained with corn in 1914, when the dynamited plots produced thirteen per cent more grain than the undynamited. In most instances the difference in yield was no greater than would occur on two areas of soil similarly treated."

In no instance was there improvement sufficient to pay the expense of dynamiting.

The effect of exploding dynamite in the subsoils upon fruit trees has been investigated. The New Jersey Station conducted work to determine the effect on peach and apple trees and found no difference in the growth of apple trees and very slight difference in the growth of the peach trees. The Pennsylvania workers used the dynamite on newly planted apple trees as well as on mature trees. Records kept of the yield of fruit showed them to be less from trees growing in dynamited soil and the growth of the young trees was slightly better where dynamited.

Explosives Aid Drainage

Explosives may be used to advantage in some cases. Where a shallow layer of hradpan that impedes or prevents drainage underlaid by a porous subsoil it may be broke open in a number of places and let the water pass downward, or vertical drainage may be thus practiced. Shallow cemented hardpans have been destroyed by explosives and trees planted to advantage, otherwise they were failures.

Usually it is not advisable to plant fruit trees on land that is so impervious that such practices are necessary owing to the fact that there are far more acres of good fruit land than can be utilized in this manner. This practice then must be local and limited in extent.

The present status of our knowledge of the depth of plowing and advisibility of subsoiling by means of special tillage implements may be summarized as follows: The rather prevalent theories that very deep plowing and subsoiling increase the water holding capacity of soils thus being beneficial during periods of drouth; the feeding zone of root systems of crops, the available elements of plant food by improving the structure and aeration or ventilation of the subsoils are not founded upon experimental evidence. Plowing deeper than about seven inches has not generally resulted in an increase of crop yields, although root crops see mto be exceptions to this on some heavy soils. Doubtless there are small or local areas that deep plowing ten or twelve inches is desirable, and in some cases the use of the subsoiler is advantageous. Definite and reliable information concerning the depth of plowing sandy soils is not available.

MARKET FLASHES

WHEAT

WHEAT PRICES PER BU., DEC 16, 1919			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.37	2.37	2.40
No. 2 White	2.35	2.35	2.38
No. 2 Mixed			
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.30	2.30	2.36
No. 2 White	2.26	2.28	2.34
No. 2 Mixed	2.26	2.27	2.33

Wheat is selling all over the country at prices very much higher than the government price. Farmers who have part of their stock on hand need have no hesitancy in holding for higher prices. They might as well get the benefit of the increase as the dealer speculators. Unfortunately most farmers did not hold over much wheat this season.

CORN

CORN PRICES PER BU., DEC. 16, 1919			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow	1.53	1.50	1.65
No. 3 Yellow	1.52		
No. 4 Yellow	1.48		
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow	1.57	1.50	1.66
No. 3 Yellow	1.55	1.48	1.62
No. 4 Yellow	1.50	1.40	1.60

Corn has kept up well during the past week, being bullish most of the time. A slight bearish spell occurred last week-end, however, at the publication of the government crop report. It had been expected in many quarters that the government's new figures would show considerable reduction in the corn supply, but these expectations were not met, inasmuch as increases were reported. But the market firmed up after the first nervousness, and the market was bulled by the reports that the railways this week would give considerable attention to the moving of corn.

OATS

OAT PRICES PER BU., DEC. 16, 1919			
Grade	Detroit	Chicago	N. Y.
Standard	.85	.84	.93
No. 3 White	.84	.83	
No. 4 White	.83		
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
Standard	.75	.73	.82
No. 3 White	.74	.72	.80
No. 4 White	.73	.71	.79

As we predicted early in the fall, oats have gradually advanced and today are quoted at the highest price of the season. The crop is short and we can reasonably expect advancing prices nearly all winter long. Purchasers of oats better get into the market now; sellers will take no chances in holding. Both home and foreign demands are holding up well.

RYE AND BARLEY

Rye is coming into its own, aided very materially by the scarcity and great demand for wheat. Many of the foreign countries prefer rye to wheat at the comparative prices. The export trade is quite brisk and is expected to continue throughout the winter.

Rye is firm and in active demand in Detroit, at $1.62 for Cash No. 2 Barley is keeping up well, with $2.80 to $2.90 per cwt. for Cash No. 3.

MICHIGAN BUSINESS FARMING told its readers two months ago that it expected lower prices and a dull market for the balance of the year. Our predictions have been fulfilled in nearly every respect and because of the conditions which we cited. We cannot often be accused of being "bears," but when common sense tells us there is no hope for better prices we prefer to be a "bear" than give our readers a "bu msteer." Beginning January 1st we will change from a "bear" to a "bull," because in our judgment the bean market is going to pick up about the first of the year and much higher prices are in prospect. We are not alone in this opinion. Michigan beans at today's prices are not as high as they ought to be considering the growing lack of supplies in the hands of dealers and the higher prices of Japan beans. But dealers got their fingers burnt a few weeks ago on beans and they are not anxious to repeat the performance. But watch the bean market. It has firmed up a great deal the past ten days. During the holidays it may take a slump or rule steady, but thereafter watch it climb.

BOOM FOR THE BEANS

The following letter has been received from an authority on the bean market. (M. B. F. is the first publication to which the following tip has been released for the benefit of bean growers.)

"There is a big advance in the bean market. We are getting $7.50 today, (December 12) and there is sure to be a still further advance later on."

Weekly Trade and Market Review

The resumption of coal mining ought to be a stimulus to business in general. For a time the shortage of coal was a bullish factor in the grain market, but with the cutting off of trains and the closing of elevators the trade came to a standstill in many parts of the country.

Despite the general inactivity of trading the condition of the grain market has constantly strengthened and now that the coal strike is over and normal conditions again prevail, we expect all grains to advance. Grains of all kind have been on the upgrade all the month. The government crop report shows a considerable increase in supplies of wheat, corn and oats and it affected the market adversely for a few days following its publication, but the effect has entirely worn off and buyers are eager to take offerings at ruling prices.

Improvements of the financial condition of various lines of business are reported. The foreign exchange has rallied slightly and there seems to be a general sentiment of more security in trade for the time being.

POTATOES

We told our readers at the opening of the market season that they didn't need to worry about potatoes. We told them correctly, too, for prices have steadily advanced all season long and there are indications that they are going higher. Usually about this time of the year this market becomes sluggish (and don't be surprised if it drops a point or two during the holidays) but this year has seemed to be the exception to the rule. Potatoes are a safe crop to bank on for the rest of the marketing season.

Hay has been bringing higher prices at many points, including many local markets, according to letters from our crop reporters. There is a scarcity frequently at the terminals and the demand bears up. No. 1 timothy is bringing as high as $30 in the Detroit markets this week.

Baker Takes Lead in M. B. F. Straw Vote

HERBERT F. BAKER has taken the lead over Milo D. Campbell in our straw vote for governor. Campbell is only fifteen votes behind, however, and may catch up to Baker before this issue is in your hands. Nathan F. Simpson is a strong contender for second place being only five votes behind Campbell.

The statement was published in M. B. F., and other newspapers that Mr. Campbell wrote to Samuel Gompers that there was "nothing in common between organized labor and the farmer." Mr. Campbell did not make this statement. On the contrary he said, "I fully agree with you that the farmers of the country have many common interests with the toilers of the cities. But events of the last few weeks, have in my opinion alienated much of the good will toward organized labor that was previously in the heart of the farmers."

The Grange and the farmers' clubs have both declared openly for a farmer governor and legislature and the members in convention assembled agreed to support the candidate named by the legislative committee of the Grange, Gleaners, Farmers Clubs and Farm Bureau. We find that this is the spirit of our readers. We urge all local arbors, granges and clubs to take a straw vote on governor at their next meeting and report the result to M. B. F. The outcome of our straw vote will assist the legislative committee to make its decision.

If your candidate is not listed above write in name.

LIVE STOCK

Little to encourage live stock shippers has been noted in the market reports. To be sure there is a rise reported for the Chicago market for hogs. And Chicago gives as much as a dollar or more than last week in its sheep sector. But the cattle prices are lower than ever. In East Buffalo the market for cattle is slow, but hogs and sheep are strong and higher. There is likely to be little doing around Christmas. Detroit is going to have a sale Sunday, Dec. 21, of some of the finest stock displayed at the International Live Stock Show at Chicago. Twenty carloads will be shown at the stockyards in Detroit.

DETROIT FRUIT STEADY

Chickens and hens are quoted lower in Detroit and buyers give no attention to poultry aside from turkeys, geese and ducks. These are wanted and higher prices are quoted. A still further advance is predicted during the next few days owing to the light offerings, especially of turkeys. These are scarce all over the country and many holiday dinners will be minus the king of birds this year. The fruit market is neglected and steady.

Some late quotations from Detroit follow:

Apples—Michigan, small, $1.25@1.50; best Spy, $3.25@3.50; Baldwin, $2.25@2.75; Greenings, $3@$3.25; York imperials, $2.50@2.75 per bu.; western, $3.25@3.75 per box.

Eggs—Fresh eggs, 75@78c per doz; storage, 48 -2@51c per doz.

Butter—Fresh creamery,, 64c; fresh creamery in 1-lb. bricks, 65@67c; storage bricks, 63 1-2c per lb.

Chestnuts—28@30c lb.

Cauliflower—$3@3.25 per bu.

Cabbage—home grown, $75@100 per ton.

BUTTER

Because of the coal shortage, which has material affected both passenger and freight train service, shipments of butter to New York are considerably delayed It is estimated that they are fully 48 hours behind schedule in arriving. As a result there is a greater scarcity of high quality butter than at any other time this season. Established quotations are as follows. Extras, 73c; higher scoring than extras, 73 1-2 to 74c; firsts (90-91 score), 65 to 72c; firsts (88-89 score), 61 1-2 to 64 1-2c; and, seconds, 55 to 60c. Detroit's butter market is dull, while Chicago's is higher. Eggs in Detroit are proving too high-priced and the trade is slight.

Receivers are finding it difficult at the close of the week to get enough fine butter to supply the demand under existing conditions; it might be expected that there would be a marked advance in the price of high quality buter, but such is not the case. The principal factor that is downward in New York is the bearish tendency of the Chicago market. Extras, in Chicago, have been quoted 5@6c under the New York prices, for several days. With that difference in the two markets there would be no desire on the part of anyone to attempt to cause the price to advance in this market. Undergrade butter continues to accumulate and there is a gradual letting down in price. The margin of difference between prices of undergrades and high quality butter continually widens.

BOSTON WOOL MARKET

The following wool quotations are given in Boston: Michigan and New York fleeces: fine unwashed, 66@67c; Delaine unwashed, 85@87c; 1-2 blood, unwashed, 80@82c; 3-8 blood, unwashed, 68@69c.

AMERICANS BUY LONDON WOOL

There were 9,100 bales offered at the wool auctions sales in London last week end. Competition was better and prices were in sellers' favor. Americans bought greasy merinos.

Michigan State Association of Farmers' Clubs Wants Railroads Retained

Organization Takes Constructive and Progressive Action Upon State and National Issues

THE STATE Association of Farmers' Clubs renewed its claim as an independent farmers' organization when at its 27th annual session in Lansing it proudly and fearlessly went on record as opposing the immediate return of the railroads, favoring the League of Nations, the Scully income tax bill and a farmer governor. The resolutions adopted showed clear understanding of the problems of the time and a determination to have those problems solved right or not at all.

The gathering was well attended by delegates from nearly every county in the state, and a program was given which covered a wide range of subjects of interest to farmers. Significant of the new get-together spirit among the farmers, the association had on its program speakers representing all the other farm organizations in Michigan. This fact brought forth much comment and the association officers were commended for their broad-mindedness and spirit of co-operation for inviting the other farm organizations to participate in the occasion.

Addresses were given by T. E. Johnson, superintendent of public instruction; Carl Young, state representative and president of the Michigan Federation of Labor; J. N. McBride; Edgar Burk, president of the association; C. F. McIntosh, Washington, D. C.; Sen. Scully; John C. Ketcham, master of the State Grange; Grant Slocum, founder of the Gleaners; C. A. Bingham, secretary of the State Farm Bureau; C. B. Cook, agricultural agent of Oakland county; Milo D. Campbell, president of the National Federation of Milk Producers, and Dr. Taylor of the U. S. Department of Agriculture. An excellent reading was given by Mrs. Eben Mumford.

Mr. Johnson said that "the greatest need of today is the establishment of some school system whereby every boy and girl in the state of Michigan will have a chance for equal education. Boys and girls living in isolated sections of the state should have the same opportunity for education that the boys and girls of large cities do."

President Burk advocated legislation giving to farmers the right of callective bargaining, terminal warehouses, and a more rigid economy in the expenditures of public money.

The remarks of Sen. Scully and the heads of the farmer organizations were mainly devoted to the subject of co-operative action between existing farm societies to secure better agricultural conditions through legislation, etc.

Mr. C. A. Bingham explained the objects of the Farm Bureau and told how he hoped it would be the means of co-ordinating the other farm organizations of the state. C. B. Cook, of Oakland gave an account of the success that was meeting the efforts of the Bureau to increase its membership.

Carl Young injected some fireworks into the otherwise peaceful gathering by charging that the remarks of Mr. Bingham relative to the labor organizations sounded as if they might have come from the Michigan Manufacturers Association. He then charged that the Farm Bureau had received some of its money from industrial heads in this state. Asked if this were true, Mr. Bingham replied that the books of the Bureau were open for inspection, but finally admitted that about $7,000 had been received from the Coalition Committee, which is composed of manufacturers and bankers.

The open meeting discussions were confined largely to the present great and seemingly increasing problems of farm life, particularly the acute shortage of help. It was the general sentiment, however, that the farmers should buckle in with a grin as they always have done and not be led away by the alluring promises of the city.

Feeling the need of additional finances and believing that those clubs which are willing to affiliate with the State Association should also be willing to support it with their money, the association unanimously voted to make the minimum membership fee five dollars, every club paying at the rate of fifty cents per family.

Where Farmers' Clubs Stand

1. Endorse League of Nations.
2. Endorse "Collective Bargaining."
3. Favor retention of railroads and express lines until proper legislation is adopted to protect public's interests.
4. Favor terminal warehouses.
5. Recommend appointment of National Commission to study stabilization of markets.
6. Urge adoption of Sen. Scully's income tax bill.
7. Endorse practical farmer for next Governor of Michigan.

The report of Mrs. I. R. Johnson of Rushton, secretary and treasurer, showed a substantial gain for the year. Four new clubs were organized and the existing clubs reported a total membership increase of 1,121 members.

The following officers were elected for the ensuing year: President, Alfred Allen, Mason; vice president, Lee Noble, Oxford; sec-treas., Mrs. I. R. Johnson, Rushton; directors, E. D. Olmstead, Nashville; W. A. Cutler, Grass Lake; J. P. Hackett, Newaygo.

The following resolutions which were unanimously adopted showed the spirit of the convention:

National Affairs

We believe that congress should take immediate action on the League of Nations covenant, that this vastly important matter affecting the governmental affairs of our country be dispensed with promptly, reassuring congress that we desire the adoption of such a covenant as will eliminate future possibilities of war.

Resolved, that we not only recognize the rights of the American farmer to "collective bargaining" but that we insist upon the passage of the Capper-Hersman bill now pending in Congress as an amendment to the Clayton Anti-Trust Act, which clearly definies the right of the American farmer on this important question.

Resolved, that we favor the re-

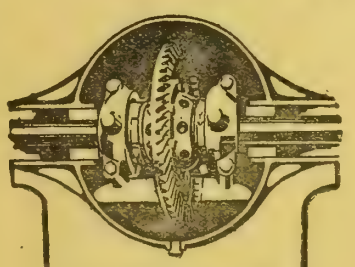
TEXACO
TRACTOR OIL



Texaco Thuban Compound

THE economy lubricant for transmissions, differentials, and worm drives. One of the family of quality petroleum products. Some others are:

Texaco Motor Oil
Texaco Axle Grease
Texaco Crater Compound
Texaco Cup Grease
Texaco Gas Engine Oil
Texaco Harvester Oil
Texaco Separator Oil
Texaco Home Lubricant
Texwax

TEXACO
REG.U.S.PAT.OFF.

Symbol of First Aid to the Tractor

War-tested by our navy—now peace-approved by our farmers

OF COURSE we are proud of the *service* record that the red Star and green T oils made in lubricating the ships of the navy during the war. But we now have the larger satisfaction that comes from the universal approval and use of Texaco Tractor Oil by the farmer. It is first aid to the tractor everywhere. It makes possible greater efficiency than was ever known before its use. With every quality required of a tractor oil, no wonder the farmer prefers it. He wants correct body, unfluctuating quality, and durability. So he gets this oil marked with the red Star and green T, and does away with that enemy to smooth and continuous operation of the tractor, friction. Become better acquainted with Texaco Tractor Oil. Supplied in wooden barrels and half barrels; 15, 33, and 55 gallon steel drums; and one and five gallon cans.

THE TEXAS COMPANY
Petroleum and Its Products

General Offices—Houston, Texas. Offices in Principal Cities

DISTRICT OFFICE—CHICAGO, ILLINOIS, McCORMICK BUILDING

JUST BETWEEN OURSELVES

All Hands Ahoy; Christmas Time Again

A GLAD CHRISTMAS TIME is with us again and the new year will soon come trooping in. 'Twas but yesterday that we rejoiced on Christmas day that the war was over and our boys on their way home. How we longed for their coming; how eagerly we looked forward to their joining the fire-side circle on next Christmas day.

The boys are with us and will join the family circle—but my, what changes have taken place. We had fervently prayed for the close of the world-wide conflict and a return of pre-war conditions in the home, factory and shop. The war is over, but conditions as they existed before the war, have passed on forever.

And it is well; for the tremendous sacrifice those have made who gave their sons for the cause of freedom, should and must bring to the people of the nations of the earth, more of freedom, right and justice than they enjoyed before the war. The conflict across the seas has ceased; the conflict here at home is raging as never before.

But out of it all good will come, for God has so promised. We are each playing our part in the drama of changing conditions; and it is our duty to study well our parts and act promptly when stern duty demands loyalty and devotion to principle. The whole world is about to take a step forward. It is a ponderous body and the forward movement necessarily slow—but that step must be taken.

The new year means but the birth of a new day. Let us view it with Emerson, from the hill-tops: "I see the spectacle of the morning from the hill-top over against my house, from day-break to sunrise, with an emotion an angel might share. The long, slender bars of cloud float, like fishes, in the sea of crimson light. From the earth, as a shore, I look out into that silent sea. I seem to partake its rapid transformation; the active enchantment reaches me and I dilate and conspire with the morning wind."

A Merry Christmas and a Happy New Year to you, my friends. Do your part, and rest content; the storm will soon pass, and the sun will shine again. God is at the helm, and ALL IS WELL.

"Engage a Band and Hire a Hall"

HISTORY is in the making these days. We call it the "period of reconstruction," and yet not a gun was fired on this side of the pond nor a single projectile landed on our shores. We find no shell holes; no shattered bridges, wrecked towns or villages, no pillaged homes or razed manufacturing plants. No wonder the people of France, Belgium and England are asking what the United States means by the very flippant use of the term, "reconstruction period."

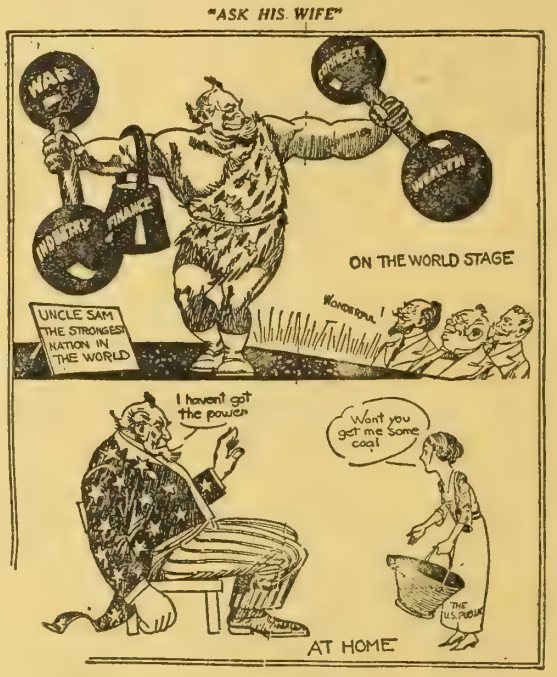
Perhaps you will say that we are going to "reconstruct" our social and commercial system; that it can never again be the same as before the war. Granted, but why not go about the matter in an orderly way? Why all of this excitement? There are a hundred thousand "nuts" roaming over this country these days; trains crowded, hotels filled and accommodations everywhere taxed to the limit. Remodel, is the term we should use, if we wish to change existing conditions—nothing has been destroyed by the war—except our good common sense.

The edict goes forth; "engage a band and hire a hall;" and then some "nut" claiming to represent this or that plan, scheme or organization, sends out a call for a conference. If letters will not secure an attendance the wires are kept hot, and a few of the faithful gather in some distant city. The discussion opens by exercises in "flag waving," after which committees are appointed. An adjournment is taken for luncheon.

And then comes the committee's report. "We view with alarm, etc." The report is adopted as a whole because we haven't time to take it up by sections, as "Mr. Nut and Mr. Butinski, must catch the early afternoon train for Oskosh, by-gosh." The daily press the next morning tells all about the position the middle-west farmers have taken on the "railroad and labor questions," and the deed is done.

My Farmer friends, it is high time we got down to business and let the "nuts" rant and snort. Old High Cost of Living has arrived—and he is not here for a visit, he has come to stay. What you want is your share of the profits which are now going to the market gamblers. You can pass resolutions until the crack of doom, and you will not get ahead in the game. Action is necessary, and, you are reminded again, that you are living in an age of organization.

The boot and shoe manufacturers are not spending their good money and valuable time to educate the consumer on the cost of production. The manufacturers of clothing are not giving details as to costs. Automobile manufacturers offer no brief to explain why the price of their products has been increased. They simply find the cost of production, add a profit, and the consumer can buy at the price



—Thomas in Detroit News.

named or go without. Like the yellow jackets; they are organized.

Really, my friends, there is more accomplished where two or three farmers have gathered to take action in solving their problems thru practical co-operation, than through all of the "wind-jamming, resoluting, cussing and discussing conferences ever held." Progress has left a problem at your door, Mr. Farmer, and a similar problem was left at the doors of each of your neighbors. Unitedly you can solve problems, in your own interest, foolishly you can let others solve your problems in their interest.

"Choose, ye, this day whom ye shall serve." And in the meantime, join with the rapidly increasing number of sane citizens, who think that it is about time to cut out the "engage a band and hire a hall," slogan.

The Coal Strike, Mine Operators and Velvet

UNCLE SAM is a powerful fellow when performing on the world stage. His feats of strength and daring, the powerful resources at his command are the wonder and admiration of his audience of nations. Yet how lamentably weak in his "own home town" where he is unable to keep even the "home fires burning." The manner in which the administration handled the coal situation strained the patience of the people to the snapping point, and it is well that the whole fiasco has been terminated, for the present, at least.

The administration had been fully advised of the contemplated action on the part of the miners two months before the day set for the strike. These underground workers had asked for a conference with the mine operators, suggesting a change in the working agreement. The operators refused to meet the men, claiming that they were bound by a "during the war" agreement. The miners claimed, and rightfully so, that as all war-time restrictions had been removed so far as the operators were concerned and prices advanced, that they were entitled to an increase in wages to meet the rapidly increasing cost of living. Here the trouble began, and here the date was set for the strike.

Time passed, and no steps were taken to avoid the impending crisis. Finally on the eve of the strike, weeks after the order had gone forth, the administration asked that the strike be postponed for further parley. This suggestion could not be accepted by the miners; the days passed quickly and the miners quit their jobs on the day and hour set, and with the people clamoring for coal the mines of the nation were closed. And then more delays while the fuel pile grew smaller. Finally the administration secured a mandatory injunction ordering the officials of the miner's union to rescind the strike order and forbidding them from paying out any of the defense fund which had been collected for the express purpose of feeding the miners' families while the bread winners were out of work.

In the meantime Dr. Garfield, the fuel administrator who muddled up things generally during the war, was again brought from obscurity. Manufacturing plants and business places were closed; coal was held on the tracks while people suffered for want of fuel, and things were getting where the pinch was felt, when the administration finally adopted the measures which should have been applied in the first instance, and the miners have gone back to work. It will take months to replenish the coal bins of the nation and in the meantime the mine operators will see that the people pay the cost of the strike and all losses piled up during the shut down.

I presume the administration will now forget all about the trouble, and the mine operators will go right along, fleecing the public, refusing to give the miners regular work for fear of creating a surplus, and parceling out the nation's fuel supply by "divine right." Please read what former Secretary of the Treasury McAdoo, has to say about the profits of the mine operators:

"The coal operators assert that I gave out confidential information, when I stated that profits of the mine owners in 1917 ranged from 15 to 2,000 per cent on capital stock, before deduction of taxes. This was not confidential information. The treasury department may publish statistical matter of this character any time. In fact, information concerning this very subject was furnished by me to the United States Senate, in response to a resolution introduced by Senator Borah, concerning profiteering and was published July 5, 1918, in Senate Document 259, 65th Congress, second session. In this report the returns of several hundred coal companies showed profits ranging from 15 to 800 per cent on their invested capital in 1917. The range of profits was higher on capital stock. In fact, many operators got back their entire invested capital several times, out of their profits in 1917, as shown by the reports, and must now be working on velvet."

Full information regarding the profits secured by mine operators during the past year are on file at Washington, and the people should be given the facts and figures. Remember, the people own the nation's natural resources, the compaines merely operate the mines—when we deal with natural resources the people have the right to all of the facts in the case. As we freeze and sneeze we just naturally wonder if there is another "Teddy" on earth, somewhere.

Strong Arm

Conducted by MR. GRANT SLOCUM
Arcadia, R. F. D. No. 4, Mt. Clemens, Mich.

STRONG ARM, M. B. F.—What is your opinion of stock offered for sale in companies which propose to go into the farm, dairy or grazing business on a big scale? The parties interested are wealthy men, and have made a success of other lines of business. If I buy stock at once, I can get in on the "ground floor."

I will answer your question by aking another; many such companies have been organized right here in Michigan—do you know of a single one that has succeeded? The fact that the men identified with this new enterprise are successful business men enters not at all into the question as to the value of the stock. City dwellers are so sure that the farmer is getting rich that they can quite easily be induced to put a little money into such an enterprise as you suggest. The management of the enterprise is placed in the hands of the "mutt" who concocted the scheme and there you are. Leave this kind of stock alone—there is not once chance in a hundred that it will pay a dividend or again be worth par.

Friend Slocum: Can you give me any information regarding the Dayton Coal, Iron and Railway stock. Salesmen are working in this vicinity and present a very attractive proposition to those who buy the first issue of stock. Stamp enclosed for reply.—J. J. C., Ada, Mich., Nov. 26, 1919.

I advised J. J. C. not to buy this stock until he had heard from me. The Grand Rapids News of December 2, contains the following: "F. E. Wood and E. W. McDonald of Chicago, were apprehended yesterday as they entered the home of Edward Bostock, to secure the first payment of $260 on stock in the Dayton Coal, Iron and Railway Company. The fellows acknowledged their guilt when detectives got hold of their grips and found sufficient evidence to convict them. It's all a matter of psychology, said Wood. I arouse a man's passion for wealth, tell him that he can get rich investing a few dollars—then the job is easy. We were making $700 per day and would soon have departed had we been left alone." And still some people will tell you that the old adage that a "fool is born every minute," is untrue. If J. J. C. invested before securing our report, he will find much to interest him in this brief statement.

MICHIGAN BUSINESS FARMING—I take your paper and although I am not a farmer, I read every page, for I want to own a farm some day. I have always lived in a city and by hard work and economy we have our home paid for. I can sell it for enough to buy a forty-acre farm, or a suburban home where I can go into the chicken business. Would you advise me how a city man could get into farming and not take too great a chance? I am 52 years of age.—L. E. S., Detroit, Mich., Dec. 3.

You are on thin ice right now, Brother, and the real estate goblins will git you if you don't look out. Hundreds of city men—yes, I might say thousands—have lost their all by falling into the hands of sharks just at your time of life. First the chicken business. Just find one man who has made good in this business in the vicinity of Detroit—just one. You can find hundreds who went into the business to get rich, lost their all and are now starting all over again in the city. The forty acre farm plan sounds better. Have you enough money so that you can buy the farm and stock it? If not, remember it takes money to buy horses, stock and equipment, and if you must borrow money to get started, it means interest and a living for yourself and your family to be made out of a business in which you have had no experience. However, you have one great asset—you like farming. How about your wife, is she willing to do her part? If you are agreed, then get acquainted with some practical farmer—one who has nothing to sell—and put your proposition up to him. If you get the right kind of a "forty" and feel your way along, you will succeed. But most city men think they "know all about farming," and refuse to ask or accept advice, until it is too late. At your time of life you should go where you can earn a living and be a little more independent.

Buy Now—Pay Later

A Special Offer on

Limestone, Ammonia, Potash

We will postpone all payments on shipments of Solvay Pulverized Limestone, Arcadian Sulphate of Ammonia, and "U-S" Potash placed during the months of November, December, January and February.

All shipments made during that period will be billed April 1st, 1920. A cash discount will be allowed up until April 10th, and a net cash payment on or before July 1st., 1920.

A Word About Ordering

Everyone who is dependent upon railroad shipments knows the delay that is to be expected on less than carload lots. We are doing everything within our power to facilitate shipments.

Limestone, of course, is shipped in carload lots as a minimum. When ordering less than carloads lots of Ammonia and Potash be sure to order them with your carload of Limestone—or see your dealer. He will schedule your less than carload shipment with a carload order going into your neighborhood, and your shipment will arrive more quickly and more surely.

A good plan is for several neighbors to group orders into a carload shipment to insure prompt delivery.

SOLVAY PROCESS COMPANY

Master Your Soil

Real mastery of the soil cuts out much of the labor and worry of farming. What would it be worth to you to know just what course to follow with a field which your greatest efforts have failed to make profitable. The proper selection and use of fertilizer are important; so is the selection of seed. But *good management of the soil* is also necessary.

Why not find out just what to do! Why not consult our

Agricultural Service Bureau

This Bureau has carried on field tests for many years with many kinds of fertilizers and fertilizer materials, in many states on different soils, under different conditions of rainfall, climate, etc. It has demonstrated to many farmers the best methods of managing their soils. Perhaps it may help you solve your problems. It is under the personal charge of Dr. H. J. Wheeler, formerly Director of the Rhode Island Agricultural Experiment Station. This service is free to you.

"How to Make Money with Fertilizers"

is the title of a 56 page book (46 illustrations) containing information every farmer needs in relation to the proper use of fertilizers; it shows where profit is to be found, and how to get it. It is an interesting book—not a catalog. Any one of our offices named below will send it to you free. Simply mention this paper and ask for the book. Do it now. *Master* your Soil!

If we have no agent in your town, we want one.

The Farmer and the Sugar Situation

LEST THE CONSUMER may feel that the demands of the farmers for higher prices on sugar beets will result in another boost in sugar prices it would be well to look into the merits of the farmer's case and endeavor to convince the consumer that his attitude is just and reasonable.

There is a shortage of sugar. One of the reasons for this shortage has been the lack of profit in the growing of sugar beets. Farmers will grow beets when they are profitable, but they will turn to some other crop when the cost of producing beets is greater than the returns from them. The cost of producing beets has rapidly increased the last four years, and the price they have paid for these beets has not kept pace. Hence, in the absence of any disposition on the part of the manufacturers to pay the farmers a price that will make beets a profitable crop next year, the growers are inclined to plant beans instead. It's a toss-up as to which of the two is the better paying crop under existing conditions.

Farmers do not set the price of sugar any more than they do the price of any other product. The supply and the demand adjusts the price level. If in the absence of federal or other artificial control of prices, the abnormal demand and the acute shortage sends prices upwards, the farmers cannot be blamed. Out of the thirty dollars or so per ton of beets which the consumers paid last year for the sugar they contained, the farmer received exactly ten dollars. No matter to what heights the prices of sugar may soar next year the proportion of the manufacturers' share to that of the farmers' will be about as two is to one.

What the farmers get for their beets next year will have but little effect upon the sugar market. If the farmers were to receive only five instead of ten dollars per ton the price of sugar to the consumer would not be reduced. Higher prices are inevitable and the only thing that the farmer asks is a guaranteed price that will pay cost of production and an equal division in the share of the profits. His claim is just and will appear so to any reasonable mind.

A large portion of the profits derived from the sale of sugar or any other crop soon finds its way back to the consumer if the profits are spread out among a large number of people. Concentrated in the hands of a few, however, it is a long and tedious journey back to whence they came. Just as a community benefits from the division of profits which its manufacturers may make with their employes, so will the entire country benefit as the farmer's share of the consumer's dollar increases. If the sugar manufacturers are to make huge profits next year as a result of abnormal conditions it will be to the interest of the consumer for the farmer to receive a fair portion of them.

The Railroad Question

UNLESS the president changes his mind the railroads will change hands again January 1st. Government operation will cease and private operation will be resumed. Economies effected by the government will, it is safe to assume, be swept aside and the plush chair fellows, dummy directors and retinue of attorneys whose jobs it is to keep the people from knowing too much about railroad affairs and to hang around legislatures to see that no unfriendly laws are passed, will be reinstated at good round salaries and the bill charged up to Jones who pays the freight.

The government took over the railroads because the private owners failed on the job. Billions of the people's dollars have gone to build up worn-out systems that had been all but wrecked by scheming capitalists. Under enormous difficulties the government has brought order out of chaos and is slowly putting the railroads back on their feet. The question that now presents itself is whether the government shall restore the railroads to the private owners before legislation is provided for protecting the government's enormous investments and the public's welfare.

The question of government ownership is not involved in the situation which now confronts us. Even the most confirmed opponent of government ownership could argue against the immediate return of the railroads without hurting his theories one whit. There is no need for haste in handing the roads back to the private owners, and it will be a mistake to do so until lawyer-proof legislation has been adopted to make the railroad wreckers behave themselves. The holders of rail securities are not suffering under the dividend-guaranteeing plan now in operation. Common sense tells us to leave the railroads just as they are until the people have had an opportunity to give the subject mature consideration and adopt legislation that will define the future status of the roads and protect the public's interests.

State Grange Goes Progressive

WE ARE AFRAID that the National Grange will feel like spanking its wilful offspring, the Michigan State Grange, when it learns what its "child" did at Saginaw last week. The Michigan Grange entertained its parent organization several weeks ago and during the visit it was good as good could be. But the old gentleman who had grown cautious and ultra-conservative in his eastern surroundings said a lot of things about railroads, public utilities, big business, etc., which greatly displeased his progressive Michigan offspring and as soon as the "old man" went back home the Michigan State Grange kicked over the traces and took issue with a good many resolutions adopted by the National organization.

We want to commend the delegates to the State Grange convention and the members who sent them there for their uncompromising defense of the farmer's interests. It would have been easy for the State Grange to follow the footsteps of the national organization and go the way of reactionism. It would have been easy for the Grange to ignore or to compromise upon some of the issues which were projected into the convention, and it is a tribute to the sterling character and progressiveness of the Grange folk that they turned aside any temptations that might have thrust themselves in to take the easy course. Once more the Michigan State Grange has gone on record as a farmers' organization which can be trusted to speak for the farmers.

Peace on Earth

"PEACE on earth; good will to men." Thus sang the angels when the Christ child was born, and thus commanded God as he dedicated his dearly-beloved son to preach the gospel of righteousness and salvation and be a Savior among men. And Christ went about doing good, healing the sick, cheering the downcast, pointing out the way of forgiveness to the transgressor, and performing other divine duties in unselfish service to mankind. The world needs a Savior today. It is spiritually sick and in the grasp of a materialism as gross and selfish as that which brought the Roman empire to its ruin. The nerves of the world are on edge. Minds are in a turmoil; hearts are calloused; the thing we call conscience is deadened with the mad desire for wealth and ease. All human attributes seem directed by the one and only impulse to increase one's possession of things material. The mad scramble and the bitter contest are truly a spectacle to call down the compassion or vengeance of God. Men have tried their hand at bringing the world to its senses, but the conflict goes on more bitter each hour, and the day of universal peace and justice seems more remote than ever before in the history of the world. God has been good to the world in all the years that have gone before. He has given abundant blessings and all things that human imagination can conceive to make life easy and comfortable. Yet with all our having, we are not satisfied. There is one thing we want and as the Christmas time approaches our want increases to a passion. It is peace. Peace with our neighbors, peace with our enemies, peace with the world. Not only peace in our common every day relations, but peace of mind, so that we might all go to sleep the night before Christmas and awaken on the morning with the definite consciousness that all turmoil and strife and differences were no more. Were God to give to the world another gift in this year, nineteen hundred and nineteen years after he gave his only son, he could give nothing more wonderful or precious than "peace and good will to men."

Get Behind the Farm Bureau

NOW THAT the officers of the Michigan State Farm Bureau have satisfactorily cleared up the mystery of the source of its campaign funds and removed all possible doubt as to the sincerity of their purpose, the way has been opened for all to join hands and boost for a united Michigan agriculture.

No organization is stronger than its membership. No organization can long succeed that does not have the confidence, support and active interest of its members. Organizations of all kinds are frequently led astray by ambitious men because members have slept at the switch and depended too much upon the judgment of the engineer to take the right track. The officers of the Michigan State Farm Bureau will have many temptations and many opportunities to take the wrong track and wreck the train. We are not afraid to trust the men whom the farmers elect to direct the affairs of their farm bureau, but all the same these men should have the counsel and encouragement of the members to assist them in holding unswervingly to their high resolves and ideals.

We are very much alive to the opportunities that lie before the Farm Bureau for performing great and history making deeds not only in behalf of farmers but in the interests of the nation as a whole. The farm bureau movement can not fail. It must not fail. Failure would spell bitter disappointment to thousands of farmers and the work of organization among farmers would be set back for many years. So we urge our readers to support the Farm Bureau; first, in order to give it the numerical strength that it must have to make its efforts effectual; second, to direct the organization along lines most advantageous to the farmers.

Withhold Judgment

PUBLIC opinion should not convict those caught in the Newberry mesh until trials by jury have. An indictment is not a conviction. And if a jury of twelve men say that these men did not do the things of which they are accused, no blemish should attach to their names because they were under the cloud of indictment.

Whether or no the Newberry crowd violated the law, they spent a sum of money that does not look good to the average citizen, and even though they may be completely exonerated the investigation, indictment and trial will have served their purpose to warn others that the conscience of the people has been aroused and cannot again be safely insulted by such a lavish use of money.

WHAT THE NEIGHBORS SAY

FARMERS SHOULD ENTER POLITICS

Yes, the farmer should and will be in politics in the very near future and it is getting absolutely essential that he should. Conditions are getting worse in state and national politics where they have no regard for public opinion it seems.

What has been done in the way of reconstruction in this country since the war ended? absolutely nothing. A complete political upheaval is the only remedy as both the old parties seem to have outlived their usefulness.

Yes, the farmers should nominate a complete state ticket, but by all means put up a man for governor like Jim Helme or Grant Slocum.

Let us do as they did in Canada where the farmers have control of the legislature. It also seems to me that too many people here in Michigan are too much excited about the Non-Partisan League, that great farmers organization of the north west. What has it done that it should be ashamed of? Let us not forget that the special interests and big biz of this country are trying everything in their power to destroy this or any other organization and that their cry of "pro-Germans, Socialists," etc., is raised for very selfish reasons and also don't forgt that these accusations have also been frequently used during the last three years to deceive the people and to enable certain "patriots" to fill their pockets at the expense of the public. —*T. R., Fowler.*

Whether or not the special interests and Big Business are in a conspiracy to thwart the efforts of the middle classes to organize, you have said a great deal that is absolutely true. The political history of this country from the years 1916 to 1920 will be one of the darkest records of the nation. We look to the farmer as our chief hope of purifying politics and carrying out the reforms of reconstruction.—Editor.

A CORRECTION

I am writing you the facts regarding the half page ad in the *Huron County Tribune* advising the bean growers to get busy and write their congressman requesting him to work for a tariff on beans

When we received our copy of MICHIGAN BUSINESS FARMING advising us to write to our congressman, Mr. James Davidson, a prominent young farmer and myself talked the matter over, and called a meeting at the Meade Township hall. We had a good turn-out, explained the matter as well as we could, and several of the township officers gave their views. We assessed ourselves 50c or $1 for expenses, and appointed canvassers to cover the town, getting all the voters, women and men that were not at the meeting. The next day Mr. Davidson and I went to Bad Axe and I wrote the advertisement that appeared in the *Huron County Tribune*, and Mr. Davidson, as treasurer of the meeting we called, paid for it, $12. Also we sent a long petition to Mr. Cramton, and also one to Mr. Fordney, and a substantial donation to the BUSINESS FARMING for the committee that went to Washington

When I saw the copy of the "ad" I wrote for the *Tribune* in the BUSINESS FARMING, and saw the *Huron County Tribune* getting all the credit for the same, when I wrote it, and the voters and taxpayers of Meade paid for it, I thought I had better have it corrected.—*H. D. Horton, Filion, Mich*

We are very glad, indeed, to make this correction and give the bean growers of Mead township the credit that belongs to them for taking such immediate and effective steps to advise Mr. Fordney of their wishes. Business Farming was in error to have credited the Huron County Tribune with having published the advertisement free of charge. We even wrote to the editor of the Tribune commending him for his public-spiritedness. Pardon the misimpression we were under. Your letter is the first information we have that the advertisement was bought and paid for by the farmers.—Editor.

BAKER "UNTAMED BEARCAT"

Enclosed you will find my vote for a farmer candidate for governor. It is for Herbert Baker. We like Herb down here not only for the service he has rendered, is rendering and can render in the future, but we like him for the enemies he has made. Reactionaries and stand-patters seem to know the men they cannot buy either with money, office or flattery, and when they come in contact with a man like that; a real "untamed" progressive like Herb Baker, there is nothing too mean for them to do. Slander, vituperation, calumny, even to throwing his picture out of the capital window and jumping on it with their feet, these reactionaries and stand-patters have done all this) and would do much more if they dared, but they are mighty careful not to do any of their dirty work when the "untamed bear cat" is around.

Now if I classed myself as a Democrat instead of a Progressive Republican I would put in a vote for Jim Helme because Jim would make the best Governor Michigan ever has had so far and no doubt about it.

With the Farmers' National Congress at Hagerstown going for the reactionary and stand pat, the National Farm Bureau the next week at Chicago going for the reactionary and with the "Rotten borough" organization of the National Grange at Grand Rapids the next week going reactionary and stand pat, what are we farmers going to do? I tell you what a lot of us are going to do. We are going to cut loose from those leaders in our organizations who lick the hands of conservatism and "vested" interests and do like Ontario has done, vote for men we know are true blue honest farmers with sense enough not to get silly the minute a party boss pats him on the back and asks him if he would like a higher office. Our men will come to us for their offices instead of going to the bosses.—*J. B. S., Lawrence, Mich.*

This letter is from a progressive and successful farmer who stands well with his neighbors and the world. Mr. Stafford is a prominent Granger. I met him for the first time at the National Grange convention before the Grange had passed any resolutions. I am glad to note in his communication that he agrees with us that the National Grange committed itself to standpattism, extreme conservatism and reactionism.—Editor.

CITY PEOPLE'S IGNORANCE

Enclosed is our vote for governor. Of course, we will support any good farmer who runs for the position. Am enclosing $1 toward the expenses of the delegates to the bean hearing at Washington, also a clipping from the *Detroit Journal.* I think it is such bunk as this that is responsible for the spirit of antagonism that is developing in the city toward the farmer. Every meeting they have had has been a slur on the farmer and an unjust one at that. They carry the idea that the farmer sets the price on his own goods and sells underweight (by measure), neither proposition being true in this neck of the woods. Sugar beets are cleaned thoroughly, all roots and fibres removed and washed and scraped perfectly clean before they are weighed (a basket being removed from every load delivered for this purpose, then the whole load reckoned by this sample). —*J. Dulmage, Lapeer County.*

The clipping referred to was used as the basis of the front page article in last week's M. B. F., "How shall the farmer educate the consumer?" It is surely a perplexing question and one that M. B. F. is giving some study to. I have asked the prosecuting attorney of Wayne County to permit me to appear before his "fair-price" committee and correct the false and misleading statements published in the Journal. The writer has also made arrangements with a large city daily to publish a series of articles on the relation of the farmer to the consumer, and I am in hopes that this will help to set the consumer right on the farmer's position.—Editor.

ADMIRES EDITORIAL STAND

I wish to express my appreciation of your splendid paper, the M. B. F., especially your criticism of the National Grange and the state organization of the Farm Bureau. Some of their declarations of principles will please Big Biz and the profiteers as much as the Dred-Scott decision pleased the former slave owners. What the real progressive farmers may fear is the control of their organizations by Big Business. This has been the scheme in the northwest and west, but where the farmers own their own press the designing and cunning schemes are exposed.

I suppose you feel squelched since so severely criticized by a certain farm paper relative to the real farmer sentiment on public ownership of public utilities. But not all who cry, "Lord, no man shall enter the Kingdom, but they that do the will of the Father." Neither are all purely agricultural or farm papers real Simonpure friends of the farmer nor will they enter the Kingdom of Heaven as such.

We need go back but a few years to the time when so called farm papers that had advocated certain great economic and to that time popular principles and changed their editorials on important matters comp[illegible] from one week to the next, they had been daily papers the changes would have been over night. It was reported [illegible] papers received ten, others fifteen and still another twenty-five thousand dollars for changing their mind [illegible] time I was editing [illegible] two papers in central Kansas, *Kansas Commoner*, Wichita, K[illegible] the other, the *Harvey County* Newton, Kansas. The [illegible] I have a letter in my possession now which I received in that year fr[illegible] a certain "League" in Wall Street, [illegible] York, pleading with me to let them furnish editorials either in plate matter or ready prints free at my office, and had I parleyed with them doubtless I, too, could have changed my mind on very important questions I had advocated between the two issues only one week apart. My "sledding" would have been easier. Big Business would have smiled on me if I had said, "the public be d-d." But I was young and let the opportunity pass. The crying need of the hour is for every farmer and every producer of wealth to learn to discriminate between the wheat and the chaff or between papers that are really friends and those only pretending to be friends, while taking particular care not to offend any of their Big Business advertisers or friends. I trust that the Michigan State Grange will not go back on the principle of public ownership of public utilities which it has overwhelmingly adopted for more than 15 years.

The propaganda from Wall Street for the past two years is having its effect To read their stuff in the daily press as well as in most of the weekly and monthly papers relative to turning back the railroads to former control must please Wall Street, Standard Oil, the Packers, etc.

But I must close by saying as I wrote you several months since that my first choice for governor is Herbert Baker, not only the real friend of the farmer but as well the wage-earner, and short-sighted it seems to me to nominate any man who has in the past hit the wage earner in the face and eliminated his vote and influence. I regret that the National Grange refused to send delegates to the labor conference. Was it for fear of contamination? Why not the farmer and wage-earner joining for not only a farmer for governor but a farmer or a true friend of the producer in every congressional and legislative district! That would count more than complaints about profiteers. Yours for progress *forward.*—*B. E. Kies, West View Farm, Hillsdale, Mich.*

It is good to have such friends as Mr. Kies. His long experience in the newspaper business has made him quite familiar with the efforts of special interests to subsidize the press. Big Business is not of itself wicked or harmful to the public interest. But in the hands of unscrupulous men the power of money and organization is a most destructive weapon. There are some newspapers in the country that are so controlled by the advertisers or other special interests that they dare not publish even news matter which is displeasing to their advertisers, and editorial policies are shaped and revised continually to meet their approval. We must say, however, that the number of advertisers the country over who attempt to sway the editorial policies of the mediums they use are comparatively few. Without advertising patronage, the cost of the newspapers of the country would be almost prohibitive. Were it not for the advertising printed in the columns of Business Farming your subscription would cost five to ten times what it now does. And so while we appreciate the great necessity of this advertising patronage, we have never permitted our editorial policies to be influenced by our advertisers. Because of this stand we have lost some business, of course, which has gone to other farm journals that are not quite so particular about the interests of the farmers. Yet, we expect some day to prove to these unfriendly advertisers that the efforts of M. B. F. to place the farmer in a better economic position will enable him to buy more and better articles of utility and convenience for the farm and home and are therefor of actual benefit to the manufacturer. Men who conduct their business honestly and do not try to gouge the public, have nothing to fear from the farmers, and manufacturers of everything that is used on the farm ought to encourage M. B. F. and the farmers in their efforts to put farming on a better business basis.—Editor.

Sense and Nonsense

Not Giving Bone Away

Some time since a woman went into a butcher shop and asked for two pounds of a certain kind of meat. Immediately the butcher started to oblige and closely the customer watched him as he cut, sawed and chopped.

"Just a moment," finally interposed the customer as the meat was being placed on the scales. "You are—"

"What's the trouble?" quickly interjected the butcher. "This is the kind you wanted, isn't it?"

"Yes," replied the woman, "but you are giving me too much bone."

"Oh, no I'm not," returned the butcher, denying what he thought was a charge of generosity. "You're paying for it.'

Brave Enough

"Oh, George dear, why aren't you like the knights of old? Why can't you go out and do something heroic for my sake like they did in the brave days when they wore armor, darling?"

"Something heroic for your sake," shouted George. "Good gracious, girlie, ain't I going to marry you on a salary of 23 dollars, and the h. c. l. getting worse and worse every every day."

HARD TIMES

Mr. Mouse—Good gracious, won't the price of cheese ever come down!

Dad's View

The Pastor—So God has sent you two more little brothers, Dolly?

Dolly—(brightly)—Yes, and He knows where the money's coming from. I heard daddy say so.

An Early Start

"And we'll grow old together, dearest."

Her father's voice from Upstairs —"Well, you needn't start doing it down there, need you?"—Tit-Bits (London.)

The Reason

She—George, you looked awfully foolish when you proposed to me.

He—Well, very likely I was.—London Opinion.

The Poor Fish

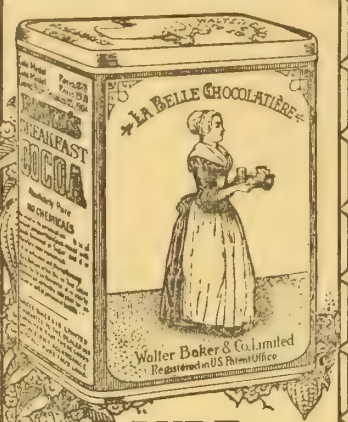
"I hear you are going to marry Archie Blueblood," said one society woman to another. "Is it true?"

"Marry him?" exclaimed the other, "not likely. What on earth could I do with him? He's rejected from the army, he can't ride, he can't play tennis, golf, nor for that matter can he drive a motor car!"

"Oh, but he can swim, you know."

"Swim, indeed! Would you like a husband you had to keep in an aquarium?"

BAKER'S COCOA



PURE AND DELICIOUS

It is a most satisfactory beverage. Fine flavor and aroma and it is healthful.

Well made cocoa contains nothing that is harmful and much that is beneficial.

It is practically all nutrition.

"My, what a relief!"

THAT *rheumatic twinge* doesn't bother you long after you've had the aching part bathed with the old standby—Sloan's Liniment. You just put a little on—it doesn't stain the skin—gently pat it, and it penetrates, sending a *warm, soothing glow through the tortured part.*

It stands alone in promoting quick relief from *after-effects of exposure, lumbago, sciatica, muscle* and *joint strains, pain strains* and *stiffness, neuralgia, bruises* There's a successful record of 38 years back of Sloan's Liniment.

Keep a big bottle ready for use—it may be any minute. The big bottle holds six times as much as the small one. 35c., 70c., $1.40.

Sloan's Liniment

The Little Foxes

It's the little foxes that spoil the grapes; so it is with health; mend the broken resistance and you have robustness, neglect and you have weakness.

Scott's Emulsion

concentrated tonic-nutriment, effectually mends the little weaknesses and sustains strength by building up the resistive powers of the body. If you would keep strong—use *Scott's Emulsion* often.

Games for the Season

By MABEL CLARE LADD

THERE ARE very few of us "grown-ups" who didn't repeatedly have to refer to our maps to find out just where a country or province lay during the late world war. It was then I wished I had studied my histories and geographies a little more carefully. This year when I began to haunt the shops for gifts which I could offer our children of the M. B. F. family for prizes, I found that the toys this year are more numerous which have an educational value than ever before. And chief among them are the wonderful cut out maps of the United States and the world.

True, we have had cut out pictures for some time but never before have I seen so many worth while ones. These maps are mounted on a stiff card-board, each state separately, so that by the time all are fitted in place, the child has a pretty general idea of the relative position of each state to the others, and in time will learn to not only bound every state in the union, but will observe the lakes, rivers and the capitals of the states. Allowing the children to use a regular map in connection with this game is a great help at first, but of course it is easily played without, as no state will fit any other than its proper place.

There are educational games which can be home made—which, in fact, can be made by the children, themselves, and which will furnish amusement for a stormy day or long winter evening, such as the game of "Keeping Store." To make the materials for this game a good-sized box should first be secured to serve as a store. The handy boy can use his ingenuity in devising ways and means of making of this box a very compact little store, by supplying shelves, etc. Then mother will furnish empty cans and bottles which should be labelled tea, coffee, sugar, spices, peas, corn, tomatoes, etc., while sacks are labelled 25 lbs. flour, 5 lbs. salt, etc. The number of articles carried in the store can be enlarged from day to day. Then with pasteboard, cut out money, using the coins to mark the size, and then printing on these card board pieces of money, their denomination. The figuring up of what the articles amount to which are bought by the "customer" must all be done by the "storekeeper," without pencil or paper. When the grocer has sold out his stock, another child, will undertake the task. The value of articles and mental arithmetic are both learned by the children in this way.

The regret of many parents today is that they did not improve their time when they were children. You an do much to influence your children's future lives by surrounding them with the proper kind of games for their play hours.

Remember please, that if your local stores do not carry these cut out maps or anything else, I will do your shopping for you. Just write to "Woman's Editor, Michigan Business Farming Mt. Clemens, Mich.," and describe carefully what you want. Many farm women have found this service to be a great help, and it is hoped that many more may make use of it this winter.

Of course, there are numerous educational games such as "authors" played with cards. As many readers know, this game teacher the child something of the greatest writers and their works. Another variation is that of a card game with great historical or religious characters mixed with the fun of the game. Suggestions along these lines are welcomed from our many readers.

AN EXCELLENT educational game for a gift is that of a map of our nation. By putting together the many parts, children are interested and learn geography at the same time.

Sleeveless Sweater

There is still time, if you have a couple of afternoons and several evenings, in which to make a few more Christmas gifts at home. Very popular indeed this fall has been the sleeveless sweater, the idea which came from the boys' sleeveless sweaters of last year. However in place of the drab khaki we have a brightly colored yarn, and they are

crotcheted instead of knit. Crochet hook No. 2 and two large balls of Shetland floss are used for this charming ladies' fillet sleeveless sweater. Make a chain of 124 stitches, work 117 d c on chain, then follow pattern.

Habit-Forming Drugs

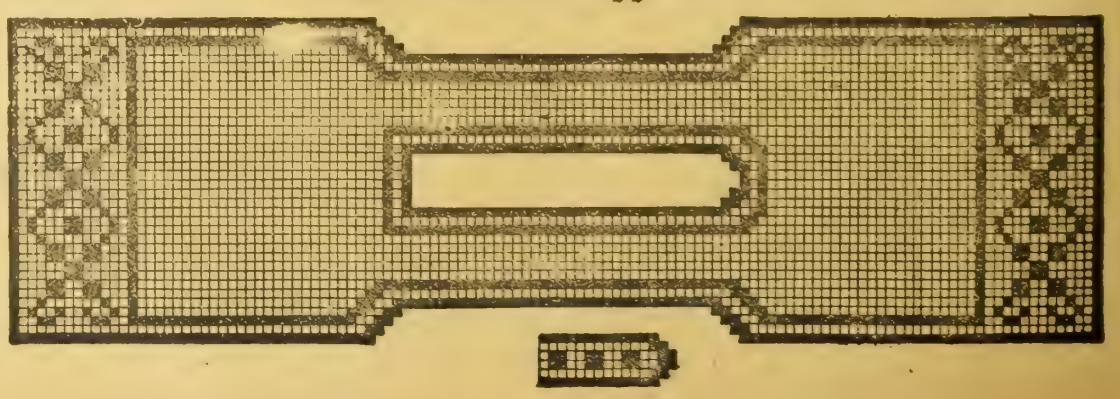
SCIENCE has worked wonders for us in the way of relieving pain thru the intelligent use of drugs, but these same drugs which, when used under the supervision of a reliable physician and administered with skill and judgment were life savers, have come to be so commonly known thru their use in patent medicines, that a great danger lurks in their misuse. A blessing indeed it is to be able to give a man who has suffered a terrible accident a small dose of morphine to deaden the pain until the shock has passed, but if the law would allow every one to buy all the morphine they wanted there are plenty of people who would become drug fiends from its common use. And so the law has been passed that it be sold only under a physician's prescription, but there are scores of drugs the effect of which is not so immediately apparent but which are nevertheless habit forming, whose use the law has not regulated and which are innocently used.

The most commonly used of these drugs are acentanilid, antipyrin and phenacetin, which are embodied in the preparation of mixtures intended for the relief of headache and other minor aches and pains. The pure Food and Drug Act of our state requires that the number of grains of these drugs used in each prescription shall be plainly printed on the wrapper and while this law is of course complied with, the fact that they are dangerous is not generally known. In a recent government bulletin the warning is sounded that these drugs, if habitually taken will cause "anemia" or thin blood and depress the heart. A more commonly known and extensively known headache remedy is aspirin, which many physicians even will recommend for common use as being harmless.

If you suffer from headache, there must be a reason. Either you are suffering from eye strain, you have eaten something which disagrees with you and has consequently upset your stomach and caused the headache, or your nervous system is upset. The cure is at the root of the evil; not in deadening the pain for the time being only. The cure will be much more lasting if you discover the cause and correct that instead of taking "dope."

If you have been using some patent medicine which you think is absolutely harmless, and would like to really know the truth about it and will write this department, we will look the matter up thru reliable channels and answer thru columns of our paper without using your name or address. This applies to beauty lotions as well as the regular forms of patent medicines.

Last Minute Suggestion



I DEEM the sweetest letter I've had for many a day,
Was penned by a tiny toddler, in only a baby's way;
In memory's cluttered garret I've hunted in vain for the key,
To interpret the childish symbols—I've somehow mislaid it I see,
'Tis certain I must have kept it—how careless of me to forget—
The identical spot where I left it along with the rest of the set.
Now all of the symbols and prattle so plain to a baby's eyes
Must forever remain a puzzle—their meaning I only surmise.

I fancy she's written to tell me of Christmas approaching, don't you?
Of a dolly and cab she is wanting and candy and oranges, too—
Of a wee Christmas tree in the corner, or is it a stocking or shoe?
No matter for Santa will find it before he is bidding adieu.
There's one tiny word at the ending I'll play it's a hug or a kiss,
Do you wonder I claim it the sweetest—a quaint little letter like this?
Pray God in His mercy shall keep her as pure and fair in His sight—
As the day that she penned all the prattle that I have translated tonight.
—By C. Shirley Dillenbeck.

A Christmas Letter

LAST WEEK I received a letter from one of our readers voicing the sentiment which so many feel that Christmas has come to mean hardship by many just because we are such slaves to custom that we spend more than we can really afford. I knew from personal experience that her statement was true so what could I say? I laid the letter aside to be considered, and the next mail brought such a happy thought from a subscriber way up in the northern part of Michigan.

The second letter contained a subscription sent in by a mother for her little girl with the request that I award her the blue plaid hair ribbon as a prize. The mother expressly requested that I send it to her for, said she "It may be about all she will get this year. You see the early June frost hit our potatoes on which we had depended, and while we have enough in our cellar to last us this winter, still we haven't any ready money, and I guess we will have to make our own Christmas out of just what we have. However the woods close at hand will furnish a tree and I am putting off buying the children's much needed shoes until that time so that their necessities may be turned into their pleasures. And really, do you know I think I am better off with my children about me here, where wood is plentiful than many families are in the city with the prospect of no fuel for the winter."

Some one has said, "I would rather be able to appreciate what I cannot have than have what I cannot appreciate," and I believe this brave little widow has caught the true spirit of good cheer in being contented with what she has and making the most of it.

One of the very best Christmas suggestions thus far received came from one of our readers who states that she raised a quantity of citron this year—that she has candied it, and now she is making small boxes of pasteboard covered with birch bark, pasted on. These she will line with white tissue paper and fill with candied citron for her married daughters who will spend the Christmas day with her. The daughters come home from the city each year and nothing will give them quite so much pleasure, I am sure, as will these dainty birch bark boxes tied with bright red ribbon and containing each a jelly tumbler of apple jelly, surrounded with candied citron, for their fruit cakes this winter.

What about a newsy, breezy letter to the friend who has moved from your vicinity. She will appreciate much more a Christmas letter containing news of those she has left behind and a Christmas wish than she would a gift which you spent double the time to make and more money than you could afford in the materials. Christmas letters in place of ready-made cards mean so much more to the absent ones, that their worth cannot be estimated. Begin this year to write to the relatives and friends who are away all about the children; who bought neighbor Brown's house and how many chickens you had this year—how you will spend the holiday and with whom—and see what appreciative letters you will receive in return.

Books for Christmas

When in doubt as to what to buy for a Christmas gift, a book is usually a very satisfactory remembrance for old or young.

A book which has just been published and will interest the whole family and be a valuable addition to any library is "Theodore Roosevelt's Letters to His Children," which comes all illustrated, as he wrote them.

A book which has been causing a whole lot of favorable comment, which can be read in an hour and is very amusing is entitled "The Young Visitors," by Daisy Ashford, a little girl nine years old. There is a preface too by Barrie, who considers this child story very wonderful because of the imagination displayed.

It is really too soon after the great World War to buy a book on this subject which will be authentic and which you will wish to keep. Several have been printed but the clerk at the library advises waiting awhile before buying the copy which you will wish to have in your home.

And with books should be classed papers and magazines. The mother in the home will appreciate deeply the monthly magazine which will remind her twelve times each year of the giver while surely father will be equally delighted to know that his favorite paper has been renewed for him

History shows us that all great men and women have been persistent readers The reading habit may be established in your children through the wise selection of their Christmas books.

CALUMET BISCUITS—light, flaky mounds of goodness—capped with a tender, done-to-a-turn crust. You'll admit that no other biscuits *can* compare with them—the minute the first batch comes from your oven.

The Children's Hour

DEAR Children: Merry, Merry Christmas! I wish I might peep into each and every one of your homes and wish this best of all wishes on Christmas morning, but that can't be, so will have to be content to send my message through OUR paper.

Some of our little friends have been working for the prizes but have failed to get the subscribers and are afraid that they won't get their prizes now. So I want to tell you that the prizes offered are just as good after Christmas as before and so if you have part enough to win a prize you have set your heart on having, just keep right on and perhaps you can have it by New Year's. Or if you can't get it then—remember, never give up.

The Doo Dads are with us once more for this issue at least. We also have a fine Christmas story and a large bunch of letters from our readers.—Affectionately. —LADDIE.

LETTERS FROM OUR BOYS AND GIRLS

Dear Laddie—This is the first time I have written to you. My father takes the M. B. F. We have four little rabbits and we have 40 acres. Well I must close.—Bruce Patrick, Wilmot.

Dear Laddie—This is the first time I have written to you. My father takes the M. B. F. I am 8 years old and go to school. I have three brothers and no sisters. We have 40 acres. I am in the 3rd grade. My teacher is my mother. We have four little rabbits. I hope to see my letter in print.—Ruth Patrick, Wilmot.

Dear Laddie—I live on an 105-acre farm, comprising 14 cattle, four horses, 27 sheep, 125 chickens, 14 geese, 13 guineas and I have four ducks, two black and two white and brown mixed. I have for pets a dog named Rover and two cats Topsy and Fred. I would like to have some of the girls of the M. B. F. write to me.—Anna Boyd, Quincy, Mich.

Dear Laddie—This is the first time I have ever written to you. I am a girl 12 years of age and am in the 6th grade. My teacher is Miss Claudia Siple. I like her real well. For pets I have a little yellow and white kitten. His name is Tommie. I will close hoping to see my letter in print. I would like to have some of the members of the Children's Hour write to me.—Zella Geer, Sand Lake, Mich.

Dear Laddie— This is the first time I have written. I am 9 years old and live on an 80-acre farm. We have three horses and 16 cattle. I am in the 4th grade at school. There are 26 children in school. I have two rabbits and a cat for pets. My father takes the M. B. F. I like the Doo Dads. The nearest town is St. Johns, 2 1-2 miles away. I hope to see my letter in print.—Byron Kissone, St. Johns.

Dear Laddie—I am a farmer-girl, 13 years old and live on an 80-acre farm. We have 14 head of cattle. We also have two kittens and one old cat 7 years old. I go to school at Burgess and am in the 7th grade My classmates are Edith Baker, Edna Kane, Glendon Hilge and Clarence Struthers. My teacher is Miss Stewart. There are 32 pupils in our school. I can't think of much to say in this letter.—Edith E. Chew.

Dear Laddie—I have never written to you before. I am 11 years old and in the 5th grade. My teacher is Miss E. Adams. For pets we have one bird and two goldfish. I am going to the public school in Rogers I have two brothers, Alfred and Ralph. Alfred is 7 years old and Ralph, 4 years. My father takes the M. B. F. I like to read the letters from the boys and girls. I would like to see my letter in print.—Louis Erkfitz, Rogers, Mich.

Dear Laddie— I have not written to the M. B. F. for a long time, so thought I would write to you and the girl and boy readers. I used to live near Arcadia, Mich., but we have moved to Frankfort and are living in a nine-room house. I go to school every day and to Sunday school every Sunday. I live three blocks from the church and five from school. I like my school and teacher very much. My Sunday school had a Hallowe'en party the Wednesday before Hallowe'en and a taffy pull one Friday night in November. I will close as my letter is getting rather long. I hope to see my letter in print.—Noami E. Wallin, Frankfort.

Dear Laddie—I am going to write to you again for I like your other letters. We have two pigs, six cows and seven calves, also two horses. My sister and her little boy were out here a whole week and we had lots of fun. I will be glad to see my letter in print this week. I go to school every day. My cousin is at mygrandpa's. Her name is Mrs. Dolson. I guess I will close—Ernest Brown Cass City, Mich.

The Junior Cook

Christmas Snowballs

1 cupful of popcorn.

1 cupful of corn syrup (light color.)

1 cupful grated cocoanut.

Pop the corn, being careful to make it as white and "fluffy" as possible. Salt it to taste.

Boil the corn syrup till it forms a ball when dropped into cold water.

Put the popcorn into a broad shallow pan.

Pour the hot syrup over the corn and toss lightly with a big fork till every bit of corn has some syrup.

Mold the corn into small balls—a little smaller than a tennis ball is a nice size. Pouring the syrup and then tossing the corn around cools it all enough so hands will not be burned.

When the balls are formed roll them quickly in the grated cocoanut which has been put in a small dish.

Put each ball in the center of a piece of oiled paper to harden.

When the balls are cold and firm roll them in the paper till ready to eat.

These are fine for a school party or to hang on a Christmas tree. If used for the tree, tie each ball with a bit of red string to keep the paper together.

Dear Laddie—I am very much interested in the Children's Hour of the M. B. F. I enjoy reading the letters from the other girls and boys. I am 11 years old. I have been going to school five years and am in the 5th grade. I have a kitten and dog for pets. Shep is my dog's name and the kitten's name is Dorothy. Hope to see my letter in print.—Laura A Bennett, West Branch, Mich.

Dear Laddie—I have been reading the boys' and girls' letters for some time and now I will try and write a letter. I am 11 years old, have brown hair and blue eyes. I have one mile and a quarter to go to school. I am in the 6th grade. My teacher is Miss Eva Bell. For pets I have seven cats and eight chickens. We have five horses and three cows and live three and three-quarters miles from town. We have taken the M. B. F. for some time. I hope to see my letter in print.—Vera Bohen, Middleton.

Dear Laddie—I am a boy 13 years old and in the 7th grade. Our teacher's name is Helen Conden. I live on an 80-acre farm. I have eight brothers, Clyde, Ivan, Francis, Lionell, Earl, Eddie, Fred and Arthur. I go to the Linch school. I like the Doo Dads in the M. B. F. We have six horses, seven cows, two calves; two pigs, three cats, one dog and about 50 hens. There are four of us going to school. I will close now hoping to see my letter in print soon.—Foster Marshall, Clare, Mich.

Dear Laddie—I am a girl 14 years old weigh 121 pounds and am five feet six inches tall. My father takes the M. B. F. and I love to read the letters from the boys and girls, but as I never saw any from our town I thought I would write one and I hope to see it in print and I will come again. I think those Doo Dads are such funny people but I don't see them in the paper lately. Perhaps they are taking a vacation. I live on an 80-acre farm on which we keep seven head of horses, one cow and eight young cattle, also three pigs and 75 chickens. I have two brothers who are married and whose names are Frederick, 30, and Louis, 28. I wish some of the boys and girls would write to me. I will try and answer all the letters. I do not go to school any more. I passed the 8th grade when I was 12 years old and I also went six years without missing a day or being tardy. Don't you think that is a pretty good record? I only have one-half mile to go to school but six years is a long time to go without missing I think. Well, as my letter is getting long I will close, hoping to hear from some boys and girls. I remain—Rosa Sheick, West [illegible] Mich.

THE Doo Dads surely have a swell time on Christmas this year. They have found a nice plumb pudding which had been dropped out of the end of a jammed packed bakery cart. And how the little funny folks are wading into the sweetest pudding that ever made Christmas famous.

Old Flannelfoot, the cop, is one of the first to arrive on the scene of any commotion, and he eagerly calls for all Doo Dads in the Land of Doo to hurry before it is all eaten. You see he has the true Christmas spirit. Old Doc Sawbones is rushing up with his first aid outfit, because he sees the trouble is already started. Jercy Haw Haw, the dude, is being knocked down.

Weenty's Presents

MR. RABBIT wore quite a puzzled look one night when he came in on one of his visits to Weenty. He always came between nodding time and waking up so Weenty was in her crib all covered up snugly to her little pink nose for it was quite cold as it always is around Christmas time.

It was the nearness of Christmas that made Mr. Rabbit so thoughtful. Weenty found out when he had made himself comfortable on Weenty's little chair.

"Do you know," he said at last, "here it's coming on Christmas time and I'd like to give Fanny and Paul a surprise."

"Fanny and Paul?" Weenty asked. She had never heard of them before.

"They're two orphaned bunnies," Mr. Rabbit explained. "They live in a little house by the meadow. Would you like to see it?"

Weenty jumped up quite briskly.

"I would indeed!" she cried. "And if I can help to give Fanny and Paul a Merry Christmas please let me, Mr. Rabbit."

Mr. Rabbit took his magic stick that could take him anywhere he chose to go.

"Come along then," he said.

Weenty climbed on the Magic stick that flew to the edge of her crib and in a thrice away they went out of the window, across the lawn and over the meadow to where a great oak spread bare branches across the starlit sky.

"Why," said Weenty, "it's the place Brother Bob said there were rabbits!"

He fell to digging away at the snow and soon a little door came to view. There were little panes of glass in the door so Weenty peeped in.

It was a very little room and anyone could see that Fanny and Paul weren't rich bunnies at all. There were only a few sticks in the little basket by the hearth and the quilts on the little beds looked thin and worn.

Fanny and Paul had already gone to bed so Weenty and Mr. Rabbit contented themselves with their peep. Afterwards they sat on the root which was somewhere near the roof of the rabbit house to talk it over.

"It's quite plain that they need a Santa Claus," Weenty said soberly. "They're such little bunnies, too. What do you think they'd like, Mr. Rabbit?"

"That's what I wanted to ask you," Mr. Rabbit replied. "You ought to know more about what's proper to for Christmas than I because you've had so many of them."

"But I don't remember them all," Weenty said. "I have had four, of course, and this one coming will make five."

"But I don't remember them all," Weenty repeated. "Last year Santy gave me a doll and a tea set and lots of things; nuts and candy and cakes books and a sled and—

"I don't think Fanny and Pearl can read and I know they don't like candy," Mr. Rabbit said a little sadly. "Perhaps they'd like toys though. Are they nice?"

"Don't you think they know anything about toys either?" Weenty asked.

"Really, it's quite hard to say," Mr. Rabbit answered. "You seem to like them right well, but I suppose that isn't any proof, is it? You don't care for cabbage and carrots when they're not cooked, do you?"

Weenty admitted she didn't but it gave her an idea.

"Well, they like cabbage and carrots," she said, "and that will be a fine start for our Christmas presents."

"Quite right," Mr. Rabbit agreed.

"We can make them look quite like toys too," Weenty said. "We can dress the carrots up like dolls and make the cabbage leaves into books. Then when they get tired of them they'll be useful as well as something to play with."

"Mother told me," Weenty said that the best presents are the suitable ones."

"Then I'm sure our presents will be very fine."

"I'd like to make them new quilts Weenty said.

"Well, there are plenty of feathers in the old nests." Mr. Rabbit said, "I can get them, too."

"And where shall we find some cloth to put the feathers in?" asked Weenty.

"Here's my handkerchief for one," Mr. Rabbit replied, pulling his gay kerchief out of his pocket.

"And here's mine," Weenty said holding her little handkerchief out.

"And here's a needle from the pine tree and a cobweb for the thread so you can start to sew while I fetch the feathers and the other things."

Weenty set right to work with a will and as the needle was a migic needle, there were no pricked fingers and the quilt was ready to be stuffed when Mr. Rabbit came back with the feathers. While he was away for the carrots and cabbages Weenty found some gay red berries from which she managed to squeeze some juice. She used it to make a pretty pattern on the quilts.

"It looks more Christmassy," she told Mr. Rabbit when he came back again.

Afterwards they sat on the root, which was somewhere near the roof of the rabbit's house to talk it over.

RAW FURS
WANTED

Mr. RAW FUR SHIPPER—
We want your raw furs. Put your own assortment on them and mail us a copy. If we cannot net you more than you expect, we will return them to you, express paid. Our price list is yours for the asking.

FARMERS SERVICE BUREAU

(A Clearing Department for farmers' everyday troubles. Prompt, careful attention given to all complaints or requests for information addressed to this department. We are here to serve you.)

A WILL IS A WILL

I want advice on a will that my father left to me and my brother. We were to pay all funeral expenses and debts and then we were to share alike in the rest of the property. My brother never paid any of the expenses and debts. I have paid all expenses, including taxes for 39 years. I also paid insurance and kept up the interest on a mortgage which father had on the farm when he died. What can I do? I think I am entitled to the farm. My brother died a few years ago, leaving a widow and three children, living in New York state. I can get no word from them and my brother left no will to my knowledge.—Subscriber, Mecosta County.

Your letter does not state whether your father's estate was probated or not; nor, do you state whether you have had the use of the land. I am assuming that the estate of your father was not probated and that you are in possession of the land in Michigan. I would be of the opinion that you should have the estate probated and charge up in your accounting for the land all of the expense you have been to in connection with the estate and at the same time give the estate credit for the rental value of the land occupied by you. If you have been to any expense in making permanent improvements you should charge for those and credit the additional rental value therefore. The interest of our brother does not become yours by virtue of your paying debts, etc. His interest would descend to his wife and children.—*W. E. Brown, legal editor.*

UNLICENSED VET CAN'T COLLECT

Can a man without being a licensed veterinarian use a crusher for castrating colts, and charge for his labor?—Reader, Branch County.

I am of the opinion that an unlicensed veterinarian can not collect veterinary services.—*W. E. Brown, legal editor.*

MAKING A DITCH OVERFLOW

A has a farm on Sec. 14; B has a farm on Sec. 13. A has a piece of low land that drains in a natural way across the road on B.'s land. There has been a ditch there for over forty years. About fifteen years ago there was a county ditch dug across B's farm and A paid drain tax on this low land. Then B gave A the right to open this old ditch and have outlet to county ditch, which is about sixty rods. A digs all of this ditch at his own expense. Three years ago A cleaned out ditch again with B's consent. Now B has built a dam across this ditch and the fall rains have flooded this low land and have spoiled a good seeding of hay. Now has B any right to dam this ditch and is he liable for damages?—Subscriber, Clinton County.

From the brief statements of facts I am of the opinion that "B" had no right to stop up the water way and is liable to "A" for the damage caused by him by so doing. A fuller statement of facts might show conditions that would permit the closing of the ditch.—*W. E. Brown, legal editor.*

MAY RESTORE OLD 'PHONE RATES

I am on a farmer's 'phone line, one of we all were charged for pole rent when we were charged for pole rent from the end of our company line to Reed. Our contract did not call for that and the officers refused to pay. After being shut off from the central office for weeks during the "flu" epidemic, the 'phone owners made so much fuss that the officers paid and things went as usual. The semi-annual meeting came a few weeks ago and the secretary called up everyone and asked them to be there. It was a very bad night and few were out. We were asked to pay two dollars more for switchboard service. By a majority of two they voted to refuse to pay and let them take the 'phones out at the end of the year. Now, when we own the line and want the 'phone are we obliged to let it go when a large majority of the 'phone owners are willing to pay? Is there any way to get around the vote taken that night? We were not notified that anything unusual was going to be voted on.—C. M., Osceola County.

I believe that the extra charge made you for pole rent was unauthorized without serving notice. I believe the law requires the 'phone company to make complaint to the State Railroad Commission, now the Utilities Commission, and they give a date for you to be heard. I am of the opinion your line might discontinue the use of the exchange for any reason. If the Utility Commission ordered the raise in your rates you will have to obey or have your service cut off. If they did not order the raise then you can appeal to the commission to restore the old rate. I assisted in a hearing before the old railroad commission under a similar statement of facts and the commission ordered the old rates restored.—*W. E. Brown, legal editor.*

DISCHARGE FROM MARINE CORPS

I have a son in the Marine corps. He would like to come home to help me and I want his help. How can I get him out?—A. J. B., Hillsdale.

It seems to be very difficult to get discharges from the Marine Corps. I would advise you to see personally or write a full explanation of the facts and needs to your congressman. He may be able to advise you what to do.—*W. E. Brown, legal editor.*

SOME PEA MEN PAYING WELL

Farmers around here aren't satisfied with the price of peas given by the canners to the growers. We believe that farmers in other parts of the state are getting more than we are around here. We believe we ought to get around four cents per pound or more.—G. C., President Pea Growers' Association, Kent City, Mich.

We are informed that the price given to pea growers varies considerably in different parts of Michigan. The price ranges from $60 to $90 per ton. Thus in some places the pea growers are getting more than four cents a pound.—*Editor.*

NON-TAXPAYER MAY VOTE

Will you please advise through your paper if a non-taxpayer, man or woman, has a right to vote to bond a county to raise money to build highways?—J. S., Wexford County.

Any citizen in the state of Michigan has the right to vote upon county bonding propositions.—*Editor.*

STATE LAND

I am thinking of buying state land. Can you please tell me with what state official I am to conduct the deal; to whom do I pay the money and from whom do I record the deed?—A. E. H., Elwell.

A letter to the Public Domain Commission, Lansing, Mich., will bring you complete information.—*Editor.*

FINANCIAL KING'S INTEREST, 19-year-old Jersey, has shown the remarkable average production of 825 lbs. of milk and 44 lbs. butterfat per month. This splendid animal is being tested at the Greystone Stosk Farm, Westchester, Pennsylvania.

UNCLE RUBE SPINACH SAYS:

CHRISTMAS MEM'RIES

Looks like a real ol' fashioned Christmas don't it now? an' this snow an' everything brings thoughts of the Christmas days an' Christmas joys of days gone by—days when we were younger than we are now—oh, I'm not so old as I would be had I been born sooner, but older'n I was a few years ago—that is in years—not in feelin's as I can see.

'Course you know I wuz born and raised on a farm—fur enough from the city not to be troubled by city ways, city styles, nor city girls. In my younger days the country girls were good enough fur me an' by ginger, the city girl can't anywheres near come up to 'em now—in my estimation. Oh, don't I remember the ol' gray horse I used to drive! An' you, you ol' granddads, don't you too remember, the ol' hoss you had trained to go without drivin' when you had the best and only one beside you? No automobiles in them days. We didn't need such things anyway then. 'Member how the little girlie wuz always willin' to drive the ol' hoss that needed no drivin'? the innocent little angel—she knew you would need your hands an' arms for other business keepin' her warm you know, keepin' the blanket an' robes; we had real genuine Buffalo robes them days you 'member, an' swell box cutters an' buggies cut three quarter size. You know we had to set pretty close together sometimes an' we didn't object a bit—I say we didn't.

Well, to git back to my mem'ry stuff—'member the sleigh rides we used to take—the whole neighborhood of young folks all loaded into one big sleigh, each feller havin' his own an' only one with him—sometimes it happened that some of us would have more'n one only one—it sometimes caused a little mite of confusion but we gener'ly got away with it an' what rides we used to take—sleigh bells big as cow bells.

'Member the Christmas tree in the ol' school house, how some elderly man would dress up like Santa an' pass candy to every kid an' git off jokes to make everybody laugh—I've never been able to fergit. Well you 'member we usta put all our gifts onto the Christmas tree, gifts for mother an' sometimes for father an' something for the only one—it didn't take a hundred an' fifty dollar ring to satisfy the girls of that happy time, something costin' not more'n a dollar or two wuz plenty good enough, an' the best and only would always remember her ol' beau, general'ly something made by herself, knitted wristlets or mittens, hemstitched handkerchiefs, anything so long as she made it was sure to please.

Oh, say, I jest got to quit this mem'ry business—it kinda upsets me like an' yet I thank the good Lord that I have been privileged to take part in so many happy Christmas times, an' that I live in the closest proximity to the scenes of my boyhood days—that I can greet the friends of my youth and young manhood, some have gone on of course, some who were dearly loved among them the bride of my early choice. Well, I am thankful for health an' strength an' that I can enjoy life, but the thing I am most thankful for is that I have so many among the younger folks that I can call friends and now let me wish every reader of M. B. F. a merry, merry Christmas and a Happy New Year. Cordially—*Uncle Rube.*

FARMERS' CLUBS WANT THE RAILROADS RETURNED

(*Continued from page* 9)

tention of the railroads. telegraph lines, express companies, etc., until such times as permanent unification and reforms are instituted and a fair determination of government control in peace times be made in comparison with corporation control.

We regard the plans of terminal warehouses and a market commission for preserving the rights of the producer and consumer as correct in principle and a proper step at the present time.

We commend the effort of Hon. C. E. Scully to secure the passage by the last legislature of a law providing for a state income tax, and again urge the passage of such a law, either by initiative or by the legislature.

Whereas, agriculture is the foundation upon which rests the prosperity of the state; and

Whereas, a large percentage of the citizens of which are farmers;

Therefore, be it resolved, that justice, propriety dictate that the next governor of Michigan shall be either a practical farmer or one who has a sympathetic understanding of the needs and problems of the farmers of the state.

FINANCING THE MICHIGAN STATE FARM BUREAU

(*Continued from page* 6)

our reasons for this stand without going into further details.

As an example of how we think the interests of the Farm Bureau might clash with those of members of the Coalition Committee, we need only to point out that one of the members of the Committee is a sugar manufacturer with whom the beet growers are now negotiating on next year's contracts. The sugar manufacturers have always tried to buy beets at the lowest possible price regardless of whether it was enough to pay the farmers cost of production. Many beet growers are members of the Farm Bureau and right now they are placed in the peculiar position of demanding better beet prices from one who has but recently patronized them with his money.

If the matter of securing a fair beet price for the farmers were left to the Farm Bureau to what extent would the Bureau go in forcing manufacturers whose money they are using to give the farmer a square deal?

This is typical of many instances of the division of interests between farmers and others. We grant that it ought not to be this way, but as long as man continues to be the selfish animal he now is at the present time, sugar manufacturers, elevator owners, bank stock holders, dealers in food products, etc., will continue to take as much toll from the farmer as they can and the farmers must continue to organize to protect their interests.

We have a right to look upon the efforts of people who have no actual interests in agriculture to ingratiate themselves into the confidence of farm organizations, loan them money and otherwise put them under obligations. We have a right to ask why the Coalition Committee is backing the State Farm Bureau. And we have a right to insist that the farmers who are being asked to become members of the Farm Bureau should know the full facts as to the source of the Bureau's money.

WHAT WOULD YOU DO?

If you had a whopper of a piece of machinery that weighed some fifteen tons and yet had to be so finely adjusted that a fly could go through without folding its wings.

——and if after using that piece of machinery every week for three years, you found it was "acting up" and not working at all to your satisfaction.

——and you called in from the factory where it was made an expert who advised you to lay-it-up for a week so he could make it work right again

——what would you do?

Why, of course, you would do just what we have done. Turned our big rotary magazine press, the largest of its kind in Michigan, over to a "press doctor" who has kept the "patient" in bed for a full week, while he doctored it!

That is the reason why the issue of the December thirteenth is combined with that of the twentieth, which we hope will reach you so improved and prompt that it will in a small measure at least, reward your patience.

All subscriptions on our books will be credited with the one issue missed.

GEORGE M. SLOCUM, Publisher.

YOUR BEST XMAS GIFT TO A FARM FRIEND!

Wondering what to remember some farm friend with?

Here is a present that will remind someone of your thoughtfulness every Saturday for a full year.

M_____

As a Christmas Remembrance you will receive Michigan Business Farming every Saturday to January first, 1921.

From_____

_____

WE MAIL THIS CARD DIRECT

We have prepared a beautiful Xmas card, in two colors with the wording shown above which we will mail direct from this office to each new subscriber whose name you send us.

SPECIAL CHRISTMAS OFFER

We will accept Xmas NEW subscriptions at the following rates good to January:

1 New Subscriber, ... $1.00
3 New Subscribers, ... $2.00
5 New Subscribers, ... $3.00

There is no cheaper or more thoughtful way to remember a list of farmer friends or neighbors who have befriended you during the long year just past.

It seems hardly necessary to add that you do this weekly a great favor and make the farming business in Michigan better, when you add the names of new readers to our mailing list.

MICHIGAN BUSINESS FARMING,
MT. CLEMENS, MICH.,

Enclosed find $.....for which you are to send our weekly for one year, to January, 1921, to my friends whose names are attached. You are also to send each one a Christmas Card conveying my compliments. Send me a receipt for this remittance. With Christmas Greetings to M. B. F., your reader,

GERMOZONE The Best Pet Stock Remedy

For Poultry, Pigeons, Dogs, Cats, Rabbits, Parrots, Canary and other birds or pet animals, Germozone is a universal and safe remedy; for colds, snuffles, roup, sore throat, loss of voice or singing, influenza, bowel trouble, distemper, sore eyes or ears, canker, gleet, loss of fur or feathers, sores, wounds, skin disease, or other affections of skin or mucous membrane.

"My hens have never done so well as this year and haven't lost a single chick"—Mrs. Flora Kapple, Walker, Ia. "Simply grand for rabbits"—L. W. Browning, Boone, Ia. "Cannot praise Germozone enough. I use it for chickens, stock and household"—Mrs. Wm. Hoeppel, Hugo, Okla. "My bird puppies don't know what distemper is and I never had such good success before with chicks"—Curly Smith, Kennett, Mo.

Germozone is sold by most drug, seed and poultry supply dealers, or mailed postpaid in 25c, 75c and $1.50 packages from Omaha. Book on treatment of diseases free with each package.

GEO. H. LEE CO. Dept. 410 OMAHA, NEB.

Get More Eggs; Save Feed

Sky-high prices for eggs this winter will make big profits for those who know how and what grain mixtures to feed. Improper methods mean big loss. Prof. T. E. Quisenberry made a thousand hens in the American Egg-Laying Contest lay 200 to 304 eggs each in a year. Another big flock cleared for him $6.15 per hen in nine months. His methods are explained in a new bulletin "How to Get More Eggs and Save Feed." Get this free bulletin by writing Quisenberry today, addressing care American Poultry School Dept. 1392, Kansas City, Mo. (Adv.)

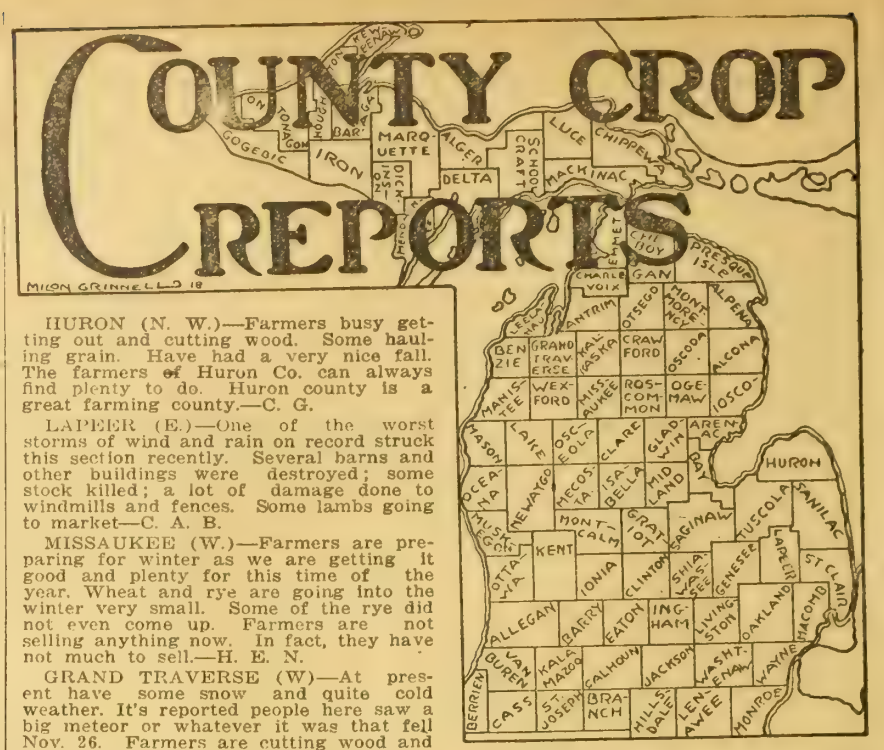
COUNTY CROP REPORTS



HURON (N. W.)—Farmers busy getting out and cutting wood. Some hauling grain. Have had a very nice fall. The farmers of Huron Co. can always find plenty to do. Huron county is a great farming county.—C. G.

LAPEER (E.)—One of the worst storms of wind and rain on record struck this section recently. Several barns and other buildings were destroyed; some stock killed; a lot of damage done to windmills and fences. Some lambs going to market—C. A. B.

MISSAUKEE (W.)—Farmers are preparing for winter as we are getting it good and plenty for this time of the year. Wheat and rye are going into the winter very small. Some of the rye did not even come up. Farmers are not selling anything now. In fact, they have not much to sell.—H. E. N.

GRAND TRAVERSE (W)—At present have some snow and quite cold weather. It's reported people here saw a big meteor or whatever it was that fell Nov. 26. Farmers are cutting wood and there is a big barn raising in our neighborhood. Had a very bad wind on Saturday night last.—C. L. B.

WEXFORD (W)—Snowing some and storming. Winter has set in by the way things look with 6 to 8 inches of snow on the ground. Good sleighing except on gravel roads and some rough places. The farmer's Despatch says looks out for the 17—awful eruption, earthquakes and tornadoes and thunder storms.—S. H. S.

LIVINGSTON(N. W.)—It keeps us all busy caring for our stock and keeping the fires buring this fine winter weather. Ground froze solid. Not much produce moving just at present except milk. The heavy windstorm of Nov. 29 did considerable damage to buildings, fences and orchards through this section of the country.—G. A. W.

CLARE (C.)—Quite cold here now with high winds. Some snow. Farmers husking corn and cutting wood. A good many are moving to town and renting their farms. The first of the motor trucks assigned to Clare County arrived last week. The state provided it with a dump body for hauling gravel for the trunk line roads.—V. W.

MIDLAND (E.)—A little colder at present. The farmers are still continuing their fall work. The ground is frozen too hard to plow. A few of the farmers are selling hay. It is a fairly good price now. There are plenty of auction sales yet and everything sells good. There wasn't but very few apples in this neighborhood—J. H. M.

ST. JOSEPH (E.)—Farmers are having some corn and fodder shredded and a little manure hauled. Butchering time in full swing. Men are hunting rabbits—four men bringing in 23 in one day. Weather is fine now; had quite a little of a tornado here. Shook things quite a bit, but no great damage done. Hauling coal and wood. Quite a bit of that done lately.—W. W.

BAY—The farmers here are shredding corn preparing for winter, and rushing their beans to the market before the price becomes any lower, as most farmers do not want to take any chances on holding. The heavy wind of last week did some slight damage about here. The weather is cold with a little snow. The bean market is on the raise with corn is a little off.—A. G. The following prices were paid at Bay City:—Wheat, $2.10; corn, $1.30; oats, 74; rye, $1.24; hay, barley, $2.50; buckwheat, $2.50.

JACKSON (N. E.)—The weather the past few days has been good but recently this section was visited by what was termed the worst storm ever known in this vicinity. Much damage to buildings stacks and trees was reported. Farmers are nearly "all set" for winter; some corn still in the shock. Clover seed still to be threshed. Considerable rye going to market as prices are up. Beans still low. Rumors are current of dealers refusing to buy even at $6.—A. F. W.

MECOSTA (E)—Farmers are getting ready for winter, cutting wood, taking care of potatoes, putting them in cellars for the winter. Not many going on the market at present time. A good many fields of corn not husked, help scarce; farmers doing their work alone. Quite a good many farmers selling out and moving to town; can't get help to carry on their farm work. Wheat went into winter with a good plant growth and is nicely covered with four inches of snow. Weather very mild.—W. H. S.

GENESSEE (S. W.)—Farmers are not doing much at this time on account of the cold weather. We have had cold weather and also quite a lot of snow, and it now seems as if winter has begun in earnest. Farmers are selling some potatoes and livestock but not much of anything else. Most roads are in good shape and will continue to be so as long as the weather remains cold. We had quite a bad storm last Saturday and the wind did considerable damage, tearing up fences and blowing down silos and damagaing several buildings.—C. W. S.

BAY (S. E.)—There is not much change among the farmers in the last week. The weather has been very cold for this time of year. Everybody busy, but not rushed. Beans being threshed and yielding generally good. Corn shredding going on. Corn is good and the stocks are nice. Lots of beets yet at the welch stations. They are being loaded as fast as cars come in. The roads are good. Not much being sold. Very few beet contracts being written up yet. The price of labor increased and beets the same old price. Don't seem to suit the farmers.—J. C. A.

OAKLAND, (S. E.)—Potatoes have been pretty well marketed in this section. Hay is being held. Corn was a good crop. Farmers are grinding oats and corn and buying just as little feed as possible.—H. M. R.

MANISTEE (N)—Farmers have their work about ready for winter. Corn about all in the barn or crib. The weather is cold and snowy. Some every day but not enough for sleighing. Hogs still keep going to market. One man sold a hog dressed yesterday that brought him seventy dollars. Some hog. And he sold at one cent less than the price for spring pigs. We have had no auction sales this week, but two are advertised for next week. There is nothing doing with potatoes or beans in these parts, not many to sell and those that have them don't care to sell now.—C. H. S

MONROE, (W.)—We are having a little cooler weather. One morning it was zero. The farmers are busy doing chores and getting the wood pile and coal for winter. There is quite a lot of corn going to the elevator. The price paid is $1.65 per 100. The heavy wind storm of November 29 did quite a bit of damage to fruit and shade trees, also damaged some farm buildings and fences. The roads are fine at this writing.—W. H. L. The following prices were paid at Petersburg—Hay, $20; hens, 20; springers, 20; ducks, 20; geese, 18; butter, 60 dairy; butterfat, 74; eggs, 70; hogs, $12; dressed, $17; veal calves, $16.

MASON (W)—Ground covered with an inch or so of snow. Frequent snow storms. Also frequent high winds. Considerable damage to Ludington's million dollar breakwater resulted from last week's gale. Condition of roads and weather unfavorable for marketing. The wheat has come up 3 cents per bu. since the embargo was lifted. Farmers are doing some thinking. We heard one man say that not less than two weeks ago he marketed a load of wheat at Scottville which graded No. 3 white. It was dumped into a car containing all grades and both red and white wheat. That man is ready to put up his $5 for membership in the Farm Bureau as are many others in this county.—B. M.

CHARLEVOIX, (S. W.)—Rough feed is selling high at auction sales. Cows go from $50 to $90; young sows bring better than market; other hogs dull; spring calves run from $15 to $25 a head hulk from $17 to $20, green buzz wood sells $2.75 to $3 a cord; slab wood, 50c higher. A farmer candidate for governor would poll a good vote in this corner of the county.—C. M. The following prices were paid at East Jordan:—Wheat, $2.10 oats, 90; rye, $1.12; hay, No. 1 timothy, $30; No. 1 light mixed, $28; straw-rye, 8 to 9; wheat-oat, 8 to 9; red kidney beans $9.50; springers, dressed, 25; butter, 60 butterfat, 73; eggs, 65; hogs, dressed, 18; beef steers, 5 to 6; beef cows, 4 to 5; apples, $1 to $1.50.

HILLSDALE—Wheat and rye look fair. Some fall plowing has been done. Corn not at all taken care of. On Nov. 29 a severe wind storm did lots of damage. It destroyed buildings and put the telephone and telegraph service out of commission for several days. On Nov. 30 the new Congregational church at N. Adams, Mich., was dedicated. It is one of the up-to-date churches in the county. The people in North Adams and vicinity may well feel proud of the structure. The auditorium is finished in oak of the finest quality. It has a large window in front, the gift of the Ladies' Aid Society. The building is modern throughout.—A. J. B. The following prices were paid at Hillsdale—Wheat, $2.18 to $2.23; oats 70; rye, $1.35; straw-rye, $11; wheat-oat, $12; potatoes, $1.75; onions, $2; hens, 19; springers, 20; ducks, 22; turkeys, 30; butter, 60; eggs, 70; hogs, 13; beef steers, 6 to 9; veal calves, 15.

BARRY—Farmers are nearly all working away, though a few are belated and are trying hard to catch up by husking corn indoors. Nearly all the farmers in this community have joined the Farm Bureau except a few who do not approve of it. Many auction sales are reported in the papers. All things are going high except horses. Colts can not be sold; hay is quite scarce and therefore sells high.—M. D. The following prices were paid at Hastings:—Wheat, No. 1 white, $2.05; No. 2 red, $2.10; oats, 70; rye, $1.30; potatoes, $1.25; hens, dressed, 17 to 23; live, 14 to 18* butter, 60; butterfat, 70; eggs, 62; hogs, dressed, 13 to 18; live, 10 to 14; beef steers, live, 7 to 10; veal calves, live, 8 to 18.

ST. CLAIR—Soil in good condition and slightly frozen. Farmers selling butterfat, poultry and some live stock and a little hay. Quite a number are holding hay for better prices. The big storm of the 29th did a great deal of damage in this section. Several barns were demolished, live stock killed, windows blown in, the large ones being broken in most cases; trees were uprooted and havoc raised in all directions. Damage not all reported yet.—I. J.

INGHAM—Some hogs are being sold at 12c per lb., yet prices at market for meat keep up. A meeting of farmers at Mason secured a condensed milk factory to locate there. Building will commence at once with 3,750 cows pledged by farmers to supply milk to begin operation April 1.—C. I. M. The following prices were paid at Mason:—Wheat, $2.03 to $2.10; corn, $1.20; on cob, 60; oats, 65; rye, $1.25; barley, $2.20; hay, 18; bean $6.25.

SHIAWASSEE—All stock is going into winter in good condition. Feed is plentiful, and farmers owning silos were able to fill them to full capacity and have considerable roughage left. Heavy changes in real estate at $100 to $125 an acre according to location and farm conditions.—D. H. M. The following prices were paid at Corunna and Vernon:—Corn, $1.76; oats, 68 to 70; rye, $2.25; potatoes $1.25 to $1.50; hens, 20; springers, 22; turkeys, 25; butter, 60; butterfat, 72; eggs, 68; apples, 25.

MONTCALM—The farmers are husking corn and marketing farm produce. Soil is frozen. Farmers are selling potatoes and beans. Wm. Lewis has a new Dodge truck and International tractor.—G. B. W. The following prices were paid at Lakeview:—Wheat, $2.10 bu.; corn, 75; oats, 48; rye, $1.30; hay, No. 1 timothy, $22 ton; No. 1 light mixed, $20; straw-rye, $8; wheat-oat, $10; beans C. H. P. Pea, $6.25 cwt.; red kidney, $10; potatoes, $2.30 cwt.; onions, $1.50 bu.; cabbage, 8 head; hens, 16 lb.; springers, 20; butter, 70; butterfat, 72; eggs, 60 dz.; hogs, 20 lb.; veal calves, 15.

MUSKEGON, (E.)—Farm work pretty well done although some corn out and some plowing not done. Not much produce being marketed. Everybody holding beans and prospects very poor for many beans for next year. Wood cutting is being pushed on account scarcity of coal. Wood cutters getting $11.25 a cord and not many at that price. Cattle that were pastured out, very thin and no sale. Horses and colts being sold from $40 to $75.—E. E. P. The following prices were paid at Ravenna:—Wheat, $2.12; corn, $1.20; oats, 80; rye, $1.10; hay, No. 1 timothy, $32; No. 1 light mixed, $30; beans, $6; potatoes, $1.60; cabbage, 3; hens, 18; springers, 19; turkeys, 27; butter, 76; eggs, 70; hogs, 15; beef cows, 8; apples, $2.50.

BERRIEN (W.)—Not much farm produce moving to market now, as farmers are not satisfied with price of hogs, corn, hay and potatoes at present. This has been an ideal fall for good road building, many stone roads being built here now. An unusually large number of farms is being sold this fall, many of the new owners coming from the city; farm land is selling very high. Many small fruit farms of 15 and 18 acres have sold for $5,000 to $6 000. The large grain farms are correspondingly high. There was a very large acreage of wheat, rye and vetch sown this fall. Many farmers sowed timothy seed this fall, clover seed being so high and many had lost their entire seeding the last few years from drought. Clover seed about $50 bu.—O. Y. The follwoing prices were paid at St. Joseph:—Wheat, No. 1, $2.13; No. 2, $2.10; corn, $1.40; oats, 75; rye, $1.35; hay, No. 1 timothy, $30, No. 1 light mixed, $28; straw-rye, $12, potatoes, $1.60; hens 18; springers 18, butter, 60; ubtterfat, 75; eggs, 65; dressed hogs, 16 to 18; veal calves, $22.

FARMERS ASK FOR BETTER SUGAR BEET CONTRACT

(*Continued from page 2*)

an acre let the company pay the farmers $12.00 a ton and the sliding scale the same as last year.

"The company loses nothing if the seed is not good. If the beets are half a stand you have to pay $26.50 to the company for labor just the same. Last year the Bay City Sugar Co., sent out a lot of beet seed that would not grow. They did not pay the farmer for his work."

A. M. Lewis, secretary of the Swartz Creek Co-operative Live Stock & Produce Shipping Association, Genesee county, writes: "The farmers and beet growers of the vicinity of Swartz Creek held a meeting with about 30 present and nearly all agreed that they could not raise sugar beets another year for less than $15.000 per ton on sliding scale based on 9c sugar. They claim that if the company raises the price of labor six dollars an acre that they must have more for their beets or they will raise beans or quit entirely."

The committee is preparing a plan of action as we go to press. We are assured that it will ask for an even division of at least such profits as are derived from the sale of sugar over 9 cents per pound. What other recommendations it may make we are not advised at this time, but our readers may feel assured that as soon as this information is available it will be published.

Settlement for 1918 Wool Crop Drags Along

FULLY six months ago Michigan Business Farming was assured by the Department of Agriculture that the final settlement for the 1918 wool clip would soon be made and excess profits, if any, returned to the farmers. Since then we have received numerous letters from our readers who have become impatient and want to know when the matter will be settled. Well, you know, it takes a long time to unwind government red tape. By the time clerk No. seventeen of the seventeenth division of branch No. seventeen of the Domestic Wool Section of the U. S. Department of Agriculture completes his investigation of the complaint of John Jones against Hank Hicks, whom, it is alleged, paid Farmer Jones only 60c per pound when he should have paid 67c; and reports back his findings to his sixteen superior officers who in turn report them back to their seventeen times seventeen superior officers who put their stamp of approval thereon and finally advise that John Jones is entitled to receive an additional seventeen dollars and seventeen cents from the aforesaid Hicks, that gentleman will be dead or out of business. At least, these are our conclusions after reading the following letter which is almost the counterpart of several we have previously published from the department upon the subject:

"I have your letter of November 22 with reference to the status of the work involved in winding up the affairs of the Domestic Wool Section of the War Industries Board.

"The Department is not in a position to answer specifically the latter part of your inquiry because the auditing of the reports of nearly 4,000 dealers is proving to be a considerable task and, while the collection of excess profits is progressing satisfactorily, it is impossible at this time to state definitely what the amount will be. The distribution of these profits presents many difficult problems, since the business methods of the dealers did not always conform to the regulations. It is impossible, therefore, to adopt any uniform system of pro-rating the profits. The work is being pushed as vigorously as possible and every effort is being made to hasten the completion of the task.

"There is now in course of preparation a statement, for release to the press, setting forth in more detail the status of the work. I shall be glad to send you a copy of this statement as soon as it is completed. —*D. F. Houston, Secretary.*

What One Labor Paper Thinks of the Farmer

SOME farmers don't like the attitude of M. B. F. toward the proposed political alliance between organized wage earners and organized farmers. They say: "The iterests of these two are identical and they ought to organize and cooperate." We have tried to point out in what respects the interests of wage earners and farmers are mutual and in what respect they are dissimilar. We have found that the average farmer has far greater charity for the wage earner than the wage earner has for the farmer. Some labor papers endorse a union of wage earners and farmers, but others oppose it. One of the most bitter criticisms of the farmer we have ever read was published not long ago in the *Indianapolis Union*, which, according to the *Literary Digest*, styles itself as the oldest labor paper in the United States. In justice to the laboring people it must be said that the views expressed by the Union are extreme and radical and probably do not express the sentiments of the majority of wage earners. Nevertheless it is well for us to know how some of the laborites look upon the farmer.

This journal flatly denies that labor seeks an alliance with the farmers; that it "has its hands full keeping down Bolsheviki and other vermin without the addition of the agricultural cootie."

"There is nothing in common between the man who works for a wage and the farmer," says the Union. "The main object in life of the wage-earner is to get for as little outlay in money or toil as possible the wherewithal to feed himself and his family. The sole object of the farmer is to get as much as possible for the food products that the man in industry must buy to live. If it were not for the restraining influence of the abused middleman the two would be at each other's throats.

"We do not believe that there is a predatory interest in this country but agriculture. It controls congresses and legislatures and compels legislation in it's own interest and to the exclusion of all other interests. It forces the government to an expense of forty million dollars a year to serve it through a governmental department which occasionally isolates a bug; it sets the country by the ears with the bugaboo of a boll-weevil when the price of cotton is to be boosted; it exploits everything from spring rains to early frosts to bolster the price of wheat. And between seasons the bucolic brother puts in his time beating the tax collector and denouncing "capitalism,"—the farmer invented the term in its opprobious sense. Having a low sense of morality until his years beget in him a fear of hell, the farmer takes no thought for the welfare of any member of any other class. And he would dominate the country by number if, in the providence of God, he was not led to the practice of not sparing the rod and spoiling the child. His autocratic and domineering rule at home has such a chastening influence on the more intelligent of his offspring that the roads cityward are kept open by youths of spirit who seek the city to fulfill the destiny of this nation and recruit the forces of industry in order that there shall be a better market for the old man's pigs."

Michigan Shines at International Stock Show

(*Continued from page* 5)

Baier, La Crosse, Wis.; 14th, Fred Rumsey, Elliott, Ia.; 15th, Wm. Filyes, Brillion, Wis., 16th, Paul Poseharsky, Princeton, Ill.

Michigan Has Best Exhibit

There were educational exhibits from 18 of the leading agricultural colleges in the country. Michigan's exhibit occupied three times as much space as any other one exhibit. Professor Joseph Cox of the Michigan Agricultural College had direct charge of the exhibit. He was assisted by J. W. Nicholson, Secretary of the Michigan Crop Improvement Association, William Murphy, Extension Specialist in Farm Crops, Fred Cornair, President of County Farm Bureau at Chesaning, Michigan and by Professors Megee, Bibbins, Putman and Duncan of the Michigan Agricultural College.

U. S. Department of Agriculture Has Large Exhibit

The United States Dept. of Agriculture had many interesting exhibits which were of practical value to the farmers that visited the show. The value of lime and its place in American agriculture was fully discussed. Diseases of the cereal crops were exhibited and their eradication and control was explained.

An exhibit put up to explain federal grain supervision was a big feature. Practical demonstrations were given in explaining to farmers how the moisture content of wheat and flour was determined. The different grades of wheat and flour were also exhibited. The testing of carload lots of wheat was also explained to the farmers.

Women Take Interest in Home Economics School

The Home Economics Department for the Iowa Agricultural College gave daily demonstration for the women. Many food charts were studied, and six food specialists gave valuable hints on food combinations.

Her Health Was Not Left to Chance
The cows that make the big milk records are well fed and well bred, to be sure. But, above all, they are in the pink of condition. The constant strain of heavy milk production will wear down the vitality of the digestive and genital organs in the best of cows, and the result is such ailments as Abortion, Retained Afterbirth, Barrenness, Scouring, Bunches and Milk Fever. Any of these diseases can be successfully treated and eliminated with KOW-KURE, the great cow medicine. The medicinal properties of this famous remedy act directly on the organs of production and reproduction, putting the cow's system back to normal, healthy action. Feed dealers and druggists sell KOW-KURE: 60c and $1.20 packages. Consider cow-health first, and your dairy will be a leader, and a money-maker. Our free treatise,
"THE HOME COW DOCTOR,"
will give you valuable pointers on how to treat and prevent cow diseases. Ask for your copy.

CATTLE

HOLSTEIN-FRIESIAN

You Should Become a Member

The Holstein-Friesian Association of America, the organized breeders of the popular and prosperous Holstein cattle, was founded in 1885. Today it has nearly 15,000 members, registers over 80,000 Holstein-Friesian cattle each year, giving employment to 150 clerks, and has over a quarter of a million dollars as a Reserve Fund. It spends nearly $50,000 in Holstein publicity and Extension work, and a member directly and indirectly reaps the benefits of the progressive work of this truly great organization.

If interested in Holstein cattle write today fo rour free booklets.

A New Herd Boar

(his name) Big Bob Mastodon

sired by Caldwell Big Bob, champion of the world in 1917. His dam is Mastodon Josie; she is a daughter of A'S Mastodon the Grand Champion at Iowa State Fair in 1917. Ready to ship boars.
(Come and see him.)

C. E. GARNANT, Eaton Rapids, Mich.

LIVE STOCK FIELD MEN

E. N. Ball ..... Cows and Sheep.
Felix Witt ..... Horses and Swine

One or the other of the above well-known experts will visit all live-stock sales of importance in Michigan, northern Ohio and Indiana, as the exclusive Field Men of Michigan Business Farming.

They are both honest and competent men of standing in their lines in Michigan and they will represent any reader of this weekly at any sale, make bids and purchases. Write them in care of this paper. Their service is free to you. They will also help you arrange your sale, etc. They work exclusively in the interests of Michigan's OWN live-stock weekly!

MICHIGAN BUSINESS FARMING

The only Independent Farmer's Weekly owned and Edited in Michigan

Vol. VII, No. 16 | MT. CLEMENS, SATURDAY, DECEMBER 27, 1919 | $1 FOR ONE YEAR (2 yrs $2. 5 yrs $3)

The Farmer and His Markets--Review of 1919

Resume of World and National Conditions That Regulated the Prices of Farmers' Products

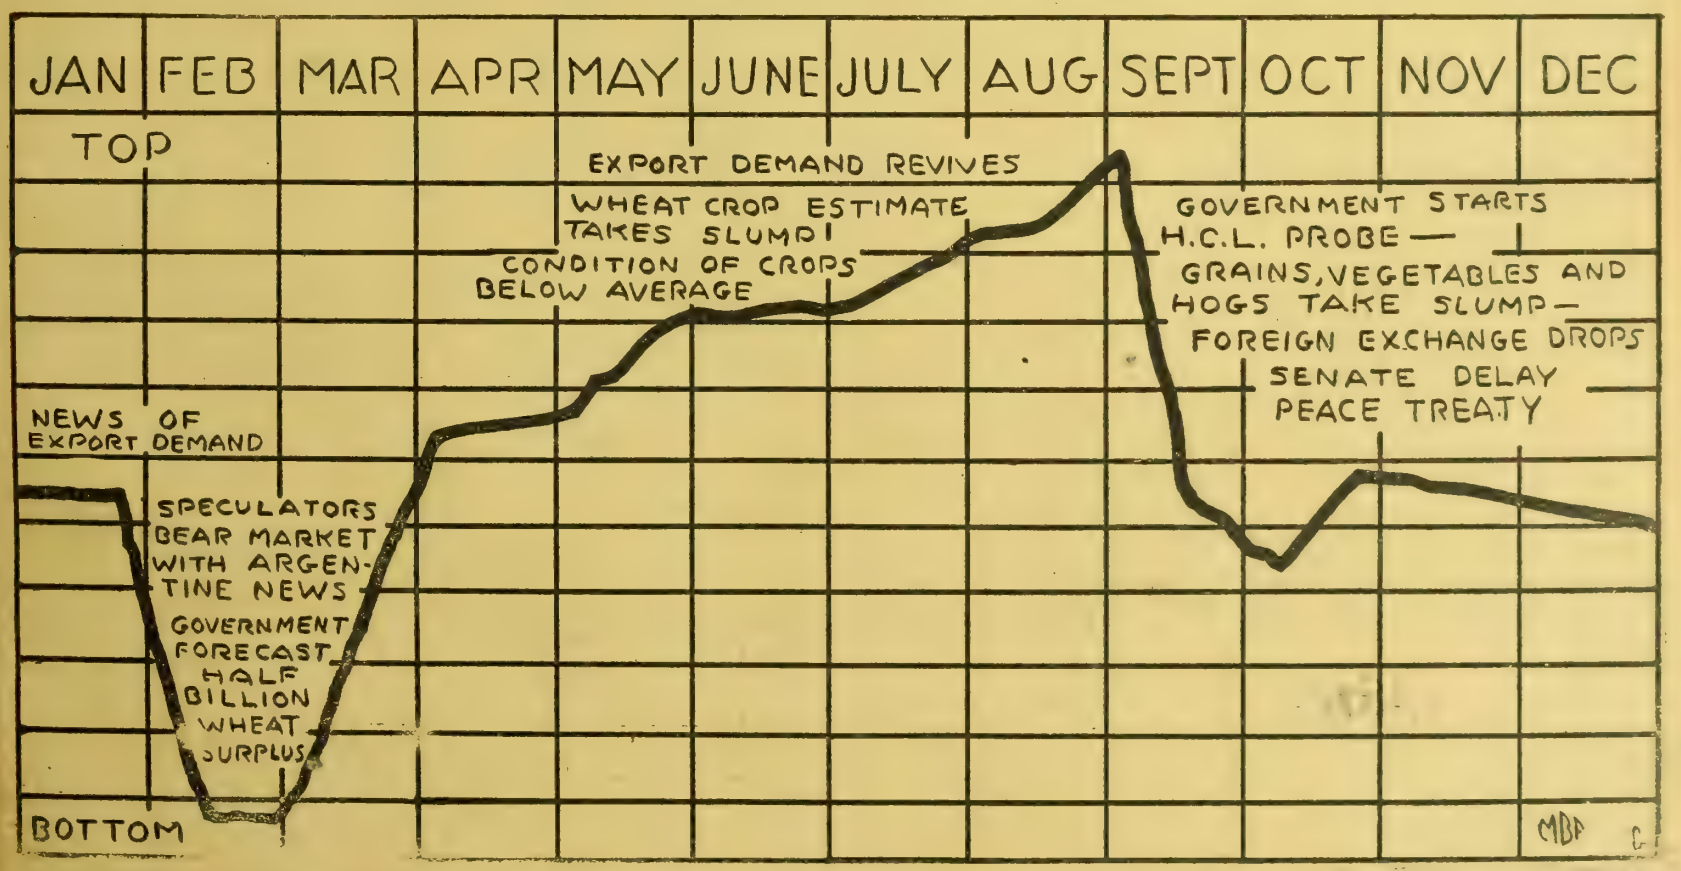
THE YEAR just coming to a close will be a memorable one to the farmer in many respects. It was born in the vale of uncertainty, and unusual caution has marked the transactions of trade and business up to the present time. The feeling that "no man knoweth what cometh next" was pronounced not only in industrial deals but in the bargaining of farm crops. Buying of farm products for domestic consumption was mostly from hand to mouth, purchasing and contracting on a large scale being for the most part confined to foreign buyers. As a result of this condition an apparent over-supply of any product sent prices tumbling, but when a shortage loomed nervous buyers, fearful that they could not meet their contracts soon bid prices back to their former level and usually a few notches higher. Prices of farm products have been kept to an unnecessarily low level because of the lack of confidence pervading the ranks of nearly all who produced and handled them.

Notwithstanding some of the panicky manifestations of the year it has come through safely and given a fairly good account of itself. The readjustment of business to a peace-time basis has proceeded far more rapidly and satisfactorily than many thought possible. The developments of the year have been a strain upon the financial structure, but we approach the close of the year with the almost certain knowledge that the structure can withstand almost any crisis and that panics and other financial disturbances are things of the past.

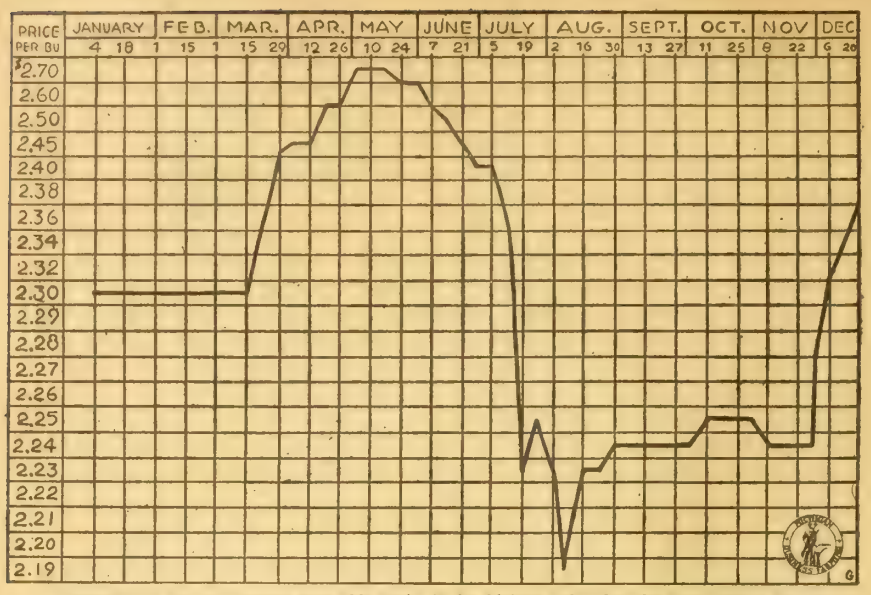
Strikes and other industrial disputes were common throughout the year. They might have been anticipated. Employers of labor might have foreseen the unrest that was sure to follow the war and provided against it by calling their men into conference and arbitrating wages and working conditions with them. But that isn't the way with human nature and because of the short-sightedness of our captains of industry there have been enormous losses from suspended manufacturing and commercial operations. But the coal strike and the steel strike and other strikes have all been adjusted to the extent that the majority of men have gone back to work, fairly well satisfied with the concessions they have gained. Business conditions in general are healthful. Good business for the business man and the manufacturer usually means good business for the farmer.

The World Food Situation

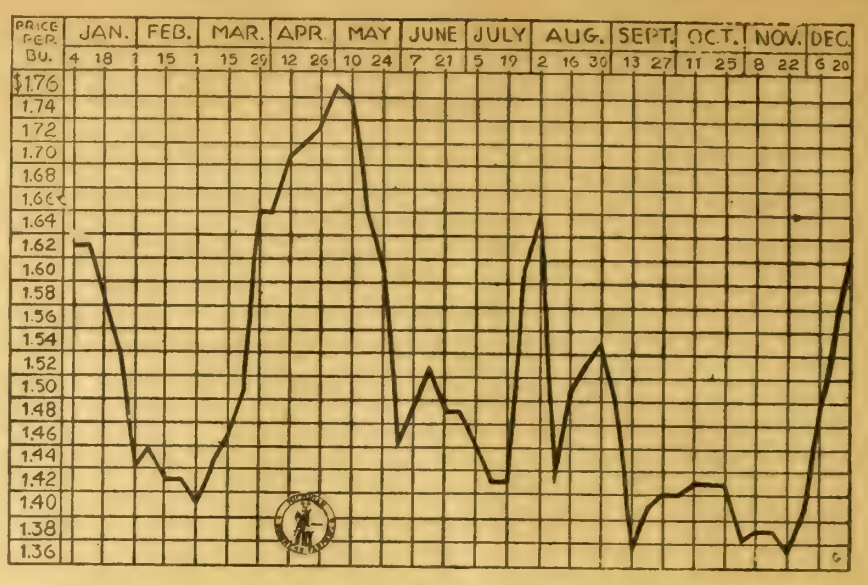
Not long after the armistice was signed the Food Administration published a map called "The Hunger Map of Europe." Great black spots in nearly every European country told a graphic story of the want and starvation ahead of the inhabitants were they obliged to depend upon their own meagre food resources for their sustenance. It was announced that millions of people of Europe and Asia must rely upon the American food producers for the ensuing year or two. Immediately the uncertainty that followed the signing of the Armistice gave way to confidence and prices on nearly all farm products were sustained for a considerable period of time. There was great expectancy that an enormous flow of food products was about to start for foreign countries. But for various reasons this demand did not develop, at least in the proportions expected. November passed into December and the new year came without any appreciable increase in export buying. Lack of ships, high rate of exchange and rumors that the European food situation was not so bad as pictured, all had their effect to depress the markets. On top of that the newspapers all over the country began to speculate upon the "enormous losses" the government must meet because of its guaranteed price on wheat. It was freely predicted that the surplus of wheat which the government must buy would run more than a half billion bushels. The generally accepted fact that there would be a huge surplus of this grain naturally affected all other grains and near the close of the month prices on corn, oats, rye and barley began a rapid decline which continued well into February. About this time speculators began to play up the Argentine situation and declared that the foreign nations and even many domestic buyers could secure corn and wheat in



The above chart shows the general trend of the grain and hog markets during 1919. It will be noted by comparison with other charts published on subsequent pages that not all markets followed this trend exactly, but it will also be noted that the same influences charted above had an effect upon nearly every market. This chart shows clearly how very little the farmer has to do with controlling prices on his products.



WHEAT—Lack of supplies sent this grain to its highest point for the year during the month of May, but the harvesting of the new crop brought it down to its lowest level in August. Since then prices have been steadily on the gain, and will probably continue upward until another crop is harvested.



RYE—This grain responded readily all through the year to the export demand. Foreign countries are large consumers of rye flour and great quantities of this grain have gone overseas. With the price of wheat advancing, rye may be expected to follow suit.

the Argentine for a much less price than in the United States. The unseasonably warm weather contributed to the decline, and the government's delay in announcing its future plans for the control of hog prices had a tendency to weaken corn. All these conditions were used with good effect by speculators to bear down the markets, and for a time they succeeded admirably .The first chart gives a true picture of what happened to the grains during the latter part of January and February and shows how they gradually recovered their former strength and climbed to new high levels for the year.

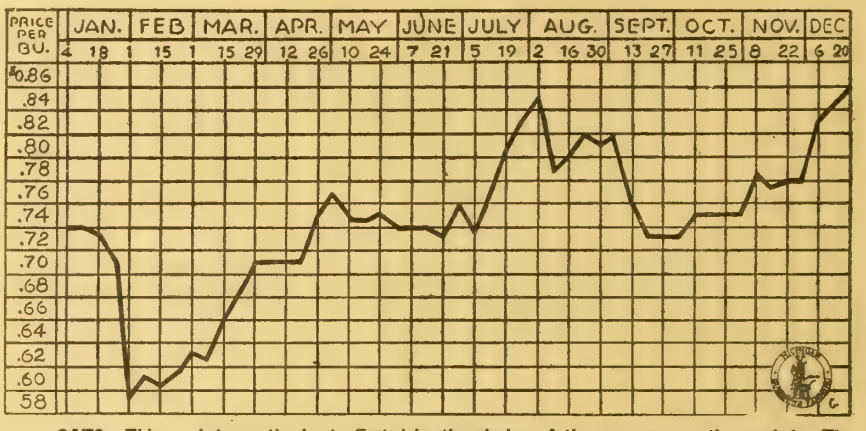
Markets Gain Strength

In our issue of February 22nd, we said: "We have been advising farmers for a couple of months to be patient and wait the turn of the tide that will surely come in most markets. But we realize that there comes a time when patience ceases to be a virtue and farmers will become anxious over the prospects. We are unable to account for the slowness with which trade picks up following the removal of export restrictions. Unless there is a radical change for the better in the markets within the next thirty days, we too, will begin to lose faith in the situation and come to the conclusion that somebody has been "ham-stringing" us all. But we expect that change to come; we expect it to come soon; and when it does come we expect prices on such products as are in demand for export to steadily increase.'

The chart on page 1 shows that the "radical change" came in almost exactly thirty days and at the beginning of April nearly all the grain markets had recovered from the setbacks of February and March.

H. C. L. Probe Forces Prices Down

The reasons for the recovery of the grain markets during the early spring are many. Food commissions of foreign countries began buying; ships became more plentiful; the Argentine argument wore itself threadbare; winter wheat began to show signs of damage and the estimate fell by several hundred million bushels. Under the stimulus of these influences prices on nearly all farm products began to soar and reached so high a point in early September that the public began to protest and clamor for relief. The department of justice forthwith began investigations to ferret out the "profiteers" and newspapers all over the country set up a cry against the "high cost of living." The packers said food prices were too high; they discontinued their purchases for a few days and hogs took a drop of $4 to $6 per cwt. within less than a week's time. Corn followed suit. Oats and rye were in sympathy. For thirty days there was a veritable stampede in the grain markets. Corn dropped from $2.05 a bushel to $1.55; oats from 81 to 72 cents; rye from $1.54 to $1.41. As explained elsewhere in this issue the increasingly high rate of exchange began to cause a falling off in exports and the failure of the United States



OATS—This market was the least affected by the placing of the new crop on the market. The 1919 crop was way short and except for occasional declines the trend of this market has been gradually upward.

Senate to come to an agreement on the peace treaty delaying the extension of credits to those countries which wanted our products, only aggravated the situation. Another important reason for the great drop in food prices from the first of September to the first of October was the marketing of the new crops. This nearly always causes an easier feeling in the markets tho the decline is not usually so great as it was this year.

Markets Again Regain Their Strength

The middle of October found the grain and live stock markets, and most of the vegetables and fruits recovering from the slump and the opinion is quite general that the coming year will see new high levels in most of the grains. All markets are holding up surprisingly well for the pre-holiday season and this fact is taken as an indication of unusual strength. Wheat has been showing a marked tendency the last sixty days to seek new higher levels and we would not be surprised to see this grain selling at close to its previous high record long before the new crop is harvested. Judging from the recent advances in this market it is hard to believe that the removal of the wheat guarantee in June will have anything but a stimulating effect upon the market. There may be a temporary decline, but we must remember that a very large part of the crop has already been moved and that what remains is hardly sufficient to take care of the demands that will be made upon it. As wheat advances the other grains, it is safe to assume, will follow suit and farmers may expect a steady advance in all grain prices.

What of the Future

According to Herbert Hoover, former food administrator, "starvation faces from fifteen to twenty million persons in central Europe outside Germany unless some quick means can be discovered for their assistance."

Unless relief is quickly furnished government in the countries affected he predicted a breakdown of stable government and "creation of another cesspool like Russia."

Would Sell Grain Surplus

To meet the situation Mr. Hoover proposed that the great surplus of wheat and flour held by the grain corporation be sold on credit to Finland, Poland, Austria and other nations of Central Europe.

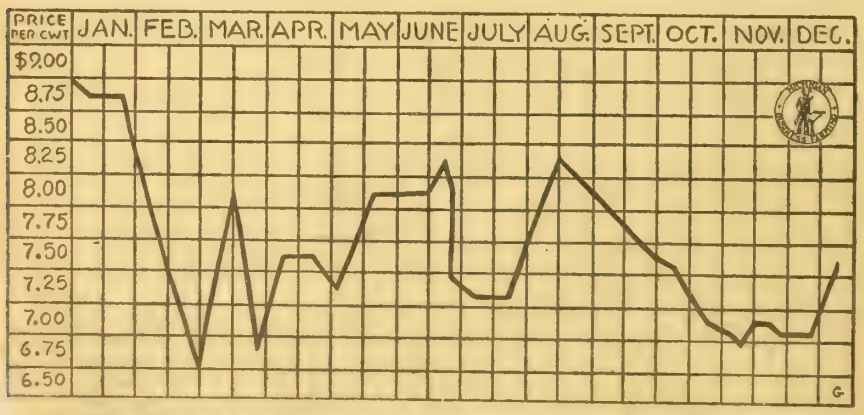
The grain corporation, he said, could extend the credits out of the capital it already possesses without a call for special appropriations by congress.

New Law Provides Credit Expansion

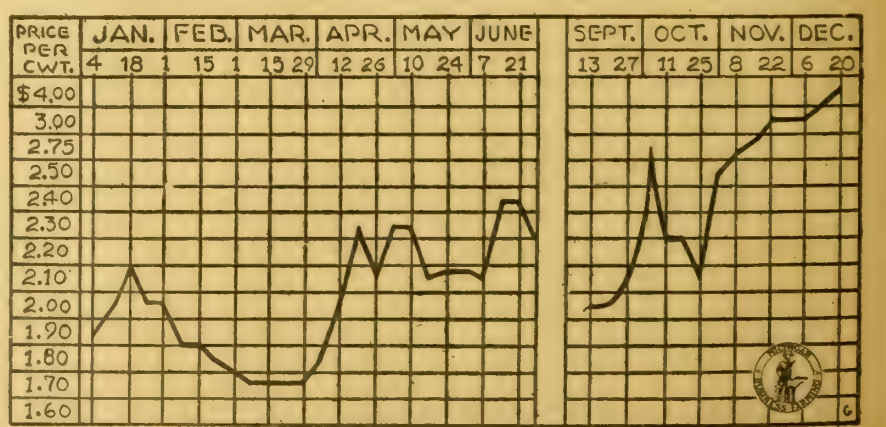
A bill to allow exporters to discount their bills of sale to foreign countries with the Federal Reserve Bank has just passed both houses of congress. It opens the way for an immense expansion of credit just what Europe needs in order to buy freely in this country. "The day the bill passed," says the Rosenbaum Review, "France bought close to 2,000,000 bushels of oats and wheat taking the latter at the Gulf and the oats mainly at New York * * *The end of the bull markets in grain is not yet in sight, and provisions will start upward shortly. If Europe can buy as much hog meat as it needs there will be a great shortage in this country. Further, *the Review* says:

"Think this over: Wheat crop of the United States this year one of the largest on record. Guaranteed price $2.26 for No. 1 red and hard winter and No. 1 northern at Chicago. The average price this season will be the highest on record. Grain Corporation has resold around 40,000,000 bushels or more wheat to mills from its accumulated stocks within 5 months of harvest in the face of the largest movement from farms on record. The requirements of Europe seem to be limited by their ability to pay for the grain. History shows that the highest prices immediately follow a war.

"To increase the price of the 1919 wheat crop, there is the prospect of a short yield in 1920 in the United States. The government December returns showed 38,770,000 acres seeded to winter wheat, or 11,719,000 acres less than the record area in the fall of 1918 and is the smallest since 1914. Of the total area seeded this fall, around 9,000,000 acres or 25 per cent are reported heavily infested with Hessian fly. Winter killing is likely to be severe. Rye, the other bread grain showed a total of 5,530,000 acres or 1,702,000 less than last year. Condition of winter wheat is 85.2 against 98.5 last year and the lowest on record with three exceptions. Only three times has the July condition been above the December. In 1917 the condition of winter wheat for the harvest of 1918 was 79.3 while in July 25.22 bu. per acre with an average yield of 15.2 bu. per acre. A yield in 1920 of that quantity would suggest a crop of 588,000,000 bushels, but for every 1,000,000 acres abandoned it will be necessary to cut the total 15,000,000 bushels."



BEANS—Note that beans followed other markets when they plunged downward in February and March, but that they did not wholly recover their former strength. The chart shows an upward trend in beans during December, and as we go to press this strength is becoming more marked.



POTATOES—Being a perishable crop potatoes have not been governed so closely by the influences affecting the grains. The trend of the potato market since the opening of the season the first of October has been decidedly upward and even higher prices are anticipated. But it is an uncertain market.

Beet Growers Ask for 50-50 Split of Profits

Committee Rejects Plan for Flat $15 Contract as Farmers Entitled to more at Present Sugar Price

AT A RECENT meeting of the committee named by the sugar beet growers to represent them in a conference with the sugar manufacturers for the purpose of drawing up a new contract on the 1920 crop, it was definitely decided not to ask for a flat $15 rate. Two reasons were given for this. The first one was that the growers had no positive information that the manufacturers could afford to pay that rate in case sugar prices declined and it was the unanimous sentiment of the committee that nothing should be done to cripple the manufacturers or prevent them from making a fair return on their investment. The second reason was that the flat $15 rate would not give the farmer a fair share of the prifits derived from sugar at its present wholesale price and that no matter how much the consumer might have to pay for sugar the farmer would receive no benefit from the increase.

Various plans were presented by members of the committee all looking to a fair division of the profits. The proposal to adopt a sliding scale based on both the percentage of sugar contained in the beets and the wholesale price was rejected because of the well known difficulties encountered in making a test of the beets satisfactory to both producer and manufacturer. This is the plan that is followed in California, and is considered the only thoroughly equitable one, but the time does not seem ripe for its re-introduction here in Michigan. Some day when the beet growers are thoroughly organized we may hope that they will be in a position to have their inspectors at every loading station and secure a correct test of their beets and share in the proceeds of the higher test beets. Under the previous and present arrangements between farmer and manufacturer there has been no incentive to grow high test beets, but we predict that the time will come when the beet and sugar industry of this state will depend for its very existence upon the production of beets high in sugar content. The abnormally high prices will serve as a stimulus to a greater production of both cane and beet sugar and some day we shall have to reckon against over-production and low prices. When this time comes the Michigan sugar beet with its low content of 12 to 15 per cent sugar cannot compete with the California beet nor the Cuba cane. New methods of fertilization and cultivation will have to be employed to increase the sugar content of Michigan beets else they will be put out of the running. When this time comes the manufacturers will have to make it an incentive for the farmers to grower higher test beets.

But to return to our story. The members of the committee reported that they had held mass meetings in their respective territory a few days previously and that the unanimous sentiment of the growers was that they did not care to grow beets another year under the old contract. Farmers in all sections of the sugar beet counties reported to the committee that they intended to withhold their signatures from any contract unless approved by the committee. It is probable that the committee represents eighty to niety per cent of the beet growers and that any orrangement made between it and the approval of the growers.

The plan which the committee finally adopted as the basis of the contract they will suggest to the manufacturers was presented by Mr. C. E. Ackerman, of Durand. It provides, first, for a fixed minimum price of $12, based on sugar at nine cents or less per pound. The manufacturers claim that beets this year will test 14 per cent or higher. A ton of 14 per cent beets would be worth $25.20 with sugar at 9 cents.

Twelve dollars of this would go to the farmer; $15.20 would be the manufacturer's portion. As sugar advances in price from the 9 cent basis, the plan contemplates that the increase shall be shared equally between manufacturer and farmer. The accompanying table shows how each increase of one cent per pound of sugar would increase the farmer's return per ton of beets. At the present price of sugar the farmer would receive for next year's beets $16.20, under the plan adopted by the committee, or $1.20 per ton more than the flat $15 rate would bring him.

The manufacturers are to be invited to a conference to be called in the very near future and they will be asked to recognize the reasonableness of the farmers' request for a greater share of the profits derived from the sale of their product, and draw up a new contract along the plan outlined above. There will be no suggestion of force or coercion on the part of the committee. It will merely be presenting the practically unanimous opinion of the sugar beet growers whose very numbers are an obstacle in the way of their meeting the manufacturers en masse or individually. The manufacturers will be advised that the growers are willing to accept a contract this year that will give them cost of production plus a fair share of the profits. If the manufacturers do not wish to be fair and present the farmers with such a contract, there is no law under the heavens that can compel the farmers to accept a lesser contract.

The entire state press will be invited to attend this conference. The farmers will as usual place all their cards on the table and they want the public to see them and be the judge of whether their request for a better contract is just and reasonable. The farmers wish to keep entirely within both the civil and moral law in their negotiations with the manufacturers and they are willing that the public shall also be the judge of this. They intend to show that the new scale of prices which they seek will encourage greater production, thereby relieving the shortage and benefitting all concerned.

There is plenty of time in which to sign up contracts for next year's acreage and farmers are urged to withhold their plans on next year's acreage until after the committee meets with the manufacturers. Many farmers declare they will turn to some other crop, but we are sure that they will find sugar beets a profitable crop under the proposed contract.

What the Farmer wants for Beets

Wholesale Sugar Price	Total Value of Ton of Beets Testing 14%	Farmer Wants	Manufacturers' Portion
9c	$25.20	$12.00	$13.20
10	28.00	13.40	14.60
11	30.80	14.80	16.00
12	33.60	16.20	17.40
13	36.40	17.60	18.40
14	39.20	19.00	20.20
15	42.00	20.40	21.60

Sugar Supply of 1920 not Equal to Demand

The latest information to be had on the probable supply and demand for sugar in 1920 is contained in the following letter from the U. S. Department of Agriculture:

"The total world sugar production for the season of 1919 which just began a few months ago, and will end late in 1920, is estimated at about 16,600,000 long tons, which is 279,000 tons more than we produced last year. These are totals given by Willett & Gray, quoted from the most authentic sources. For the season of 1914-15, the world production was estimated at 18,532,000 long tons, or nearly 2,000,000 more than was produced last year or expected to be produced during the current season. The principal shortage is in the beet crop of Europe. About the time of the outbreak of the war, Europe was finishing the beet sugar season, which resulted in a production of 8,243,000 tons. The average production of European beet sugar for the five years ending in the summer of 1914, was about 7,400,000, while the prospective output for 1919-20 is given as 3,469,000. A long ton is 2,240 pounds. So much for the world situation.

"Sugar production in the regions from which the United States gets its supply has increased greatly since the outbreak of the war. The principal source is Cuba. During the fiscal year ending June 30, 1919, the United States received 5,489,000,000 pounds of sugar from Cuba; 1,216,000,000 from Hawaii; 703,000,000 from Porto Rico; and 211,000,000 fro mthe Phillipine Islands, also, 136,000,000 from other sources outside of the United States, making a total import of 7,755,000,000 pounds. The net supply for that year amounted to 8,727,000,000 pounds. In the year before the net supply was only 8,090,000,000 pounds. Cuba's production for the current year is now estimated at over 9,000,000 pounds, some of which would naturally be bought by other countries besides the United States. The Sugar Equalization Board estimates a great increase in the consumption of sugar in the United States. This Department, however, has no definite figures on sugar consumption. The supply, however, seems without doubt larger than it was early in the war.

"In considering the shrot supply in the world compared with before the war, we should take into account possible changes in purchasing power. It is hardly to be expected that the European countries, which have suffered heavily from the war, would be ready to purchase as much sugar as they were accustomed to use before the war. International exchange, also, affects the purchasing power of the European countries in buying sugar abroad.—*Frank Andrews, Chief Division of Crop Records, U. S. Department of Agriculture, Washington, D. C.*

U. S. to Continue Sugar Control

Congress has voted to continue federal control of sugar prices for another year. M.B.F. has advised the Sugar Equalization Board of the new contract terms Michigan growers are asking, and has urged that the wholesale price be fixed high enough to allow the farmers a fair price under this contract.

Campbell Noses into First Place again with Baker Hot on his Heels

THE RACE is getting hot. Two weeks ago Campbell led all contenders, with Simpson running second and Baker third. Last week Simpson dropped to third place, Baker took first and Campbell second. Then the "Campbellites" got busy and showered us with enough votes to restore Campbell to the lead and drop Baker to second place. As we go to press the majority of votes coming in seem to favor Baker. Nathan P. Simpson is getting all sorts of votes and boquets from all parts of the state and we predict that he is going to be a close contender for first place. Of course, Mr. Simpson says he is not a candidate, and Herb Baker says he wants to go back to the Senate, but we imagine that any of the gentlemen on the ballot would accept the nomination for governor if tendered to them on a silver platter with trimmings attached.

The federated committee of the farm organizations is to meet very soon now to map out their program and name men to lead the farmers to victory in the next campaign. It is very important that they have a strong expression of the views of the farmers, and we expect to lay before them the result of our straw ballot. We do not expect that the Committee will be entirely guided by the result of our straw vote, but it will serve to point out to them the several candidates who are strong and those who are weak.

Clip This Coupon

PLACE a cross after the name of your candidate, or if you prefer someone not mentioned write in the name on the dotted line. Then clip the coupon and mail it to Editor Michigan Business Farming, Mount Clemens.

Herbert F. Baker ☐	W. N. Ferris ☐	Nathan P. Hull ☐
Milo D. Campbell ☐	Fred Green ☐	Chase S. Osborn ☐
Edwin Denby ☐	Alex J. Groesbeck ☐	Nathan F. Simpson ☐
Luren D. Dickinson ☐	John C. Ketcham ☐	Dudley E. Waters ☐
Horatio S. Earle ☐		L. Whitney Watkins ☐

M .....

Will you support any good farmer candidate named by the legislative committee of the farm organizations? .....

If your candidate is not listed above write in name.

Thousands of our readers have not yet voted. It costs nothing but a two cent postage stamp to cast your vote and it may mean the selection of the man whom you most desire to see elected. We are well pleased with the interest shown thus far but we urge those who have not acted to clip out the coupon AT ONCE. If you renew your subscription or write us upon any matter be sure to include your vote with your letter. Below are some of the expressions of opinions from readers upon the governorship matter:

* * *

My first choice, Herbert F. Baker; second, Chase Osborn; third, L. Whitney Watkins; fourth, Jas. Helme, or I will stand back of any candidate in your list.—*W. R. S., Sterling*

* * *

"Enclosed you will find ballot marked for Milo D. Campbell for governor. Two votes for him at our house. We think your paper just great. Wishing you all the best season's greetings.—*Jos. R. R., Sebewaing, Mich.*

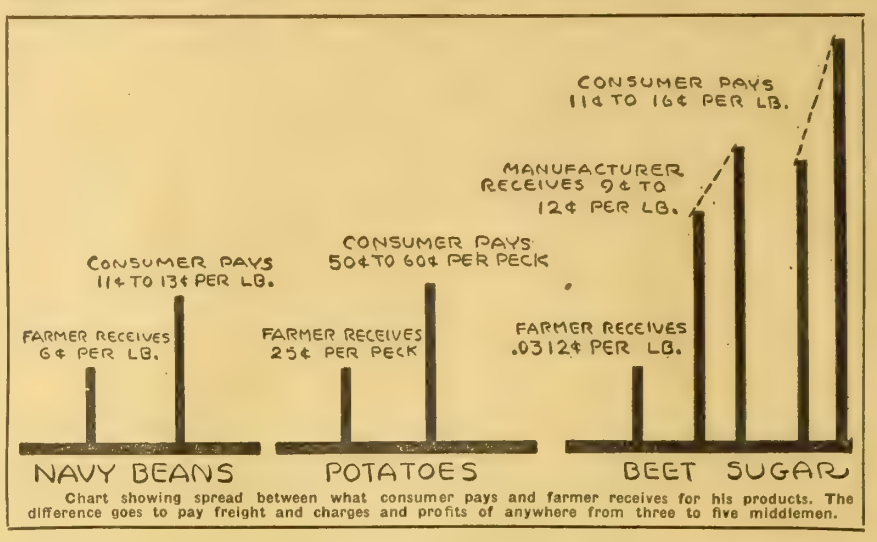
Fair-Price Committee Gives Farmer Hearing

Detroit Price Regulating Body Discloses Ignorance of Farmers' Costs and Trials

THROUGH the courtesy of Mr. Allan P. Cox, chief assistant prosecuting attorney of Wayne county, the editor of Michigan Business Farming was permitted to appear before the Detroit Fair-Price committee last Wednesday and present evidence to disprove certain statements which were given out to the public several weeks ago by a member of the committee. These statements were published in a Detroit newspaper and formed the basis of an article that was printed in the Dec. 6th issue of M. B. F.

This Fair-Price committee came into being at the behest of the Detroit council. It is composed of seven or eight wholesale and retail merchants, a member of the dairy and food department, and a member of the women's clubs of the city. The work of the committee is under the direct control of the prosecuting attorney of Wayne county. The committee attempts to recommend a maximum plane of prices on food commodities under which the average wholesaler and retailer can do business. Any merchant caught selling at prices above those published by the committee is technically guilty of profiteering. One objection that has been raised against the committee by the people of Detroit is that the prices it announces are higher than many retailers are charging and that this fact encourages those who sell below that price to immediately raise their prices to the level recommended by the committee, which, if true naturally raises the cost of living. The committee argues, however, that the publication of its prices induces merchants who can sell under that level to use these prices to draw business to their stores and that the resulting competition forces high-price merchants to reduce their prices accordingly.

Be that as it may the majority personnel of the committee make it peculiarly sensitive to attacks upon the wholesale and retail business in general and there has been altogether too great a readiness to shift the blame for the high cost of living upon the shoulders of the farmer. We found certain members of the committee quick to resent any suggestions that the blame for the high cost of foodstuffs lay upon the cumbersome and expensive methods of distributing this food. One member, the president of a chain-store company asked this question: "Do you believe that those who have their money invested in the marketing of this food should be done away with. That would be depriving them of their bread and butter, and that would be a class measure." Our reply to this way: "Your chairman has already emphasized the necessity of eliminating all extra expense and reducing profits to a minimum in getting this food from the producer to the consumer. If we found that these men of whom you speak are not essential in the efficient and economical distribution of food, would you argue that the consumer should carry them along and pay toll to them." To which question he made no reply.



CONSUMER PAYS 11¢ TO 16¢ PER LB.
MANUFACTURER RECEIVES 9¢ TO 12¢ PER LB.
CONSUMER PAYS 50¢ TO 60¢ PER PECK
CONSUMER PAYS 11¢ TO 13¢ PER LB.
FARMER RECEIVES 6¢ PER LB.
FARMER RECEIVES 25¢ PER PECK
FARMER RECEIVES .0312¢ PER LB.
NAVY BEANS
POTATOES
BEET SUGAR
Chart showing spread between what consumer pays and farmer receives for his products. The difference goes to pay freight and charges and profits of anywhere from three to five middlemen.

Below are extracts from the arguments we presented to this committee in defense of the farmer:

"I am here to say to you that the statements emanating from this committee about the farmer are ninety per cent false and 100 per cent misleading and by the rules of the square deal should be corrected. I think I see how it happens that unfair things are said about the farmer. You retailers and wholesalers gather here to fix the responsibility for profiteering if there be profiteering. Mr. Retailer says, 'It is the wholesaler who is profiteering. Mr. Wholesaler denies the allegation, but since someone must be charged with the crime, it is laid up against the farmer who is not present and cannot speak for himself.

"You have heard it said that the famer feeds the world. Food is life and life is everything. But how lightly does the average consumer look upon this most essential commodity. How indignant he is when the price of butte and eggs advances. Motor cars may double and triple in price, but all is well. Theatre tickets may advance fifty per cent but the public does not complain. Even clothes, fashionable clothes, twenty per cent of which is material and the balance style, can scale the ladder of high prices to dizzy heights and the consumer pays the bill and goes blithely on his or her way. But, my friends, a proportionate advance in the prices of foods is a matter to call down the condemnation of the press and public and arouse the minions of the law to a frenzy of investigation. Yet, you folks know that food constitutes the minor part of the family budget. Frequently a month's rent is much more than the total cost of the month's supply of food. I cite these things to you merely to show that you ought to have a better understanding of the cost of producing and be less critical of the farmer who grows the things that keep your body and soul together. And I ask that you give the figures and facts I present to you careful thought and consideration so that the next time you are tempted to criticize the farmer you will be a little more charitable in your conclusions.

"Now, I want to make a very broad statement. It is this. The farmer, as a rule receives less than sixty cents of the dollar which you consumers spend for his products. Where the rest goes, I am not prepared to say. Nor do I intend to insinuate that the gentlemen who are present here this afternoon engaged in the wholesale or retail grocery business are profiteering. I do not intend to say they are because I do not know and that is precisely the reason why I am asking you to refrain from making any further public statements concerning the farmers' profits, because it is a subject of which you know very little."

The Spread Between Producer and Consumer

A large chart similar to that reproduced here was exhibited to the committee showing the spread between what the farmer receives and what the consumer pays for his food. For some reason or other the simple truths revealed by this chart aroused the ire of one J. C. Cusick, head of the Superior Wholesale Company, who charged that we were attempting to arouse the consumer against the wholesaler and retailer. He challenged the correctness of the figures and declared that there was no place in Michigan where potatoes could have been bought from the farmers the middle of November for $1 per bushel. He accused us of distorting the truth and made such bitter attacks upon the farmers as to call forth the opinion of the writer that if his remarks reflected the opinion of the entire committee we were forced to the opinion that the committee was trying to protect the interests of the wholesalers and retailers instead of the consumers of Detroit. Be it said, however, that all other members of the committee were courteous in their attitude and seemed to take a genuine interest in the facts present. Mr. Cox said: "Granting that all you say is true, what is your plan for reducing the cost of distributing this food." "That," we replied, "is a problem altogether too great for this committee to solve. It is a problem which will try the skill of the nation's best experts, but it is a problem that will eventually be solved. No plan that we might suggest here today would find favor in the eyes of this committee because the majority of them are opposed to a change in present methods and when the problem is solved it will mean that some of the men who are here today must go into some other line of business. Roughly speaking, however, the solution of the problem lies in groups of organized consumers dealing direct with groups of organizer producers."

High Rate of Exchange Means Lower Prices to American Producers

HE ACCOMPANYING article was submitted to us by the American Ass'n of Meat Packers. It is evidently offered in partial explanation of the drop in hog prices. Whether or not it constitutes the principal or even an important reason for the decline, it does contain much information of interest to farmers.

IT MAY SEEM a far cry from a decline in sterling exchange values to an American farmer's hog, but the connection is very real and the drop in the exchange value has cost the farmers of this country millions of dollars.

This is how it came about:

Before the armistice, and for several months thereafter, the food purchases of the Allied governments were controlled by the United States Food Administration. While this arrangement was in effect, liberal credits were extended by this government to the Allies. The exchange value of Allied money was thus supported.

But last March the control was withdrawn, and free trading was resumed.

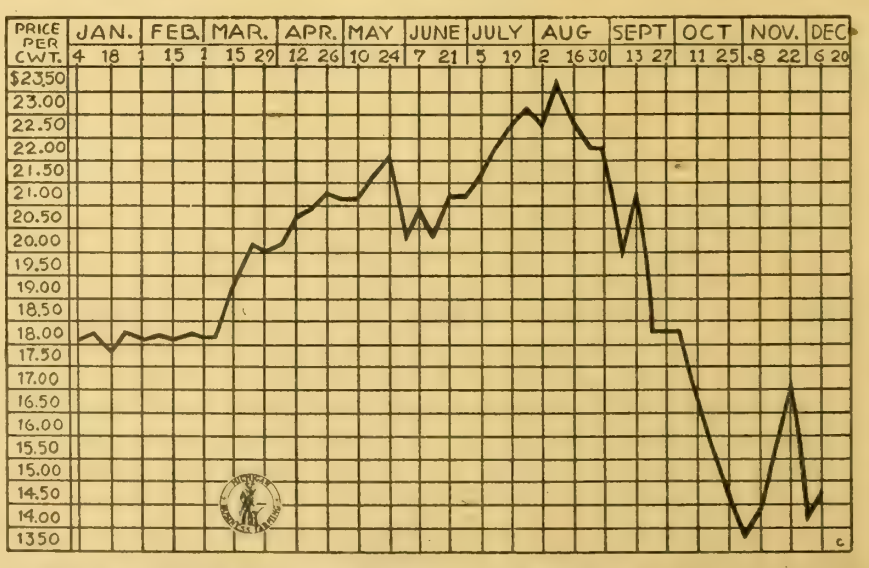
England bought heavily—very heavily, especially pork products. Other countries did likewise, but the case of England is notable.

This heavy buying was reflected during the spring and early summer by high prices for American hogs. The farmer, in a sense, was the direct beneficiary of British buying.

At the time these English orders were taken, a pound sterling was worth perhaps a little more than four dollars and seventy cents. The packers, who generally received for their products sixty-day bills or drafts on London, counted that these bills, payable in sterling, would bring just four dollars and seventy cents per British pound sterling.

It is common practice to sell these bills to bankers at a discount, so that the proceeds may be used immediately in the packing business.

The first of the bills on London were bought by the bankers at something like the price expected by the packers. But when additional bills on London were offered for sale, it was found that the exchange value of the pound sterling had decreased, and the bills worth less than had been calculated. In other words, the packers had set a price on their products and taken bills on London in payment. Then, when they sold these bills, the money realized was less than the price at which they had thought they were selling the goods.



What happened to the hog market in 1919. The chart does not show the break in the market during the week ending Dec. 13th when hogs dropped to $12.50.

Pork Per Lb. Vs. Pork Per £

Here is a very simple illustration of how it worked.

Suppose the packers were selling some product at thirty cents a pound and were taking sixty-day London bills in payment. Then suppose that by the time they sold these bills this form of exchange had declined six per cent (from $4.70 to $4.42.) This means that the packers would receive for their products nearly two cents a pound less than the price at which they had intended to sell them.

And the exchange value of sterling continued to decline.

So the packers did a very natural thing. To compensate for the falling exchange value, they raised the price of their products in England.

A Race Between Prices and Exchange

This worked all right for a time. Prices mounted steadily as sterling declined.

Then the compensating system broke down. There was two reasons why it did so.

England had bought very heavily;

CURRENT AGRICULTURAL NEWS OF THE WORLD

GRINNELL

CALIFORNIA REPUBLICANS URGE TREATY RATIFICATION

Nearly forty prominent California Republicans joined in sending the following telegram to Will H. Hays, Chairman of the Republican National Committee, at the meeting of the Committee in Washington on December 9, 1919:

"The undersigned Republicans of California concerned for their party and their country, respectfully urge upon you and other members of the Republican National Committee the necessity for the immediate ratification of the Peace Treaty and the duty which rests upon you as the present official representatives of our party to urge the Republican senators to recede from their refusal to pass the treaty without amendments or reservations of such character as substantially to alter its character and to require its resubmission to our allies and to Germany.

"The defeat of the treaty and a separate peace with Germany will be a betrayal of our allies and a victory for Germany. It will mean a continuance of the present chaotic conditions in Europe, with indescribable suffering there and certain reaction here.

"The responsibility for this if the treaty fails cannot be shifted or concealed. It will rest upon the majority of the Republican senators, and, through them, upon the party and the issue, which should not be a party one, will be made so.

"We are confident that the vast majority of the Republicans in this state at least are in favor of the treaty and that the position of the Republicans senators will seriously damage the party."

TEN MILLIONS LOANED TO FARMERS IN NOVEMBER

During the month of November, 1919, an aggregate of $10,689,965 was loaned to 3,352 farmers of the United States by the Federal Land Banks on long-time first mortgages according to the monthly statements made to the Farm Loan Board. The Federal Land Bank of St. Paul leads in the amount of loans closed, the same being $2,107,100, the Federal Land Bank of Houston following with $1,409,245. The other banks closed loans in November as follows: Spokane, $1,315,600; Louisville, $1,036,600; New Orleans, $880,450; Omaha, $723,700; Wichita, $635,500; St. Louis, $620,970; Columbia, $570,100; Baltimore, $505,500; Springfield, $463,300; Berkeley, $421,900.

On November 30, 1919, there were operating in the United States 3,890 Farm Loan Associations. The total mortgage loans made by the Federal Land Banks through these associations to 106,929 farmer borrowers as of that date, amounted to $282,007,781. During November, 8,215 applications were received asking for $29,324,460. During the same period 6,410 loans were approved, amounting to $20,763,905.

The grand total of loans closed is distributed by Federal Land Bank Districts as follows:

Spokane	$37,610,220
St. Paul	37,490,100
Omaha	36,855,390
Houston	31,408,401
Wichita	24,597,400
St. Louis	22,217,250
Louisville	19,936,700
New Orleans	19,548,380
Columbia	15,012,595
Berkeley	15,000,800
Baltimore	11,433,800
Springfield	10,896,745

Up to November 30, 1919, interest and amortization payments due by borrowers to the banks amounted to $15,213,719.64. Of this amount all but $230,671.90, or 1 and 5-10 per cent had been paid, and o fthis sum $124,935.38 represents installments which had only become due during the month.

LIVINGSTON FARM LOAN ASSOCIATION ORGANIZED

The organization of the Livingston County Federal Loan association has been perfected and the following officers elected:

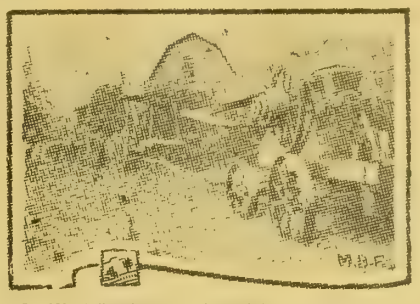
President—Joseph D. Stackable, Pickney; vice president, Rex Gorton, Howell; secretary and treasurer, Irwin N. Ball, Hamburg. Boad of Directors—Joseph N. Stackable, W. F. Shehan, T. P. McClear, of Pinckney, Rex Gorton and W. E. Allen of South Lyon. Loan Committee—W. F. Shehan, Rex Gorton and W. E. Allen.

INGHAM THRESHING GROUP CELEBRATES FINE YEAR

A banquet was served in connection with the annual meeting of the stockholders of the Farmers' Threshing corporation and their families here in the Community hall, Dec. 8. There were 102 in attendance to enjoy the oyster supper and the program which followed.

Reports were given showing that the Bath and DeWitt Mutual Threshing company had commenced operations July 18, 1919, and had threshed 2,000 acres of grain and beans to the amount of 36,658 bushels of grain and 6,425 bushels of beans. The corporation has a membership of 35 stockholders. There are 50 shares of $100 each and at the close o fthe threshing season the stockhoders declared a dividend of 30 per cent on their stock.

F. T. Smith and Monty Ellsworth are the managers. The officers are: president, Will Stadel, who acted as toastmaster at the banquet; secretary, J. J. Slaight, J.; treasurer Fred Wildt.



C. W. BRUNGER, of Bellaire, Michigan, has sent the above picture of a scene showing the work of the co-operative threshing association of farmers in the vicinity of Bellaire. Enthusiastic reports have been sent in of the success of this organization.

CORN SHOW DATE JANUARY 28

County Agent J. V. Sheap has sent out score cards for the Jackson county Corn Show to be held at the store of Reid & Carlton, Jan. 23 and 24. Exhibitors may obtain cards from the county agent in advance of the show, in order that they may know how to select their corn with a better understanding in regard to the points on which it will be judged.

There will be a class for each variety of corn and ten ears of corn will constitute an entry. Exhibitors may enter all classes if they desire to do so. It is urged by the county agent that they get their samples in without delay, as they will probably be in better condition than if kept in a corn crib.

At the last Jackson county corn show some excellent corn was exhibited and it was later taken to the state at Lansing, and the result was that most of the prizes went to this county.

Ogemaw Livestock Association

About thirty of the farmers of Ogemaw county met at the Farm Bureau office at West Branch, Saturday, December 6, and formed a Livestock Improvement Association. Ogemaw county is well spotted with pure bred stock and it is the intention of the Improvement Association to boost the breeding of pure bloods.

HURON COUNTY AND IOWA LAND VALUES COMPARED

As a comparison in the price of Huron county land with that of some of our other states, we quote the following extract from a letter received by G. E. Everingham, of Sebewaing, from John B. Smith, who recently went to Waverly, Iowa, to take charge of the agricultural department of the sugar plant at that place. It is worth reading:

"Was a little disappointed with the Iowa country when I first landed here. The country around Waverly is something like the Bad Axe country, slightly hilly. Hills are sand or sandy loam and the low spots are black sand or sandy loam usually with cold sandy bottom. However, there are some very good clay loam spots. All the river bottoms here seem to be sandy bottoms and they sure have plenty of creeks and rivers. Last week I worked up through about 70 miles north and 100 miles west of here. I made the swing around that section and there I found the Iowa lands you hear about. Land around Waverly is selling at $250 to $450 per acre, but north and west of here it sells for $250 to $600 per acre. I was over an eighty at a place called Bode. Party could sell for $600 per acre and I could duplicate the same farm in Michigan at $175 per acre or less. I am certain that it would be less. The land around Sebewaing is just as good as any I have seen out here, and I believe that I have seen some of their best. Their corn here this year averaged about 40 bushels per acre and beets around 8 tons. Sebewaing territory had them beaten 50 per cent this year on corn and almost 400 per cent on beets.—*Sebewaing Blade.*

"Am Not a Candidate"—Helme

I note you have my name on your ballot for Governor and I acknowledge your request for a biography. Please take my name off the ballot as I would be an impractical candidate. Barring political revolutions the next Governor of Michigan will be nominated at the Republican primaries, next August. I could not be nominiated on that ticket and I could not be elected on the Democratic ticket. So it would be useless to vote for me. I would not accept a nomination for Governor on any ticket. Thanking you for the complinemt of suggesting my name. —*J. W. Helme, Adrian Mich.*

Excess Wool Profits Apportionment by U. S. Involves Five Distinct Steps

THE Department of Agriculture is receiving inquiries from wool growers of the country concerning the progress made in winding up the affairs of the Domestic Wool Section of the War Industries Board. The work involves four distinct steps or activities and it seems probable that fifth will be necessary.

The first step is to secure, on forms furnished by the department, sworn reports from the 3,686 country dealers and the 179 distributing centers dealers to whom the War Industries Board issued permits to deal in wool of the 1918 clip.

The second involves the auditing of these reports, in detail, to determine whether the methods pursued and the profits made are in accordance with the regulations.

The third is the collection of excess profits from those persons or firms whose reports, after auditing, show that such excess profits were made. As rapidly as they are received by the department, all remittances for excess profits are being deposited as a special fund in the Treasury of the United States.

The fourth is a careful analysis of each report which shows excess profit with a view to work out the fairest possible method of distributing such profits. After this is done, the department proposes to disburse the excess profits by check of its own disbursing officer drawn on the Treasurer of the United States.

The fifth step will be an audit, in the field, of the books and records of dealers whose reports for any reaseem to make this course advisable.

The first division of the work has been very nearly completed. A relatively small number of approved dealers have failed to make reports, and it is believed that the transactions of many of these were so small as to be practically negligible.

The department has not yet taken drastic measures to obtain the outstanding reports, but is ready to take whatever action may be necessary to enforce compliance with the regulations.

It has been discovered that several hundred wool dealers carried on their business as usual during 1918 without securing permits. As the names of these dealers have been ascertained, they have been required to furnish reports similar in all respects to those required from permit holders and to pay over their excess profits whenever it appears that they have made more than the regulations allowed. In other words, they are not allowed to derive any advantage from having operated in ignorance or violation of the regulations. The discovery of many of these unauthorized dealers was impossible until the reports of the 179 dealers in distributing centers were audited, since the entire wool clip of the country eventually passed through their hands and was itemized on their books either as purchases or consignments.

The second division of the work, that of auditing the reports received, is progressing as rapidly as the force available will permit, and the collection of excess profits proceeds as the audit of each separate case is completed. Many of these individual reports contain a record of thousands of transactions and the auditing process is correspondingly slow. Until the audits of the reports of approved dealers are completed, the department will not be able to complete its list of unauthorized dealers. This fact will delay the completion of the collection of excess profits.

As rapidly as excess profits are received from any dealer they are apportioned to the indivdual growers to the extent to which their identity is disclosed, but the actual payments are being withheld until the collection of excess profits is more nearly completed, in order that practically all the growers may receive their checks at approximately the same time.

The reports of many country dealers show no excess profits. Relatively small amounts of excess were made by most of the others and the refunds to individual growers will, in many cases, be very small. In other cases, the refunds will amount in the aggregate, to several cents per pound upon all the wool which the dealer handled.

The greater part of all excess profits appears to have accumulated in the hands of certain distributing center dealers who purchased largely through direct agencies in producing sections. Many of the distributing cent dealers, who handled wools on consignment only and whose profits were necessarily limited to the commissions paid by the government, appear to have no excess. In the discussion of this subject in the press, the fact that nearly two-thirds of the wool clip of the country is so-called territory wool from the western and Pacific Coast States, which was handled almost exclusively on consignment, and therefore furnishes no opportunity for the accumulation of excess profits has, to some extent at least, been overlooked.

A Happy New Year to You.

IF ANYTHING happened to the world on the day the end was predicted to come, we haven't been advised of the fact. In these parts the old globe seems to be enjoying her usual good health and jogging along in the same old rut as usual. If any heavenly bodies wandered out of their course and came a-courting this way, old Mother Earth gave no perceptible sign that she was aware of their presence, for she kept blithely on her way and never once truned her head. The sun still comes up in the morning, plays hide and seek with the grey winter clouds, and after an incredibly short time hides himself for the night behind the storm clouds in the west. The snow continues to drift lazily earthward; the children traipse by on their way to school with noses red and dripping just as in days of yore when you and I were kids; the doctor still bustles by with his medicine case under his arm to treat a case of mumps or help some tiny piece of humanity into the world; and the undertaker's black wagon rumbles past carrying the remains of one who has shed all his earthly cares. In fact, we can't perceive any change at all in the usual order of things except that eggs have advanced another two cents and the coal office called us up this morning and said that the coal strike being settled we could now have another quarter of a ton of coal on our contract which we placed last spring.

So, dear readers, it appears that we must hang around the sphere for a little while longer and continue to perform our allotted tasks. The plan of life and death and the mortality of the untverse is still the secret of the All-Father. If the hour ever comes when man is called to give an account of his earthly pilgrimage, it will come as in the twinkling of an eye, and we imagine that science will be standing around with its mouth wide open and a puzzled look in its eye.

But what we started out to say was that since we have survived the prognosticated catastrophe and in all probabilities will be given at least one more year's lease on life whether we would or no, we M. B. F. folks wish all of you M. B. F. folks not only a happy, but a helpful, a contented, and prosperous New Year, overflowing with the blessings that come with serving our fellow-men and our God.

That Farmer Governor Caution

THE STATE PRESS is showing a lively interest in the farmer-for-governor movement. Generally speaking the attitude is favorable. Now and then, however, some daily paper will sound a word of warning against the farmer who "farms for politics" only.

We have heard about this kind of specimen from our well-meaning city contemporaries, but we have never seen him. Our acquaintance with the farm leaders of Michigan is fairly broad and our opportunity to judge is fairly good but we know none of any standing among the farmers whose interest in agriculture is not sincere. It is inevitable that men who have spent a good share of their lives to advance the interests of farming should be placed under the suspicion of being self-seeking politicians. It is merely a part of the sacrifice that all men are compelled to make who dedicate their time and money to the furtherance of the public welfare.

Men are continually coming up for office who have never turned their hand to help another, and with the aid of those who caution us against the "farmer politician" slide into public jobs. Lawyers, bankers and business men join lodges, contribute to campaign funds and use their friends to build up political fences—but the Gods forbid that the farmer should do any of those things.

This cautioning of the farmer to "beware the man who farms for politics" is hot air and camoflauge. The city press knows it hasn't got a leg to stand on if it attempts to oppose the farmers' organized efforts to elect a farmer governor, and so under the guise of friendship it insidiously attacks the leaders of agriculture hoping thereby to create division and turn the farmers against each other.

A Correction

HERBERT F. BAKER says that we were mistaken about his being chairman of a joint labor and farmer conference at Chicago recently. We hasten to make the correction and ask Mr. Baker's pardon for our blunder.

Mr. Baker is president of the Farmers' National Council, a federation of a number of farm organizations, which has taken a more or less active and fruitful part in shaping legislative affairs at Washington. This council held a conference at Chicago the middle of November with the National Co-operative Association, composed of organized groups of consumers. Mr. Baker was chairman of this conference and its object was of a most commendable nature. The conference sought to establish some plan whereby organized farmers and consumers could co-operate in the exchange of commodities eliminating as many middlemen as possible. The conference with the Chicago Federation of Labor was held after Mr. Baker's departure from Chicago.

It might be said in this connection that any project with which Herb Baker aligns himself is a project worth supporting, and if Mr. Baker has set his splendid abilities at work to discover a way around the middlemen that stand between producer and consumer, it goes without saying that the way will be discovered. We want to assure Mr. Baker that we are with him, heart and soul, in this enterprise.

Men Vs. Measures

FOR A LONG time the people of this country have embraced a false theory of political economy. They have held that the measure was more important than the man. A measure is an abstract thing. It means nothing unless carried out. And it cannot be made to function unless it is placed in the hands of a person. Measures have been tried and found wanting. The men who have been chosen to put measures into effect have not always carried out the letter of the measure with which they were entrusted. Ever since the Constitution was adopted men have been elected to office pledged to carry out a certain program, but in a great many cases they have been false to their trusts. The strict adherence to measures to the almost total exclusion of the qualificaions of the men appointed to put them into action has divided the country in partisan groups. It is well known that innumerable voters will vote for any kind of a man who pledges himself to carry out certain measures, without ever giving any thought whatever to the character of the individual.

Isn't it about time to discard this false theory. Haven't the events of the past few years proven to us that it is no longer good business nor good politics to trust worthy measures in the hands of unworthy men? Corrupt men may corrupt good measures, but corrupt measures seldom corrupt good men. The measure is no longer the determining factor in good government. Look first to the qualifications of the man, and the measure will take care of itself.

Gold or Grain

IN THE early centuries when people labored for the sole purpose of keeping their bodies clothed and fed, with no thought of accumulating a surplus of wealth, there was no such a thing as a medium of barter and exchange. If the fisherman wished to change his diet and hankered after goat meat, he simply took a mess of fish to the goatherd and exchanged it for a portion of goat's meat. This simple manner of exchanging one necessity for another was naturally not conducive to hoarding. Manifestly a fisherman couldn't lay up a lifetime's supply of fish, nor could the goatherd pile up his wealth of goats in his safety deposit vaults and go to the Bermuda Islands for the winter.

Adam Smith, in his "Wealth of Nations," tells us how man finally reached the civilized point of realizing that this manner of bartering was crude and cumbersome. The more thrifty began to accumulate more of the goods which their work made possible than they could consume or conveniently exchange, so the desire was created to use some convenient article which everyone within certain limits of territory would employ as a medium for purchasing goods. Because metal could be conveniently handled and it was none too plentiful, the ancients began to use crude metals pounded into a remote resemblance to our present-day coins. At first iron and other coarser metals was used but very gradually nations began to drift to gold, silver and other more precious metals.

Even though gold and silver has long been used as media of barter and exchange, there have been brief periods when their purchasing power was low because of the scarcity of the goods their possessors desired to buy. You remember the seven lean years in Egypt when Pharoah commandered all the grain of the kingdom and placed it in the stewardship of Joseph. All the precious stones and metal in the earth could not compare in value with the wheat that was stored away. For gold cannot be eaten nor by any manner of means can it extend life a single hour if there is no food which it may purchase.

Are we coming to another period when grain will be better than gold? There is famine in the world. Millions of people are on the verge of starvation. The farmers' supplies of grain are in demand, and there is no better security to be had than wheat or corn. All other commodities may decline in value, but grain, the staff of life, will remain stable and unchanged. For it is the one security that can be stored indefinitely and eaten, if necessary, to sustain life.

Reactionaries and the Legion

RETURNED SOLDIERS have cause for a lot of thinking these days. Especially the million or so members of the American Legion find this to be the case. Persons not fully acquainted with the facts are continually saying to Legion members something like this: "I see Wall Street is backing the Legion."

Now the average member of the American Legion resents statements like that. The Legionaries are mostly young men with liberal tendencies at the polls. They made a great sacrifice for democracy and freedom. Especially this may be said for the several hundred thousand farmers returned from the war. When they helped form the Legion in Paris last winter, the ideals were splendid—the principles above reproach. No sign of Wall Street there. It was when the natural instinct of the returned soldier broke out against anti-American bomb throwers and assassins, that Wall Street saw a straw of hope in its propaganda fight against radicalism. The Legion men merely do not wish to see the Constitution thrown aside. They stand for Americanism and resent opinion that they are reactionary.

WHAT THE NEIGHBORS SAY

FARM BUREAU VS. FARMERS' CLUBS

We are close and interested readers of your publication, Business Farming, and are thankful that the farmers of Michigan have so true and fearless a guide in these times of unrest and general upheaval.

There is one point which I would like to see elucidated a little more clearly, viz, just what is the difference in principle and aims of the Farm Bureau and the Michigan Farmers Clubs? If the difference is not essential to the well being of the farming people, why two organizations? If it is essential why not make it so clear right now that the voters will be so well informed on the subject by election time that all the camouflage of glib oratory, and money cannot blind them, as priviliged interests always have done and still evidently count upon doing?

We need a true farmer governor, hard as many other absolute "hewers of wood and drawers of water" in the coming legislature as we can possibly get to hold up the hands of such a governor. But who, is the question. We were sorry Grant Slocum absolutely declines the honor. It seems early to cast even a straw vote for men who will stand for principle and justice in such a campaign as the coming one will be, must be like those of our Revolutionary fathers, impervious to all kinds of abuse, bribery, calumny and incapable of bending to sophistries or pretense.—*R. L. M., St. Charles, Mich.*

Your good words are much appreciated. The general aim of all farm organizations is the same, viz., the uplifting of agriculture. The Farm Bureau leaders claim that their organization provides a medium for the co-ordination of all farm organizations. Being of a national character, the Bureau, it is claimed, is in a better position to bring all farmers into a great national body. We are sorry that the Farm Bureau has not seen fit to take the other organizations into its confidence and make them feel that they are to be integral parts of the Bureau. There is work for all, and that work can best be done by all working harmoniously and unitedly together.—Editor.

PRICES WILL NEVER AGAIN BE WHAT THEY USED TO BE

In your last issue you asked, "How Shall Farmer Educate Consumer?" In answer, let there be a fund raised by every farmer in Michigan donating a small amount of money to be used in advertising in the big city dailies. That is the only way the consumer can be educated as to what the farmer is up against in production.

One thing is certain: Food prices will never be again what they were 10 and 20 years ago; 'twould be physically impossible. In times gone by the farmer, in order to sell at the prices we received, mined his land of nearly all its virgin fertility, worked his wife and children for which they drew no pay, but the farmer of today is too well educated to put up with these conditions any longer. There is hardly a farmer in the United States today, that doesn't know all about conditions in the cities, its big wages and short days to city laborers. The amount of money the average farmer can make farming doesn't look good at all compared with what he can earn in the city and farmers are quitting by the hundreds and going to town. Around here 30 to 50 years ago the land was still nearly all in forests and now a large part of it has been farmed out and is ready to be abandoned. Lots of it wouldn't produce enough to pay a man and team wages for plowing it, to say nothing about the rest of the laws required to make and harvest the crop. If this land is used any longer it has got to be re-built and that means lots of money and labor invested before there can be any paying returns received. This is the biggest reason I know of as to why food prices have got to remain high. It will have to be high prices or no food.

When a man starts in to bring up run-down land by the use of commercial fertilizer and barnyard manure he begins to realize he has some job on his hands and if he can't get reasonable pay for his labor and money invested he don't do it. That's all. We have four votes here at our house for a man for governor who has been an honest-to-God farmer. Not one who has farmed by proxy. To understand the farmer's problems thoroughly he must have labored at farm work with his own hands for a number of years. I would suggest that M. B. F. give the past history of all candidates. How did they make their money? How many years did they put in at actual farm work? Knowing this, every voter in the state would know at once how he wants to vote. Get me? Am sending you a clipping taken from the *Grand Rapids Press* which expresses the same idea (by the editor). At our house we will vote for the man, if there be such, who has worn callouses on his hands for many years doing actual farm work, not the kid glove fellows—*A. A. L., Cedar Springs*

Yes, you are right. If the farmer could only get the facts before the consumers they would soon understand why farmers are not profiteering at present prices and why prices of foodstuffs can never be as low as they used to be. Certain big magazines, notably Collier's Weekly and the Saturday Evening Post are doing a great deal to enlighten the consuming public on the farmers' case but there is much left yet to do along this line. Please don't lay too much stress on the "callouses" of the farmer candidate for governor. To make a good governor a man must have some training and experience off the farm. Let's not lay down any fast rules about this matter. Let's look into the record of the candidate, and if it's all right support him even if he does wear "kid gloves." Kid gloves don't disqualify a man for the job if his heart is in the right place. If there is a man listed among the "farmers" on our M. B. F. straw ballot whom you cannot trust to represent the farmers, give us his name, and the reason why you suspect him, and we'll look into his record a little more closely.—Editor.

THE MINERS' TROUBLES

Your paper is generally right. You may be misinformed regarding the miners' troubles. They gave long notice of the strike and made many requests for adjustment. In many mines they did not average three days a week last summer. Cities should have municipal storage for summer out-put. No one peeps about that. Why? It would do away with rush speculation and cause operators to have money invested. The state and municipal storage warehouse idea would end many problems of economical distribution.

I do not know what you can do with the grand central farm bureau idea. It is plain to one who knows the men at the top. It has been boomed by Big Business. There is danger in it. I am very glad you are on, but be careful, men who will enjoin a miner against his fraternity funds will hurt you if they find it necessary.

It is not that I do not think you square with the common people that I do not want you to make any errors that will cripple you.

$25,000 is too much for Federal Farm Loan when so many small farmers have trouble getting smaller amounts. Better the small rural home than large corporation farms and speculation. Accept my apology for the intrusion.—*R. H. W., Lewiston.*

On my desk lies a letter from Mr. J. C. Wetmore, author of the "Uncle Rube" articles. Mr. Wetmore says: "In conversation with a man from the Ohio coal fields I learned this: In the first place there are too many men engaged in the mining business, hence the laying off of men or shutting down of mines during part of the time in the slack season. And the miners prefer the shutting down so the foreign element can get together and have a beer-fest, and they earn more money working part time in the mines than they could earn at any other class of work, this class of men might engage in working full time." So much for this side of the case. On the other side, I had a conversation recently with a steel agent traveling out of Pittsburg, who, much to my surprise, defended the miners. He said, "I am like Vice-President Marshall. I wouldn't go down into one of those shafts, nor live in a coal miner's shack for $10,000 a year." Opinion seems to be greatly divided on the proposition and we will try to get more authentic data for our readers.—Editor.

A Costly Affair

"We put over a million dollar barrage in the Argonne."

"That's nothing. They put over a million dollar barrage at my wedding."

"How's that?"

"They threw two dozen pairs of old shoes at me."—*The Home Sector.*

Winter Hauling
Means Economy for You

The highest single cost in making an application of limestone is the cost of hauling.

The hauling cost is most expensive during the spring of the year—*least* expensive in the winter, when the roads are hard, when the horses are idle, when your time can best be spared for this work.

In order to reduce your hauling expense to a minimum we will make a special offer to you, so that you may

Buy Now—Pay Later

We will deliver promptly during the months of November, December, January and February, all orders for Solvay Pulverized Limestone, Arcadian Sulphate of Ammonia and "U-S" Potash.

We will not bill this material until April 1st. If the billing is paid by April 10th, you are allowed a 3 per cent discount—or you may settle with a net cash payment before July 1st, 1920.

TRY KI-MOIDS FOR INDIGESTION

LET US TAN YOUR HIDE.

Horse or Cow hide. Calf or other skins with hair or fur on, and make them into coats (for men and women), robes, rugs or gloves when so ordered. **Your fur goods will cost you less** than to buy them and be worth more.

Our illustrated catalog gives a lot of information. It tells how to take off and care for hides; how and when we pay the freight both ways; about **our safe dyeing process** on cow and horse hide, calf and other skins; about the fur goods and game trophies we sell, taxidermy, etc.

Then we have recently got out another we call **our Fashion book,** wholly devoted to fashion plates of muffs, neckwear and other fine fur garments, with prices; also **fur garments remodeled and repaired.**

You can have either book by sending your correct address naming which, or both books if you need both. Address

The Crosby Frisian Fur Company,
571 Lyell Ave., Rochester, N. Y

Tanners of Horse and Cattle Hides

All kinds of skins with the fur on. We make up and line robes, coats, gloves, mittens and ladies furs. We mount deer heads. Tell us the kind of fur you want tanned and we will write you fully

W. W. WEAVER, Custom Tanner,
READING, MICH.

"Ring out the old, ring in the new,
Ring happy bells across the snow.
The year is going, let him go;
Ring out the false, ring in the true."

YES, let's say goodbye to the old year with no sigh of regret. In some ways it was good to us, but following closely upon the heels of the great war with its sorrow, came inflated prices and we hadn't yet had time to adjust ourselves to the new conditions and we sort of chafed under them. Now we'll leave that all behind—and with the experience gained will greet the New Year as a fresh opportunity to show the "stuff" we're made of. In this day of opportunities, we are the ones to work out our own problems; they are of our making, so they must be of our solving.

With the scarcity of help has come the labor saving machinery to take that burden. With high taxes have come high prices for commodities and while the price of clothing has been soaring we women have learned to make one good looking suit and one good looking dress serve all purposes. No longer do we have a "Sunday" dress, and a week day dress. but we buy one dress and one suit, and with these two articles up-to-date and neat, we face the world knowing that with their excessive cost still they haven't cost us more than the several dresses we used to think necessary.

Consulting with the pattern department of a large store, I was informed that they sold fifty per cent more patterns than ever before, going to show women will make their own clothes, if they have to, rather than pay the outlandish prices asked. Which shows our wonderful resourcefulness. Of course, due credit must be given to the designers of patterns who now make them so simple that one with very little experience can make a blouse or a skirt. Heaven forbid that we should ever return to the mutton-leg sleeves the gored skirts, with linings, facings, etc. It took an expert indeed to make them. Today the simpler the gown, the better we are dressed. And so all along the line, life has its compensations.

And joining hands with the women of the land who today are keeping hold of only those things of the past which are tried and found true, and turning the pages of time on those things which are past and gone and the memory of which will only cause regret, the readers of M. B. F.—the thinking, reasoning, business women, will join in Tennyson's plea:

"Ring out the want, the care, the sin,
The faithless coldness of the times,
Ring out, ring out my mournful rhymes,
But ring the fuller minstrel in."

QUESTIONS ANSWERED

We shall endeavor to devote just as much space as it necessary each week on our page to the discussion of the farm women's problems, which are given to us to help solve. And you can help by writing us on these subjects under discussion or on others which may be troubling you. Or perhaps you have a helpful hint which you will be glad to pass along:

By MABEL CLARE LADD

Editor, Woman's Dep't., M. B. F.

I want so much to earn some money and thought perhaps, through your help, I might be able to do so.

I read some years ago of a woman making her living from the sale of baskets, which she made of corn husks. We have such quantities of nice, white ones, but I have no way of knowing how to construct the baskets and thought perhaps you could tell me where to get a book of instructions. People in the cities have so many ways of earning money with which to buy the things they care for, and so many entertain and use favors, etc., and I thought possibly there might be a ready market for these corn baskets.—Mrs. C. A.

My dear Mrs. A:

I am glad you asked me for this information, as it opens up an entirely new field for a great many of our readers I am sure. Personally I had never heard of corn husk weaving until you wrote, but I immediately started an investigation. and find that it has been done and very successfully.

I cannot tell you where to buy a book, because the articles so far published have been published in a magazine which is no longer in print, but I found bound copies in our public library and believe that from these articles I can give you sufficient information so that you can with a little practice, make very pretty and useful baskets.

THE USE OF CORN HUSKS IN BASKETRY

Corn husks used in different ways furnish an inexhaustible supply of material to the skillful worker, especially as there is no farm which does not at least have a small patch of sweet corn, even though they do not go in for raising large fields of this commodity. The inner leaves which cover the ear are the most satisfactory to use as they are fine, soft and durable, and therefore more easily handled.

Several ways are suggested, but the most practical seems to be to select the more tender, delicate inside husks and dry them in the sun, after picking them apart. It is well to select those of even length, as there will not be so many ends of varying lengths to dispose of. Cut away the bulky, wood-like ends of the husks with shears.

The baskets are made by braiding, much the same as the rag rugs are braided. Select husks of uniform width, cutting the very wide ones to conform to the width desired. In braiding, the edges are lapped half an inch and braided in, weaving into the form desired as you braid, and sewing securely with linen thread which has been waxed. Care should be taken to tuck in the obtruding ends as you weave, in order to keep the plait as even as possible, although a certain attractive unevenness will exist in spite of precaution.

In making the baskets or mats, begin at the center and work outward. Make your stitches small and close and be sure that you used waxed linen thread so that it will hold. When this care is used the corn husk objects are firm and durable and may be given hard, daily usage, and after a little practice much speed may be developed in the work.

Inspiration for the shapes may be gained from a study of the pictures of the Indian baskets and the raffia baskets which are made much the same, so far as shaping is concerned. In shaping, try holding the braid firmly or loosely, firm to make the object smaller, and loose when you are weaving a large flat mat.

Variety of color as well as of shape may be accomplished by the use of dyes, but do not use a boiled dye, as in boiling you will harden and render useless your husks. Rather use a common paint of the desired color, thinning it with a little turpentine. An attractive sewing basket can be made of dark brown, having a separate cover, ornamented by using a few of the perfectly white corn husks to make a little knob or handle on the top.

Mats for the table are made by using bleached husks. These can be made either oval or round. Then there are attractive porch baskets, died green. As soon as you become interested, numerous useful articles besides baskets will suggest themselves to you, such as brush-broom holders, waste paper baskets, summer hats for work in the garden and boxes of different sizes for various uses.

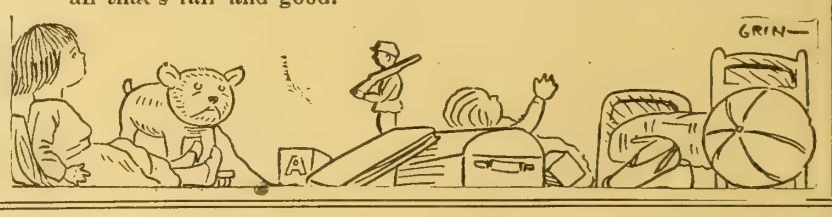
HOPE

Dedicated to H. H.

By C. Shirley Dillenback

You're jut a baby to me yet—short years ago I saw a downy head—
Safely cradled on mother's arm within a snow-white bed;
Saw too, the children gather 'round to worship at your shrine—
You were indeed the wonderful gift of the God divine.

Your very name bespeaks the love you woke in mother's heart—
That you might grow to womanhood and nobly play your part,
She gave to you the name of one she loved long years before—
When she was but a baby, too, with many tasks in store—
And years so crowded with grief and care—to live for those she loved her sole request
I wonder that she did not sink in dumb despair—but no—she fondly clasped you to her breast,
And said, "We'll share with her as we have shared before—each one of you must help to do your part
It was not meant that we should understand—the anguish that was locked in mother's heart,
Because we had so little we could give—how lovingly we gave the little that we had—
How faithfully we tried to hide our want, and shun the friends who fain would make us sad.
The years have passed and now I find—the tiny hands which once I scarce could grasp—
Have grown broader, finer lined than mine, with greater power to clasp—
The form which once I held in close embrace now bears the lines of perfect womanhood—
In loving trust I pray the heart of you has grown, as much in faith and all that's fair and good.



HOUSEHOLD HELPS

The toughest piece of steak may be made tender and palatable by pounding salt, pepper and flour into it, browning thoroughly in hot fat, adding water, covering closely, and allowing it to steam for about an hour or until tender. This is known as Swiss steak.

Save your lemon and orange peel. Boil together and use in pudding sauces and cake fillings.

Did you ever try thickening soup with oatmeal left from breakfast?

One cup of honey is equal to one cup of sugar with one quarter cup of water added.

The Children's Hour

DEAR CHILDREN: I know every one of you who contested for the Christmas prizes for the best stories are anxiously waiting for the winners names, and the stories to be printed, and so this week, although it is New Year's week and I might write a whole lot about making good resolutions for the New Year, instead, I'm simply going to tell you who won the prizes, which were packages of Christmas cards, with tags, labels, etc., and then we will have all the space possible for these stories.

One story won the prize but it was so long that I can't print it or we wouldn't have space for any others. Be careful children when you write, and make your letters short or we can't print them. Then there was such a pretty little story that should have won a prize, but the person who wrote it forgot to sign his or her name, so it had to be thrown away. Evelyn Bugg, of Ponca won a prize but her story was too long to print. Then Lillian Richardson, of Blanchard, wrote of the First Christmas, and as we should always keep in mind why we celebrate Christmas, I am printing her story and sending her a prize.

The boys around Blanchard, Mich., have learned the value of good wool bearers. The above Delaine ram, which sheared 25 lbs. when 3 years old, is one which belongs to John Brown, of Blanchard.

Pauline Frueh, of Mt. Pleasant won a prize because her story was not only well written but because it showed that at Christmas time she was unselfish and that she was thinking of what others might receive as well as what she might get.

And Pearl Buffenbarger, of Branch received a prize package for her little poem, printed below. We didn't have a single original drawing submitted in time for these prizes.

And now I want to wish you all the happiest year in your life, and you can help make it so by always being thoughtful of others. If you are kind to others, they will be kind to you and you will find that you will be happy the whole year thru. —Affectionately yours, LADDIE.

OUR BOYS AND GIRLS

Dear Laddie—As I have not written to you for some time I thought I would write you a story.

The First Christmas

When Joseph and his wife Mary, went to Bethlehem his wife rode on a mule and he walked. When they arrived there the houses were all full so they had to sleep in the stables with the horses. They slept in a manger. There was born a baby. They named it Jesus. There came to see the baby many saints. The angels all sang and everything seemed brighter. So on this day the first Christmas was celebrated.—Lillian Richardson, Blanchard, Mich.

Dear Laddie—It has been some time since I wrote to your corner, but as I have been sick and had to stay at home from school I thought I would spend my time writing to your corner again. I had one story published in the Business Farming, and my sister won a prize some time ago. I love to write rhymes but never tried for a prize before, although I have written some for my school friends. Now for the poem.—Pearl Buffenbarger, Branch, Mich.

A Little Child's Plea

"Bring me a mama, dear Santa Cluaus please,"
Thus spoke a dear little chap;
"I never have known any comfort or ease
Or sat on a dear mother's lap."

"I would rather have one, than all of your toys
Or candy or peanuts or corn.
I would be the happiest of all little boys,
If you leave her on glad Xmas morn."

And thus saying the boy fell asleep,
And dreamed that his mother had come
He was so full of joy he began to weep,
But awoke at the sound of a drum.

Just then a nice lady, who was passing that way,
The golden-haired child chanced to see.
And seeing the hard ground on which he lay
Said "Won't you come home with me?"

"Oh Mama! Dear Mama! Have you come at last?"
He asked in the wildest of glee,
"I've waited so long for you to come past
For fear that you would somehow miss me."

He thought 'twas his mother, so the dear lady said,
With a glitter of tears in her eye;
"Yes, Tommy come home, I've come back from the dead;
Yes, back from my home on high."

Dear Laddie—We take the M. B. F., and like it real well, although we do not live on a farm. We live just about one-half mile from Muir and about a quarter of a mile from the school house. I am 14 years old and will be 15 in March. I am in the 9th grade. There are only about 65 pupils in the whole school. On Dec. 11 our class gave a debate at the hall on the question that Lincoln was a greater man than Washington. Tuesday before Thanksgiving our room had a banquet. I do not know whether we will have anything for Christmas or not. We have a white mule. I wonder if any of the other M. B. F. readers have one. My father said that he would like to get a mate to drive with him. As my letter is getting long I will close.—Mary F. Rogers, Muir, Mich.

Dear Laddie: — As I have not written to you in a long time I thought I would do so today. I have just returned from Sunday school. I am now 13 years old and am in the 8th grade. I have a brother 5 years old and a sister 7. For pets we have a cat and two little kittens. There are 22 pupils in our school and we all dearly love our teacher, Miss Helen Barrett. We are going to have a Christmas tree this year. On Thanksgiving we made turkeys out of pastboard and set them in the room. I will close because I want you to find room for my original story.—Pauline Frueh, Mt. Pleasant, Mich.

A Christmas Longing

Once upon a time a beggar girl was wandering around a large city when she heard the bells pealing out their glad tidings; but in her little heart she did not know what the soft notes told. As she stood gazing through a store window at a beautiful doll that looked like it would like to speak, and at some pretty dresses for a girl about her size, a man came out of a lovely carriage drawn by two shiny black horses. No sooner had he descended than his two-year-old baby climbed out and started across the street among the hurrying crowds. As quick as the father was, the beggar girl was quicker and like a flash she darted thru the crowd, grabbed the child in her arms just as a carriage rolled by, and carried the baby to safety. When she caught her breath she was in the rich man's carriage, driving to a more beautiful palace than she ever dreamed of and there in a corner stood a beautiful tree and its glittering branches half hid the doll she longed for. It was hers along with some pretty dresses. This was her first real Christmas

Dear Laddie—This is the second time I have written to you, but my other letter was not printed. I am a little boy aged 4. For pets I have a dog and two cats. Last summer I had a garden and a patch of potatoes which I tended myself. I sold my potatoes and bought a new suit of clothes, a pair of shoes and rubbers and I have $1.70 left. My father takes the M. B. F. and likes it fine. I like it fine. I have one little brother, Emory, aged 5, and a little sister, Hazel, 10 year old and in the 3rd grade at school. My teacher is Miss Timpke. Hoping to see my letter in print I will close with love to all the boys and girls. —Dick Hewlett, Alanson, Mich.

Dear Laddie—This is the first time I have written to you. I am a boy 11 years old and live on an 120-acre farm We have seven milk cows one of which I milk. We also have two young cattle tle. We have three horses and 12 sheep. For pets I have a kitten and about 20 rabbits. I have two brothers and two sisters. I will close hoping to see my letter in print.—Clyde Fowler, Wayland, Mich.

Dear Laddie—This is my second letter to you. The other did not get into print so I hope this one will. I love to read the letters from the boys and girls. I am only 7 years old but I am in the 4th grade and love my school. My father is a farmer and we like the M. B. F. very much. I am the only child at home. I have a brother in South Dakota. My pets are four cats and a parrot. I would like to hear from some girls and boys.—Helen Marguerite Brady, Wexford County.

Dear Laddie—I am 8 years old. I go to school every day and am in the 2nd grade. My teacher is Miss M. Chessen. I have two brothers and three sisters. My father milks 14 cows with the milking machine. We are having lots of rain here. I would like to see my letter in print. I will close now.—Loraine Huber, Beaverton, Mich.

Dear Laddie—I am slow writing to you to let you know I received my drawing book. It is worth a dollar itself. I have been very busy or I would have written sooner. The ones that did not get something don't know what they missed.—Phebe Evangeline Dundas, Lupton, Mich.

MARKET FLASHES

WHEAT PRICES MOUNT

WHEAT PRICES PER BU., DEC. 27, 1919			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.45	2.32	2.55
No. 2 White	2.43	2.32	
No. 2 Mixed			
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.30	2.30	2.36
No. 2 White	2.26	2.28	2.34
No. 2 Mixed	2.26	2.27	2.33

Millers are offering premium prices for good hard winter wheat but they cannot get enough supplies to fill the flour demand. The percentage of hard wheat in last year's crop was low, but a good many millers will not buy the soft wheat at any price. Consequently hard winter wheat prices are mounting rapidly, and grain men predict that this grain will reach the $4 mark on the Minneapolis market before many weeks. The government's final estimate places the total crop at around 941,000,000 bushels or 20,000,000 more than the early estimate. But twenty million bushels are but a drop in the bucket compared to the total crop and will cut no figure in determining the price. In view of the facts that an enormous amount of this grain has already gone to market, that the export demand is growing stronger all the time, and that grain is the most substantial credit on the face of the earth, wheat prices are expected to keep on going up.

CORN MARKET EASES OFF

CORN PRICES PER BU., DEC. 27, 1919			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow	1.55	1.53	1.72
No. 3 Yellow	1.54	1.52	
No. 4 Yellow	1.49		
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow	1.57	1.50	
No. 3 Yellow	1.55	1.48	1.70
No. 4 Yellow	1.50	1.40	1.65

The Market feeling prevailed in trading circles last week that following the easing up of the coal situation when cars of grain will again be given right of way and supplies increase on terminial markets that price of corn would ease off a bit, and consequently prices have not been advanced as much as usual when supplies become short. Speaking of the corn situation, the *Rosenbaum Review* says "There is no doubt but what conditions are getting ripe for a decline in the cost of practically all commodities, but this will take time to bring about and in the meantime corn seems to be tending higher in order to conform with the prices for other things. May corn seems headed for $1.50." While we do not expect to see this general decline which the *Review* speaks about for several years, we are of the same opinion relative to the future of corn prices. The government estimates a greater yield of corn by nearly a half billion bushels than in 1918, but we predict that every bushel of it will find a market at prices considerably higher than now prevail.

OATS DUE TO ADVANCE

OAT PRICES PER BU., DEC. 27, 1919			
Grade	Detroit	Chicago	N. Y.
Standard	.89	.88	.95
No. 3 White	.88	.86	
No. 4 White	.87		
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
Standard	.74	.71	.79
No. 3 White	.73	.70	.78
No. 4 White	.72	.69	.77

We have maintained for months past that the oat price was not as high as it ought to be in comparison with other grains and because of the small crop. *The Rosenbaum Review*, which is one of the most dependable grain papers published, also clings to this theory. In its last issue it had this to say about the oat situation: "Oats are slowly coming into their own, and have been steadily advancing. Prices are the highest of the season. The cash has advanced faster than the futures, which is a very healthy condition. There is an impression in the trade that this will result in the country selling more freely. Others who have been right on the market for some time say that it will take much higher prices to start farmers to selling as they hold only a comparatively small amount from the 1919 crop in many sections. The crop is the smallest in five years, and need on farms is large owing to the light weight. In fact, there are a great many who believe that the actual crop is much smaller than the government's estimate."

This same publication speaking of the general trend in grains notes "that at the time this was written all grain with the exception of corn were at the highest figures of the season. December corn in all probability will sell at over $1.50 per bushel. American corn in Liverpool has advanced over 10 cents per bushel in the past few days. The bears are up against a combination of influences that will martyr them."

LAST MINUTE WIRES

DETROIT—Grain markets easier; not enough wheat to fill milling demands. Poultry in demand. Beans firm and higher. Easier feeling in potatoes.

CHICAGO—Potatoes higher; beans advancing. Hogs dull and lower, due to holiday season and falling off of purchases by packers. Cattle weak and declining.

(Note: The above summarized wires are received AFTER the balance of the market page is set in type. They contain last minute information up to within one-half hour of going to press.—Editor.

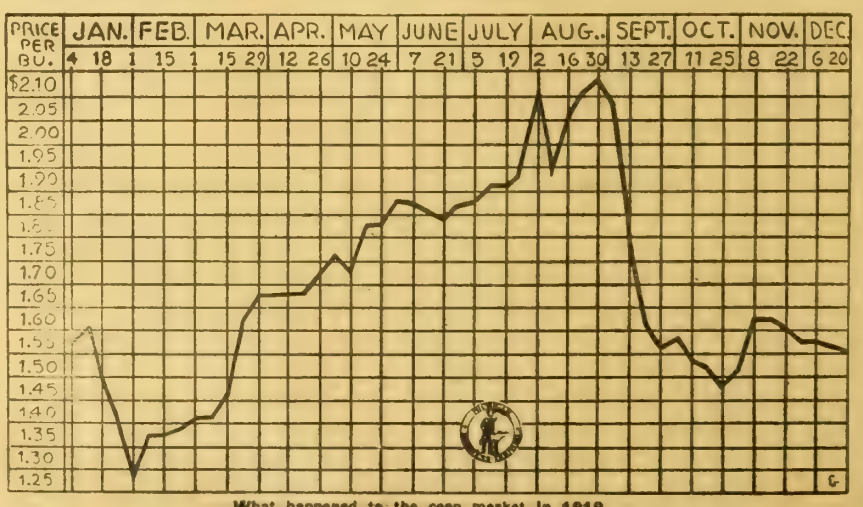
Weekly Trade and Market Review

THE SETTLEMENT of the coal strike and the passage of the bill to extend further credit facilities to foreign countries have stimulated the grain markets and prices at the close of the past week are on a generally higher level than for some time past.

Rates of exchange have fluctuated widely and interfered materially with export business of all kinds. Even Canadian exchange is way out of balance, the discount on Canadian money being around 12 per cent. The postoffice department has ordered postmasters not to accept any more Canadian money, and some of the railroads and electric lines have followed suit. In towns and cities in the eastern part of the state where a great deal of Canadian money is usually in circulation, the majority of merchants have put a ban on it. We caution our readers to examine the coin in which they are paid for their produce, and not to accept Canadian money until the exchange rate is restored to normal. If you sold a cow for a hundred dollars in Canadian money, you would actually receive only enough to buy home goods to the value of $88. In other words, the high rate of exchange on Canadian money will represent the amount of profit on many a transaction.

The House and the Senate both passed bills providing for the early return of the railroads. While we believe that it is a betrayal of the people's interests to turn the roads back at the present time, we expect that the action will have a stimulating effect on business. Business men have been pretty cautious the the last few months professing to fear the nationalization of the railroads and a stricter intereference with natural business conditions by the government. It is not a matter to be proud of that business in this country is so powerful that it can control the policies of the nation, yet it begins to look as if that were about the case. If the railroads go back to the private owners and are conducted efficiently and honestly and at the least possible cost to the public, well and good. But every good citizen will keep his eye on them and woe to the private owners if they relapse into some of some of their old practices.

There is a great demand from foreign countries for American machinery. Lithuania recently sent a commission to the United States to secure a credit of $100,000,000 for the purpose of purchasing American goods. In return for these goods Lithuania promises to export flax, timber and wool, two of which products come into direct competition with the American farmer. There is going to be an enormous increase in manufacturing activities the next few years. Europe's factories, such as escaped the destroying hand of war, are obsolete and decadent and this country must supply agricultural implements, motors, lathes, forges, locomotives and innumerable other kinds of machinery for a long period of time. The principal thing that will determine the extent of these purchases will be the ability of the foreign countries to pay for them in gold or goods of equal cash value. In the case of Lithuania bankers are promised blanket mortgages on extensive state-owned lands and forests. Just how valuable these mortgags would be, in a country without stable government, is largely a matter of personal opinion. Notwithstanding the obstacles that stand in the way, we may expect that our farms and our factories will be kept running to capacity for several years to come to replenish our own and Europe's depleted supplies of commoditis.



What happened to the corn market in 1919

RYE AND BARLEY IN DEMAND

Nothing spectacular has happened or is apt to happen in the rye and barley markets. Both grains are in good demand, the former for export and the latter for cattle feeding. The supply of both grains is short and the demand unusually brisk. As wheat prices advance rye will follow suit and and barley will not be far behind. Farmers who took our advice and planted a goodly acreage of barley last spring, have found that it paid them well. Rye is in demand at the jobbing price of $1.76 for No. 2 and barley is finding many buyers at $3 to $3.20 per cwt.

NEW LIFE IN BEAN MARKET

BEAN PRICES PER CWT., DEC. 27, 1919			
Grade	Detroit	Chicago	N. Y.
C. H. P.	7.35	7.75	8.00
Red Kidneys		13.00	13.00
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
C. H. P.	9.00	10.00	10.50
Prime	8.00	9.00	9.75
Red Kidneys	13.50	12.00	11.25

Beans are losing no time in recovering from the slump of the past several months. Demand has improved wonderfully; supplies are only moderate and there have been two or three advances of ten cents or more per bushel within past ten days. For the first time in many months bids are being offered for future deliveries at an advance over the cash price. The most encouraging thing about the bean situation is that the most persistent bears have become enthusiastic bulls and everybody is talking higher prices. Considering the food value of beans they are ridiculously low in price in comparison with other foods. A Michigan elevator, reporting to the *Price Curren Grain Reporter*, says: "The majority of Michigan growers cannot raise beans at a profit at present prices which are out of line with other foods." Latest advices from the Orient are to the effect that the 1919 crop is short. Taking all things into consideration beans are bound to take an altogether different course the next few months, and many are again talking of "nine dollar beans."

POTATOES STILL ACTIVE

SPUDS PER CWT., DEC. 27, 1919		
	Sacked	Bulk
Detroit	3.50	3.25
Chicago	3.15	3.00
Pittsburg	3.25	3.00
New York	2.75	2.50
PRICES ONE YEAR AGO		
Detroit	1.90	1.80
Chicago	1.70	1.60
Pittsburg	1.93	1.80
New York	2.50	2.40

Each week the potato market climbs another notch or two. We are a little bit suspicious of this market this year. While it is true that the total yield is less than last year's it is nevertheless somewhat above the average crop and we can find no good reason for such high prices only two months after the crop movement began. It is true that some potatoes have been destroyed by rot, but the general run is of good quality and fair size. There are very few No. 2 potatoes in Michigan this year. The starch factory at Cadillac will not operate this season at all because "there are less than 25 carloads of No. 2 potatoes in the entire state." This means that a larger percentage of the crop than usual will enter into the commercial channels. The movement of the Michigan crop has been unusually active, it being estimated that over fifty percent of the crop has already been harvested Either the government estimate is way off, or else other spud states are holding their crops. It must be remembered that practically our entire crop must be consumed at home, and while many people will undoubtedly eat more potatoes because of the high prices of other foods, it is not wise to place too much dependence upon a continuation of the present demand and prices. We may be greatly mistaken but we feel that potato prices are nearing their highest point. With potatoes jobbing no the Detroit market at $5.25 per 150 pounds or better than $2 per bushel $1.30 to $1.50 per bushel according to

growers should receive not less than $1.30 to $1.50 per bu., according to their distance from the consuming markets. On the 1919 yield this price will net most farmers a fair profit, and we caution our readers against taking too long a chance on higher prices. Why not follow the rule we have frequently suggested? Sell a portion of your holdings the first of the year and every thirty days from then on put some more on the market. This may not always bring you the very highest price, but it will save you from the lowest prices and is the safest course in the long run. Look out for a short period of low prices around the holidays.

Supplies of hay are light at Detroit and numerous other markets, although the demand is fairly good. A firm tone is quoted. Crop reporters of Business Farming have been telling of only slight activity in the hay market.

HOGS SLIGHTLY HIGHER

Week before last hogs reached their lowest level since February 1917, when the market touched the $12.50 mark. A few days later it had risen again to $14, and past week closed with best offerings selling at $14.20.

Again quoting the Rosenbaum Review we find: "The technical position of the market favors the grower more than 30 days back. Indianapolis is no longer running the bargain sale, eastern markets have worked on a level that gives Chicago a shipping margin. Buffalo speculators are buying hogs at Chicago to resell at eastern markets, an infallible sign that the big run from Ohio, Indiana and Michigan is over, and every small packer in the country is clamorous for hogs demonstrating that the cutting operation is proftiable. Provision stocks are not heavy, consumption of fresh pork is reviving and although consumers are still paying exorbitant prices for smoked meats, their purchasing capacity is large. Nobody in the trade is venturing predictions, but these facts are indisputable:

"The winter crop is numerically less than that of last year."

"Eastern killers will be compelled to buy more hogs at Chicago as the winter wears along."

"Fourteen dollars per cwt. at the market is low enough for hogs based on current cost of production. Consumers are more interested in maintenance of an adequate supply than low prices temporarily and it is a cinch that if the grower is not adequately remunerated he will either quit growing hogs or reduce his herd."

Dressed hogs are lower, Detroit buyers paying from 16@19c according to weight.

CATTLE MARKET TOBOGGANS

Hogs have had their turn on the market toboggan and now cattle are trying a hand at the sport. Everybody is selling cattle. Frightened by the stampede in the hog market and fearful lest cattle would follow the same course, purchasers of high-priced feeding stocks have been unloading their herds all over the country, with the inevitable result that supplies have been far in excess of the demand.

During the first two weeks of December Chicago received 200,000 cattle and other points report receipts of corresponding volume. The majority of stock has been selling below the $15 market for the better part of a week and some believe that a further decline of from $1 to $2 is due. Farmers who have cattle ready for the market will lose nothing by holding off another thirty days. The present is absolutely no time in which to sell, and if the majority of producers can only be made to see the folly of rushing more supplies on an already oversold market, the situation should right itself within the next couple weeks.

Dressed calves have not been materially affected by the slump in live cattle, jobbing prices on the Detroit market still ranging around 24@26c per pound. Hides have taken a considerable drop due to the change in the cattle situation. Horsehides are quoted at $8@9.

SHEEP AND LAMBS STEADY

Sheep and lambs failed to follow the cattle market last week and all live stock markets with the exception of East St. Louis report slightly higher prices. On the Buffalo market lambs sold as high as $19 per cwt., and yearlings between $9 and $15 per cwt.

DAIRY PRODUCTS EASY

High prices of dairy products are cutting down the demand. Fresh creamery butter quoted at 63@66c.

Fresh eggs have reached unprecedented heights, eggs five days old or less selling at retail in Detroit as high as $1.10 per dozen. Thirty day old eggs, also called "fresh" are retailing around 85@90c. Storage eggs, bought from the farmers at around 45 and 50c are retailing at 65@75c.

HIGH RATE OF EXCHANGE MEANS LOWER PRICES

(*Continued from page 4*)

had bought perhaps a trifle more than she needed. Furthermore, the prices for the product had been raised to the maximum. When sterling continued downward and the Briton was asked to pay still higher prices for his meat, he simply balked and refused to go deeper into his wallet.

In this resolution he was protected by the huge purchases which had been made.

But the value of the British pound in American money continued to move downward, so that the packers' bills on London constantly lost value. If a packer sold meat for 100 pounds sterling, expecting to get for it, say, the equivalent of $442 exchange went down and he actually realized, perhaps, only $420.

The Farmer is Affected

The consequence was inevitable. The slump in British buying and the decline in the exchange value of sterling backed up on the American live-stock market—particularly the American hog market. Prices for hogs went down. (Of course, there were other factors in this slump, such as the agitation at Washington and elsewhere, but the foreign exchange situation also had a marked effect.)

Today, sixty-day bills on London are worth about $4.08 per pound sterling, as compared with a normal value of something like $4.86.

The situation hurts industry, farming and stock raising. If the foreign nations cannot buy our goods, we can not export. If we cannot export, we cannot afford to produce a heavy surplus and surplus production is essential to national prosperity. It minimizes unemployment and cheapens cost per unit of product.

Unusual Gifts for Our Readers

You can make any premium shown below yours in a few hours time, without it costing you one penny. We give these premiums and many others to our friends who take subscriptions for M. B. F. among their friends and neighbors. Hundreds of farmers in every county in Michigan are waiting for a chance to subscribe for this weekly they have heard talked so much about. You save them the trouble and expense of sending in their subscriptions, by making up a club —we give you the gift FREE for your trouble.

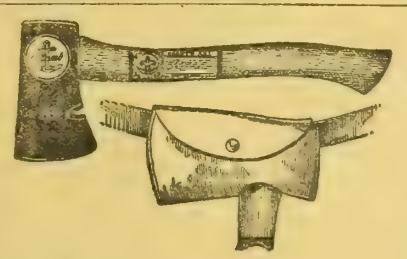
(A9) Union Hardware Rocker Skates—
Clamped to sole and heel style, made with full rocker blades. Girls style also. **YOURS FOR** three new yearly subscriptions or six renewals.

(A1) The "Radiolite" is THE WATCH. The numbers are coated with radium property, and can be seen very distinctly in the dark. The radium light giving property is guaranteed to last. **GIVEN FOR** four new yearly subscriptions or eight renewals.

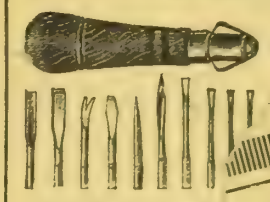
(A32) Make UR Own Batteries—
When your battery plays out make one in 30 seconds. This can be done with this wonderful invention. Outfit consists of one Flashlight Case vulcanized fibre, with heavily nickeled brass parts; equipped with Mazda 2.7 volt lamp; parts to make six cells or three Make-UR-Own batteries—an average supply for one year. **GIVEN FOR** four new yearly subscriptions or eight renewals.

(A6) The Handy Pocket Tool Outfit—
Comes in a leather case. Equipped with a cutting blade, saw, file, chisel, screwdriver, gimlet, combination bottle opener and rule. Tools fit into handle by patented device. **GIVEN FOR** four new yearly subscriptions or eight renewals.

(A10) The Universal Lunch Kit—
Kit consists of enameled metal case, 1 pint vacuum bottle. Bottle has case of brown enamel and comes with an aluminum shoulder and cup. **YOURS FOR** seven new yearly subscriptions or 14 renewals.



(A19) Boy Scout's Hunting Hatchet and Sheaf—
Latest style. Made of one solid piece of steel highly tempered and forged. The handle is made of select hickory. The hatchet is notched for drawing nails. A very handy article around the house. **Given FOR** only four new yearly subscriptions or eight renewals.



(A7) The Sargent Set—
Consists of ten piec... shown in the illustration. ... tool style, in use, is held ... handle, with like-vise jaws. The handle acts as a receptacle. **YOURS FOR** only one new yearly subscription or two renewals.

(A13) The Pocket Microscope—
is equipped with two lens, one magnifies and the other enlarges. Only 1x2 1-4 inches in size. **YOURS FOR** one new yearly subscription or two renewals.

(A22(The Upright Engine—
runs either forward or backward with equal speed. Boiler is made of highly polished brass, firmly secured to base. Balance wheel is polished in nickel. All parts interchangeable. Instructions and duplicate parts price list comes with every engine. **YOURS FOR 7** new yearly subscriptions or 14 renewals.

HOW TO EARN ANY PREMIUM SHOWN

Take one or two recent copies of M. B. F., go to your neighbors, tell them you are making up a club for Michigan Business Farming, Michigan's OWN farm weekly, the paper that every farmer in Michigan ought to take. Tell them you will send in their subscription, saving them time and expense, get their correct address, send in the number necessary for your premium and we will send it immediately by parcel post or express. Two renewals count as ONE NEW subscription. Three or five year subscriptions at $2 or $3, count as ONE NEW subscription.

JUST BETWEEN OURSELVES

By GRANT SLOCUM

WE ARE going to have trouble with Mexico; and serious trouble it will be. Like quarreling neighbors little incidents, which cause irritation, are constantly occuring, and soon, aided and abetted by a flock of troublesome chickens on this side of the fence, which are constantly flying over into Mexican natural resource gardens, where they find good pickings in oil, coal and minerals—trouble is bound to occur. Some of these days a few dead chickens will be thrown back over the fence, and when the neighbors meet again the fight will be on.

The hue and cry over the recent Jenkins incident shows just how anxious some people are for another fight. Jenkins was a Vanderbilt football player years ago, and has been in business in Mexico for more than twenty years. Some time ago he was appointed consular agent for this country in his own home town—Puebla. One night recently, he was kidnapped by bandits, who took $25,000 from his office safe and carried him away to the foothills. He was released upon the payment of a $150,000 ransom. Later he was arrested by the local authorities for alleged connivance with the bandits, then released and rearrested on a perjury charge.

Congressman and Senators, who never have and never will know the smell of burned powder on a battle field, howled themselves hoarse clamoring for war—"war to the hilt." The war propagandists immediately got busy, and it looked for a time as if the fight would be on very soon. Later Jenkins was released, Congress again lapsed into a sweet slumber, and all is well for the moment. We are maintaining approximately 60,000 soldiers along the Mexican line fence—a very neccessary precaution—yet a constant source of suspicion and irritation. It was claimed by Congress that Mexican intervention could be easily accomplished now, with our modern equipment—an opportunity I suppose to burn up the rest of the powder and use the material prepared for the Germans—a case of making something out of war salvage operations. Fireworks left over after the Fourth, as it were.

This country has indeed much war material right now which could be brought into use—everything necessary, perhaps, except the blood of American young manhood, of which we have already sacrificed too much. I quite agree with the sentiments expressed by the Wichita Eagle: "Complete intervention in Mexico would mean a wonderful opportunity for oil and sisal interests, munition manufacturers and the packers, but to the people of the United States it would mean another staggering load of debt; higher taxes, another rise in prices, and to the men in the field it would mean at least three years more of fighting, marching, obeying orders, suffering and dying." The war department figures that complete intervention in Mexico would mean three years of fighting and an army of four hundred and fifty thousand men.

And here is a point that I have never been able to understand. During the war with Germany, after the U. S. had taken a hand in the fight, there was no trouble in Mexico. Villa was quiet; and things on the border line were quite satisfactory. The moment the war was over Villa, who can't fight without money and munitions of war, again commenced his depredations; the talk of Mexican intervention was again the chief topic of conversation in certain quarters, and—"sooner or later there WILL be trouble with Mexico."

The Federal Government has caused many investigations to be made in order to locate old "H. C. of Living," who has been getting away with the peoples' money. Many states have made similar investigations, Michigan among the rest. Did they find old "Hi?" Well, hardly. When these investigations closed, the people were in much the same predicament as the creditors of that suave young gentleman, Owen More:

"Ow'en More left town one day,
Ow'en More than he could pay.
Ow'en More returned one day,
Ow'en More."

Will someone please adjust the mechanism of the "hog elevator." It seems that whenever live hogs enter the elevator on the way to market, down she goes—because of sheer weight perhaps. But here's the peculiar thing about this piece of mechanism: When hogs go down the price of hog products go up. Is it possible that this price elevator is attached to the same cable, and so that when the live hog end goes down the pork and sausage end must of necessity go up? "S'uthin' is out of kilter somewhere."

Some time ago I called attention to the fact that a Farmer Governor without a legislature in sympathy with the program he proposes to carry out, would be merely a figure head. The Detroit Evening News in a splendid editorial, calls the Farmer's attention to the fact that the legislature is even more important than the Governor. The Legislature is the law-making body; in fact the Governor gets his real authority from that body. He can "rant" and "snort," but like the bull tied to a windlass, he is powerless to free himself. There are thirty-two members of the Senate in this state, and in the past this body has been badly affected with "lawyeritis." These Blackstonites, seventeen in number, can tie up the Governor, bind the people, and act the part of the villain without fear of molestation. And it is not absolutely necessary that we have a real farmer as a Governor—what we do want, however, is a man in the governor's chair—whether he be farmer, lawyer, merchant or chief—who has the courage of his convictions and who's wishbone is not where his backbone ought to be.

The miners are at work, but the coal strike has not been settled. The railroads will be given over to the owners, but the transportation problem in this country is farther from solution than ever before. The question of the right to collective bargaining will be finally determined, but strikes and lock-outs will continue. Like the foundation of a building built on shifting sands, we no sooner get one corner of the capital and labor battle leveled up, than another corner settles, and another crack appears on the public side of the edifice. Perhaps that is the best that can be done right now— but it is merely plasteri n g up the cracks as a tempora r y expedient.

Both capital and labor needs a good spanking. These elements of discord in the family of Uncle Sam give him no rest as they are bound to wear his shoes, and neither being large enough to fit them.

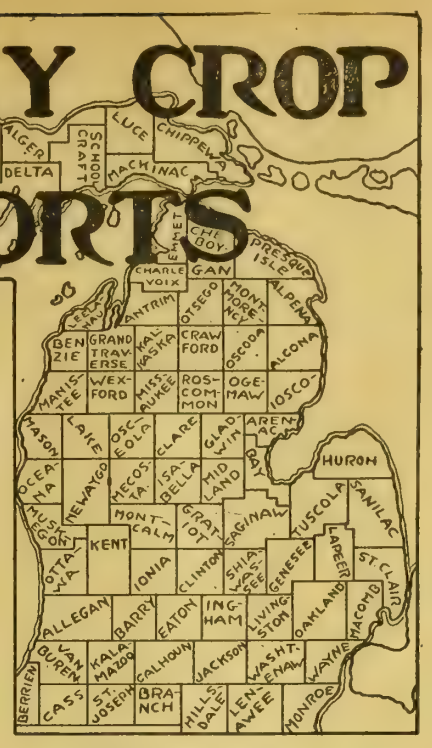
COUNTY CROP REPORTS



MILON GRINNELL '18

GENESEE (S. W.)—Farmers are not doing much of anything besides the necessary chores on account of the cold weather, which acts as if it has come to stay. The ground is frozen and covered with a few inches of snow. Farmers sold quite a few potatoes in Flint during the more moderate weather recently. Otherwise there is not much of anything moving. The beet growers of Genesee County met at Swartz Creek on Saturday, December 6, and organized the Genesee County Beet Growers' Association. The officers of the association, with a committee of 25, went to the state association meeting on December 8.—C. W. S. The following prices were paid at Flint: Wheat, spring $2.41, white $2.29, red $2.31; corn, $1.50; oats, 86c; rye, $1.43; hay, No. 1 timothy $23@25, No. 1 light mixed $20@23; beans, C. H. P. pea, $6.25; red kidney $11; potatoes, $1.75@2; onions $5@6; cabbage, $3 per bbl.; cucumbers, $2 per bu.; hens, 18@19c; geese, 22c; turkeys, 35c; butter creamery, 70@72c; dairy, 65@70c; eggs, 72@75c sheep, $7@8; lambs, $12@13; hogs, $14@15; beef steers, $9@10; beef cows, $7@7.50; veal calves, $17@18; apples, $2@2.50.

INGHAM (C.)—Quite cold winter weather, but little snow, ground frozen hard. Farmers have sold most of the stock they had for sale; be some more later; not holding back much grain; hay is high and with a cold winter feed will be short. Wood is scarce and coal is not to be got at all. Some farms have no timber and depend on coal for fuel. Doing chores is about all the work being done. Quite a large number of farms have changed hands this fall in this section, the young men have gone to factories; old men left to do farming.—M. The following prices were offered at Mason: Wheat, $2.22@2.25; corn, $1.40; on cob, 60c; oats, 72c; rye, $1.45; hay, No. 1 timothy, $20; straw, wheat-oat, $8; beans (C. H. P. pea), $6.25 potatoes, $1.75; poultry, hens, 20c; springers, 20c; ducks, 20c; butter, 65c; butterfat, 71c; eggs, 68c; livestock, lambs, $12@13; hogs, $13; beef steers, $10; beef cows, $7; veal calves, $7; wool, 60c.

MECOSTA (C)—Farmers are cutting and hauling wood to town. William Wethers has purchased a large truck to deliver oil and gas for the Standard Oil company. Heavy winds and zero weather and eight inches of snow.—G. B. W. The following prices were offered at Lakeview: Wheat, $2.50; corn, $1.40; oats, 80c; rye, $1.60; hay, No. 1 timothy, $25; No. 1 light mixed, $22; straw, rye, $17; straw, wheat-oat, $$20; beans (C. H. P. pea), $6 cwt; red kidney, $11 cwt.; potatoes, $2.50 cwt.; onions, $2.25 bu.; cabbage, 12c lb.; poultry, hens, 20c lb.; springers 22c lb.; ducks, 18c lb.; geese, 22c lb.; turkeys, 25c lb.; butter, 70c lb.; butterfat, 75c lb.; eggs, 75c lb.; live stock, live weight, sheep, $6 cwt.; lambs, $12 cwt; hogs, $13 cwt.; beef steers, $9 cwt.; beef cows, $6 cwt.; veal calves $10 to $15 cwt.

SANILAC (C.)—We have had another cold wave and at this time another warmer wave thawing at present. The farmers are having their hay baled at present. There seems to be a raise in price and it is tax time now, so we farmers have to get busy and gather some tax money. Taxes and death sure have to come. Taxes are awful high this year. I think it will keep us going some to raise our tax money. There was a good corn crop around here this year. Quite a few farmers have silos. They have filled them and now they are having the corn shredded.—A. B. The following prices were paid at Sandusky: Wheat, red $2.18, white $2.15; oats, 76; rye, $1.45; peas, $2.25; barley, $3; buckwheat, $2.20; hay, No. light mixed, $20 to the farmer; beans, C. H. P. pea, $6.25 cwt; butterfat, 74; eggs, 70.

TUSCOLA (C.)—Farmers are all set for winter. Nothing doing but chores and cutting wood. It is very cold, with a little snow on ground, but not much. There was the worst windstorm recently that has been in these parts for years, doing a lot of mischief to small buildings, barn doors, trees and fences. Farmers are not selling much now, but a few cattle. Wood is in good demand. Caro markets, December 10—Eggs, 75c; butter, 62c; beef, live, 5@9c; veal, 10@16c; hogs, 10@13c; lambs, 10@12c; sheep, 4@7c; wheat, $2.10@2.12; barley, cwt., $2.60; oats, 74c; buckwheat, cwt., $2.50; corn, $1.35; potatoes, $$1.25; cloverseed, $25@28; beans, cwt., $6; hens, 21c; springers, 21@22c; ducks, 22@25c; geese, 20c; turkeys, 28c.

MIDLAND (S.)—The farmers are busy getting their winter's supply of wood. Somewhat colder at present. It was 40 degrees below zero recently. The ground is frozen with about 6 inches of snow on top. Not much produce going to market. The sales are still continuing with prices very good.—J. H. M. The following prices were offered at Midland: Fall wheat, $2.05; corn, 35 lbs. per bu., 60c; oats, 68c; hay, No. 1 timothy, $22.50; potatoes, $1.15; onions, $1.50; poultry, hens, 17c; springers, 17c; butter, $65c; butterfat, 78c; eggs, 65c.

GRAND TRAVERSE (W.)—Farmers are mostly cutting wood. We are having very cold weather for the time of the year, not much of anything being sold at present.—C. L. B.—The following prices were offered at Traverse City: Wheat, $2.10; oats, 85c; rye, $1.25; poultry, hens, 16c; springers, 18c; butter, 55c; butterfat, 78c; eggs, 55c.

MANISTEE (N. W.)—The farmers are cutting wood, keeping fires going; also barn work. Zero weather, storm and snowy here now and ground frozen, leaving grain bare; farmers cannot sell much these cold days. Most farmers, as far as I know, are keeping their potatoes for higher prices and beans not sold yet. Farmers are buying and selling some hay. Not much building being done now.—H. A. Butterfat has gone up to 68c. Butter remains at 55c, eggs 55c. Potatoes are $$2.50 per cwt., navy beans $6 per cwt., red kidney beans, $10.50 per cwt.; rye, $1.25 per bushel.

Pork is worth 12c per lb. alive, 16c dressed; beef, 4c to 7c on the hoof, 10c dressed; veal, 12c alive; live chickens, 14c to 16c per lb.

IOSCO (E)—The weather is very cold for this time of the year. Farmers are doing chores and getting up some wood. Nothing much going to market. Not many beans in the country this year, what there is are good, dry and clean. Not many beans going to market, the farmers are holding on a little. Most of the potatoes sold early in the fall at per bu. Now they are a little higher. A. L.—The following prices were offered at Tawas City: Wheat, $2.05; corn, $1.40; oats, 70c; rye, $1.18; hay, No. 1 timothy, $20 to $22; beans (C. H. P. pea), $6 cwt; butter, 65c; butterfat, 72c; beef steers, $12@13 dressed; beef cows, $12@13 dressed.

VAN BUREN (E.)—Farmers are doing their general routine of work, getting wood, shredding corn, trimming grapes and fixing up for winter. The weather has been fine, the sudden cold snap, with zero weather for a couple of days, was felt generally. The finding of the body of Miss Maud Tabor in the cellar of their home in Lawton has created its share of excitement and the mystery is not yet solved. Charlie Wildey of Paw Paw, the manager of the Fruit Growers' Union and an old resident, has passed away. Corn selling at $1.25; oats, 80c; hay, $30.—V. G.

EAST ARENAC—Weather has been real wintery and also some snow but not enough for sleighing. It is hard on the fall grains, as the ground is frozen real deep. Some produce moving; oats, rye and wheat up some; beans just holding their own; very dull; holiday time is here.—M. B. R.

SAGINAW (S. W.)—We are having good, steady winter weather with about four inches of snow. The coal strike has shortened up the fuel supply, so lots of people have to hustle round and get wood. Quite a bit of livestock going to market. Some corn in field, yet other ways the fall work was well finished up. The following prices were offered at St. Charles:: Wheat, $2.10; corn, ear, 60c; oats, 75c; hay, No. 1 timothy, $20; No. 1 light mixed, $18; beans (C. H. P. pea), $6; potatoes, $1.50 bu.; livestock, hogs, $12.50; beef steers, $7 to $10; beef cows, $5 to $7; veal calves, $16 to $18.

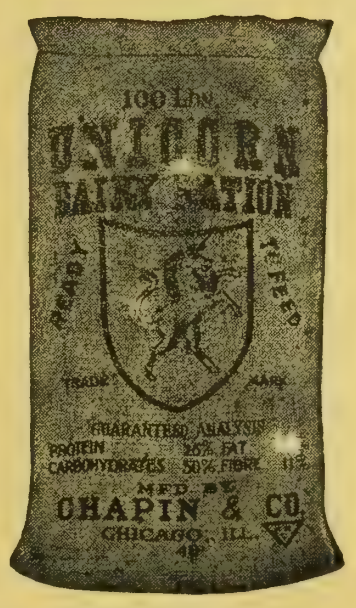
HILLSDALE (C.)—Farmers are cutting wood at the present time and feeding their stock. It is cold and blustery at this time.—A. J. B. The following prices were offered at Hillsdale: Wheat, $2.23 to $2.28; corn, 70c; oats, 70c.

SAGINAW (S. W.)—We are having a spell of about zero weather with about an inch of snow; not much doing among the farmers except chores; the roads are in fine conditions; stock is looking good, with plenty of rough feed for the winter.—G. L.

SANILAC.—Cold, cold. No snow. Hard weather on wheat and meadows. Bean threshing mostly done and principally marketed. Yield has been very good and quality good. Clover threshing and hay pressing is the order of the day. Clover threshing very good and seed of very good quality. Hay market stronger. Great deal of hay being pressed and delivered to hay sheds. Stock have started into the winter in good condition.—G. A.

CHARLEVOIX (S. W.)—Farmers are cutting wood and going to the lumber camps. Nothing much to sell now except butter, cream and a very few eggs. The weather is cold for the time of year. Not enough snow for real good sleighing, about six inches in the woods. We are getting a good price for some things, but we pay some price, too. Flour is $15@16 per bbl, cheese, 45c lb.; sugar, 15c; coffee, 50@60c; brooms, 80c@$1.50 each; nails, 6c; shoes, rubbers, mittens, yarn and clothes whatever anyone who has them has the nerve to ask.—C. B. The following prices were offered at East Jordan: Wheat, No. 1 red, $2.10; corn, $1.55; oats, 90c; rye, $1.13; hay, No. 1 light mixed, $30; straw, rye, $8@9; wheat-oat, $8@9; beans (C. H. P. pea), $6.30; red kidney, $7; uoltry, hens, 22c dressed; springers, 25c dressed; butter, 65c; butterfat, 73c; eggs, 65c; hogs, $12; beef steers, $6; beef cows, $4@5; fruits, apples, $1@2. The weekly basket of butter and eggs or can of cream buys less food or clothing than it has in years. The only place I can trade and make any money is at the postoffice. Stamps are the same old price and go as far as ever.

"What's the milk price?"



Costs More—
Makes You More

Cheap Feeding— Not Cheap Feeds

EVERYWHERE, these days, dairymen are striving to lower the cost of producing milk by lower-cost feeding.

But lower-cost feeding cannot be secured by cheap, low-quality feeds.

When a feed sells for less than Unicorn Dairy Ration it must be because it contains lower-priced, lower-quality ingredients.

It isn't the price you pay for a feed that counts—it is the profit you can make by feeding it.

The following extract from a letter, just received from Captain A. Henry Higginson, owner of Nancy Whitehall, world's record, Junior four-year-old Ayrshire, shows what one breeder thinks of Unicorn Dairy Ration:

"I'm glad to tell you that, in my opinion, Unicorn is the greatest milk producing feed in the world today, and not only produces milk, but keeps the animals well and healthy while they are producing and leaves no bad after effects."

CHAPIN & CO., CHICAGO

BREEDERS DIRECTORY

(SPECIAL ADVERTISING RATES under this heading to honest breeders of live stock and poultry will be sent on request. Better still, write out what you have to offer, let us put it in type, show you a proof and tell you what it will cost for 13, 26 or 52 times. You can change size of ad. or copy as often as you wish. Copy or changes must be received one week before date of issue. Breeders' Auction Sales advertised here at special low rates; ask for them. Write today!

CATTLE

HOLSTEIN-FRIESIAN

MR MILK PRODUCER

Your problem is more MILK, more BUTTER, more PROFIT, per cow.

A son of Maplecrest Application Pontiac—132652—from our heavy-yearly-milking-good-butter-record dam will solve it.

Maplecrest Application Pontiac's dam made 35,103 lbs. butter in 7 days; 1344.3 lbs. butter and 23421.2 lbs. milk in 365 days.

He is one of the greatest bred long distance sires.

His daughters and sons will prove it.

Write us for pedigree and prices on his sons.

Prices right and not too high for the average dairy farmer.

Pedigrees and prices on application.

R. Bruce McPherson, Howell, Mich.

MUSOLFF BROS.' HOLSTEINS

We are now booking orders for young bulls from King Pieter Segis Lyons 170506. All from A. R. O. dams with credible records. We test annually for tuberculosis. Write for prices and further information.

HIS POSITION IN THE COAL STRIKE

UP TO HIS OLD TRICKS AGAIN

The Sugar Beet Growers Issue Convention Call

Denver, Colo., to be Scene of First National Convention of Beet Growers to Strengthen Organization

MICHIGAN sugar beet growers will be encouraged to know that a movement is on foot to consolidate the sugar beet growers of the United States into one great national organization which can cope with the increasing difficulty of securing an equitable price for their product and a fair share of the consumer's dollar.

An official call has been issued for a national growers' convention which is to be held at Denver, Colorado, January 26, 1919. The call comes from the office of the Intermountain Farmers' Ass'n, Inc., 306 Judge Building, Salt Lake City, Utah. "The national sugar bowl," says the announcement, "is in the clutches of a few powerful corporations which are so united and organized as to form a most menacing trust." Attention is called to the fact that the trust is so dominating the situation as to impel the government to take action along lines which discourage the development of the sugar beet industry in this country by holding down the price of sugar beets below the actual cost of production.

Asserting that sugar beets must be regarded as one of our greatest agricultural assets, the statement calls upon the best growers through their representatives to meet at Denver and devise ways and means of securing a fair and just portion of the profits that under an equitable arrangement would result to growers from the production of sugar.

Prominent in plans for organization of a National Beet Growers' Association is C. G. Patterson, Secretary of the Intermountain Farmers' Association and a member of the National Board of Farm Organizations.

Joining the Intermountain Farmers' Association in the call for the meeting are the Farmers' Unions of Nebraska and Colorado, State Granges of Washington and Colorado, the Mountain States Beet Gowers Association and the Gleaners. Other organizations co-operating are the Idaho, Nebraska, Michigan, Ohio and Kansas State Granges, the Farmers' Union of California, the American Society of Equity, Wisconsin Cheese Producers' Federation, the Associated Dairymen of California, the Equity Co-operative Association of Montana, the Ohio Farmers Co-operative Milk Company, the Almakee County Union of the American Society of Equity of Iowa, and the National Board of Farm Organizations.

Michigan Plans Organization

The sugar beet growers' committee for this state is earnestly making plans for the formation of a strong and permanent state organization. At the mass meeting held in Saginaw a month ago the matter of co-operating with the Colorado people came up for discussion, but it was decided that the season was too far advanced to attempt to carry out a mutual program with the westerners on the 1920 contract. Nevertheless it was the sense of the meeting that plans should be laid for entering into negotiations with the Colorado growers or any other growers desiring the organized assistance of Michigan growers. No plans have yet been made for sending a delegate to the Colorado convention, but it appears that it would be a wise thing to do. Michigan is the most important sugar beet growing state in the "eastern" district, and should by all means have a voice in any convention called in behalf of beet growers. The Michigan committee has not yet issued its call for a conference with the manufacturers but this is expected at a not distant date.

Sliding Wage Scale

The committee at its last meeting discussed and practically adopted a plan for a sliding wage scale. The present flat rate, it is claimed, is not conductive to efficiency. Workmen will go throgh the rows carlessly, cutting out many beets that should be left, and when pulling the beets will leave a good many that do not come out easily. Sugar beet growers estimate that from one-half to a ton of beets to the acre are left in the ground particularly in seasons of early fall and bad weather conditions. To make it an object to workmen to use greater care in thinning and gathering the beets, the growers feel that the laborers should be paid a bonus. The following sliding scale arrangement was suggested: Minimum wage, $28 for 22 to 24-inch rows, $26 for 26 to 28-inch rows, and a bonus (50c to $1) for every additional ton over eleven tons to the acre.

Beet Sugar Statistics

At the mass meeting of growers a committee was appointed to gather such information as was available concerning the amount and value of by-products taken from sugar beets. This information has already been compiled and will be presented to the sugar beet growers through an early issue of Michigan Business Farming.

A FARMER'S VIEW OF THE SUGAR BEET CONTRACT

In your issue of December 20th of M. B. F., notice you have an article on the sugar beet question. Have been watching the sugar situation for some time. Have been a grower of beets for a number of years and have made a study of the business of raising beets. I think your article very good but in some points you have not made it very clear to most of the growers as to the sugar contract. You have taken the very lowest figures for the basis of your figures for there are not many years that the sugar content would be as low as 13 per cent. Take the year of 1917. I don't think that beets would test less than 20 per cent. Now for the raising of sugar beets think it not a very fair business in many ways. If a farmer raises a prime steer he gets the prime price. If he raises a scrub he gets the scrub price.

Now as to the old contract don't think it fair at all and if the farmers would give the issue a little thought and study they would see that it is pretty much one-sided with the largest part on the company's side. During the war when the price of sugar was restricted we didn't have so much chance for complaint but have been watching to see what the government is going to do with the price but as far as I can see the sky is to be the limit, and if it is going to be left to supply and demand any thinking farmer will readily see the sugar company's final settlement to the farmer above the guaranteed price will be determined by the four months when the price of sugar will be the very lowest. Take the present fall for an example. You could not buy a pound of sugar from our local factory at all until after Nov. 15th. I learned from the agriculturist that they were shipping sugar but it was to be subject to price, but remember, Mr. Farmer, they will not overlook October when it comes to determining the price on your beets as they take the average N. Y. wholesale price for October, November, December and January. Would like to see the New York sugar market quoted in your paper. Think it would be of benefit to the beet growers as I cannot find it in any of the dailies.

The field men in our locality are pretty independent this fall. They say they are just going to ask the farmer if he is going to raise beets and if he says no, just pass on.

I once heard Patrick H. Kelly tell a story of two toads in a farmers' milk can. One [illegible] the other a pessimist. They were both jumping [illegible] out. The pessimist [illegible] drowned. The optimist kept on jumping and was [illegible] morning. Think if there were not so many pessimistic farmers and they would do a little more thinking it wouldn't be long before we could get a better contract.

In any sliding scale arrangement there must be some basic figure from which to work. In the suggestive table published in our Dec. 20th issue, 13 per cent sugar was used because it was substantially the same basis used by the manufacturers in California who pay for the beets according to both test and market quotation. Surely you would not use a higher test as a basis, for the higher the test upon which the minimum price is based, the less the farmer gets. A good many Michigan beets will test as low as 13 per cent and some even lower. The test for 1918 beets averaged about 16 per cent, and the estimated average for the 1919 crop is 14 per cent. Of course, these are manufacturers' figures. When the beet growers are properly organized they will know their own test and not be obliged to depend upon somebody else's word.

The manner of determining the average market price for the settlement of beet contracts has been thoroughly discussed at recent meetings of the sugar beet growers and their committee. Members of the committee claim that investigation has shown that practically all the beet sugar is disposed of by the manufacturers during the months of October, November, December and January, and that it is fair to all concerned to use the market quotations for these months as the determining basis. If the supply regulates the price, it ought to be to the farmers' interest to have the sugar price for the month of October taken into consideration, for that is the month when beet sugar is normally the scarcest and the price ought to be the highest.

Of course, the companies are not anxious to buy any beets next year. There is no profit in 20-cent sugar, you know, and besides sugar might fall like manna from the skies, causing a surplus and lowering prices. It is not good business for the manufacturers to appear eager to buy beets. The farmers might ask for a higher price. This "passing by" of farmers who need to be coaxed to sign contracts is merely a part of a deliberate plan to worry the farmers into signing their contracts. You are right. We need a few more optimists among the farmers. They are entitled to much higher prices on 1920 beets and it remains entirely with them whether they get it. —Editor.

Improved Breeders and Feeders Announce Program of Annual Meeting

Breeders' Associations Will be in Annual Session at East Lansing January 14th and 15th

THE TWENTY-NINTH annual meeting of the Michigan Improved Live Stock Breeders' & Feeders' Association and Allied Organizations will be held Wednesday and Thursday, Jan. 14 and 15, 1920. On Wednesday, Jan. 14, will be held the meetings of the following organizations: Michigan Sheep Breeders' Association, Michigan Swine Breeders' Association, Michigan Horse Breeders' Association, Michigan Holstein-Friesian Association, Michigan Guernsey Cattle Club, Michigan Hereford Breeders' Association, Michigan Red Polled Breeders' Association, Michigan Aberdeen Angus Breeders' Association, Michigan Shorthorn Breeders' Association, Michigan Jersey Cattle Club, Michigan Poland China Swine Breeders' Association, Michigan Duroc-Jersey Breeders' Association and Michigan Cnester White Breeders' Association and Michigan Breeders' Association.

The officers of the various organizations are preparing interesting programs and it behooves everyone interested in purebred live stock to attend and boost for his particular breed as well as learn what his fellow breeders in other parts of the state are doing.

Thursday, Jan. 16 will be devoted to a general meeting of all association. For this meeting they have secured two speakers of national reputation, namely, Mr. O. E. Bradfute, director of the American Farm Bureau Federation, whose topic is "The Organized Farmer" and Mr. E. C. Brown president of the National Live Stock Exchange, whose topic is "The Operation of the Packing Industry and Stock Yards Under Government Control." The program follows:

GENERAL MEETING

Wednesday, Jan. 14., 1920.

At 5 p. m., room 402, Agricultural Building, joint meeting of all Allied Organizations.—The Health of Michigan Live Stock, H. H. Halladay, Clinton, president State Live Stock Sanitary Commission; reports of association secretaries; banquet tendered by the State Board of Agriculture to members of the Michigan Improved Live Stock Breeders' and Feeders' Association.

Thursday, January 15, 1920.

Meeting called to order at 9:30 a. m., room 402, Agriculture Building, East Lansng.—Secretary's report; appointment of committees; president's address, Colon C. Lillie, Coopersville; The Agricultural Outlook, L. Whitney Watkins, Manchester, Michigan; The Operation of the Packing Industry and Stock Yards Under Government Control, E. C. Brown, Chicago, Ill., president National Live Stock Exchange.

Meeting called to order at 1:30 p. m.—The Organized Farmer, O. E. Bradfute, Xenia, Ohio, director American Farm Bureau Federation; Live Stock on the Diversified Farm, Dean R. S. Shaw, East Lansing; reports of committees; election of officers.

SECTION MEETINGS

Michigan Sheep Breeders' Association.

Pres. E. G. Lead, Rickland; secretary, V. A. Freeman, Lachine.

Wednesday, Jan. 14, 1920.

Meeting called to order at 10:00 a. m., room 109.—The Outlook for Wool and Mutton Production in 1920, L. L. Heller, Wool Growers' Association; What We Have Accomplished in Co-operative Marketing of Wool in Ohio, J. B. Walker, Gambier, Ohio; Why We Should Have an Active Michigan Wool Growers' Association, C. A. Tyler, Detroit.

Wednesday, Jan. 14, 1920.

Michigan Swine Breeders' Association

President, J. B. Hibbard, Bennington; secretary, E. R. Leonard, St. Louis.

Meeting called to order at 1:30 p. m., room 109—Swine Feeding Experiments in Progress at M. A. C., H. W. Norton, Jr.; Boosting the Pure-bred Swine Industry Through Boys' and Girls' Pig Clubs, W. A. Anderson, state leader of boys' and girls' clubs; The Public Sale as a Means of Disposing of Breeding Stock, W. J. Clark, Eaton Rapids.

Wednesday, Jan. 14, 1920.

Michigan Horse Breeder's Association

President, Jacob DeGeus, Alicia; secretary, R. S. Hudson, East Lansing.

Meeting called to order in room 316 at 1:30 p. m.—The Inauguration of the American Horse Publicity Association Campaign, G. E. Wentworth, superintendent of the Chicago Horse Market Co.

Tuesday, Jan. 13, 1920 at Noon.

Michigan Holstein-Friesian Association.

President, M. W. Wentworth, Battle Creek; secretary, Chas. A. Daniels, Okemos.

First annual sale by the Michigan Holstein-Friesian Breeders' Association of 76 head of inspected and guaranteed animals, all choicely bred and with high records.

Tuesday, January 13, at 6:30 p. m.

Annual banquet at Plymouth Congregational church, Lansing.

Wednesday, Jan. 14, 1920

At 9:00 a. m., Agricultural building—President's Address, M. M. Wentworth, Battle Creek; report of sec'y.-treas., C. A. Daniels, Okemos; awarding prizes for 1919; report of sale committee; business session.

Afternoon session.—The Feed Situation R. W. Chapin, Chicago; Holstein Policies for the Future, M. S. Prescott, Syracuse, N. Y.; Organizing the Holstein Industry, D. D. Aitken, Flint, Mich.

Wednesday, Jan. 14, 1920.

Michigan Guernsey Cattle Club.

President, E. J. Smallidge, Eau Claire; secretary, C. G. Parnall, Jackson.

Room 111 at 9:30 a. m.—The Sale of Guernsey Products, H. W. Wigman; 11:00 a. m., Judging of Guernsey Cattle in Pavilion, Prof. A. C. Anderson; 1:30 p. m., Election of officers and business meeting of Michigan Guernsey Cattle Club; 2:30, Guernsey Cattle on the Island of Guernsey and in America, Harry W. Griswold.

Wednesday, Jan. 14, 1920

Michigan Hereford Breeders' Association

President, Jay Harwood [illegible]; sec'y-treas., Earl C. McCarty, Bad Axe.

Meeting called to order at 1:00 p. m., room 110—Outlook for Herefords, Allen Bros., Paw Paw; Does a Show Herd Pay as an Advertising Proposition, Tony B. Fox, Pewamo; Breeding and Feeding, Louis Norton, Nashville, father of the Hereford; Outlook for Herefords in the North West, Gid Granger, Gaines; Polled or Horned, the Most Profitable to Breed? W. H. Anderson, Grand Rapids; Foundation for a Breeding Herd, E. J. Taylor, Freemont; Fashionable or Plain Breeding, the Most Profitable for the Average Breeder? Earl C. McCarty, Bad Axe; Herefords, the Best Breed to Feed for Beef, J. F. Brand, Saginaw.

Wednesday, Jan. 14, 1920

Michigan Red Polled Breeders' Ass'n.

President, N. C. Herbison, Birmingham; secretary, E. J. Peabody, Grand Ledge.

Meeting called to order at 1:30 p. m., room 113—Influence of Sire on Herd of Native Cows; also on Grades Pure bred Cows, J. M. East, Marcellus; Improving and Advancing the Red Poll Cattle in the State of Michigan, Jacob Burner, Grand Ledge; Benefit Derived from Exhibiting at Fairs, N. C. Herbison, Bir-

State Potato Exchange Makes Rapid Progress

Field Agent Cribbs Reports November Volume of Business Over Half Million Dollars

By W. C. CRIBBS,
Field Agent Michigan Potato Exchange

A REVIEW of the work of the Exchange this year shows that the Michigan Potato Growers Exchange is making thousands of dollars for the members this season.

The season started out with a large volume of apples which were handled by the Exchange, which were sold at very high prices for the farmers. The Exchange sold cider apples for the local associations for prices ranging from $1.50 to $2.15 per hundred.

The price to the farmers was started by the local buyers at 80 cents per hundred, but it did not take long for the Exchange to get into the cider apple game and the price was advanced to $1.50 at once. The writer attended a meeting at Tustin where the farmers were not organized and they were selling hand picked apples No. 1 and 2 at $1.40 per hundred and the Exchange was that day selling cider apples for $1.65 and was returning to their members $2.20 per hundred for potatoes and the buyers in Tustin were paying the farmers there $1.70, a difference of 50 cents per hundred between the price received by the organized and the unorganized farmers.

The prices returned to the farmers by the co-operative associations this year has been very much in advance of the prices paid by the local buyers in most all cases. The difference has run all the way from 4 to 50 cents per hundred.

Last year there was a falling market coupled with a car shortage which worked against the local association or put them at a disadvantage on making returns to the farmers who were members. The buyers also were paying higher prices than they could afford to pay last year and by so doing they lost thousands of dollars. They did this in order to break up the organizations by causing dissatisfaction among the members. The buyers found that they could not break the associations by this method and although they put several thousand dollars in to break them, they doubled their number in just nine months.

This year we have enjoyed a car shortage for the market has advanced and the farmer who ordered his potatoes sold and was not able to get them off for a week or two has found that when they were sold he was returned much more than he expected in a great many cases. The buyer this year has given up the idea that they can break up the associations by paying more than the produce is worth and are taking what they can get with a fair chance of making a reasonable profit on their investment.

This year is the year when the loyal members are making good money and the man who is selling on the outside is getting let down.

The writer knows of 14 cars of potatoes shipped from one little station where there were fourteen cars shipped after the first of June last spring, by a buyer and these potatoes brought a very low price although many of them were purchased the fall before at one dollar per bushel when the market would not warrant more than 80 cents per bushel.

The Exchange has sold 90 cars of cabbage for its Saginaw association. They have sold several cars of rye and wheat at very good advances above the regular market. Three cars of rye were sold for the McBain association and netted the farmers around $1.51 cents per bushel last fall when the elevator was only paying $1.30 at the time this was loaded out. One member at Buella told me that he had made over $100 in three weeks above the buyers' price on second grade apples which were sold by the Exchange to the peddler trade.

At Gowen, a little town just six miles from Greenville, after the farmers organized a co-operative marketing association there, the members were offered $2.14 by the buyers when the same concerns were only paying $1.90 in Greenville, which is the leading buyers' market of the state.

A man at Sheffield said that his company was only paying $2.00 per hundred there and the same firm at another town just 20 miles from there, but where the farmers were organized, was paying $2.40 per hundred; so it is seen that the unorganized farmer is holding the bag for the organized farmer in as much as the buyers can take a profit from the one and spend it in another community to compete with the organized farmer.

A concrete example of the difference between the price that the buyers are paying on a safe basis, is the Kingsley association in Grand Traverse county. Mr. Sidney Weaver had 5,980 lbs. of potatoes to sell and the association was so crowded that they could not handle them when he wanted to sell and he went to the buyer who would only pay him a price which would net him $101.66. He waited for a day or two when the association could take them and he received $132.44, a gain of $30.78.

The Exchange has just held one of its representative meetings called to amend the by-laws. This meeting was held on Dec. 18th and was well attended by the voting delegates from the locals as well as many members and county agents.

One of the important amendments to the by-laws was to give the Exchange power to hire a competent auditor to audit the books of the locals whenever this was necessary or at least once a year.

One association was organized on Saturday afternoon, they purchased a warehouse on Monday and started doing business on Wednesday. This association is located so that they have members from Kent, Newaygo and Montcalm counties. They have shipped several cars of beans and potatoes and are handling all kinds of farmers supplies. One association at Grant has just placed an order for over eight thousand dollars worth of clover and grass seeds.

The Central Exchange purchased over four cars of grass seeds last year and made a saving to their members of from two to seven dollars per bushel.

To give some idea of the confidence of many of the members in their local associations, I will give a little history of the Kingsley Association. This association has been in operation about 15 months and on the start they purchased a warehouse for $3,000, but soon saw that this was too small for their needs

Chart showing approximate trend of cattle market during 1919. The chart does not show the great drop in prices from Dec. 10th to 20th, when the market slumped to $11.50.

Farmers' National Council Explains Attitude Toward Organized Labor

Secretary Benjamin J. Marsh Says "Sled-Length" Political Alliance With Labor Not Desired

EDITOR Michigan Business Farming: After an absence from the city for some time I have just been reading over the November 8th issue of the MICHIGAN BUSINESS FARMING which I always study with great interest. I want to trespass on your space briefly with a comment on some of the articles in that issue, especially the one, "Shall Farmers Unite with Organized Labor?"

May I state that the National Farmer-Labor Conference just held in Chicago on November 21 and 22, which was called by the Farmers' National Co-operative Association, did not in any way endorse a complete union of farmers with organized labor. It did not throw in its lot with the labor party, but the delegates almost without exception, favored joint effort in a strictly non-partisan way to secure a joint legislative program. I think that everyone will agree with MICHIGAN BUSINESS FARMING that an honest day's work should be given for honest pay for a day's work. We may forget the old statement that we are all as lazy as we dare to be. Any true American will want in this time when production is essential, to produce to a maximum, and to secure fair renumeration therefrom. It is not true, however, that the interests which are most loudly denouncing the coming together of farm and organized labor on a common program, are the predatory and monopolistic interests of America including of course the big financial interests. Let us admit that organized labor has made many mistakes, but seldom have they attempted to limit production, despite the assertion you quote from the Hon. Jonathan Bourne, Jr. It is a mistake to do so. It is equally a mistake for farmers to leave their machinery unprotected from the rain, and their cattle to weather the blizzard.

Farmers will realize, if they stop to think a moment, that the city, factory, transportation and mine workers of America are their big market. The total value of agricultural products was in 1917 about $19.444.000,000, of which only about one-tenth was exported. In 1917 there were 22,000,000 families in the United States, of whom less than three and one-half million received a net income of over $1,000 apiece, and the average of the 18,500,000 families was about $750 apiece. About 6,500,000 of these live on farms, so that roughly speaking, 12,000,000 families of this class have to buy their food. On the average, families with an income up to $1,500 spent 35 to 40 per cent of it for food. Of any increase in the wages which these families get, particularly those in the lower rank, with incomes of $1,200 to $1,500 probably an equal proportion or at least one-third, will be spent for more and better food. This is clearly to the farmers advantage, always assuming, of course, that the laborer is worthy of his hire—that is that he works conscientiously and energetically. It is clearly to the farmers' advantage that labor shall get the largest share of what labor produces since labor is the farmers' big market. Of course Wall Street wants to reap where it has not sown, but why should the farmers play Wall Street's game? In poit of fact a very large percentage of American families off the farm, do not eat as much as they need to maintain their highest efficiency. We have never had overproduction in America, we have had

(*Continued on page* 17)

THE FARMERS' National Council, of which Mr. Marsh is the secretary, is a federation of farm organizations which include several state Farmers' Unions, the Gleaners, a number of strong state Granges, the American Society of Equity, and minor associations of farmers. The legislative program of this council has been frequently discussed in these columns and our readers are fairly familiar with it. In addition to the general legislative aims of all farm organizations, this Council endorses public ownership of the railroads and the merchant marine, government development of the natural resources, and higher taxes on income and profits. This program is radically different from that recently announced by the National Grange and the American Federation of Farm Bureaus, both of which organizations have declared against government ownership and operation of public utilities, and have shown no concern whatsoever over the present disproportionate distribution of the tax burden. In at least one other respect the Farmers' National Council differs widely with nearly all other farm organizations,—it believes in joint action with organized labor to carry out a legislative program.

The farmers can agree en masse upon legislative remedies for the shortcomings of present marketing methods but they split asunder when they attempt to agree upon broader issues. It is not necessary that all farmers in all organizations endorse public ownership in order to unite and work together upon the matters more closely associated with their own business. The same principle can be applied to the suggestion that farmers and organized labor if they choose on matters in which they have common interests. To do this, it is not necessary that they split hairs or quarrel over matters on which there is a difference of opinion. If the Farmers' National Council and the National Board of Farm Organizations would just forget for the next six months all about the issues which they cannot possibly agree upon and remember only those upon which they can agree, they could bring material benefits to all the farmers of the United States.

Business Farming and its readers are very glad to have Mr. Marsh's valued opinions upon these great questions.—Editor.

Gleaners Buy Armour's Elevator Interests

Farm Organization Broadens Co-Operative Plans Through Half-Million Dollar Corporation

THE GLEANERS have announced the purchase of Armour & Company's elevator interests in the state of Michigan, and are organizing a half million dollar corporation to handle what is claimed to be the biggest farmers' co-operative enterprise in the middle west. The physical assets of Armour & Company include two terminal elevators, one located at Big Rapids and the other at Grand Rapids, the latter being not only the largest bean and grain elevator in the state of Michigan, but also one of the best equipped plants in the United States. Both are fully equipped to care for grain and beans in any condition, and they will be used as terminal plants, with receiving station and elevators distributed throughout the state. Aside from these plants the company has an interest in a large number of local elevators; general offices at Grand Rapids and sales agencies in most of the large terminals.

THIS HUGE terminal elevator in Grand Rapids is now owned and operated by Gleaner farmers. It is the best of its kind in the United States and will go a long way toward solving farmers' marketing difficulties.

The investments of the great packing firm in Michigan's elevator business consisted of a half interest in the Lewellyn Bean Company, and it was under the name of this company that Armour & Company carried on their bean and grain business in this state. The president of the Lewellyn Bean Co., is Mr. Fred E. Lewellyn of Grand Rapids, one of the most successful and best known bean men in the state, a man who has probably done more than any other man or group of men to stabilize the bean market the past year or two and to see that farmers secured a fair profit on this product.

"Yes, it is true," said Mr. Lewellyn, when interviewed by an M. B. F. representative, "Armour & Company have sold out their Michigan interests to the Gleaners. The deal has practically been closed and within a short time the Gleaners will be in full charge of our plants in this state.

"The move was inevitable," continued Mr. Lewellyn, "I have realized for a long time that farmers would some day control the distribution of their products as much as their production, and that they would have something to say about the ultimate price just as all other business men do. I think the time has come when the business interests of the country should recognize this fact and treat the farmer as a business man."

Asked if the present business organization of his company would go with the company into the Gleaners fold, Mr. Lewellyn emphatically replied:

"Yes, sir; every man in my organization will come to the new corporation with the intention of making the business the biggest kind of a success. Not only myself but the men who are associated with me are firmly convinced that a great future lies ahead of this co-operative enterprise, and we are all going into this new company with the feeling and understanding that we are to be joint co-operators with all other interests. Co-operation has come to stay, and it is our future life work to complete and strengthen the chain from producer to consumer. We are going to see that every one connected with the enterprise has a real interest in carrying out his part of the plan. We will not only make it an object for farmers to co-operate in selling their products, but for consumers to co-operate in purchasing these products."

"What are your future plans? Is your chain of elevators complete or do you expect to take on additional elevators from time to time?" Mr. Lewellyn was asked.

"Well, you know," he replied, "there's no limit to a co-operative proposition of this kind. It can be as big as you want to make it. We will add new elevators just as fast as the need for them develops. We don't intend to encourage the building of elevators in sections that are not populous enough to support one. There are already too many elevators in certain sections of the state, all competing with each other and just barely making both ends meet. There is no use of the farmers having from twenty to forty thousand dollars invested in elevators at every four corners. Where there is room for an elevator and our investigators find that there is a chance of making it a financial success, we shall build and operate. A modern elevator represents a large investment of money and while we will probably not find it good business to erect elevators at all points where farmers want them, we do expect to have a warehouse or shipping station in every principal town of the state where farm products may be taken in and forwarded to our big terminals at Big Rapids or Grand Rapids for finishing and distribution."

"Is this large central organization with local elevators acting as branches to be preferred to the locally owned and operated plants?" we asked Mr. Lewellyn.

"Why certainly," he said with a smile, "I have been operating elevators for farmers for many years, and I have learned from experience that a central selling and buying organization is absolutely essential to the constant success of such enterprises. Nearly all the big elevator companies of the state own a string of elevators, with their chosen managers in charge. Were this not the most satisfactory and successful plan, rest assured they wouldn't follow it. The Gleaners' co-operative plan carries out the idea of the central organization. I was attracted to this plan several years ago, and at the time I said to myself that if the Gleaner folks held to the plan they would succeed, and I guessed it right. That's why I'm glad to cast my lot with the Gleaners and help the farmers of the state to put their business on a solid financial basis through co-operative marketing."

The Gleaners claim to be the pioneers in the co-operative field in Michigan. The whole idea back of the Gleaner organization and its various enterprises is "co-operation," through the application of which every individual receives a portion of the benefits which he helps to secure. The Gleaners have applied this principle to their marketing organization, the Clearing House, which is just what its name signifies, a clearing house for the products of its members and for the supplies which they desire to buy.

The first central Gleaner distributing agency was established in the city of Detroit in 1906. Since then the growth of the marketing organization has been rapid. Two years ago the association found it necessary to increase its capital stock in order to take care of its accumulating business. Nathan F. Simpson, former warden of Jackson prison, was engaged as general manager and the business was expanded until it embraced seven modern elevators and eight buying stations. But even this extension was not sufficient to handle the vast volume of business that began to pour in, and the purchase of Armour's interests was the next logical step. Mr. Lewellyn has been virtually operating a number of farmers' elevators during the critical period of the past two years, by supplying them with working capital, taking their products and guaranteeing them net interest earnings. It is understood that the majority of these elevators will be taken over by the Gleaners.

We are advised that the Gleaner Clearing House will continue as in the past, and that its capital will be increased to care for a number of branch elevators which will be established this season. All elevators will be under one central management, and through this plan operating expenses will be reduced to the minimum. The Gleaner's Corporation will be able to secure ample capital, and all of the local elevators will be financed from this source. There is nothing unique or new, from a business standpoint in the Gleaner plan as outlined several years ago. These organized farmers claim and rightfully so, that "big biz" has no monopoly on the right to organize under the corporation laws of the several state. The big elevator companies of Michigan, all centralize as to management and operation. One company owns 57 elevators; others from ten to thirty. The steel trust, standard oil, the packers—all of the big business enterprises are organized on this plan.

The Gleaners, having secured a broad co-operative law a few years ago, are enabled to build a "big co-operative biz" on the regulation "big biz" foundation. The Farmers will own all of the elevators, and at the same time they will have an interest in the sales, service and management organization. We understand that the sale of stock will in no way be confined to members of the Gleaner organization, and that at least one co-operative canning factory will be established during the coming summer. The Gleaners believe that the business of marketing farm products is not different in its basic principles than any other commercial business, and that it requires large capital and credit to protect the investments against the ups and downs of fluctuating markets.

The Hot Water Treatment for Wheat Protects the Seed from Smut and Other Diseases

HOW TO OBTAIN seed wheat of high quality, free from stinking and loose smuts, anthracnose, weak kernels, rye, cheat, cockle and other pests, with little effort or expense, has been demonstrated very strikingly this year in over thirty Indiana counties, particularly in Shelby county. As a result of these demonstrations a systematic move is on foot now to make it possible for every wheat grower in that state to obtain such seed in the near future.

A big step in this direction was taken the past fall when more than 4,000 bushels of seed was treated for more than 400 farmers in 49 of the 92 counties of the state. In eight counties, central treating stations solved the problems of treating the seed, but in the remaining 41, the work was done largely on individual farms, with extension men or county agricultural agents either doing the work themselves or supervising the work of the farmer.

In the fall of 1917 the so-called modified hot water seed treatment was unearthed from the old government publications with the idea of trying it on some few wheat growers who might be willing to have a small part of their seed subjected to such a process. The treatment was known to be effective in controlling the loose or black head smut as well as the stinking smut, but had been used very rarely and then only by the plant doctors who employed it chiefly for scientific and experimental purposes. It was discovered some twenty years ago by a Scandinavian botanist, Dr. Jensen, and later modified by the scientists of the United States Department of Agriculture. Owing to its seeming impracticability, however, no consistent attempt had ever been made to use it, to any extent, on the farm.

The task of securing co-operators in this undertaking was not an easy one, since no grower was very anxious to have his seed wheat "cooked." However, owing to the pressure of the world war and the urgent demand for more wheat a few patriotic farmers were found who were willing to take a chance on it. The work was in charge of F. J. Pipal, of the Division of Botany, Purdue University Agricultural Extension Department, in co-operation with the county agricultural agents and the United States Department of Agriculture. About four bushels were treated in each case.

The results were very gratifying in every case, except in which the seed was killed owing to the improper handling after the treatment. The loose smut disease, which is borne within the kernel and therefore cannot be reached with the formaldehyde treatment, was practically eliminated from the treated crop, although as much as one-fifth of the crop was destroyed by this disease in the untreated fields. But this was not all. Altho the treated stands were lagging behind at first the farmers noticed that they made better progress after they resumed their growth in the spring and kept ahead of the untreated stands until harvest. Ernest Thornburg, of Randolph county, president of the Indiana watched his "cooked" plot with considerable interest, cut and threshed it separately and found that it yielded 10 bushels more to the acre than the untreated field, which had 8 per cent loose smut and a trace of stinking smut. The grain from the treated field was also of much better quality in other respects. Mr. Thornburg used it all for seed last fall and as he reported, he had a wheat crop this summer such as he had never had before.

Even better results were obtained by John Meiks, of Shelby county, whose treated plot yielded 15 bushels more to the acre than the untreated, altho the latter was on fertilized ground while the former received no fertilizer at all. The Meiks untreated field had 20 per cent loose smut.

The above results encouraged those in charge as well as the farm-

Breeders Prepare for State's Greatest Auction

Seventy-Six Black-and-Whites on Sale Lists of Michigan Holstein Organization

By VERNE E. BURNETT

King Oosterbaan Veemar Hengerveld

HOLSTEIN enthusiasts are very busy these days preparing for the Michigan Holstein Breeders first annual sale, to be held at the Michigan Agricultural College, at East Lansing, Tuesday, Jan. 31, when seventy-six of the finest of purebred black and whites will change owners. The program is declared to be the greatest of its kind ever billed in the state and big crowds of spectators are expected. Starting a series of annual sales, the Holstein breeders are making special efforts for a splendid opening affair.

The kings and queens and crown princes of the purebred world will adorn the stalls at the college when the sale takes place. The DeKol, Hengerveld, Korndyke and Pontiac and many other highest grade pedigree names can be recognized on the lists. The best herds and the best breeders were called upon in the arranging of the auction, and the breeders' guarantees are provided for each head.

Dora De Kol Oosterbaan is one of the Holstein aristocrats with more than 3,000 pounds of milk to her credit for a 30 day test.

Just to show samples of the calibre of the animals on the list, we point out the feature that sixteen of the animals have dams with more than 30 lbs. and up to 33.5 lbs. to their credit. One has a record of 1,100 lbs. per year. Four cows boast 30 lbs. of butter in 7 days. It is interesting to note that many are soon to freshen and that all are bred to bulls from dams with 30 to 45 lb. records.

Among the seventy females, in all stages of lactation, we find the following group of average records: All full age records average 7 days, 27.93 lbs. butter; 586.1 lbs. milk; four yr. old records average, 7 days, 25.85 lbs. butter; 540.9 lbs. milk; three year old records average, 7 days, 34.28 lbs. butter; 497.9 lbs. milk; two year old records average, 7 days, 18.94 lbs. butter; 396.4 lbs. milk.

Experts at the Michigan Agricultural College are taking active interest in the affair and expect all sorts of hospitality to be extended to the crowds expected to attend the auction. H. W. Norton, of the Extension Department, M. A. C., is a member of the committee in charge of the affair. Charles A. Danies, of Okemos, Mich., is secretary of the Holstein breeders and a member of the committee. The third committeeman in charge of the occasion is Albert E. Jenkins.

One of the high lights brought out by the galaxy of purebreds at the sale is the important part which the cow testing associations are playing in the raising of dairy standards in Michigan. There are more than a dozen of these associations active in the state and many are being organized. Business Farming has started a series of short articles about these associations, giving the names of members, the names and records of the ten highest cows, and other interesting material.

Another point to notice about the big auction is the national aspect. Buyers are expected from many states. Michigan has been building up a world wide reputation for purebred Holsteins. The recent cattle census of Livingston County threw a bombshell into the camp of the claimants of the best dairy district. Action of the various cattle organizations is largely the cause of the splendid record which Michigan has tacked up for herself. Breeders from Texas and Australia have visited Michigan in the past few months to buy purebreds, and the long list if Michigan winners at the International Live Stock Show in Chicago was a further boost for Michigan breeding.

Mr. Daniels, the Holstein secretary has made the following statement about the cattle at the big Lansing sale: "The animals selected are all sure profit makers and it will pay to raise many more like them. Many have 30 day records. A few have semi-official yearly records up to 1,100 lbs. butter, 25,000 lbs. milk. Six bulls have dams with records up to 33.5 lbs. butter and 675 lbs. of milk every seven days. The entire herd is sired by better than 30 lb. bulls. Two are ready for heavy service. All cattle are from herds under state or federal supervision for tuberculosis eradication and sold with a 60-day guarantee. Moreover all were selected from the best herds in Michigan and that is going some!"

Aggie Hengerveld Pontiac

Grove Lane Regina De Kol, a heavy producer herself, is dam of one of the most promising heifers at the Great Sale of Holsteins at Lansing.

It is impossible here to give the high lights to be offered at the sale, but numerous breeders have sent to Business Farming pictures and short accounts of the animals to be presented. A few of the list of royal Holsteins connected with the auction follows:

Dora De Kol Oosterbaan (22541.) Record at nine years, 11 months, 20 days: seven days, butter, 32.47, and milk, 745.5; thirty days, butter, 130.29, and milk, 302.0. She is the dam of a 24.4 lb., 3 year old, a bull calf by a 43 lb. sire and one reference sire in the great sale.

Grover Lane Regina DeKol (314,196.) Record at two years and four months: seven days, butter, 21.04 lbs., and milk, 460.8 lbs. At three years and seven months, butter, 29.66 lbs., and milk, 594.5 lbs. Milk for one day, 90.0 lbs. She is the dam of a heifer born April 5, 1919, consigned to the sale.

Aggie Hengerveld Pontiac. Record: butter, 26.28; milk, 618.3; milk for one day, 103.2. Semi-official for 282 days, milk, 18,858.8 lbs.; and butter, 758.6 lbs. Mark B. Curdy, consignor.

King Oosterbaan Veeman Hengerveld (22541.) Sire: Sire Korndyke Veeman Hengerveld. Dam: Dora De-Kol Oosterbaan. Record: seven days, butter, 32.47 lbs., and milk, 745.5 lbs.; 30 days, butter, 130.29 lbs., and milk, 3022.0 lbs.

College Belle Butter Lass. Record: butter, 7 days, 32.69; milk, 7 days, 71.16; butter, 30 days, 133.42; milk, 30 days, 3035. On semi-official work now, and will finish with about 1,100 lbs. butter and 25.000 lbs. milk. Bred to Pauline Sir Pontiac. He from a twice 30-lb. cow. Due March 2.

Rhea Hartog Elzevere 2d (309,925.)

Topsy Hartog Pet Canary (244,856.) Butter, 32.11 lbs., and milk, 551.0. Owned by Charles S. Heeg.

Canary De Kol Wayne, 609 lbs. milk, 27 lbs. butter in 7 days. Sire: Travis Cadillac Lad. Owners, Lake Side Dairy.

The date of the sale is considered especially opportune, inasmuch as prominent breeders from all parts of Michigan will be gathering at the state capitol during the same week for the annual meeting of the Michigan Improved Live Stock Breeders and Feeders Association and Allied Organizations. This series of meetings will be at Lansing, January 14 and 15. The Michigan Holstein Breeders Association is one of a long list of breeder associations which will join hands in Live Stock Improvement Week. Thus it is felt that a more opportune time could not be found for the first annual sale of Holsteins.

Here is what one prominent breeder in the state says regarding the sale: "The big auction of Holstein purebreds at Lansing, Jan. 13, is a landmark in the history of Michigan live stock. I believe it to be the greatest affair of its kind ever held and that none can well afford to miss it. It is more of a state exposition than merely a sale, inasmuch as some of the state's choicest stock will be on display."

Further reports of the great sale at Lansing will be made in a later issue. It is believed that the assembling of so many purebreds each year for a sale will be a fine thing for the dairy business, and the first installment, Jan. 13, surely looks as though it is going to be a ten strike.

College Belle Butter Lass, one of the finest of the 76 purebreds at the auction.

Regulation of Moisture Conditions in Soils

The Use of Muck, for Example, May Retain Moisture for Crops During Drouth

By PROF. M. M. McCOOL

Moisture in Terms of Money

MANY FARMERS testify that they have made more money because they took the time to get acquainted with the science of soils. In this article, Prof. M. M. McCool, of the M. A. C., presents some facts which may aid many farmers in getting the best value from the use of their land. Perhaps you are in a section troubled with annual drouths which make your crops shrivel and die. But if certain elements were mixed in with your soil, enough moisture might be held to tide over the vegetation until the rains come. Again, perhaps you have soil which holds too much water. The message on this page is the result of experiments tried out by thousands of practical farmers.

THE IMPORTANCE of proper amount of soil water to crop production cannot be overestimated. Water is nature's great solvent and it is largely through this action that plants are enabled to obtain salts in solution for their growth. Moreover, it is essential for the movement of the salts from the roots to the stems and leaves of the plants. We know that wood, hay, fruits, and even flesh, if kept perfectly dry do not decay. It is known that a vigorously growing plant must be supplied each day of hot weather with water in amounts equal to or greater than its weight, otherwise, it withers or ceases to grow, and that the total amount of water taken up by the roots from the soil mass and lost through the leaves to the atmosphere may exceed 500 lbs. for each pound of dry material produced by the plant, or about ten million pounds of water per ton from an acre of land. To state it differently about ten million pounds of water must be furnished by one acre of soil during the growing season to a crop that yields one ton of dry matter, or "curred" products. It is common knowledge that soils saturated with water are unsuitable for other than water loving plants. On the other hand a region that is not supplied with sufficient water is a desert regardless of its composition. Thus it is obvious that a comprehensive knowledge of the subject is very desirable.

We are to discuss many phases of this important subject but in this article the water supply, the forms in which water exists in the soil, the amount present in different soil classes and the things that affect the water retaining capacity of soils are to be considered.

The supply of moisture in soils depends primarily on the rainfall. The exceptions are where artificial irrigation is practiced or where water is brought to a region through some porous substratum and then reaches the surface by hydrostatic pressure. The following table shows the annual precipitation for different portions of the earth's surface:

Precipitation on Earth's Surface

Annual Precipitation	Percent of earth's land surface
Under 10 inches	25 0
From 10 to 20 inches	30.0
From 20 to 40 inches	20.0
From 40 to 60 inches	11.0
From 60 to 80 inches	9.0
From 80 to 120 inches	4.0
From 120 to 160 inches	0.5
Above 160 inches	0.5
	100.0

It is seen from the table that 55 per cent of the land area receives less than 20 inches of rainfall annually, while only 5 per cent receives over 80 inches. In the United States fully 50 per cent of the total area receives less than 20 inches of rainfall, and over a very large part of this the growing of crops is practically impossible except under irrigation. In almost all regions where crops depend upon rainfall, its unequal distribution, or the frequent recurrence of periods of drouth, results in reduced yields.

In almost every season in some parts of even so small an area as a single state crops are injured to a greater or less extent by drouth. In some cases the dry weather occurs early in the spring, in April or May, but it occurs more often in July or August, at the time when the growing crops are in greatest need of moisture. At the University of Illinois the distribution of rainfall is so irregular that in the past twenty-five years seven Aprils have been dry or have had less than two inches of rainfall, and during this same time four Mays, eight Junes, five Julys, six Augusts, and eleven Septembers have been dry, or a total of 41 out of 150 growing months for the 25 years. In the southern third of the state the distribution is still more irregular, and drouth is more injurious there, because of the greater evaporation and the character of the soil. This illustrates quite well the conditions generally in the humid area.

Water exists in the soil as gravatational or surplus, film water and unfree.

If water is added to a vessel of soil until it just stands on the surface it is said to be saturated, soaked with water, or water-logged, and naturally the pore spaces are completely filled with water; the air being displaced or forced out of them. Now if there is an opening made in the bottom of the vessel the surplus or gravational water will drain off, the amount so lost depending mainly upon the texture. Similar conditions maintain under field conditions in case of the finer textured soils after a heavy rainfall, the length of time required for the surplus water to drain away depending much upon the texture and nature of the subsoil. If the subsoil is rather coarse in texture or perforated by roots of plants or lower forms of life change takes place quite rapidly; if compact and fine in texture it is much slower.

Inasmuch as the rooots of plants must have sufficient air for their existence the surplus water in the soil is extremely undesirable, since it makes the solution too weak for plant growth and also forces out the air from the pore spaces and as a result the whole soil mass becomes in a stagnant or unsanitary condition. It is sometimes stated that this water cannot be taken up by the plants. This is untrue, and if it did not become in an unsanitary condition the plants would not perish unless the soil solution became too dilute. In fact, wheat or other crops may be grown to maturity in vessels of well or river water, provided the water is frequently renewed. Much of our information concerning the nutrition of crops has been determined by such means.

Now after the free water has drained off the soil is still in a moist condition. The amounts of water so held exclusive of that which still remains when plants wilt in it may be spoken of as the maximum film capacity of the soil. It is held mainly on the surface of the particles or groups of particles as the water film that clings to a pebble when withdrawn from the water and is easily removed by plants, readily passes into the atmosphere as vapor and freezes when the temperature reaches about one and one-half degrees lower than the freezing temperature of pure water. It may be assumed that the thickness of the film of water that surrounds a small soil particle under the above conditions is about the same as that surrounding a large one. Therefore, it follows the volume of soil that has the largest amount of internal surface spoken of previously is able to retain the larger amount of film water. We have also learned that fine textured soils are so characterized and consequently have greater maximum film water capacities than coarser ones. Muck and peat soils retain large quantities of water after they have drained.

The maximum film capacity of soils is also influenced somewhat by the structural relationships, the finer textured ones especially are capable of retaining more water when in a loose than when in a compact condition. Soils under field or natural conditions will retain less water than if under laboratory conditions inasmuch as they are usually more compact. The amount of water held by compact and loose soils, after having been saturated and often permitted to completely drain has been determined. A sandy soil held 5 per cent water when compact and 7 per cent when loose. A clay held 14 per cent when compact and 28 per cent when loose and a muck held about 100 under the former and 200 under the latter condition.

The water retaining capacity of a soil should always be determined under field conditions otherwise the results may be misleading. Since the degree of compaction or firmness of a soil changes little if any below the depth of plowing this increased water retaining capacity does not amount to much when one considers that the roots of plants strike to much deeper zones in the soil. In case of very shallow rooted crops it might tide them over a few days of drouth and thus be of great benefit to them.

It is well recognized that a given volume or weight of vegetable matter in various stages of decay retains much more water than the same quantity of soil, acting in like manner to a sponge. This is exemplified by the muck soils above referred to. The addition of manure or muck to soils may appreciably increase their water holding power. Thus, greenhouse managers and others change the soil in this respect when they incorporate with it leaf mold, compost, muck and similar substances. When we take cognizance of the fact that manure or other crop residues are added to the soil in relatively small amounts, it seems that their importance in increasing the water holding power has been unduly emphasized by some. It is no doubt used by some as an argument to stimulate the interest in the practices of manuring and green manuring the land and perhaps is justifiable.

Warm soils have a lower film water retaining capacity than cooler ones inasmuch as their attractive power for water is weakened and in addition its fluidity is increased. Thus a soil should retain more film water in the spring than in the summer or other times when the temperature is higher.

If a plant is grown in a mass of soil until wilting takes place, due lack of water, then removed and the soil weighed, heated in a drying oven several hours and again weighed, it will be found to have lost an appreciable amount of water. This water that is held so strongly by the soil some chemically by the minerals and the remainder on the surface, that the plant cannot make use of it, may be spoken of as the unfree or combined water, and the point in the water content where wilting takes place is called the WILTING POINT of the soil. This form of water is lost or removed from the soil only as vapor, some of it may condense on roots of plants and then be made use of by the plant. Although it cannot be removed directly by the crop for its growth it probably aids in breaking down minerals in the soil, or in the oxidation processes. In some instances that is near its upper limit.

The amount of unfree water in the soil when plants wilt is governed mainly by texture and the vegetable matter content. Where wheat was grown in vessels of soil sealed at the top, until wilting took place and the amount of unfree water determined. sand contained about one. fine sand about three, loam about eight, clay loam fifteen and muck about forty-five per cent respectively.

It is thus seen that texture has a tremendous influence upon the amount of water present in the soil when the plant wilts. Fine textured soils may retain more unfree water than the total amount of film water held by sandy soils in the fields. Moreover, vegetable matter increases the amount of unfree water as exemplified in the muck. Thus, in discussing the effect of vegetable matter on the water content of soils this point should never be overlooked.

CURRENT AGRICULTURAL NEWS OF THE WORLD

LIVESTOCK SHIPPERS UNITE

More than 300 co-operative livestock shipping delegates, representing 21 states and four Canadian provinces, assembled in Chicago in December and unanimously perfected a permanent National Federation of Co-operative Livestock Shippers. The following states in the order named were represented by the largest delegations: Iowa, Michigan, Indiana, Illinois, Wisconsin, South Dakota, Minnesota. Other states represented were: Nebraska, Ohio, Kansas, Oklahoma, Washington, Colorado, North Dakota, Missouri, Tennessee, New York, California, Kentucky, Louisiana, Pennsylvania and Canada.

The following officers were elected:

Knute Espe, Ames, Iowa, president; C. E. Compson, Remus, Mich., vice president; John Miller, Galva, Ill., treasurer; Selby E. Peterson, Waconia, Minn., acting secretary; Earl J. Trosper, 906 Royal Insurance Bldg., Chicago, organizing secretary; C. Hoover, Longmount, Colo., director; T. M. Patterson, Agricultural College, Miss., director; A. S. Anderson, Beresford, S. D., director; C. H. Gustafson, Omaha, Neb., director; H. M. Phillips, Palmyra, Mo., director; J. F. Larson, Ellsworth, Wis., director and M. E. Sherman, Kendalville, Ind., director.

Knute Espe has organized 12 livestock shipping associations in his home county (Story) one of which he serves as president. He is associated with W. T. Murr, famous Chester White breeder, who is well and favorably known among the live stock men of the country. C. E. Compson is state manager for the Michigan Federation of Co-operative Livestock Shippers and one of the most able men in the movement.

John Miller is president of the Farmers' and Grain Dealers' Association of Illinois, an officer in one of the oldest livestock shipping associations in Illinois and a recognized leader. Selby Peterson is treasurer of the Minnesota State Federation of Co-operative Livestock Shippers. It has been largely through his efforts that eight bills of immense benefit to the Minnesota livestock shippers have been put through the Minnesota legislature. Earl J. Trosper is the originator of the National Federation idea and it his been largely through his efforts that the federation has been successfully launched. He is a recognized agricultural leader and both practical and impartial in his work.

The objects of this federation in a general way are as follows. To encourage better and more economical methods in the production and distribution of livestock and livestock products; to promote co-operative education, and to encourage the organization of co-operative livestock marketing organizations; to develop uniformity in the plan of organization and method of operation of local livestock shipping associations; to aid such organizations in problems of general interest in transportation, handling and marketing; to lease, buy, build, own, improve, mortgage, sell and control such buildings and other real and personal property as may be necessary in the conduct of its operations; and to perform any other work which may be of benefit to its members or helpful to the industry.

The national and state federations will be financed on a small membership fee and a per car charge basis which will be regulated from time to time to meet the shippers' needs.

Throughout the entire two days' session the large delegation of livestock shippers, representing 21 states refused to disagree. The National constitution recommended by the official committee was adopted without an important change. All state delegations were eager that the organization stand on its own feet to the end that all co-operative livestock shippers, regardless of location or affiliation with other farm organizations, be accorded uniform recognition.

The following states went on official record at the meeting requesting the services of the organizing secretary in helping them perfect state federations of livestock shippers: Indiana, Fort Wayne, Dec. 11; Colorado, Ft. Collins, Feb. 15; Illinois, prior to Feb. 15; Iowa, South Dakota, Wisconsin made definite plans to federate, date to be announced later.

Successful short courses for managers and others interested have already been held at St. Louis and Kansas City. Similar short courses will be held following the holidays at all the leading terminal markets including Omaha, Sioux City, Denver (Dec. 20) Chicago, Detroit and St. Paul. Dates to be announced later.

8,000 Expected to Attend Farmers' Week

As head of a committee composed of men from every department of Michigan Agricultural college, A. M. Berridge, is now engrossed in the task of completing arrangements for Farmers' week to be held at the college February 2 to 7, inclusive.

Many speakers of country-wide reputation have been engaged to address the various assemblies, while still others will be added to the list within the next week or two. E. V. McCollum, of Johns Hopkins university, who is rated as one of the leading nutrition experts of the United States, will be one of the principal speakers. Dean Vivien of Ohio State university, and H. C. Taylor, chief of farm management bureau, Department of Agriculture, in Washington, D. C., will also be heard in addresses of great importance to the farmers of Michigan.

Probably the feature exhibit of the week will be that of farm crops in the pavillion of the agricultural building. Practically the entire prize winning exhibit which represented Michigan in the international show at Chicago will be on display there. Rosen rye, Red Rock wheat two types of grain developed at M. A. C., form the greater part of the exhibit.

The poultry show, in charge of Prof. C. H. Burgess, head of the department of poultry husbandry at the college, will be another feature of the week. To enter the show birds must have won a first prize in some authorized competition, but even with this strict regulation a large entry list is assured.

RECORD ASSOCIATIONS MEET

The annual meeting of the National Society of Record Associations was held in December at Chicago, Ill., the membership being limited to registry associations recording purebred livestock. The meeting was called to order by Jess C. Andrew, President, who briefly reviewed some of the difficulties which the record associations had encountered in maintaining the purity of their records during the past year, but emphasized the fact that owing to the memorable decision obtained by the Percheron Society of America the rights of record associations were now thoroughly defined in the courts and that the officers of other associations were now in a position to exert the heavy hand of discipline upon those members who were unappreciative of their responsibility as purebred breeders.

N. E. Michigan Scores Heavily

Northeastern Michigan scored heavily at the International Live Stock show at Chicago, Nov. 9 to Dec. 6, due to the enterprise of Prescott & Sons, owners of a ranch which has become famous at state fairs and has for years carried off honors at the international show. This year the Prescott's Richland Farm Shorthorns carried off the following prizes:

Shorthorn bull, two to three years old, fourth prize, competing in a class of 15 animals; Junior yearling, 12th prize, in a class of 22; senior bull calf, sixth prize in a class of 26; junior bull calf, third prize in a class of 25; senior yearling heifer, 12th prize in a class of 30; junior heifer calf, 12th prize in class of 35; Shorthorn "get of sire" eighth prize in a class of 12; Shorthorn calf herd, 10th prize.

Annual Meeting Williams Twp. Union

To the members of the farmers co-operative union of Williams Township, Bay Co., notice has been given out that the annual election of officers will be held in the town hall on Saturday afternoon at one thirty, January 10, 1920. Each member is requested to be present to take part in electing the officers for the ensuing year and hear the annual report of the Treasurer and to renew their membership to the farmers' union of Williams Twp., writes Irving B. Davis, Secretary.

Agricultural Agent Proposes Turkeys to Combat Grasshopper Pest

W. P. Hartman says Northern Michigan Climate Suited to Raising of Fowls Which Will Rid Country of Hoppers

W. P. HARTMAN, agricultural and industrial agent of the G. R. & I. R. R., who for a number of years has taken a keen interest in Northern Michigan agricultural problems, has written the Agricultural College suggesting the more extensive raising of turkeys as a means of combatting the grasshopper pest which annually costs the farmers heavy losses. Mr. Hartmann's letter follows:

Undoubtedly, one of the most destructive pests in northwestern Michigan the past three years has been the grasshopper. Losses due to this single insect has mounted into the hundreds of thousands of dollars from damage to pastures, grain and vegetable crops, and even young friut trees.

The infested area has been materially extended each year. Probably a careful survey would show doubling of the area the past season. The cycle of three seasons may work, but it occurs to me as a false theory to proceed on the assumption that the grasshopper will be extinct, or of little consequence, next season, its fourth year, or that natural enemies or weather conditions will control it.

I am convinced from observations that this is distinctly a state problem and to be finally solved only by active state measures. Individual farmers, sufficiently aroused and interested, applying poison bait means only local relief at best. To rely on the action of County Boards of Supervisors is bound to prove a disappointment, for some boards will, as in the past, go the limit in providing funds to buy poison, while others will be indifferent to the seriousness of the situation.

From the splendid work of the College, the County Agricultural Agents, some Boards of Supervisors and others, last year, we are all aware of the results to be expected from concerted action in the application of poisoned bait. In other states, and in a limited way in Michigan, the turkey has amply demonstrated itself as an active and effective enemy of the grasshopper.

Would it not be altogether feasible for the College to put on an energetic campaign first, to arouse all farmers and particularly those located in the central and northern sections of the lower peninsula to the seriousness of the grasshopper; secondly, to the value of the turkey in combating the pest. Incidentally, the turkey as a rule, does well in north Michigan and is a profitable branch of poultry husbandry, properly handled. It grows and fattens on a grass hopper diet.

One of the first steps of the campaign would be to locate available supplies of turkey eggs for hatching purposes at commercial prices. Fancy stuff taboo. Next in order would be to obtain the names of farmers who would want to buy the eggs and these lists procured through the co-operation of the County Agricultural Agents, Development Bureaus, agricultural departments of transportation lines, and others.

May I suggest that, in order to arouse enthusiasm and to get the program in line for the early spring hatching, a publicity campaign ought to be inaugurated at once.—Signed, *W. P. Hartman, Agricultural and Industrial Agent.*

Prof. C. H. Burgess of the poultry husbandry department of the M. A. C. and Prof. R. J. Baldwin, extension director, state that they believe Mr. Hartmann's idea is good, and that as a matter of fact the college has had the subject under consideration for some time. It is being proposed that the supervisors in the counties where grasshoppers are a menace to the crops, purchase commercial turkey eggs and sell them to the farmers at cost.

Prof. Burgess declares that he has evidence to prove his claim that three hen turkeys and their broods of young can keep 100 acres of land free from grasshoppers. He also says this experiment has been tried out in Michigan as well as other states with great success.

Over a year ago Mr. Hartmann wrote the editor of MICHIGAN BUSINESS FARMING about this matter and we published an article at that time, heartily endorsing his idea. A few weeks later we published a letter from one of our readers in Otsego county, giving his experience in regard to turkey raising.

"One pair of good turkeys," he said, "is all you need for a start." Some advocate buying turkey eggs and setting them under a hen, but he found the turkey hen the best mother, requiring less care and watching. The White Holland turkeys was his choice, because they were very tame and did not wander so far from home as most breeds. He declared the main things, to make the business a success are keeping the newly hatched turkeys shut in the chicken yard for the first couple of weeks and feeding them hard-boiled eggs mixed with crumbs and oatmeal. Also keeping the turkeys until they are at least three-quarters grown in the dry during damp and rainy weather, and in the spring feeding the old birds in the evening to get them in the habit of staying at home nights.

Turkeys are not only valuable as destroyers of grasshoppers but the raising of them for market at the present prices, ought to be a very profitable business. It requires very little of your time, and we cannot see why turkey raising in Michigan shouldn't prove a financial success as well as a solution to the grasshopper pest problem, as the climate is very favorable for the raising of the fowl. —*M. J. G.*

MARKET FLASHES

WHEAT IS LOWER

The feeling that all grains are about to enter a short period of low prices has already affected the wheat market, and prices are from two to four cents a bushel lower. Another influence is the fact that the Grain Corporation has disposed of a large part of its surplus holding to the mills who are now loaded up with wheat and looking for a market for their flour. Bears are using the argument that Europe will buy little of our wheat because Australian wheat can be purchased at such lower prices, but this argument will not wash. We feel that wheat is the one grain that, aside from temporary setbacks, will keep on the upward trend. Nor is the demand for this

WHEAT PRICES PER BU., DEC. 30, 1919

No. 2 Mixed	2.26	2.27	2.33

grain to be entirely credited for this supposition. A large port of the crop is in the hands of speculators who will of course see to it that they do not lose. Were the farmers still in possession of any considerable amount of the 1919 crop, there might be another face to the matter.

CORN WORKS DOWNWARD

CORN PRICES PER BU., DEC. 30, 1919			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow	1.50	1.46	1.59
No. 3 Yellow	1.48

No. 2 Yellow	1.57		1.81
No. 3 Yellow	1.55	1.60	1.75
No. 4 Yellow	1.50	1.52	1.70

The anticipated holiday slump and the tactics of the bears have hit the corn market and it has sagged a bit for the past four or five days. It is quite generally believed in the trading centers that the movement of corn is about to increase very materially and unless an unexpected export demand should develop, it cannot be disposed of at existing prices. We merely repeat here what we have said before, that there may be a temporary and possibly sharp decline in corn prices.

OATS IN SYMPATHY

No. 4 White	.72	.69	.77

One thing that strengethens our belief that the weakened condition of the grain markets is largely the work of speculators is the fact that oats has been in sympathy with corn and is a cent or two lower. Everyone knows that the oat crop is short and that higher prices are inevitable and there is not good reason why there should be the slightest decline in prices. The visible supply of oats is less than half of what it was a year ago at this time. We predict a demand for oats from eastern and foreign points which cannot be filled at any price until another crop is harvested.

RYE DECLINES; BARLEY STEADY

Quite without reason, rye dropped a couple cents a day or two after Christmas. The year's supply of rye is inadequate and the demand from abroad is good. Rye is not on a parity with wheat and we are confident that higher prices will prevail. Latest quotations on this grain are $1.78 per bushel for No. 2. Barley is holding its own and entered the week quoted at $3@3.20, Detroit.

LAST MINUTE WIRES

DETROIT—Grain markets strengthen and go up with rush; potatoes firm, beans quiet and steady. Seeds in demand and steady. Hay firm and in demand.

CHICAGO—Corn prices go up with news of 50 jump in Canadian wheat price. Oats rise two cents. Provisions bullish. Hogs, higher, and cattle uncertain. Sheep market active.

Weekly Trade and Market Review

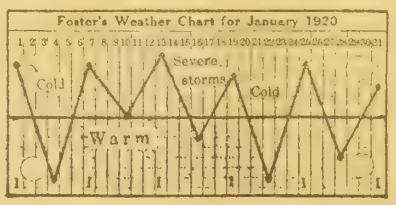
WE ARE about to enter the great "bear" season. At this time of the year the speculators who must force the market down to make a clean-up, corral all their "bear stories," and march them in solid phalanx into the exchange pits and the market newspapers. It is a case of "now or never," and particularly so this year since practically every prediction that has been made by the bears for the past four months has fizzled. Virtually nothing has happened the way the bears said it would; it has been a "discouragingly bullish" season all through, but the month of January and the first part of February will be the period when the bears will frolic if at all.

Following the holiday season during which prices of farm products held up surprisingly well, there has been a slightly weaker tendency in grains. The coal strike has caused a tightening up on the movement of grain and supplies the past sixty days have been very inadequate. Advancing prices have encouraged farmers to sell, and now that grain cars are to be given the right of way a more liberal movement is anticipated, and there may be a short era of lower prices. We do not fear, however, that the slump will be as serious or lengthy as the "bears" are predicting. We do not think that it will last through the major part of January and possible into February. During this period of the year there is a slight pause or partial suspension of business throughout the country. The inventory is taken; plans for the ensuing year are laid out; and industrial activities in general are at a low ebb. So whatever may happen to the market the next thirty days will be due to natural causes and farmers need have no alarm.

The general opinion of those engaged in industrial enterprises as to the business conditions in 1919 is one of optimism. It is predicted that the year will witness an unprecedented building boom and that the railroads will be in the market for enormous supplies to keep up the work of bringing their tracts and rolling stock up to their former state of perfection. About the only uncertain questions of importance that will confront the nation will be the disposal of the peace treaty, the settlement of industrial strife, and the stabilizing of the foreign money exchange. It is unfortunate that we are to have a presidential election this year, as it usually brings about a condition of uncertainty. However, those who hold the purse strings of the country, claim that the election of a Republican president would do more that any other thing to strengthen the confidence of Big Business and encourage it to expand. Michigan Business Farming views the future with the utmost confidence that prosperity will continue on the increase and that the scales of social and economic justice will tip a little closer to the perfect balance. We expect to see organization among the farmers greatly strengthened and broadened and the way opened up for the universal recognition of our oft-repeated assertion, that "farming is a business," and must be treated as such. We shall, of course, continue to do our part to bring about the changes in marketing methods and legislation that are necessary for the perpetuation of this truth.

THE WEATHER FOR THE WEEK

As Forecasted by W. T. Foster for MICHIGAN BUSINESS FARMING



WASHINGTON, D. C., Jan. 3, 1920 —Warm waves will reach Vancouver about January 5, 10 and 16 and temperatures will rise on all the Pacific slope. They will cross crest of Rockies by close of Jan. 6, 11 and 17; plains sections 7, 12 and 18; meridian 90, great lakes, middle Gulf States and Ohio-Tennessee valleys 8, 13 and 19; eastern sections 9, 14 and 20. reaching vicinity of Newfoundland about Jan. 10, 15 and 21. Storm waves will follow about one day behind warm waves, cool waves about one day behind storm waves.

These disturbances will dominate the weather of the continent from near Jan. 3 to near Jan. 23 and will include two cold waves that will cross meridian 90 near Jan. 4 and 22 and two warm waves that will cross meridian near Jan. 7 and 13, one severe set of storms, moving eastward, that will cross meridian 90 during the week centering on Jan. 16, and a less severe set of storms crossing meridian 90 during the week centering on Jan. 5.

These storms, or disturbances, control all the weather features; warm, cold, high winds, rain, snow, sleet, frost, tornadoes, hurricanes, but not all of these accompanying every storm. Interested readers of these forecastswill gradually become forecasters. I can not always give all the details but, with Foster's weather map before them and my description of the storm movements, published regularly in this paper, they can understand coming weather events.

The most important weather events of January will be from near 15 to near 22, on meridian 90; a day or two earlier west of that line and a day or two later east of it. All kinds of winter weather are expected during that time. Those who understand the language of the clouds will be greatly aided in estimating coming weather. Old farmers and old seamen have long been experts in cloud language. I can not include all these things in these Weather Bulletins.

W. T. Foster

LIVE STOCK HIGHER

The live stock markets held their own during the Christmas week and latest advices show hogs, cattle and sheep on a higher level than prevailed a week ago. This was true at all live stock markets. There is quite a difference of opinion as to what may happen in the hog market the next thirty days but nearly all look for very heavy runs throughout the entire months. Here's what two commission houses has to say about the situation through the Price Current Grain Reporter:

"We are approaching the period in the winter hog packing season when the East will be a dominating factor in the making of prices. We have called attention several times recently to the fact that after Jan. 1 Ohio and Indiana would be practically marketed up on their winter crop of hogs. This would bring Eastern buyers to the western markets, and if the consumption of hog products continues normal, it will be hard to break the hog market. A great many are anticipating a very heavy run of hogs in January. This is logical, for the country has not, up to the present time, really loosened up. Railroads are not furnishing cars up to the demand of the shippers and hogs are gaining weight very rapidly and should there be an shortage in the number of hogs this year competent stockmen say the deficiency in numbers would be made up by extra weight. Should it turn out that January hog receipts are as heavy as is anticipated, the month of January might be the low period for hog prices in this winter's packing season. We have felt all the time that hogs would sell lower during this winter's packing season than they have sold so far, but our prediction is threatened with absorption into the realm of uncertainty—*W. G. Press & Co., Chicago.*

"Summing up the features of the hog situation, Clay, Robinson & Co. say: 'Prospects are favorable for a good acting hog market in the near future. Of course, we are going to have a very heavy run the latter part of January and through February, but until these big runs materialize we think the trade will give a good account if itself. There are bound to be breaks in the trade on days of relatively large receipts, but for the near future we look for these declines to be offset by advances registered on days of curtailed receipts.'"

BEANS ARE STEADY

BEAN PRICES PER CWT., DEC. 30, 1919			
Grade	Detroit	Chicago	N. Y.
C. H. P.	7.35	7.75	7.75
Red Kidneys		13.75	14.00
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
C. H. P.	9.00	9.25	10.50
Prime	8.00	8.50	9.75
Red Kidneys	12.00	12.00	12.75

Beans in the Detroit market have risen close to $7.50 and this week have been holding steady, although the trading is not especially active. Farmers in Michigan show a disposition to hold back their beans at the present unsatisfactory prices, although some are moving to market. Letters from farmers say that if they could get at the local elevators a price around $8 they would plant a crop of beans next year. The attitude of the farmers is believed to be setting the speculators to thinking. The short crop and the other elements indicate that better prices are over the horizon. The difficulty with exchange rates on money generally has had a severe effect in the orient and is confusing American trade for beans in the Far East. The Japanese traders have an obvious advantage over the Americans in the Oriental trading, both because of the similarity of their exchange rates with the Orient and because of their greater familiarity with Oriental conditions of commerce.

Eastern hay markets have shown some improvement during the last week or so, due to increased demand. This came as a surprise because the holidays usually interfere considerably with the business, both of buying and selling. Western markets continue strong due to heavy buying.

POTATOES IN DEMAND

SPUDS PER CWT., DEC. 30, 1919

	Sacked	Bulk
Detroit	3.50	3.25
Chicago	3.00	3.00
Pittsburg	3.50	
New York	3.25	

PRICES ONE YEAR AGO

Detroit	1.90	1.80
Chicago	1.85	1.60
Pittsburg	2.00	1.90
New York	2.50	2.40

Potatoes, following the Christmas quiet, are in demand again and a firm market is quoted for spuds and all vegetables in most markets. In Detroit spuds are quoted at $5.25 for a 150-lb. sack. There has been little activity in Maine and other eastern states due to the cold wave

DETROIT PRODUCE MARKET

The apple market continues low and steady, supplies being ample to meet the demands. The fruit buying movement has turned to oranges and grapefruit. Vegetables were firm, with moderate movement. Cabbage continues to bring from $2 to $2.50 for good stock. Rutabagas have advanced in price and are now generally bringing $1.50 a bushel.

Increased supplies of poultry are being taken up as quickly as offered, the market on same being firm. Dressed pork was in moderate demand, but offerings were small. Butter and eggs are dull, consumers waiting for lower prices and buying accordingly.

Friday, Jan. 16.—Sale of Shorthorn cattle under the auspices of the Michigan Shorthorn Breeders' Association. and convenience to secure rooms for the

TREATING WHEAT SEED

(*Continued from page 4*)

ers who saw the demonstration fields to try the hot water treatment on a larger scale in the fall of 1918. County Agent R. G. East, of Shelby county, realized that he would not be able to meet the demands from his farmers for treating seed if he had to use the original method of treating a peck or two at a time. Consequently he set his brain to work and devised an outfit which treated four bushels at a time he established a central treating station at Shelbyville, the county seat. The treating apparatus consisted of two large vats to hold hot water, one at 120 degrees F., and the other at 129 degrees F., and a large wooden framed drum, lined with heavy wire screen to hold the grain when steeped in water. The drum was raised and lowered by means of a chain pulley and operated by means of a hand crank. Water was heated in a large galvanized iron tank by means of two water tank stoves and added to the vats as needed to maintain the proper temperature.

Several hundred Shelby county farmers became so interested in the results of the hot water treatment that last June they made an inspection trip of the thirty or so fields sown with treated seed. The tour occupied two days and extended to every part of the county, extension men or farmers talking on some phase of the hot water treatment or pure seed.

The farmers who wished to have seed treated soaked it in cold water at home and then brought it to the central treating station where it was subjected to the "cooking" process. After the treatment it was spread out on a floor, sacked as soon as cooled off and taken home again to dry. More than 30 farmers took advantage of this opportunity, most of them being limited in the amount of seed treated, to 4 .bushels each When their plots were check up it was found that the treatment practically eliminated both smuts, while in the untreated fields loose smut ranged from a few to 20 per cent, averaging 11.7 per cent, with stinking smut also prevalent in some fields. But this was not the only benefit resulting from the hot water bath. It was very noticeable in many fields that kernels with low vitality were killed by the treatment, and only sound, well producing seed was left to grow. In some instances the heads of the treated plots were fully a half inch longer than those on the corresponding untreated fields.

The hot water treatted seed affords the grower further opportunity to improve the wheat crop. Altho it would be quite impracticable on a large scale it was a simple task to go over the 2-acre seed plot and remove all rye, cheat, cockle, wild onion and garlic, and even plants of mixed varieties of wheat when these were not numerous. Thus the grower was able to obtain very desirable kind of seed, free from weeds as well as smuts.

More than a hundred other demonstrations, distributed over 30 counties produced as gratifying results as those in Shelby county, and the method promises to put wheat growing on a much more profitable basis than heretofore. Farmers consider it very practicable as well as desirable. The seed from the treated plots will receive special attention and will be multiplied from year to year until there is sufficient amount to supply every grower in the county. This will require from four to five years. When that is accomplished it should increase the average grain yield by at least 25 per cent.

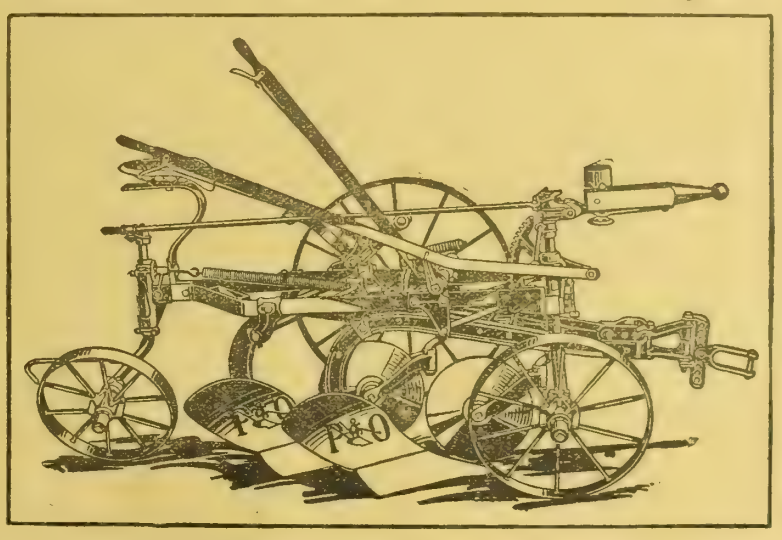
The process of treating seed wheat on individual farms by the hot water method and sowing it on special seed plot will appear in the next issue.

1842 P&O 1920

Light-Draft Plows

EVERY detail in the construction of the P&O Line of Light-Draft Plows is worked out on the lines laid down by the founders — making for Simplicity and Strength. The popularity of these famous plows shows that the policy of the founders was right—they "knew how."

Used by Three Generations of American Farmers



78 Years of "Knowing How" Hammered into Every One of Them

P&O Light-Draft Plows cover a wide range of work, not only for all ordinary plowing, but for the unusual and the extraordinary. *For Horses:* Walking, Sulky and Gang, both moldboard and disk, in all standard sizes and models of bottoms. *For Tractors:* From 2 to 6 bottoms, both moldboard and disk. *Special:* For grading, ditching, hillsides, root ground, cut-over timber land, orchards, etc. There is a P&O plow for any section, and for any condition of soil.

Whether you own or operate a horse-plow farm or a tractor-plow farm, get a P&O Light-Draft Plow, and be a satisfied plowman.

Write for P&O Plow Catalog, or call on the nearest International dealer. Tell us your plowing problems — we believe we can help you.

CHICAGO U S A

JUST BETWEEN OURSELVES

"Same to You, Good Folks, Same to You."

ON MY DESK this morning I find an exceedingly large number of letters, and Christmas and New Year remembrances—all breathing the same spirit of comradeship; of good cheer and best wishes for the New Year. So many, indeed have been the kindly remembrances this year, that I wish it were possible for me to visit every home, if only to open the door and shout: "Same to you, good folks, same to you!"

The letters of commendation, too, bring encouragement and happiness to the busy office, and I shall see that those who have labored with me in carrying forward the work during the strenuous year just past, and to whom great credit is due for their loyalty and interest, have the satisfaction of reading your words of good cheer and encouragement. Kind friends you have indeed furnished all lubricant necessary to keep the wheels of interest turning smoothly during a twelve-month.

I am sure now that there is a "law of compensation," Some times one feels that the easier way, the line of least resistance, is the more comfortable way to travel. Our motives are so often misunderstood, it seems. So hard to make others understand why we take this position or that. It isn't an easy matter, my friends to take a stand for what you know is right, when you must stand for a time, alone, simply because others can not, or will not, understand.

It is a mighty easy matter for a publication to play the game, to consider the money end of the proposition before deciding whether a question is right or wrong. But to loyally serve, to work for the common good and truthfully represent those who place their interest, to a certain extent in your hands, and place reliance in what you say; to disregard the financial end; so very necessary to your success, is quite another thing.

You can't travel very far down the business highway without coming to the forks in the road. It is not difficult to locate the road you should travel, but many sign boards are alluring, and especially is this true when one knows that they point out the easier way. It is quite true that we have noit always been on the popular side, but your generous support, kind friends, proves that you feel that we have very often been upon the right side.

The "law of compensation" is bringing its reward. So many good friends commending our work; so many offering encouragement; so many "lending a hand," and adding their neighbor's name to our subscription list; so many, many loyal men and women of the farm boosting for "M. G. F." Surely you have given us a good start on our journey through the New Year. And a Happy New Year to you, good folks. We shall press on; "Peace if possible, but the Truth anyway."

* * * *

WHERE DO WE GO from here, Boys? The old year has passed and as we stand upon the threshold of the New Year, our hand yet upon the latch of the door just closed, we are reminded of the refrain caught up by the brave soldier lads, when ordered to break camp with no idea of their destination: "Where do we go from here, boys, where do we go from here?" We have passed through a year of uncertainty, and have now entered a year with general conditions even more complex. We don't exactly know where we are going, but let us rejoice in the fact that we do know that we are on the way to better things. We can, of course, close the books of the old year, as of yore, and turn a new leaf—but to that new ledger page we must of necessity carry a whole lot.

* * * *

I suggested two weeks ago that while the miners had gone back to work, the coal strike was by no means settled. This prediction was made upon the strength of the fact that the mine owners never had, and the opinion that they never would give the consumer representation on a board of arbitration. The Palmer-Lewis memorandum proposed to create a commission, with full power to investigate and settle the trouble between mine operators and mine workers. One of the three members on this commission was to represent the public—the consumer—and this commission was asked to settle the trouble without increasing the price of coal.

Now the mine owners claim that there was no such agreement, that it was proposed to have a government commission to act with the miners and mine owners, to the end that the strike might be settled—a sort of referee as it were. In the past all differences between the mine owners and miners have been settled between the parties directly involved—never before has it even been proposed that the dear public should have a hearing. And the controversy was usually settled in this way:

Scene: Sitting room in large hotel; present a government representative, the president of the miners' union and the chairman of the mine owners committee. The government agent speaks: "Well, boys, really now, what is the trouble?" "We demand more wages," blurts out the president of the mine workers union. "Well, by gosh, we won't pay them another durned cent," retorts the chairman of the mine owners committee. "Tut, tut, tut, boys, we will never get together by following this plan. Listen to me:

"You miners want ten per cent increase; you mine owners certainly would not object to a little more profit for yourselves. Dead easy boys, dead easy. We will add thirty cents per ton to the cost of coal; you take your ten per cent Mr. Miner, you absorb the rest, Mr. Mine Operator." "I don't care who pays the increased wage so long as it does not come out of our profit," says the mine owner. "It's the ten per cent increase we are after," replies the miner. And the very next morning the daily press gives out the glad news that the strike is settled and all is "quiet on the Potomac."

* * * *

The United States occupies considerable space on the map of the world, yet it has frontier contact with only two countries. Our good neighbors across the line on the north and northeast have never caused us trouble. The line fence, once established has been held and jointly kept in repair. We have neighbored with our cousins, borrowed from them, loaned to them, bought from them and sold to them. When in trouble we have helped them, and when Uncle Sam gets into trouble the Canadians will be the first to proffer their aid.

On the south we have a far different border line and a far different situation. The Christian Science Monitor in speaking of this border line says: "The Mexican border is space, and emptiness and cactus, with soldiers strung along the sluggish saline river, from the other side of which comes, ever and anon, an unexplained bullet." Trouble has ever been brewing along this line, for some reason this bad blood has been passed along from one decade to another. How different from that imaginary line which is the only border on the north? Why?

If Uncle Sam really understood the Mexicans, the real brown people of that land of sand, of cactus, of rocks, and lost opportunities, and the Mexicans understood the desires of the people who labor for the common good, who only ask for that which is rightfully theirs on this side of the line—if they understood and we understood—do you really think that these bronzed humans beyond our southern border line would seek ever to kill and destroy? Don't you wonder some times what has caused this bitter feeling between Mexicans and Americans, and who keeps the kettle of hatred boiling? And isn't it possible that hogs are wallowing at the source, and polluting the stream which runs this way?

* * * *

It will take you just five minutes to step on the ferry in Detroit and land on the dock at Windsor, Canada. Thousands of workingmen and women reside in Windsor and work in Detroit, going to and from their work every day. Last week the bankers had to get together and try to stabilize Canadian money. The Detroit United Railway company will not accept Canadian money, at any value, on either their city or interurban lines. You cant get rid of a Canadian bill on a bet; and when change is made both parties look for King George's head—if it shows itself, the buck is passed on.

The English pound sterling, normally worth $4.86⅔ in our coin, dropped as low as $3.65; the German mark, with a par value of about 24 cents, is right now worth about two cents and the Austrian crown nominally worth 20 1-3 cents is now worth a half penny. Europe's foreign credits have been strained to the point of exhaustion during the past five years; her national wealth has been mortgaged to the extent that a second mortgage would be about worthless, and her accumulated financial strength was all spent for destructive purposes.

England, France, Austria and even Germany want to buy raw materials and food products from the United States, but their money has so depreciated that they can't get enough cash together to make a decent purchase. The purchase of food and fuel requirements alone by the nations of Europe would require an expenditure on their part of nine billion dollars, providing their money was at par with this country. Under the present rate of exchange this amount would be doubled.

Noted financiers say that the United States has already financed Europe to the limit of safety; and that we need our cash here at home. And with the League of Nations held up by the Senate, there is mighty little chance of helping them further with a big loan. And there you are. All of the nations of Europe bankrupt; thousands upon thousands literally starving to death for want of food; commerce and industry must be built again from the foundations—and all for what purpose? War is hell.

* * * *

The agreement between the Attorney General of the United States and the packers, brings to a speedy close the agitation that has been going on for years between the Government and the "Big Five." Under the agreement the packers will drop all side lines and devote their time to building up the packing business and its related industries—butter, eggs, cheese, poultry, etc. And best of all the Union Stock Yards Company at Chicago will be unscrambled.

G. L. Slocum

Ann Arbor, Michigan
December 10, 1919

Mr. Grant Slocum,
Mt. Clemens, Michigan
Dear Sir:

I like your page in M. B. F. issue of December 6, 1919. Here is how it strikes me.

In your first editorial on the Industrial Conference you cite the inability of Class to consider the interests of the main body of the people. Next you take up the coal situation and must admit that only an ultimatum from the most powerful place can protect the shivering masses from the selfish squabble in the necessary business of digging coal. The next topic is important because it points out that you have been placed in the fortunate or unfortunate position of being accountable, not to yourself, but to those friends who place their confidence in your sincerity to do the best thing for us all for the price, their confidence. I could not see eye to eye at our esteemed secretary's conclusion—minus the machinery necessary to produce the desired effect. And I say Amen to the sentiments in the railroad paragraph. The fact that I read the page produced the following result:

Since workers, organized or not, operators, organized or not, and producers of all sorts under the competitive system of distribution cannot seem to give the public that the consumer demands, and since it is evident from your own pen that the union of the consumers is able to put it over, as in the case of the railroads and the mails; why doesn't some trusted representative of those who would see the standard of life paid for us all come out flat-footed for a system of distribution by the Government similar to that in vogue wherein the producer, the farmer, miner, operator and manufacturers of all sorts who deal in the necessities of life are paid cost plus and the whole product marketed at an average price such as would return expenses, but no more, to the distributor?—Andrew P. Campbell.

Silaged Sugar Beet Tops are Well Suited for Dairy Feed

Department of Agriculture Explains Preparation and Value of Beet Tops as Silage

BEET TOP SILAGE is well suited for use by the dairyman or the feeder of beef cattle and sheep. When it is fed for the production of beef or mutton, the hay requirements may be reduced 50 per cent. The warm, succulent silage seems to stimulate the appetites of the animals, causing them to consume and utilize larger quantities of feed. Most beet browers estimate that beet top silage has a value about one-third to one-half that of alfalfa hay.

These points are discussed in detail in Farmers' Bulletin 1095, "Beet Top Silage and other by-products of the Sugar Beet," which was recently issued by the United States Department of Agriculture. This bulletin advocates the use of beet top silage to aid in meeting the shortage of hay and other forage. It illustrates good methods of constructing pit silos and gathering and siloing the tops, and makes other important suggestions in regard to feeding the silage, molasses, etc, based largely upon reports of beet growers and stock feeders.

Balanced Ration Recommended

"Beet pulp and molasses, by-products which have an established value with stock feeders, should be fed with a moderate allowance of hay or other feed in order to make a balanced ration," the bulletin says.

"At the present price of beet molasses many feeders are finding a mixture of molasses with hay or with pulp to be profitable. This furnishes a variety and stimulates when fed in regulated quantities.

"In feeding beet top silage, about 30 pounds per 1,000 pounds weight for cattle and 3 pounds per head for sheep each day seem to be most satisfactory.

"Animals not accustomed to beet top silage should be given a small quantity at first and the feedings gradually increased until the normal ration is reached."

Other important points given in the bulletin follow:

A good crop of beets will yield from 3 1-2 to 6 tons of processed silage.

The average cost of gathering the tops and filling, packing and finishing the silo is about $1 a ton.

It is extremely important that the tops be gathered and put into small piles promptly after the beets are topped. The dirt may be easily shaken from the tops while the leaves are still fresh. It is imperative that dirt and sand be eliminated.

The fundamental factors that are involved in making good corn silage also apply in making beet-top silage Pack the mass thoroughly to exclude the free air and then seal tight. Good silage requires thorough packing.

It is not necessary to run the tops through a silage cutter. Some feeders prefer to do so, however, to avoid the possibility of lambs choking on the crowns.

The same structure that is commonly used for putting up corn silage may be used for beet top silage. Because beet tops pack in a very dense mass, the structure will sometimes crack and spread and thus allow air to enter. A well-built silo is reasonably safe.

Making beet top silage does not necessarily involve a cash outlay for materials. The natural earth silo and stacking above the earth are both successful. Concrete side retaining walls are advisable under certain conditions, however.

Making beet-top silage does not necessarily involve a cash outlay for materials. The natural earth silo and stacking above the earth are both successful. Concrete side retaining walls are advisable under certain conditions, however.

An excellent quality of silage is made by stacking the tops entirely above the earth and then packing them thoroughly. The spoilage loss is greater than when the structure or the pit silo is used.

It is not necessary to alternate layers of tops with layers of straw. It is always advisable to put a layer of straw next to the earth bottom and sides to eliminate dirt from the silage. When straw is intermixed with the tops more packing is necessary.

The economic utilization of beet tops and other by-products not only yields a direct profit by feeding to stock, but greatly assists in maintaining soil fertility and also in establishing a better crop rotation.

The by-products of the sugar beet crop when properly handled and fed have a value equal to the entire cost of what is commonly termed "hand labor" in producing the crop of beets.

The best practices of feeding the by-products of the sugar beet crop will yield a net profit equal to half the net profits usually had in growing and marketing the crop of beets.

It is safe to conclude that one ton of good beet top silage is equal to half a ton of alfalfa hay when fed as a mixed feed. Many feeders think that the silage has a value equal to good hay, ton for ton.

Beet top silage comes out of the silo warm in the winter, and it is appetizing. It seems to stimulate the assimilation of food and to aid the animal to appropriate the maximum values from all the feeds consumed.

The silo brings the feed near the feeding yards and minimizes waste.

Do You Know Hudson

But Through Sheer Merit Alone Essex Made Its Thirty Million Dollar Sales Record

Builds the Essex?

Essex success has not been accidental. No one doubts its right to the position it holds.

But how many know why Essex in its first year revealed qualities more mature, more evident of the influence of long experience, than is commonly found in cars even in their third and fourth year.

You will recall the Essex was announced one year ago without one word as to the identity of its builders. Not a claim was made for its performance.

You were asked to go look at it, take a ride and form your own opinion. The Essex, we said, would have to speak for itself.

Now that it has established itself, we reveal why Essex has all the qualities of cars of long development.

Was Designed by Hudson Engineers

They conceived it as they developed the Super-Six. All they learned about endurance, they incorporated in the Essex.

They gave to the Essex the power that has made it famous in all quarters. Its speed is the result of what had been learned in making the Super-Six winner of all worth while speed records.

The Essex can never be all that the Super-Six is for they are totally different types.

But the Essex does bring quality and performance to a class field that was unknown.

The former owners of large costly cars that have adopted the Essex have not been Hudson users. They have come from other cars, cars that fall short of the Super-Six in all particulars save size and cost.

The Essex appeals to such users because of its nimbleness. They like the way its performance compares with that of the Super-Six. You can see this on every hand. The two cars in any community that are most prominent because of their performance ability are the Hudson Super-Six and the Essex.

Essex Did Not Need Hudson's Endorsement

Think of the advantages Essex has had. What ordinarily would have required years to perfect was made possible in the very first model.

That is why 20,000 are now running, why more than $30,000,000.00 was paid for Essex cars in ten months.

You have not needed the Hudson endorsement to understand Essex performance.

Essex has won its own way. Hudson gave it full benefit of the experience of its engineers and the ability of its manufacturing organization. Its name was not needed.

Now Hudson takes the same pride in acknowledging its kinship to Essex that a father might in speaking of his son who on his own account had made good.

Do Not Be Misled

That the farmers will not name the next governor of Michigan. HERE IS one chance out of a hundred That chance lies in a possible division among the farmers, and it is a chance that the politicians who don't want the farmers in the State House are playing to beat the band.

"A house divided against itself will fall." Divided, farmers won't have a look-in during the next campaign. United and working harmoniously, their success in electing their candidate for governor and members of the legislature is assured. The powerful political lobby that has been organized in this state the past two years will divide the farmers if possible. This is the lobby that defeated Sen. Scully's income tax bill; it is the lobby that put thru the state constabulary measure; that created the boxing commission, and defeated the farmers' warehouse amendment. Quite by mere coincidence, of course, the lobbyists are among those indicted in the Newberry scandal.

Do you think for a moment that this powerful lobby, backed by millions of dollars, will sit idly by while the farmers are marching to the Capitol at Lansing? Not on your life. They are busy right now; they've been busy for six months. They aren't fighting the farmers; they're too diplomatic for that. To all appearances, they are the best friends the farmers of Michigan ever had. They have access to the councils of the farmers. They are trying to insinuate themselves into the farm organizations. At every opportunity they play the friendly Reynard. Indeed, we would not be surprised to see them suggesting the name of some "farmer" for governor who hasn't a chance to win in the hopes that he will divide the farmers and cause the farmers' political movement to fizzle.

Don't be misled by these false friends. Scrutinize their activities. Weigh their motives. Reject their counsel and their help. You do not need it so why accept it? Play the game as skillfully as they, and you will not be holding the bag when the votes are counted next fall.

Peace Treaty Differences

IF THE Peace Treaty were not such a hugely important matter to the present and future generations, there would be something amusing about the conflict of opinions upon it. The country is divided into a score or more groups, each of which thinks it has the only correct interpretation of the terms of the Treaty, and not a one of which is willing to concede to the other. There are those who want the Treaty adopted in its original form. They say that the objections raised to the Treaty by certain members of the Senate are without foundation and inspired solely by political bias. On the other hand there is a small, extremely selfish and potentially dangerous group that would not sign any kind of a treaty embodying a proposal for a League of Nations. They simply cannot bear the thought of a rubbing elbows with the European "rabble." Between these two extreme groups are divers others who quarrel and quibble over particular sections of the Treaty.

During the writer's recent visit to Washington he had the opportunity of talking with several members of Congress and asked their views on the Treaty. One Republican congressman was absolutely sure that the League covenant gave Great Britain five votes to the United States one, but as for the objection to the Shantung provision, "pshaw, that didn't amount to anything." But a Republican colleague held differently. He said, "I don't lay much stress upon the argument that we do not have as fair representation in the League as other nations, but I do object most strenuously to being a party to the robbery of Shantung."

Then there are other objections. Catholics oppose the Treaty because it does not specifically guarantee Irish independence. Protestants oppose it because they say that it was dictated by the Pope. Sen. LaFollette is the leader of an active group who assert that it was drafted in the interests of Big Business. But a very important element in our industrial circles oppose it because they say it insures England a predominating position in the world's trade. Some are of the opinion that the Treaty deals too lightly with Germany; others declare that it places unbearable burdens upon the German people and invites future trouble. Some of the Republicans are naturally against the Treaty because they are afraid the Democrats will get all the credit, and Anti-Wilson Democrats don't want it because they are afraid it will put the Wilson followers in too solidly with the country.

It would be a physical impossibility to write a Peace Treaty and League of Nations covenant that would be acceptable to all these arbitrary factions, so why try? Let's all admit that the League of Nations is a gamble, which it is, and draw cuts as to whether we shall get in or stay out.

Rewarding Industry

SOME PEOPLE propose that all should share equally in the profits they help to create.

Let's examine that proposition and see if it will hold water. We will first have to look into human nature. What is the motive that makes a man work? Is it his desire to serve and be of usefulness to the world? No, that thought seldom enters the average man's mind. As men grow older and realize how empty are the material fruits that are gathered from the sowing of thrifty and industrious habits the desire to serve may predominate the desire to gain. But that isn't the way the average man under forty looks at it. The incentive to work is the desire to gain. The apprentice covets the journeyman's job and works hard to arise to his level. The journeyman covets his employer's job and applies himself industriously that he may some day be an employer himself. The thrifty farm hand works hard and saves a penny now and then in the hopes that he may some day become a farm owner himself.

Now let's remove this incentive to gain. How shall we do it? By the simple process of compelling every land owner, every factory owner, every railroad owner, every mine owner to pay his men equally with himself and distribute the profits equally among all, himself included. Now, what happens? The apprentice, being a very young man, finds himself in a position he has not earned, on the level with the boss. Diligence is replaced with slothfulness, discipline with laxity, ambition with self-satisfaction and thrift gives way to prodigality. Why labor to become a journeyman or an employer when there is less work and less responsibility with equal pay? Similarly, the farm hand loafs on the job. Why become a farm owner and take all the risk when there is less work and less worry at equal pay working for another?

The scheme won't work. No boy or man is so poor or lacking in opportunities who cannot by diligent application to his job and a determination to succeed wage a successful battle against the "accursed profit-system" and stand among the greatest in the land. The majority of the nation's great men were once poor boys. The fight they had to make against the odds of competition was the making of them. The affairs of the world are not run by men who enjoyed soft berths when they were young.

It is quite true, as a correspondent points out, that the children of poor people are perhaps helping to earn the family bread while the children of profit-takers are getting an education. But as experience shows, this is not necessarily a handicap in life's race. Moreover, if we look into the causes for poverty, we will find that the average American family is poor because of bad luck, frequent sickness, or mismanagement. Of two men with the same-size families, one will live comfortably and save while the other will go into debt. What is the reason? One of them is naturally frugal and manages wisely; the other is a spender. Triple the wages of both, and what is the result? The careful man saves thrice as much as formerly, and the waster spends thrice as much.

We are offering no defense of those conscienceless profiteers who force their employes to work at starvation wages, and wax fat from the proceeds of their labor. Such as these deserve to be condemned. But we believe that industry should be rewarded, and if an industrious man earns an excess over his expenditures and invests it, we believe that he is entitled to a fair interest on his investment. We do not believe in equal wages or equal distribution of profits, for it would put a premium on laziness and take away the worker's greatest incentive. We do believe in a graduated wage and profit-sharing scale which gives to every man a fair living income and a share of the benefits according to the amount of useful work he performs to help create these benefits. This principle is fundamental. It always has worked and it always will work. It is fully in attune with human nature and the great plan of life.

It Pays to be a Railroad President

IN OTHER DAYS when the railroads were supposed to be rolling in wealth that was filched from a burdened public, pompous and prosperous-looking individuals were likened to "railroad presidents." For fiction and fancy pictured railroad officials as drawing enormous salaries, and lolling in ease and luxury. Our information as to the amount of money spent by the roads in salaries, fees and other perquisites was largely a matter of speculation until the government took over the railroads and began to weed out superfluous vice presidents, directors, attorneys, lobbyists and numerous other more or less useless figure-heads that were on the payroll. The saving thus effected by the government ran into many millions of dollars a year.

There has recently been published a list of the leading railroad officials who in the more palmy days waxed fat from their salaries alone. It comprises several hundred rail officials whose salaries ranged from $20,000 to over $100,000 a year. Nearly every road formerly retained legal counsel whose business it was to fight regulatory legislation, prepare briefs in their argument for higher rates, showing the great loss that railroads were sustaining, and perform other odd jobs to which their legal talent was suited. To these retainers the railroads paid fixed salaries from $10,000 to $50,000 a year, plus any special fees that might arise in case of actual litigation.

We do not fear that the private owners will immediately restore the extravagances that have been eliminated by government control. Experience and the government have taught the rail heads many a valuable lesson that they are not apt to soon forget. They are in about the same position as the fussy old lady who kept accumulating odds and ends and relics, thinking that perhaps "some day they would come in handy," but having had her house cleaned and the rubbish burned she finds that it was useless baggage and wonders why she ever cluttered up her house with it.

It is reasonable to believe that the roads will be run henceforth with far greater efficiency and less extravagance than in the past, and while there may be a temporary increase in rates, it ought not to be of long duration.

WHAT THE NEIGHBORS SAY

FAIR PRICES FOR ALL COMMODITIES

"What constitutes industrial justice?" Fair prices for all commodities, including labor.

What constitutes fair prices depends on production costs, the chief item of which is labor. What constitutes fair wages depends on the cost of producing labor—the cost of living. I can produce sugar beets profitably at ten dollars a ton *if*— if the relative prices of other commodities are not too high.

"Value to society" is important, but secondary. It is not, in itself, a valid excuse for high prices. Society could exist more comfortably without gold than without bread. But what do we call the baker who, presuming on the value of his product, charges "all that the traffic will bear?" Toothpicks, on the other hand, are not worth much, yet if they are to be produced at all they must be priced high enough to provide a good living for the folks who make them.

This applies also to labor. Human nature being what it is, efficiency must be made worth while. Unpleasant jobs also must be made attractive by extra pay or shorter hours. But I see neither justice nor expediency in paying a business manager a hundred times as much as an equally skilled mechanic. Jesus of Nazareth didn't charge for the full value of His services. Washington and Lincoln followed His example. He who demands exorbitant wages just because he can get them is as mean a profiteer as if he charged two prices for a loaf of bread.—*Stacy Brown, Lake Odessa, Mich.*

You couldn't have said more had you used ten times the space. There are men in this world who serve for the love of serving. They never are paid in full what their work is worth to society, and by "society" I mean the people who make up the community, the state and nation. But not all men are like that. Many men are "clock-watchers." It is against their religion to work one minute over the time for which they are paid, or to expend a single ounce of energy in doing some service to their fellowmen unless they expect some day to be remunerated. Industrial justice or industrial democracy will never become a universal and permanent condition until the natures of men are made over.—Editor.

NATIONALIZATION OF PUBLIC UTILITIES

In my county most farmers are friends of what you call organized radical labor because the majority of them have been city workers. In your comment on "labor's opportunity" in the Dec. issue of the 6th, written by S. H. S., you ask for information regarding industrial justice and I believe to get it all people should have what they actually produce and the only way to get it is through nationalization of all public utilities.

The difference between the man that spent money for an education and the workman is this: I believe in many cases the workmen had to pull a saw or peddle papers or black boots for a living when a child under our present profit system and his or her more fortunate brother or sister was going to school. Many of these politicians are put in their position with money wrung from labor thru excess profits. I wish you would tell me what Red Radicalism is. Is it men who advocate public ownership or does it dignify plunder and destruction.—*E. W., Gladwin, Mich.*

If you believe exactly what you say, then you believe that any man whom you hire to help with the crops should have what he "actually produces". You would discard altogether the factors of investment and proprietorship and turn your farm over to others who lacking the abilities that you and thousands of other farmers possess to acquire and operate farms, are obliged under the present system to work for others. I claim that you are mistaken when you say that the farmers of your county are friends of organized "radical" labor. The I. W. W. is a radical labor organization that teaches the farm hand who wants higher wages and cannot get them in any other way to hide stones and tools in wheat sheaves so that when fed into the separator they will ruin the knives. They teach violence and destruction of property and every other means to gain an end. They believe in the doctrine that might is right. Do you want us to understand that the farmers of Gladwin county approve of these and similar tactics advocated by the I. W. W. and other radical branches of organized labor? Not even the law-abiding members of labor organizations can stomach such theories as these. So why should you?

In the eyes of some reactionary interests any man who proposes a peaceful reform intended to better conditions of the mass of people is a "red-radical". But intelligent people define "red-radicalism" as any movement which advocates or employs violence to bring about a change in the existing order. Properly speaking, "red radicalism" does signify "plunder and destruction."—Editor.

FARMERS SHOULD CONTROL STATE LEGISLATURE

I most heartily endorse your stand for the uplift and rights of the farmers of this state, in your articles as printed in M. B. F. The time has come when the farmers of this state must organize and take over the reins of government, or be forced into bankruptcy. It is high time that such graft and corruption to gain seats in our state government be brought to an end. Money is the root of all evil, and has done more to corrupt and undermine our form of government than anything else. Until the farmers of this state organize sufficiently and gain control of our state government, we will be discriminated against and trodden down. Where is there a man that can not say that the farmer hasn't just as much right to set a just price on his produce as the manufacturer or any other class of business, for farming is a business, just the same as manufacturing is a business, and let me tell you, my friends, that it is the hardest kind of work and the most poorly paid of them all. The defeat of the Warehouse Amendment was a direct slap in the face of the farmers of this state, and don't you forget it, the Gum Shoe candidates who helped to defeat that measure, will be sorry when their terms of office expire. We must put up a candidate for governor who knows the farmer's problems and whose body and soul is of the down-trodden farmers today, a man of deeds as well as words. The farmers have been humbugged long enough; they are going to fight for their just rights and fight hard and don't you forget it. My choice to guide us and fight our battles for governor is Herb Baker. Two votes are enclosed for him from my home. There isn't a doubt in my mind but what we can land our man.—*Wm. S., Pigeon.*

If democracy means equal representation to all classes of people according to their numbers, the farmers must have greater representation in our law-making bodies. On the basis of equal representation farmers would easily predominate in the state legislature. We hope our readers are awake to the fact that they are not as fully represented in the legislative branches as they ought to be. —Editor.

BEAN AND WOOL TARIFF

Enclosed please find a two dollar bill to extend my subscription. My choice for governor would be Mr. Campbell, on stand he took against Mr. Pinchot in trying to keep the farmers from locking arms with what I would call anarchism.

My stand on the duty of beans would be enough to protect the farmer; and on wool, not less than 10 cents per lb.; on our best selling grades and down to 5 cents for cheaper grades and at least 50 cents per lb., on re-worked or shoddy. I have a statement showing the price of woolen rags before the war and now. Aug. 1, 1914, soft woolen best 4⅞ to 5⅛c.; Nov. 1, 1919, soft woolen best 18½ to 18c. This shows a rise of about 400% in re-worked wool or shoddy against about 200% in raw wool and if 80% shoddy or re-worked wool can make good cloth we can be sure of wearing woolen clothes for a long time to come if there is not another sheep shorn in the United States for the next three years.—*T. O., Constantine.*

Your comparison of the increase in the price of woolen rags and raw wool is interesting. There are matters which farmers must follow and use their organized power to correct.—Editor.

THE STATE FARM BUREAU

I would like some good information regarding the State Farm Bureau. The county agent wishes me to help canvass our township, but I don't want to go ahead with it unless I am sure that it is going to be a good thing for the farmers. Please tell me all you can about the principle of it, what do they plan to do? Do they propose to use the membership money they collect in to pay high-salaried officers or will the money be expended wisely to benefit the farmer? Do you think the Bureau will be free from political pull?—*G. W. R. C., Kent City, Mich.*

You will find an answer to most of your question in an article published in the magazine section of the Dec. 20th issue. I have no fear that the officers of the Farm Bureau will misuse the funds that have been placed in their keeping. Salaries for officers who do the work and wages for field workers are necessary, and any farm organization to become a force in the nation's affairs, must have ample financial backing. As to whether or not the bureau will be free from political pull depends entirely upon the interest the rank and file show in the selection of their officers.—Editor.

FARMERS MUST PULL ON SAME TUG

I am a reader of your valuable paper and at your request I send you herewith the desired coupon with my choice for governor of Michigan. I prefer Herbert F. Baker. I have read quite a little in your paper about this man and I agree with his views. The others I know very little about. Michigan farmers ought to have a man who could not be bought, scared or coaxed as we have had and now have. I am an old man high in the seventies, have very little good or bad to expect, but we would like to see our younger generations have a better show than we have had. It is too bad that farmers cannot think alike. They would be stronger if they would pull on the same tug. They ought to overlook partisan lines.—*F. W. B., Riverdale, Mich.*

All the young old men are not dead yet. When a man "high in the seventies" takes such an interest in the kind of men elected to office, it seems as if the younger generations should be eager to get into the fray and see that only such men as "cannot be bought, scared or coaxed," are put into positions of public trust. We [illegible] of 'em, but the trouble always has been to induce Mr. Average Citizen to "overlook partisan lines", and support the MAN instead of the PARTY.—Editor.

MR. POWERS EXPLAINS

In the current issue of MICHIGAN BUSINESS FARMING is an article regarding the Michigan State Farm Bureau, I note that you made use of my name. So that you may possibly correct what is a misunderstanding on your part I would like to inform you that my connection with the *Detroit Free Press* terminated some months ago. Since then my relation to the *Free Press* has been in the capacity of publicity director of the Michigan State Farm Bureau, always ready to lend to the *Free Press* and any other publication in Michigan any assistance possible wherein the interests of the farmers of the state are involved.—*J. P. Powers, publicity director the Michigan State Farm Bureau, Birmingham, Mich.*

Less than two weeks before Mr. Powers wrote us the above letter he reported the annual convention of the Michigan State Grange for the Free Press, and signed himself as "staff correspondent." A reporter is not dignified by the term "staff correspondent" unless he has some actual connection with the editorial staff or is temporarily off duty. We have no quarrel with Mr. Powers, but his past and present connections with a metropolitan newspaper that has never been notoriously friendly to the farmers and is the special spokesman of certain interests with which the farmers' interests most frequently clash, will make the average farmer feel that the Farm Bureau could have made a wiser selection for its publicity manager.—Editor.

ENDORSES M. B. F. POLICY

I want to take this opportunity to very heartily endorse your policies and your very firm stand on all questions of vital interest to the farmers. I am aware that all who dare stand for the right and a square deal for all classes today are termed cranks, etc., but I am glad we are blessed with a few,—far too few—such cranks today. Wishing success and prosperity to your, the only real farmers' paper in Michigan, I am very respectfully yours.—*Fred D., Leonard, Mich.*

The best Christmas presents that we have ever had are the thousands of kind letters, of which the above is typical, that have been received from our readers the last few months. Material gifts are soon worn out by use, but the kind word is stored away in memory's chest and abides forever with the possessor. It is not possible to please all. Some times one must pursue a course that is not altogether to the liking of one's friends. They criticise; they say unkind things about you; they avoid you. It gives the heart a twinge to be thus deprived of the good opinion of one's friends, but that is the price that every man must pay who adhers strictly to the course which the conception of one's duty points out. It is as difficult for a newspaper to take the right course at all times as it is for the reader. Michigan Business Farming has no set policy. As conditions change, policies must change. But it is not swayed by partisan prejudice or favoritism to any particular class or faction, and as the years go by we feel that our every reader will come to understand this better. We are indebted to such readers who have taken a few moments to write us letters of encouragement. They help us wonderfully along the way. —Editor.

SENSE AND NONSENSE

The Trouble

"Nope! I can't work for you no longer at the old wages." said Farmer Fair's hired man. "The price of the necessities of life is too high. Silk shirts has riz ag'in."

Wordly Wisdom

"Frankly, now, if you had to choose between me and a million, what would you do?" she purred.

"I'd take the million. Then you would be easy.

Letting Well Enough Alone

A traveller journeying thru the Straddle Ridge region of Arkansas came upon two men prone in combat in the dusty road, the upper gentleman pommeling the nether gentleman like beating a bass drum. The traveller, feeling for the under dog, resolved to interfere.

"It is a shame to strike a man when he is down," he virtuously chided.

"If you knowed the trouble I've had to get this yere cuss down," returned Huck Buckleby, who was doing the thumping, "you'd shut your mouth and go on about your—by gosh!—business."

Rough Diamonds

Not long ago a profiteer was taking a friend through his palatial abode. Pointing to a mammoth mirror he said: "Would you imagine, Bill, that that mirror cost $500,000?"

"Wonderful, simply wonderful!" gasped the friend, truly impressed. "But what a pity it's scratched," he murmured as he scrutinized it closer.

"Yes, it is rather," returned the multi-millionaire carelessly. "Oh, ah, Matilda," he continued, turning to his wife, "perhaps you had better not let the children have any more diamonds to play with."

The Bard's Condition

All through the war I wore old clothes
For patriotic reasons,
And now from other causes I
Shall wear them several seasons.

What They All Say

"Aw, yes," grumbled the postmaster at Forked Stick, Arkansas, "I've heered all I want to hear of them old jokes about postmasters reading the postal cards. Lemme tell you, there ain't nuth'n to it, as fur as I'm concerned. Not a blamed thing! Only about one in fifty of them durn postal cards is worth reading anyhow."

The Farm Home
A Department for the Women

By MABEL CLARE LADD

RESOLUTION FOR SERVICE

YES. WE made a Resolution for the New Year, and the one we made was that of SERVICE. And you readers of M. B. F. can help me keep my resolution best by telling me how this paper through the columns, or by a personal errand, can best serve you.

Through our Readers' Own Column each week we have been able to help a few of our readers, but we feel that our mission [illegible] that there is so much room for growth.

Then there's the Personal Service Shopping Bureau, through which numerous of our readers have been able to secure from the city stores that which they could not find at home. But what we most desire in the year that is ahead of us is that more use shall be made of these columns.

Don't be afraid to write me, for be assured that if your request is one the printing of which will help others, that it will be so changed in wording, that no one will know from whence comes the inquiry.

Are you planning on a party of some sort of an entertainment for Washington or Lincoln's Birthday and want some games, or a new way of decorating your rooms and table? We have a good supply, but you know that our paper is so widely distributed that should we print games with the answers you couldn't possibly use them, for your very friends would have already seen them thru these columns.

Or perhaps you are interested in a reading course. Write and tell me how many are interested with you—whether it is through lodge, club or simply home reading and what the subject matter is in which you are most interested and through the assistance of our Public Library here, I can furnish you any number of references.

SEEN IN CITY SHOPS

The most noticeable thing in skirts—they are going higher—both in price and length—in fact Dame Fashion cannot rest content until she has led us from floor to ceiling it seems and now the number of inches milady's skirt shall be from the floor is ten inches. They are still close at the bottom but fuller at the top.

And the late winter hats are very much ostrich trimmed, for dress wear. This will delight many who have very good looking feathers laid away in tissue paper, for they are certainly softening to the face, and are attractive to most faces.

Women in Politics

Conducted by JUDSON GRENELL

EVERYWHERE we turn these days we hear and read much upon the subject of "Making America American" and [illegible] is said of our attitude toward the foreign born who are within our shores. A committee appointed to study this subject have recently reached this conclusion: "The attitude of the alien toward his country, in great part, is a reflection of the attitude our own citizens have towards him. Americanism should undertake to teach the duty of the host not less than the duty of the guest."

Neither can we expect from the foreign born perfect harmony with our laws unless they have a comprehensible knowledge of them. Likewise should acquire of us concerning our rights and privileges as citizens and we find ourselves [illegible] in a thorough knowledge, we are armed ourselves with [illegible] in our study of this question. This week we [illegible] the question of the responsibility in electing capable men to head our public institutions, as outlined by the following paragraphs:

Farm life in America surely has its ups and downs, but one above shows what the farm woman of the Balkan countries in Europe puts up with. This Serbian lady probably never saw a flivver or a farmer with a motor truck. She has been getting supplies to town with the ancient ox cart and has sat by the roadside to rest when the Yankee camera man caught her.

The State and the Woman Voter

State political issues seldom acquire the importance, in the mind of the average voter, as do local and national candidates and issues. Yet their neglect is almost certain to be followed by a series of economic mishaps that legislators, when trying to remedy them, are more apt to make matters worse than better. This is well illustrated in the conduct of state institutions—one of the most important, if not the most important of all the state's activities.

Prison Management

There was a time when the commonwealth contracted out to persons and corporations those convicted of crimes. It allowed those favored with contracts to obtain cheap convict contract labor, which was brought into competition with outside free labor. This course was followed for years, at the state's expense and legislative palliatives only served to increase the stench. Notwithstanding the evil was so patent it was not until citizens in all walks of life united in denouncing the wrong that it was abolished.

When an economic wrong yielding gain is once entrenched by law and custom, even a majority may be impotent to apply a remedy. The recipients of the favors contribute to party treasuries, and even finance candidates who agree to oppose any change.

This particular blot on the state's escutcheon was placed there because of disregard by the state of a fundamental economic axiom: Never allow the use of public property for private gain.

State Institutions

The state's activities in the matter of elemosynary institutions is a continual source of anxiety to all who have the state's welfare at heart. The feeble-minded, the epileptic, the deaf, dumb and blind, the tubercular, the insane, etc., must be taken care of, when necessary at state expense, if humanitarian principles are to prevail. They represent all classes, all nationalities. In number they run into the thousands, and the drain on the state's treasury is very great.

In all these cases, without exception, the woman voter can well demand that where the families of these unfortunates are financially able, they should pay the full cost of maintenance. The state's duties begin only where family duties end. The taxpayer should be safeguarded against being expected or compelled to carry burdens that individuals should bear. If paying the expenses of these unfortunates should deprive the family of as complete subsistence as is necessary in order to prevent suffering, then the case acquires the importance of a state case and automatically becomes a common burden.

Some state institutions are already self-supporting, or nearly so; others by wise management, may be made less burdensome to the benefit of the inmates and the state at large.

Responsibility

A grave error in state government is the creation of independent "boards." The machinery is not in existence that can quickly change an independent board into a serviceable one. Independent boards scatter responsibility so that no one ever knows just whom is to blame for bad government.

Concentration of responsibilty, united with the power of the electorate to recall a dishonest or inefficient responsible official, works for good government. Concentration of authority calls for what is called "the short ballot." That is, the election of as few officials as possible, so that the voter shall not be confused by a multiplicity of candidates. It calls for the abolition of independent state boards, and the appointment by the governor of the heads of state departments, and all who exercise executive authority. The governor must be given the power to demand, at any time, a resignation, without giving any reason for the request. In no other way can responsibility for bad management be placed.

So the woman voter, besides keeping in mind the axiom that it is unsafe to allow the use of public property for private gain, must also remember that without concentration of authority, inefficiency cannot be located. Power and responsibility go together.

Hope for Spinsters

"Since Miss Peavy Potter has her six cylinder roadster she speeds so that she keeps all the motor cops busy."

"How ridiculous! Why does she do it?"

"She says it's so exciting to be chased by a man."

Our Readers' Own Column

It is indeed gratifying to note the interest displayed in this column, and also the really worth-while questions asked. If you have been following them, you will have noticed that the information asked for is such that all of us can profit by the answers. This is your column—and the more use of it you make, the better we shall like it as we will know that our paper is filling a definite need.

A TRAVELING LIBRARY

Editor Woman's Dept., M. B. F.:

Dear Friend—Could you tell me if it would be possible to have a traveling library in our community. Once I read that some libraries had unused or worn out books that one could have by paying the freight on them. We have no library in our vicinity and are simply buried in the country until spring. A good circulating library would help so much. I shall be very grateful for any information you can give me on the subject.—*Mrs. B. B., Gratiot Co.*

The question you have brought up is one of the most helpful that could have been asked as we are sure the information you seek will be welcomed by a large number of our readers who live in localities where no public library is within reach.

If you will address Mrs. Spencer, Secretary of the Library Commission, Lansing, Michigan, she will give you full information as to how to proceed to secure such a library in your community. The State Librarian will furnish to any community, where no public library exists, a selection of fiction, travel and biography.

WRITE TO A PRIVATE SCHOOL

Dear Miss Ladd:

I am having trouble trying to convince my daughter that at her age, eleven, she is more becomingly dressed in middy blouses and athletic shoes than in the fancy dresses and high heeled shoes. Girls are growing more frivolous every day, to say nothing of the hole it is making in poor Dad's pocketbook. Perhaps you can say something which will help me to convince her. —*Mrs. Jas. B.*

This is a subject which has received a great deal of attention from educators as well as mothers thruout the land and today some high schools have adopted the middy blouse with a navy skirt as the uniform to be worn by the girls attending that particular school, while others have adopted the Peter Thompson which as you know is navy, but made in one piece with the sailor collar, and the bright red tie.

I would suggest that the easiest way to convince your daughter of the value of thise mode of dress with the common sense heels which go with it, is to send to some of the private schools, a list of which I am sending you, as well as some of the larger city schools, where a set rule regarding dress is established. Ask for their catalog and also inquire relative to the dress questions. Then when you have your information all gathered, tell your daughter that you wanted to be sure that you were advising her for the best and convince her that if she persists in wearing clothes which are inappropriate for one of her age, she would at once be singled out as "green" should she appear in a city where the school girls are all clothed in middies and Peter Thompsons. Another good thing is to secure some first class [illegible] catalogues from houses which cater to school girls' clothes, asking them to send you the catalog con-

(Continued on next page)

LATEST STYLES and New York Patterns

3013.—Ladies' Dress. Cut in 6 sizes: 34, 36, 38, 40, 42, and 44 inches bust measure. Size 38 requires 6 yards of 44-inch material. The dress measures about 2 1-8 yards at the foot.

2660—Girl's Dress. Cut in 4 sizes: 8 10, 12 and 14 years. Size 12 requires 4 1-8 yeards of 40-inch material.

Be sure to give number and size. Send orders for patterns to Pattern Department, Mt. Clemens, Mich.

taining such descriptions and you will be flooded with material to prove that you are right. And daughter will quickly be convinced that she is not doing the "right thing" and above all things young girls like to adopt the modes used by the most exclusive schools. You will not need to refer to the question of health at all, as I am sure that you will win your point by simply proving beyond question that there is no choice—for only two kinds of dresses are permitted in exclusive and high class schools.

If the butter troubles you about gathering, dissolve a tablespoon of baking soda in a pint of water and add. Churn a moment and the butter will be gathered nicely.

A teaspoon of borax added to the starch will help to keep the starch from freezing out of clothes in cold weather.

If you will dampen the bottom of your kettle, then soap it well before putting it on the fire, there will be no trouble washing the black off.

Save the excess liquid from your pickled peaches to put in your mince meat.

If the pans in which milk, custard and salad dressings are to be boiled are first wiped with a soft cloth greased with a little lard, they will not scorch.

The sputtering of hot fats can be avoided when eggs are dropped in to fry by sifting a little flour into the fat just before the eggs are added.

If lemons are warmed before you squeeze them, nearly double the quantity of juice can be extracted.

Cheese may be kept soft and good for a long time if it is wrapped when it is fresh in a cloth wrung out of vinegar and then wrapped in a dry cloth.

DANGER IN SACCHARIN

With the shortage and high price of sugar there comes the excessive use of Saccharin, until the Board of Health of the State is sounding a warning against this practice.

Saccharin is a coal tar product, and while 550 times sweeter than sugar, is not a substitute for sugar and has no food value. Sugar is a carbohydrate, possessing a specific food value, while saccharin has no food value whatever and is not allowed by the federal food and drug act.

CHICKEN CHAT

A certain concern is advertising compressed tablets as a substitute for green food for chickens during the winter. When first I saw their ad I thought that it was a compressed tablet of some such material as dried beet pulp or something of that kind, and I said to myself that would be a mighty good thing for people who are unable to get fresh green stuff during the winter.

Later I saw some of the advertising matter and find that it is composed of mineral substances, which are simply dissolved in water that is given the chickens. One might as well give a cow or a horse a tablet made of lime or chalk or some other mineral matter and call it a substitute for hay.

Lots of people do not understand the reason for the necessity of feeding bulky green food to fowls or animals. The real reason is, that the digestive apparatus of fowls and animals is constructed to take care of food in bulky form and not in concentrated form. One could feed a horse all of the necessary food ingredients in a few concentrated tablets but the horse would soon sicken and die. The stomach could not take care of the food in such concentrated form and neither would the bowels exercise their natural functions. Neither would the appetite of the animal be satisfied if the stomach were not filled.

The coarse bulky vegetable food is necessary to help fill up the stomach to satisfy the appetite and prevent the eating of too much concentrated food, such as grain, etc. It is also necessary in order to give a proper action of the bowels.

Do You Raise Pure Bred Live Stock or Poultry?

THERE ARE TIMES during the year when every reader of M. B. F., who is a breeder of pure-bred live stock or poultry, could use our advertising columns to advantage.

If you have something to sell now, or will have a few months from now, NOW IS THE TIME TO ADVERTISE IT.

Write out plainly, on the line below, what you have to offer, or what you breed. Then send it to us and let us set it up in type, send you a proof and make you a price for running it, 13, 26 or 52 times.

MICHIGAN BUSINESS FARMING, Mt. Clemens, Mich.

THIS IS NOT AN ORDER

We desire simply to show you your advertisement in print and how many lines it will occupy. We will correct, change or improve the set-up without cost to you.

The Children's Hour

DEAR CHILDREN: Of course you know the next holidays we have to think about are of Washington's and Lincoln's birthday. Both men were not only Presidents, but both men are the idol of all children. Therefore I want to know just why you like these Presidents —which one you like best, and why, and a short story of what you know of their lives. Do not make your story more than 100 words long or we can't print it—but the three best stories will win prizes. And we want an original drawing of Washington chopping down the Cherry Tree and Lincoln reading by the fire. Now here is a chance for our little folks who have literary talent to write stories and get prizes and those who can draw to send us pictures. Five prizes of "A Trip Around the World" in postal cards will be sent to each of the winners. Affectionately yours —LADDIE.

Dear Laddie:—This is my second letter as I didn't see my first letter in print. I am a girl 10 years old and I am in the 6th grade. I have two sisters and one brother. I live about one-fourth of a mile from our school house and go home for dinner most every day. My teacher is Miss Freda Behler and I like her very well. She has taught two years at our school. As my letter is getting long I will close. I would like to have some of the boys and girls write to me. —Edith McVeigh, Ithaca, Mich.

Dear Laddie:—This is the first time I have written to you. My father takes the M. B. F., and we all like to read it. I like to read the "Children's Hour." I live on a farm of 75 acres. We have five cows and three horses. I have three sisters and one brother at home. My brother goes to high school. Now I will close hoping to see my letter in print.—Anna Schaaf, Falmouth, Mich.

P. S.—Below is my story.

Christmas

Christmas is a birthday. It is the birthday of Christ. He was born in a manger in Bethlehem. There were shepherds caring for their flocks. All at once it became light around them and many angels came down and one said, "Don't be afraid, for I have good news. For there is born this day, a Savior, who is Jesus Christ." Then they went to see him and took him presents. That is why we give presents now.

Dear Laddie:—I am sending a poem that I wrote myself and I hope to win the December prize. Will you please write and tell me how I can get a camera as I would like to get one. I am a girl 13 years old and am in the 7th grade at school; our teacher is Miss Seyforth. I live on a 50-acre farm and go to the Duncan school. I will be glad when real winter comes as our teacher for the first of the year has invited us to go over and have a skating party. My letter is getting long so I will close, hoping to win the prize.—Myrtle Siver, Millington, Mich.

Dear Laddie:—This is the first time I have written to you. I live in the country and like it very much. I am 12 years old and am in the 5th grade. I like my teacher very well; her name is Charlotte Williams. I live on an 108-acre farm. For pets I have one dog and two cats. We have four horses, three cows and four calves. I have two sisters and one brother. Their names are Otho, Gladys and Bernice. My father takes the M. B. F. and likes it. I like to read the "Children's Hour." My mother is living with us. Well, my letter is getting long so I will stop, hoping to see it in print. I have over three miles to go to school.—Gardner Durfee, Alger, Mich.

Dear Laddie—This is the first time I have written to you. I am a girl 11 years of age and am in the 6th grade. My teacher's name is Emma Bellinger. My father takes the M. B. F. and likes it very much. I have one brother and two sisters. My brother's name is Glenn and my sister's names are Ruth and Evah. I live on an 88-acre farm and we have 40 acres of land north of here. We have four horses, one young colt, 28 head of cattle, 10 of which are thoroughbred Shorthorns, and about 30 sheep. I would like to join the Christmas club. Would you please send me a list of prizes and the rules of the club? I am sending you a story which I hope you will like. I would like to have some of the girls write to me. I will close now.

Dear Laddie—I am 13 years old and am in the 7th grade at school. My teacher's name is Nellie Naylor and I like her very much. My father takes the M. B. F. and likes it. I like the Doo Dads and love to read the boys' and girls' letters. I am writing you a Xmas piece and would like to see it in print.—Thelma Barton, Wheeler, Mich.

Christmas

Christmas, where Peace, like a dove in its flight
Broods over brave men in the thick of the fight;
Everywhere, everywhere, Christmas tonight.

The Worst Kind of Nuisance

Hey, Cave Gang, come closer, let each of us name
The worst kind of nuisance—we'll call it a game.
"I vote for the fellow who's never on time!"
"The chap who takes pleasure in starting a fight!"
"The geezer, while camping, who snickers all night!"
Yes, these pests are terribly trying, I grant,
But I'll cast my vote for the fellow who "cant't."
He can't rig a fish-pole, he can't take a hike,
He can't cook a flap-jack or tinker his bike'
He can't learn to signal, he can't do first aid,
Can't do without candy or pink lemonade,
Can't follow a trail and can't lace up his shoe,
Can't do a blamed thing that you want him todo!
Oh, boy, I'd be happy if I could but plant
A swift on the rear of the fellowwhocan't!
He can't get his grammar, or spelling or math'
Can't split the kindling, he can't take a bath,
He can't help his mother, he can't use his head,
Can't rise in the morning and can't go to bed,
He can't find his collar; he can't tie his tie—
He never knows what he could do if he'd try—
But repeats all day long his monotonous chant:
"Oh, mamma, oh teacher, oh mister, I can't."
There's great need in the world for the confident man
Who tackles his work with a hearty "I can."
So if you would succeed and find living a joy,
Just learn how to do things while you are a boy;
For the boy who refuses to work when he SHOULD
Loses the power to work when he WOULD.
Weakness and softness his talents supplant,
And he finds at the test that he REALLY CAN'T.

—The Cave Scout in Boys' Life for November.

A Wise Teacher

"I DON'T know what is the matter with Polly Drake," pouted Sue. "She is the most uninteresting girl I ever talket to. Why we walked all the way home from school together today, and I was never so bored in all my life."

"What an awful confession," laughed Aunt Mary, "But I can't believe that Polly Drake was altogether to blame. You are telling tales on yourself as well as on your friend."

"I—I don't think I understand what you mean," stammered Sue, growing very red.

"Sit down and I will tell you a little story," answered Aunt Mary, and Sue, who loved her aunt's ever-interesting tales, settled herself to listen.

"One of the wisest teachers and best preachers that this country can boast of was Henry Ward Beecher, who lived and preached during the last century. The fame of the good man had spread far and wide, and on every Sabbath day his church was filled to the doors with an enthusiastic congregation and visiting friends who flocked to hear the wise man's teachings. Now one Sunday there came to the church a preacher from a small town nearby, who had heard of the wonderful sermons that Beecher always gave and who had come to seek inspiration. With astonishment he looked around the crowded church. Not a head was nodding, not a soul was snoring, everybody was wide awake and all were listening attentively to their teacher's words. 'Surely,' thought the visiting preacher, 'There must be some secret in being able to attract and hold a congregation as Reverend Beecher does. After services I will ask him to tell it to me.' So, when the services were over and the church empty, the visitor approached the preacher and said: 'Reverend sir, I have listened with interest to your sermon this morning and have taken your teaching to heart, but there is another question about which I need advice. I, too, am a preacher and although a goodly number of persons come to my little church each week, there seems to be something wrong with my congregation. Throughout most of my sermon the heads nod and the eyes drop shut. There are more persons sleeping in my church on a Sunday morning than there are in the little grave yard outside. Tell me please, what can I do to wake up my congregation?'

"Henry Ward Beecher listened to the man in silence, and then placing his hand upon the younger man's shoulder he answered, "Before you can stir up your congregation, my man, you must first wake up the preacher."

Aunt Mary paused. "Oh, I know why you are telling me this story," cried Sue. "You think that before I look for things the matter with other people I should see what is the matter with me."

"Just that," agreed Aunt Mary. "Perhaps you could wake Polly up and find her interesting if you would wake the best out of Polly. Whenever I find myself wondering what is wrong with other folks I think of wise Henry Ward Beecher's words and try to 'wake up the preacher.'

"He was a wise man," said Sue, "I'm going to try to follow his advice, too." And she did.

BARNYARD CUT-OUT

BY WALTER WELLMAN

STORY TIME

"Tell us a story," comes the cry
From little lips when nights are cold
And in the grate the flames leap high.
"Tell us a tale of pirates bold;
Or fairies hiding in the glen,
Or of a ship that's wrecked at sea."
I fill my pipe, and there and then
Gather the children round my knee.

I give them all a role to play,
No longer are they youngsters small,
And I, their daddy, turning gray,
We are adventurers, one and all.
We journey forth as Robin Hood
In search of treasure, or to do
Some deed of daring or of good.
Our hearts are ever brave and true.

We take a solemn oath to be
Defenders of the starry flag.
We brave the winter's stormy sea
Or climb the rugged mountain crag
To battle to the death with those
Who would defame our native land.
We pitch our camp among the snows
Or on the tropics' burning sand.

We rescue maidens, young and fair,
Held captive long in prison towers;
We slay the villain in his lair,
For we're possessed of magic powers.
And though we desperately fight
When by our foes are we beset,
We always triumph for the right,
We have not lost a battle yet.

It matters not how far we stray,
Nor where our battle lines may be,
We never get so far away
That we must spend a night at sea.
It matters not how high we climb,
How many foes our pathway block,
We always conquer just in time
To go to bed at 9 o'clock.

(Copyright, 1919, by Edgar A. Guest)

Dear Laddie—This is the first time I have written to you. I go to school and am in the 8th grade. My teacher is Miss Anderson and I like her fine. I have two sisters and one brother. My father takes the M. B. F. and likes it very much. I like to read the stories, letters and Doo Dads. I live on a farm of 120 acres, which is five miles from Brown City. There is a church on one side of our farm and the school is on the other side. Will close, hoping to see my letter in print.—Genevieve Ramsey, Marlette, Mich.

Dear Laddie—I have seen so many letters from girls and boys and have enjoyed reading them so much I thought I would try writing one myself. I live on a farm of 140 acres. I have two brothers and one sister. My oldest brother and I take music lessons, violin and piano. We have six horses, 16 head of cattle, 31 hogs and sheep and lambs. I had one of the lambs for a pet. I fed it with a bottle. I am 11 years old and in the 6th grade. My teacher is Miss Mabel Dwyer. We have basket ball at our school. We have lots of fun gathering hickory nuts and walnuts in the fall of the year. My oldest brother is 16 and my youngest brother a year old and walks everywhere now. He is our chief pet. My sister's name is Alice. She is 7. I think this is long enough for this time. I may write again if this escapes the waste-basket.—Julie Blackmer, Pewamo.

Farmers' Council Explains Stand on Labor

(*Continued from page 3*)

under-consumption. I know a great many labor leaders, hundreds of them throughout the country, and I have never heard of one of them who opposed the farmers' receiving the full cost of production of their products, plus a fair profit. Labor is interested in eliminating the parasitical and unnecessary middleman who gets 50 to 65 per cent of the dollar the consumer pays, and out of which the farmer gets about 35 to a maximum of 40 per cent.

I am much surprised that Mr. Milo D. Campbell should have misunderstood the demand of the Michigan Federation of Labor that the legislature create a Commission to fix the retail and wholesale prices of food and other necessaries. Labor throughout the country, as all real fundamental leaders of farmers, demand the extermination of speculative middlemen, which will help farmers as much as labor. This is a common point of contact. Your readers will doubtless be much surprised to know that a farm organization of which Mr. Campbell is president, endorsed a bill avowedly to protect farmers' co-operatives from unjust persecution by the Department of Jutsice, but limited this only to such farm organizations as are "not conducted for profit." Mr. Campbell's organization then had prepared by its counsel, and had introduced a bill which would permit the packers, millers, and all the big middlemen to qualify as farmers' co-operatives, and put them at the mercy of speculative interests.

It is not clear that it is to the common interests of farmers and labor of America to have the railroads and merchant marine fairly capitalized and operated democratically for service and not for profit; to have the natural resources of America similarly owned and operated so that we shall not have coal operators making a thousand per cent on their investment while many of their half million mine workers a good proportion of the farmers' home market, get one to two hundred dollars a year less than required to enable them to get the food they need? Is it not equally the joint interest of farmers and labor of America to break the monopoly which the big packers have created in our food supplies; to see that the many costs of the war are paid off by heavy taxes of incomes, estates, war profits and natural resources speculatively held, instead of compelling farmers and city laborers to pay interest to the big financiers and to permit the small percentage of our population who made twenty billion dollars out of the war, net, to get away with it? It is ridiculous to think that anyone is asking the farmers to carry out a program dangerous to American labor. Everyone knows farmers won't do it. The most dangerous enemy of Americanism today is not the fool anarchist, but the big financial interests of this country drunk with wealth acquired through capitalizing American farmers' and American workmen's patriotism, and heavily loaded with foreign securities.

Wall Street would love to see the farmers and laborers fighting each other, while it rifled the pockets of both, as it always has done in the past. Will farmers and laborers be foolish enough to permit this, even if it does serve the selfish end of some aspiring farm leaders? I have no fear of it.

I want to thank you for giving me this space, and to assure you that the program I have outlined above, seems, to the three-quarters of a million farmers in the organizations united in the Farmers' National Council to carry out their reconstruction program, important enough to justify farmers and labor getting together as at the Chicago Farmer-Labor Conference instead of fighting each other. United on essentials we stand, divided we fall still more helpless into Wall Street's clutches. Yours sincerely.—*Benjamin C. Marsh, Secretary and Director of Legislation Farmers' National Council.*

STATE POTATO EXCHANGE MAKES RAPID PROGRESS

(*Continued from page 3*)

and they have now just completed an addition to this house, made of tile, which is costing them above nine thousand dollars which includes automatic machinery for the handling of potatoes. When the farmer drives up to the warehouse with a load of potatoes his wagon is tipped up at the front and the tubers slide out at the rear into a dump which then elevates the potatoes into a grader.

The members which number 176 paid a membership fee into the association of $50 which went into the building fund and when the building was completed they found that they would need about $3,000 more. At a meeting of the members one afternoon they called for them to volunteer to loan the association this money and in fifteen minutes, enough men had offered to loan the required amount.

At the present time the central is in a flourishing condition having done over $500,000 of business in October of this year and about the same amount in the month of November.—*W. C. Cribbs, Field Man for the Exchange.*

Hurry With Your Vote for the Next Governor

THEHE is no change in the relative positions of the candidates for governor as announced last week. Campbell is still in the lead by a slight margin, but Baker is creeping up fast. State politics have been very tame so far but we expect to see some fireworks very soon. As it stands today there are at least four self-avowed candidates in the field, with the probability that at least one more will be added to the list. It is not to be expected that all will make the run, however. There will undoubtedly be some elimination, but it seems practically certain that Wayne county will have at least two candidates in the race to the finish. We anticipate one of the hottest gubernatorial scraps ever staged in Michigan, and it behooves the farmers to seize every opportunity to secure a vote for the farmer candidate.

There are a good many thousand of our M. B. F. readers who have not yet voted. We wish we might have their ballots. Why not clip out this coupon right away and mail it in, with or without your subscription.

The Strength of Universal Service

"Behold the power of unity," declares the father to his sons, in Aesop's fable concerning the strength in a bundle of sticks as compared with the weakness in a single stick.

The "Power of Unity" is of absolute necessity to the strength of nations and of business. It is unity of service which is the strength and value of the Bell Telephone organization.

If all your telephone conversations were to be forever with but one person, a single line would meet all of your needs, but nation-wide service requires the cooperation of all those served as well as of all those serving.

The daily operation of the telephone for usual, local calls; its vitally important operation for the less-frequent long-distance calls; both depend upon the coordinated efforts of subscribers and telephone operators.

Moreover, in these days of high costs, an economic and universal service requires from each individual subscriber his financial and moral support.

Each community must support its telephone facilities to the best of its ability, if both it and the rest of the country are to receive the fullest benefit.

UNCLE RUBE SPINACH SAYS:

WHY DO FARMERS QUIT?

COMIN' toward home 'tother day, I overtook a couple of our business men talkin' very earnest an' confidential, an' so I jest kinder saunters along slow like to hear what they wuz talkin' about. Well, as I might have knowed, they wuz talkin' about farmers—business men and all other men in the cities know more about farmers and their work than all of the rest of the world put together. An' they do more discussin about farmers, by gravy!

Well, one of these fellers sez, sez he, "I wonder why so many farmers are quittin'—sellin' or rentin' their farms an' goin' out of business. It looks as though they wuz sick of the prices their stuff brings, an' I can't see why they want to quit."

"Oh, the farmers are a lot of derned hogs," sez the other wise guy. "They're never satisfied—give 'em all they'll ask an' they'll want more, an' the only way to deal with 'em a-tall is to fix the price for 'em 'an then let 'em take it or leave it. We can't handle their stuff fer nuthin'," sez he. "An' the sooner the rubes know this, the better it'll be for 'em."

Now one of these men was a butcher an' tother a grocer, an' by ginger, their talk kinda raised my dander, an' so I ups and busts into 'em, an' while I wuz about it, I thought I'd give 'em a nice kind talk an' try an' tell 'em gently-like, some of the reasons why farmers wuz a gittin' kinda tired of the game, 'cause it was bein' played too darn one-sided an' the farmer wuz bound to be the loser anyhow. An' so I sez to 'em, askin' their pardding of course for buttin' in, "You fellers' ignorance is extremely ignorant; you talk like a last year's bird's nest," I sez, usein' my most elegant languidge—"You ask an' wonder why the farmers are quittin'," I sez, "and then answer the question, yourself," I sez.

"Price-fixin' an' price-manipilatin' by a lot of sharks like you an' similar, is what's a drivin' the farmers off the farms an' you two fellers, in the business you're in, ought to know the trouble without askin," I sez. I guess I sometimes git kinda het up when I'm discussin' such things with fellers in bizness, an' mebbe I wuz a little het up on this occasion but I thought I better talk nice to 'em an' so I sez to the butcher man, "here you be, a buyin' cattle an' hogs from the farmers, payin' your own price—why, the farmers never has a chance to set any price on his stuff," I sez. "You'll buy a steer, sometimes, more often a bull or an old cow which you allus sell fer prime steer beef— well, you pay your price for what has taken the farmer two or three years to raise on high-priced feed an' hard work; you take the carcass into your shop, cut it up an' sell it out in half a day an' make more profit than the farmer gits for raisin' the anamile. You'll pay the farmer 20 cents a pound for his chickens,"I sez, "an' you'll yank off two or three ounces of feathers an' hang 'em up an' they're ready for the buyer. Well, I come along an' ask the price, 35 cents, you will say, an' then you'll slap one on the scales, weigh 'em up an' tell me about two dollars, will be near enough then you put 'im on the block, cut the head off, cut off the legs, remove about a pound an' a half from the inside of 'im an' throw the stuff in the waste box—a total loss to me an' yet I have paid 35 cents a pound for a dressed chicken, an' all the dressin' that's been done is the two or three ounces of feathers you've yanked off. We do not buy dressed hogs with jest the hairs off, do we?"I sez, "then, why is the chicken dressed before he is dressed?" Then I sez, "If you buy a dressed beef from the farmer you make him give you the heart, lungs an' liver an' you sell the same at from 20 to 30 cents a pound an' it's that way all along, everything comes your way, you couldn't get along without the farmer an' yet you're allus knockin' an' tellin' what a tight wad he is, an' by gosh! you do him every chance you git, don't forgit that," I sez an' then I sez to the grocer feller "What did you pay the farmers for 'taters this fall? About a dollar an' a quarter or less, didn't you? An' you sell 'em today for $2.40. You pay $1.50 to $2 for apples an' charge 10 cents a pound or $4.50 to five dollars a bushel; you pay 10 an' 15 cents for punkins an' sell 'em for 35 cents; beans that you pay the farmer 5 or 6 cents a pound, you sell for 11 or 12 cents." "Why," I sez, "it costs more to put milk into a bottle an' hand it out to a customer than the farmer gits for raisin' the cow, feedin' 'er, milkin' an' deliverin' the milk—sometimes ten mils or more. "If you fellers think," I sez, "that farmers like this kind of a deal, you're thinkin' through your nose, an' you've got several more thinks a comin.' Gosh," I sez, "the farmers are human bein's an' they've got a think tank of their own, an' they're a usein' of it to buy ginger an' unless there's a change purty durn soon you'll find the farmers crowdin' you fellers out of business; they'll establish markets an' sell direct to the consumer an' you guys can set on your counters an' watch 'em do it."

Well, I coulda told 'em why the farmers wuz leavin' the farms but they seemed in a hurry to git home. Both of 'em wuz out of sight around the corner an' had started to run—to make up lost time, I reckon. Cordially yours—*Uncle Rube.*

THAT FARMER GOVERNOR

Michigan farmers' organizations are giving considerable attention to the question of uniting to have a farmer candidate nominated for governor next year by the dominant political party. Only with a farmer candidate, they argue, can they secure the enactment of laws that will insure to farmers a division of the profits of their industry proportionate to the profits jobbers and retailers of farm products take.

No one will controvert the general proposition that the farmer is entitled to as much of the profits of his industry as the middleman or the storekeeper who sells to the consumer. But fallacious is the theory that with a governor who is himself a practical agriculturist, the grievances of which the farmers complain can be righted. The chief executive of the state can neither make nor unmake laws. The legislative power of the state is vested in the Senate and the House of Representatives. It is true that the Governor has the power to veto acts of the Legislature but two-thirds of the Legislature can override his veto.

If the farmers if Michigan feel that they have just cause to complain that a majority of recent legislatures have been out of sympathy with the farming industry, the only practical way for them to proceed is to see that legislators, as well as a governor, are elected who are in sympathy with their industry. They can accomplish nothing by simply electing a farmer governor. Let them direct their energies to nominating and electing Senators and Representatives who will be in harmony with the Governor instead of restricting their campaign to the contest for governor.

Such a line of action may well be followed by other activities than farming. No Governor, be he a farmer, or a professional man, or a captain of industry, can administer the government of Michigan as he would like unless the Legislature is friendly to his views. Legislatures have wrecked excellent plans of more than one governor.—*Detroit News.*

All Good Men

It's hardly fair to place so many good men on this ballot. Any one of them. I believe to be much better qualified to fill positions than our past officers."—*W. L. M., Ithaca.*

Will Support Any One of Five

"Instead of marking the straw ballot as you requested I scratched out those I would rather not see in the Governor's chair. Will support any of the others heartily."— *B. P., Ithaca.* (Our subscriber crosses out the names of all but five candidates).

Husband and Wife Agree on Same Man

"My husband and myself agree on the same man and we know more about these two (Baker and Helme) than the others and think they will make good if elected. We want a man that will stand pat on national prohibition and one that will give us the tonnage tax that has been talked to death heretofore.—*Mr. and Mrs. P. O., Scottville.*

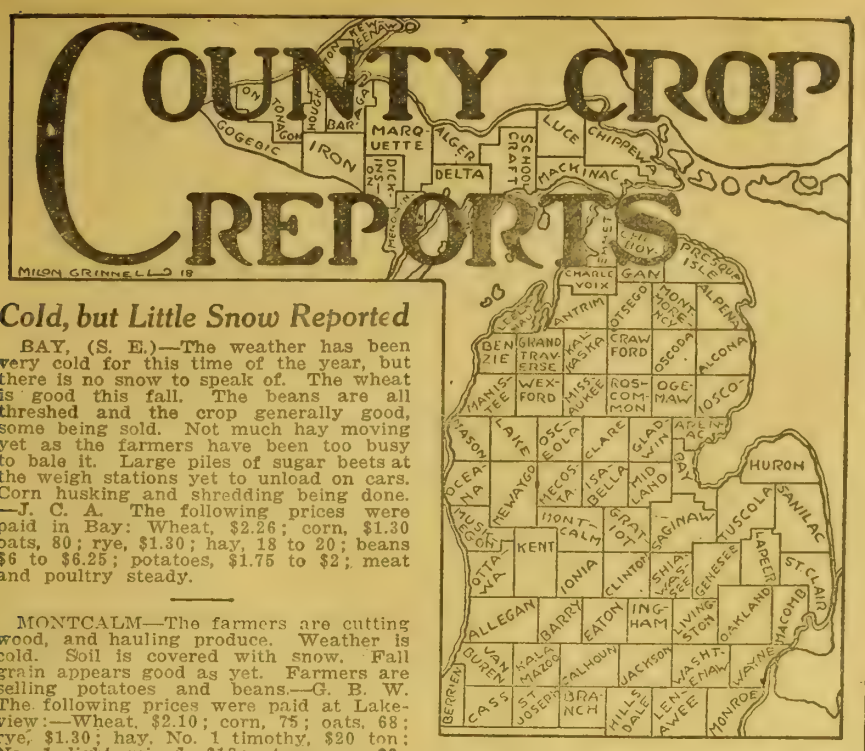
COUNTY CROP REPORTS



Cold, but Little Snow Reported

BAY, (S. E.)—The weather has been very cold for this time of the year, but there is no snow to speak of. The wheat is good this fall. The beans are all threshed and the crop generally good, some being sold. Not much hay moving yet as the farmers have been too busy to bale it. Large piles of sugar beets at the weigh stations yet to unload on cars. Corn husking and shredding being done. —J. C. A. The following prices were paid in Bay: Wheat, $2.26; corn, $1.30 oats, 80; rye, $1.30; hay, 18 to 20; beans $6 to $6.25; potatoes, $1.75 to $2; meat and poultry steady.

MONTCALM—The farmers are cutting wood, and hauling produce. Weather is cold. Soil is covered with snow. Fall grain appears good as yet. Farmers are selling potatoes and beans.—G. B. W. The following prices were paid at Lakeview:—Wheat, $2.10; corn, 75; oats, 68; rye, $1.30; hay, No. 1 timothy, $20 ton; No. 1 light mixed, $18; straw-rye, $8; wheat-oat, $10; beans, Pea, $6.25 cwt., red kidney, $12; potatoes, $2.70; hens, 16lb.; springers, 78; butter, 72; butterfat, 74; eggs, 65 doz.; hogs, 15lb.; veal calves, 15.

HURON—The following prices were paid at Caseville:—Wheat, $2.70; oats, 72; rye, $1.87; hay, No. 1 timothy, 23; No. 1 light mixed, 20; potatoes, $1.35; onions, 4; hens, 14; springers, 16; ducks, 30; geese, 27; turkeys, 35; butter, 63; butterfat, 70; eggs, 83; hogs, 13; beef steers, 7; beef cows, 5; veal calves, 1;1 apples, $2.50; grapes, 25.—C. G.

WEXFORD.—As we we did not have any earthquakes or anything out of the ordinary on Dec. 17th, the day predicted to end the world, we will proceed to tell the prices that were paid at Cadillac for produce:—Wheat, No. 1, 2 and 3 red, $2.20, $2.14, $2.14; corn, $1.40; oats, 80; rye, $1.40; hay, $30; beans, Pea, $6.20, red kidney, $8.50; potatoes, $2.55; cabbage, 2; hens 16 to 19; ducks, 20 to22; geese, 17 to 20; turkeys, 28 to 30; butterfat, 70; eggs, 65; hogs, 16 to 18; veal calves, 16 to 22; apples, $3.—S. H. S.

GRAND TRAVERSE—We have been having real winter weather. Dec. 17th registered 14 below zero but it is some warmer now. Farmers are putting up wood and threshing some when the weather is moderate. A number of auction sales. Not much marketing at present on account of cold weather.—C. L. B. The following prices were paid at Traverse City:—Wheat, $2.10; corn, $1.35; oats, 80; rye, $1.30; beans, $3.60; potatoes, $2.50; butter, 68; butterfat, 78; eggs, 65.

ALLEGAN, (S. E.)—Farmers are doing chores and other work about the farm. Most of the corn has been harvested and a considerable amount of fall plowing done. Weather continues cold. A few potatoes have been sold at $1.50 per bu., while most of the farmers are holding for higher prices. The average yield for potatoes in this section last fall was 100 bu. per acre, and 85 or 90 per cent saleable potatoes, the average being cut down about 1-3 or perhaps 1-2 from normal.—W. F. The following prices were paid at Allegan:—Wheat, $2.18; rye, $1.35; hay, $24; rye, $8; beans, Pea, $6; red kidney, $10; potatoes, $1.40; onions, $2.25; hens, 17 to 20; butter, 70; eggs, 70; sheep, $8 to $9; lambs, $10 to $10.50; hogs, $12 to $15; beef cows, $10 to $12; veal calves, $18 to $26.

JACKSON, (N. E.)—Cold with light snow. Farmers have their work well in hand, chores being the principal occupation. Some marsh hay being baled. Prices on the whole are not what they should be for the farmer to make a profit, this being the time of year when he is supposed to cash in.—A. F. W.

GENESSEE—Farmers are unable to do much besides chores on account of the cold weather. The ground is frozen to a depth of about six inches and is covered with a light snow. Farmers are selling some hay, potatoes and live stock. The threshing is about finished and the corn nearly all husked. The thaw and freeze were hard on wheat and rye. Auction sales still plentiful but prices received are some lower. The Farm Bureau drive in this county started last week.—C.W.S. The following prices were paid at Flint:—Spring wheat, $2.41; red, $2.31; white, $2.29; corn, $1.50; oats, 88; rye, $1.43; hay, No. 1 timothy, $23 to $25; Pea, $6.50; red kidney, $11; potatoes, $1.85 to $2; onions, $6.50; cabbage, $3; cucumbers, $2; hens, $22; springers, 22; geese, 24; turkeys, 34; buttery, creamery, 72 to 75; diary, 70 to 75; eggs, 72; sheep, $7 to $8; lambs, $10 to $11; hogs, $15; beef steers, $7.50 to $8.50; beef cows, $6 to $7; veal calves, $17 to $18; apples, $2 to $2.50.

MECOSTA, (N.)—Not much doing on the farm nowadays. Farmers are selling a few beans and potatoes.—L. M. The following prices were paid at Hersey:—Wheat, $2.10; corn, $1.20; oats, 64; rye, $1.10; hay, No. 1 timothy, 25; No. 1 light mixed, 20; beans, Pea, $5.75; red kidney, $7; potatoes, $2.50; hens, 19; turkeys, 30; butterfat, 64; eggs, 75

GRAND TRAVERSE—Are having nice weather at present. Farmers are mostly threshing and getting up wood. An old resident, Mrs. Weston Worden died this neighborhood last Tuesday evening. Some potatoes are being sold. Auction sales quite frequent.—C. L. B.

MONTCALM—The farmers are cutting wood and moving stumps. The weather is warming up considerable from last week. The farmers are selling potatoes, beans and wood. There are some farms for sale in this part of the county. The men are going to the city for employment for the winter.—G. B. W.

CALHOUN—Farmers are cutting wood and doing chores. Some are drawing wood, others are drawing hay. There are some potatoes going to town. They are bringing better prices. The weather is warm, snow is all gone. Not very good weather for wheat and rye. The home of Ernest Rogers of Penfield burned to the ground with nearly all of the contents.—C. E. B.

MANISTEE—Farmers are busy doing chores and getting wood. There is not much selling in these parts except feed for cattle that brings a good price. No demand for horses and all have some to sell. Hogs are about all sold that are fat, going at 17 1-2 cents a lb., at Manistee City.—. H. S. The following prices were paid at Bear Lake:—Wheat, $2; corn, $1.40; oats, 90; rye, $1.25; hay No. 1 timothy, $35; No. 1 light mixed, $32.50 straw-rye, $10; wheat-oat, $12; beans, Pea, $6; red kidney, $10.50; potatoes, $2.50; hens, 14; springers, 16 alive; butter, 66; butterfat, 69; eggs, 53; hogs, 12; beef steers, 7; beef cows, 4; veal calves beef hides, 20c lb.

MASON—Doing chores, getting fuel, also feed for stock. Weather mild. Hay and other feeds changing hands. At the E. S. Brown sale Dec. 18th, wheat-straw sold for $15 per ton. Potatoes now are $1.50 bu. The Farm Bureau held a meeting at Scottville, Dec. 12th. C. A. Bingham, of the State Farm Bureau, was present and gave a helpful talk. The farm bureau membership drive will be put on some time early in January.—B. M. The following prices were paid at Scottville:—Wheat, $2.23 to $2.25; ear corn, 72, $1.30 to $1.40; oats, 80; rye, $1.45; hay, $25; wheat-oat, $10; beans, Pea, $6.25; red kidney, $12; potatoes, $2.50; hens live, 18; springers dressed, 22; butter, 65; butterfat, 75; eggs, 65; hogs dressed, 16 to 18; beef, 12 to 14; veal calves, 18 to 20.

MECOSTA—Farmers are busy cutting wood and doing chores; some corn yet to husk. Weather somewhat warmer than last week. Some are selling beans and potatoes. Prices on beans and potatoes have advanced since last week.—L. M. H. The following prices were paid at Hersey:—Wheat, $2.30; corn, $1.25; oats, 68; rye, $1.50; hay, No. 1 timothy, 25; No. 1 light mixed, 20; beans, Pea, $6.25; red kidney, $7; potatoes, $2.60; hens, 18 turkeys, 30; butterfat, 68; eggs, 65.

MANISTEE—Farmers are not doing much of anything but reading newspapers and celebrating the holiday season. The soil is frozen. Farmers are not selling much as the markets are dull. They are holding potatoes and beans for higher prices.—H. R. A.

ARENAC, (East)—Weather fine with snow on the ground. It was rather a quiet Christmas season about here. Considerable stock has been sold and prices low. Hogs are also down and about the only thing in stock that has been holding is lambs. Beans went up to $6.50.—M. B. R. The following prices were paid at Twining:—Corn, $1.40; hay, No. 1 timothy, $18 to $22; No. 1 light mixed, $18 to $20; beans, $6.50; springers, 14 to 19; ducks, 22; geese, 18; turkeys, 32; butter, 60; butterfat, 68; hogs, $12 1-2.

LIVINGSTON (N. W.)—Farmers in this vicinity are not doing very much at present but their chores. Stock looking good. Cloudy weather and not very cold; ground bare and frozen hard. The Co-operative Association at Fowlerville is considering buying the Roundville elevator.—G. A. W. The following prices were paid at Howell: Wheat, $2.35; corn, $1.44 oats, 80; rye, $1.65, potatoes, $1.25.

You get a bigger yield on every acre when you prepare the seed bed with

12 H. P. on Draw-Bar
25 H. P. on Belt Pulley

THE HUBER light four

Draws three bottoms
Turns an acre an hour

Plows more deeply. Discs and harrows more thoroughly. And it gets the work done quickly when the soil is just right. The increased yield pays back the cost of the tractor in a little while.

Because of its simple power-saving design, and the nice balance between power and weight, the Huber Light Four gives you more work to the gallon of fuel used.

All spur-gear-drive to the draw-bar converts the highest possible portion of the power developed by the motor into useful work. High test alloy steel makes the tractor light—it will not pack plowed ground; center draft conserves power; high wheels roll easier and provide greater traction grip.

Huber simplicity is the mark of experience in tractor building. It explains the Huber reputation: "It always keeps running"—and farmers above everything else must have reliability. *Write now for "The Foundation of Tractor Reliability."*

Weight 5,000 pounds; pulls three 14" bottom plows; Waukesha, four-cylinder motor; Perfex Radiator; Hyatt Roller Bearings; burns gasoline, kerosene or distillate; center draft; two speeds, 2½ and 4 miles per hour.

The Huber Manufacturing Co.
666 Center St. MARION, OHIO
Canadian Branch: Brandon, Manitoba
Makers also of the famous Huber Junior Thresher
Some good territory still open for live dealers

Fill Your Silo From Fewer Acres

The one practical remedy for the high cost of labor is to make every acre produce more—a bigger yield of corn per acre means lower cost per ton of silage. Whether you apply manure or not, your corn needs available plant food—for a quick start—for producing more and better ears to give the silage greater feeding value—and for making big heavy corn, that requires fewer acres to fill the silo.

A·A·C· Fertilizers

Make This Possible

They supply the necessary available plantfood—ammonia for a quick start, potash to make stout, heavy stalks and big grain, and phosphoric acid to fill out the grain, reduce the number of barren stalks and bring the crop to maturity ahead of frost.

Our Agricultural Service Bureau has been making farm tests with fertilizer for many years, to determine the best fertilizers for various crops under different conditions of soil and climate. The Bureau issues bulletins dealing with the culture of important crops, the use of lime and fertilizer. The Bureau also tests soils as to their need of lime, and gives advice on agricultural matters. This Service is free. Dr. H. J. Wheeler, formerly Director of the Rhode Island Agricultural Experiment Station, is in personal charge of the Bureau.

Ask for our valuable 56 page book, *"How To Make Money With Fertilizer."* Our nearest office will be glad to send it free.

Make Your Milkers Pay

Good Health — Good Appetite — and Good Digestion are the essentials of a good milker.

Dr. Hess Stock Tonic promotes health—makes cows hungry. Remember, it takes a healthy, hungry cow to convert a big mess into pails of milk day after day.

Dr. Hess Stock Tonic produces appetite, aids digestion, conditions a cow to stand the stuffing, cramming process necessary for heavy milking. Dr. Hess Stock Tonic contains the salts of Iron that supply rich red blood so necessary to cows in milk. It contains Laxatives and Diuretics that assist the kidneys and bowels to throw off and carry off the poisonous waste materials that so often clog up the system during heavy feeding.

Dr. Hess Stock Tonic

Ever notice a cow slack up on her milk—not quite so keen for her mess—apparently not sick? Her system is clogged. This never occurs where Dr. Hess Stock Tonic is fed. Start right—by conditioning your cows for calving with a course of Dr. Hess Stock Tonic before freshing.

There is not a day during lactation that Dr. Hess Stock Tonic cannot be fed to cows at a profit. This is especially true where heavy feeding is the practice. Dr. Hess Stock Tonic is good alike for cattle, horses, hogs and sheep. It makes the ailing animals healthy, the whole herd thrifty. It expels worms.

IMPORTANT: Always buy Dr. Hess Stock Tonic according to the size of your herd—five pounds for each cow to start with. Get it from the responsible dealer in your town. Feed as directed and note the results in the milk pail.

25-lb. Pail, $2.25; 100-lb. Drum, $7.50
Except in the far West, South and Canada
Smaller packages in proportion.

Business Farmers' Exchange

FARMS & LANDS

100-ACRE FARM $4,000, WITH PR. Horses and 6 cows, poultry, manure spreader, corn, potato planters, threshing machine, mowing machine, tedder, wood saw outfit, gasoline engine, harness, wagons, cultivators, disc and leveling harrows, waiking and sulky plows horse hoe, long list complete implements. On main road, only 4 miles to big RR town, productive loam tillage, brook watered pasture, estimated 500 cords wood, 75,000 timber; fruit. 6-room house, two barns, silo, carriage, poultry houses, etc. Owner to retire now includes everything $4,000 easy terms. Details page 8 Strout's Farm Bargains 223 Strout Bldg. Free. E. A. STROUT FARM AGENCY, 814 BE, Ford Bldg., Detroit.

FARMS FOR SALE—BIG LIST OF FARMS for sale by the owners, giving description, location of farm, description, price and terms. Strictly mutual and confidential between the buyer and seller and no charge for our services. CLEARING HOUSE ASS'N, Land Dept., Tabor and Woodward Ave.

FARM FOR SALE—50 ACRES GOOD CLAY loam. Price is right, easy terms. 3 miles to town. On improved road. Fred Lauterwasser, Scottville, Mich., R 3.

MISCELLANEOUS

WE PAY $100 MONTHLY SALARY AND furnish rig and expenses to introduce guaranteed poultry and stock powders. Bigler Company, X682, Springfield, Illinois.

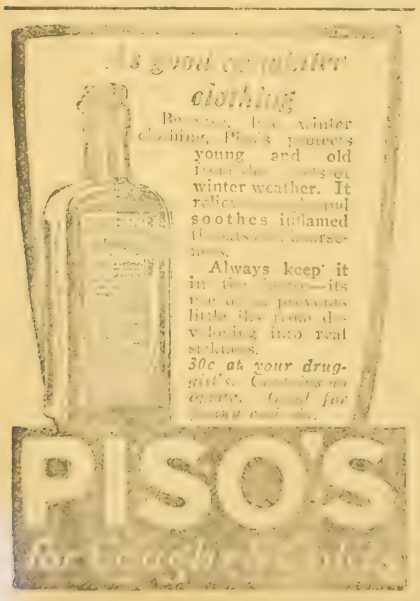
BUTTER FACTORY FOR SALE—INCLUDES steel roofed fully equipped cement factory, ice house, large barn and acre land. Located at Roseburn, Mich. Good railroad facilities. Price for entire plant $2,500. For particulars, write or phone WM. WILSON, R5, Yale, Mich.

WANTED—WORK ON FARM BY YEAR; Married. Can furnish references. State wages. Benj. Turland, Route 3, Oxford, Mich.

LANDOLOGY—A MAGAZINE GIVING THE facts as regards to farm land situation. Three months' subscription FREE. If for a home or investment you are thinking of buying good farm land, Shall we write a letter and say, "Mail me LANDOLOGY and all particulars FREE." Address Landology Section, Land Co., 398 Skidmore Bldg., Marinette, Wis.

WRITE THE CLARE JEWELRY CO. FOR highest cash prices for old gold, silver, etc. We do what we say. Box 555, Clare, Mich.

VIOLIN OUTFIT COMPLETE OUTFIT FOR sale. Fine violin. Best German. Has pure and sweet toned. Write Miss Bertha Mardiss, Shawnee, Kansas.



AGENTS WANTED

We want several Live Wire Representatives to take subscriptions, whole or spare time. Hundreds of our friends are netting a nice sum each week by doing a little extra work. A trial will convince you. For particulars write

MICHIGAN BUSINESS FARMING,
MT. CLEMENS, MICH.

Strong Arm

Conducted by Mr. Grant Slocum, Arcadia, R. F. D. No. 4, Mt. Clemens.

Grant Slocum—Will you please inform me, either by letter or through M. B. F., your opinion of the company offering stock for sale, as per agreement inclosed?—Y. M. O., Manton, Mich.

My good friend attaches to his letter an agreement to buy shares of stock in the Arthur Barry Co., of Chicago, Ill., but no other circulars or advertising matter. The Arthur Barry Co. proposes to establish the Inter City Motor Express Lines, Inc., to operate in the city of Chicago. The shares are offered at one dollar, and a little note at the bottom of the agreement sets forth the fact that "we reserve the right to reject subscriptions and refund the money." Never fear, subscriptions will never be rejected. No company of standing would sell stock at one dollar per share; better let Chicago citizens who have plenty of money, finance their inter city express companies.

Mr. Slocum—Will you kindly give me your opinion on physical culture promotion corporation stock? Is this concern reliable? I am sending circulars as received by me.—Arthur M., Oakley, Mich.

Bernarr MacFadden, the noted exponent of physical culture has sent out an invitation for the readers of his Physical Cuture Magazine to become partners in the enterprise. The stock if offered at five dollars per share and no person is to be allowed to buy more than 200 shares. The magazine is a going publication, splendidly printed and with a strong editorial force. Mr. Macfadden is a pioneer in the promotion of physical culture, and recognized as a leader. He has been quite successful, and I would say that the publication is on a paying basis. Bernarr is perhaps overenthusiastic in his new venture but will not lose a dollar of investor's money if he can help it, I could not advise you to buy this stock, however, as the element of speculation enters into the deal. I say the proposition from the standpoint of the man and the cause he represents is all right; as a money making proposition, you take your chances.

Grant Slosum—Am enclosing some circulars just received from New York. This does not come under the head of stocks for sale but I would like to know what you think of the proposition. Would you consider it worth one's time and money to invest in this business?—F. O. B., Reading, Mich.

"We want to put you in the five thousand dollar a year class, and we believe we can do it. We want to show you how you can strat a good money-making business for yourself." Thus a letter from the Mimo Manufacturing Company, Buffalo, N. Y., starts off. And, from the circulars which accompanied this filled-in circular letter, the recipient would be led to believe that he can get rich within a very short time. Quite an alluring proposition, indeed, for one to be taken out of the ordinary class and jumped right into the five thousand a year class. I know nothing about the merits of their carbon remover, and have not looked up the financial responsibility of the company. This much I do know: The advertising matter is of the same type that has been used from time immemorial by the get-rich-quick suckers with an unbaited hook. My friend, when a firm tells you that you can get into a position where you can make five thousand a year, by a first investment of $6.50, just remember that they are sure of their $6.50, while you are sure to wait a long time before you get where you can ride in a limousine. Better keep your money and plod along, Frank.

Friend Slocum—Will you kindly advise me in regard to the stock within as an investment?—H. A. A., Goodells, Mich

Here we have a chance to buy stock in the Simplex Spreader Manufacturing Company, of Kansas City, Mo. I can get no information with reference to this company in the time you have suggested for a reply. However, let me call you attention to a few facts in connection with the advertising matter you have sent me. The letter you received was a circular letter. The first words: "Do you know H. L. Wikoff?" and the next: "Probably not, but he is president of the State Bank of Oneida, Kansas; he purchased forty shares of Simplex stock." A mighty weak line for the first, to say the least. The fact that one banker purchased forty shares of stock has nothing whatever to do with the proposition. And again in the application, you are requested to pay your money, and if you are not satisfied it will be returned. An again the shares which are now selling at $12 will be raised to $16 in December. Why did not these people give you a financial statement of the Simplex Company, they claim they have been doing business for years. And as to raising the price of the stock, that is accomplished by a simple twist of the wrist. The intrinsic value of the stock would be no greater after they had given it a boost of four dollars per share. Guess you had better pass this proposition up just because it lacks the earmarks of sincerity. Either the Company is holding something back or the stock sales are in the hands of old time professionals.

Do you remember the inquiry I had from an Indiana reader regarding the reliability of the Production Meter Company, of Chicago? And the advice I gave as to the proposition from my viewpoint? Well, here's just how near I hit the mark:

Grant Slocum—Somehow it does not seem possible for us to get a line on the Production Meter Company. We have called up their offices numerous times and do not find anyone there who can give us any information. We have left our telephone number so that the principals could call us up but have heard nothing from them. Neither can we find anyone who does know anything about the company.—Manager Chicago Office.

Storing Bees for Winter With Slight Expense

I would like to know the best way to store bees for the winter. Some say to bury them. If that is all right please tell me how to do it. I have a good sand hole. Would it be all right to dig out a place and set a box in big enough to hold the four hives and bury it over with marsh hay or straw and dirt? And how late ought I have them out before storing.—S. A. C., Marion.

This office does not advise packing bees by means of burying them in the ground. We are aware that there are a few men in the state who practice this method of wintering and with fairly successful results. However, there are many other cases of beekeepers who have tried this method and because of either poor drainage or poor ventilation have either lost their colonies altogether or have found them so weakened in the spring that they were of little value.

For outdoor wintering probably the cheapest method of packing bees is to use tar roofing paper to wrap the colonies in, leaving a space of from six to eight inches between the tar paper and the hives which space is filled in with dry sawdust, planer shavings, ground cork, clover chaff or other insulating material. The tar paper is tacked to the bottom of the hives with lath to keep the packing from running out of the bottom. The packing is poured into the paper case and firmly pressed down about the hives, sufficient packing being given to insure six to eight inches on all hives and 12 to 18 inches over the tops. The tar paper is pressed down from the sides over the packing and a [illegible] long enough to completely cover the top of the two colonies is placed over the paper case to [illegible] the packing from above. The covers of the hives or other heavy objects may be used to [illegible] hold the paper.

This method is known as the tar paper method of packing colonies and is the cheapest method I know of. In this way two colonies of bees can be packed for less than 50c whereas packing cases made of wood cost several dollars each. In all cases the hives to be packed should be raised a few inches from the ground and tilted slightly toward the front to allow moisture to run out of the entrance of the hive if necessary. Entrance to the hive should be contracted to about 3-8 by 8 inches. Bees should be packed by the middle of October.—[illegible] Inspector of Apiaries.

The Right and Wrong Ways to Apply Lime

By PAUL H. SMITH
Mecosta County Agricultural Agent

LIME has been used and misused in its various forms on the sandy soils of Northern Michigan for a number of years. Some very marked beneficial results have been obtained in some cases and some decided failures have been made. Inquiry from the farmers who have used lime will reveal a decided variation in opinions as to the value of the different forms and as to methods and quantity.

Some very heated arguments have taken place when a "hydrated lime" enthusiast has met the ground lime stone advocate, but on account of the increased variation in price "hydrated lime" enthusiasts have been compelled to give up the fight. Ground limestone and marl are the forms which are used and which are giving results at a minimum cost.

However, we find many farmers who have used either limestone or marl who claim they have received no benefit from it. Applications of 2 or 3 tons per acre of marl have given apparently no beneficial results while in other cases the results with the same application have been very noticeable.

One farmer who is making a success with ground limestone states that no less than 4 or 5 tons to the acre should be used and yet his neighbor has obtained excellent results with 1 1-2 tons per acre. Why are we finding so much variation in results obtained from lime?

Investigations prove this: that the farmers who are making heavy applications are all getting results, the failures are found where light applications are used. This does not mean however, that in order to acquire success in liming, heavy applications must be made for we find farmers who are very consistently obtaining marked success with light applications.

If a fire starts in your house you know that water will put it out. If you had fifty gallons of water to pour on it you would be absolutely sure that you could stop it before it got beyond your control but suppose you only had five gallons. You wouldn't be sure that pouring on that amount would control it.

Therefore you take into consideration other factors, and instead of pouring the five gallons on the blaze you wet a blanket with the water you have and throw over the blaze. You accomplish with five gallons of water and the use of other factors pertaining to the control of fires, what might have taken fifty gallons of water alone to control.

Over half of the water poured on would have been absolutely wasted while the water which was used to wet the blanket was 100 per cent efficient.

This is quite comparable with applications of lime. Heavy applications are sure to bring results, but all farmers can not afford to make these heavy applications and therefore other factors must be taken into consideration.

A farmer came into the office of a county agent this summer and said, "What's the matter with my land—it won't grow clover. I limed it last year and I'm sure it doesn't need lime because you can see lots of it in the soil now."

The county agent made a personal investigation and found just as the farmer had stated that the soil was apparently full of limestone and yet the vegetation on it proved conclusively that the soil was acid.

Perhaps this one example brings to light the reason for so many failures in liming sandy soils. The lime is in the soil but is not in finely divided condition and therefore is slow to go into solution.

The use of very finely ground stone is advocated to overcome this difficulty. But, even where this precaution has been taken we find failures. There is still one more precaution and one which very few farmers have observed. The soil should be quite dry when lime is applied. Even though the stone is ground very fine, too much moisture in the soil will cause the particles of lime to stick together and form flakes or balls and it takes months to break these up enough so the lime will go into solution.

The man who makes a very heavy application seldom encounters a failure from this cause, because probably fifty per cent of the lime he applies is dissolved immediately and the fifty per cent is enough to correct the acidity. These men usually contend that the other fifty per cent is there for future use. This is true to a certain extent, but these particles of lime remain near the surface during the first year and are plowed under the following year and as leaching is continually carrying the lime down some of this is unquestionably lost.

If applications can be made so that all the lime applied goes into solution within a few weeks there is little question about the results obtained, and as there are plenty of opportunities on sandy soils to make the application when the ground is dry, this precaution should be taken.

This point is very hard to put into effect with marl because it is quite impossible to get marl dry enough to spread through lime distributors. Heavy applications of marl are therefore as a rule more economical than attempting to dry it before spreading.

The farmer with a marl bed close to his farm is comparable with the man who has fifty gallons of water at his disposal to put out the fire and thinks it easier and more economical to use the water than to spoil a blanket.

Illustrating Modern Potato Planting Methods

The field shown here is being planted with a second crop of Irish Cobblers to be used for seeding purposes. It was to undergo inspection by the state agricultural department for certification. The present high cost of labor made a high degree of efficiency necessary to assure a proper profit. Efficiency in this case meant the avoidance both of "misses" and "doubles" by using an IRON AGE 100 per cent Planter. Seed potatoes grown in this manner and dug when immature are rapidly increasing in popularity with growers, especially in New Jersey, where this picture was taken.

Ditching and Soil
Washing Problems Solved
LET me show you how to solve the drainage, irrigation and soil washing problems at low cost. I'll show you how two men can now do more ditch work than 100 men by old methods. This is the year to save labor and do this work swiftly and efficiently. I'll show you the way. Write for the new book that tells the story.
I Want You to Know Facts
THE Martin
Farm Ditcher, Terracer & Grader
Model 20
Cuts V-shaped ditch for open drainage, irrigation or tile any depth down to 4 feet, leaves smooth, hard sides. Also use it for back-filling tile ditches and holes. Perfect machine for cleaning old weed-clogged ditches. All steel—reversible to throw dirt either side. Adjustable for narrow or wide cut. No wheels, cogs or levers to get out of fix. Lasts a lifetime.
Farm Terracing
Builds farm terraces which stop washing of soil on rolling and hillside land and hold the water where it should remain; reclaims abandoned washed land; throws up dikes and levees; grades roads; works in any soil, wet or dry; 2, 4 and 6 horse sizes; large size fine for tractor. Needed on every farm.
Get Your Farm in Shape
Chance of a lifetime to make big money the next five years. Here is crop insurance at a low cost. Write and find out how to make big crops sure. New free book on drainage, irrigation and terracing. Write for this and our proposition. Address W. A. Steele, Pres.

CATTLE

HOLSTEIN-FRIESIAN

Value of a Purebred Holstein Bull

Do you realize in what a short time you can transform the character of your herd by the use of a purebred Holstein bull?

Each well chosen sire should give at least 50 per cent of his character to the next generation so that the direct descendents of the fourth generation retain only a little over six per cent of the original blood and nearly 94 per cent is of your own choosing. No man has any excuse for milking unprofitable cows when he can easily get into the all-year milking class of Holsteins.

Send for Free Illustrated Booklets.

THE HOLSTEIN-FRIESIAN ASSOCIATION

Milo Campbell Farmers' Choice for Governor

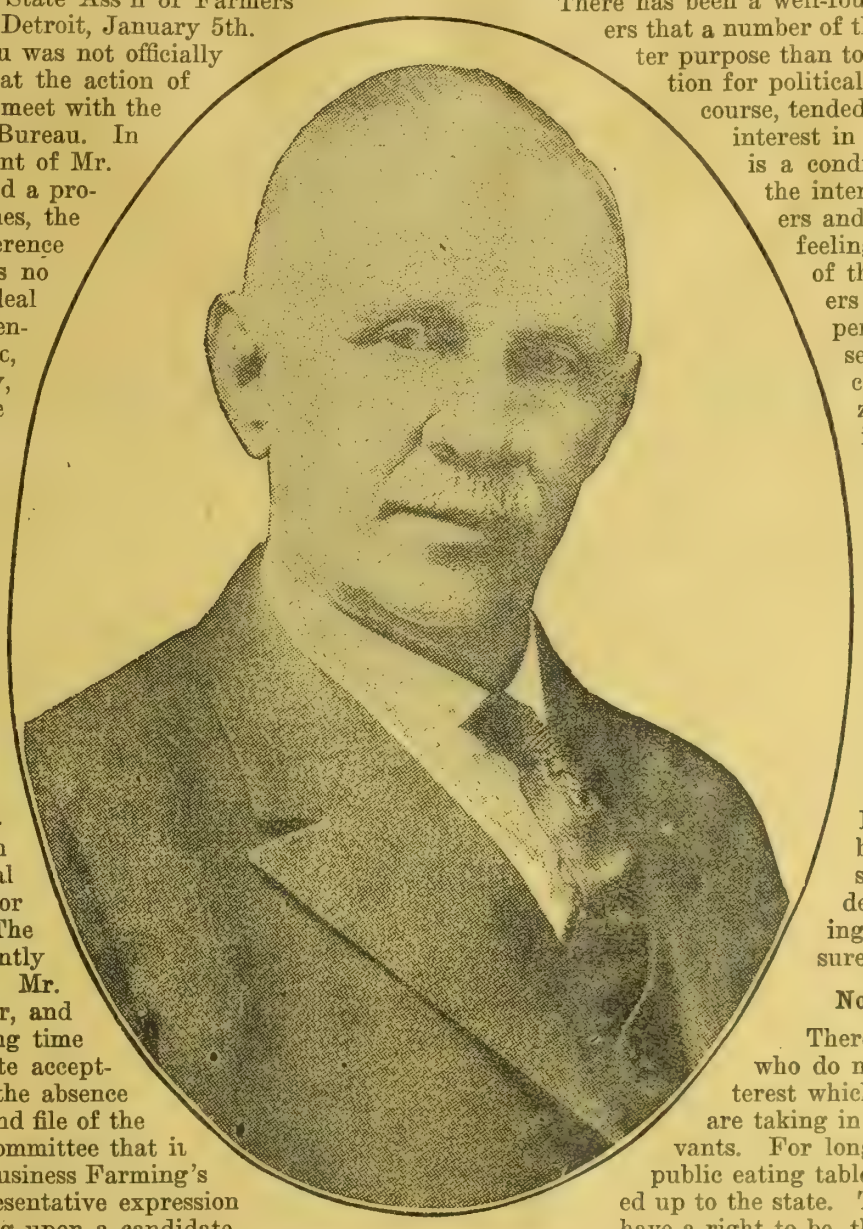
Farm Organizations Officially Petition Coldwater Man to Make Race in 1920 Primaries

By FORREST LORD

MILO D. CAMPBELL, of Coldwater, farmer and nationally known farm organization leader, was tendered the support of the farm organizations of Michigan, Monday night, providing he would become a candidate for Governor in the coming campaign This action was taken at an all-night session of the federated legislative committee of the Michigan State Grange, the Gleaners, and State Ass'n of Farmers' Clubs held at the Cadillac Hotel, Detroit, January 5th. The Michigan State Farm Bureau was not officially represented, but it is believed that the action of the other farm organizations will meet with the approval of the members of the Bureau. In conjunction with their endorsement of Mr. Campbell the farm leaders drafted a program along sane, constructive lines, the essentials of which are strict adherence to economy in state expenditures no pre-election promises; a square deal for all interests but special attentention to agriculture, the basic, and Michigan's greatest industry, and pronounced opposition to the use of money in political campaigns in excess of the legal limitations.

Mr. Campbell was appraised of the action of the farm organizations the following day, and it is understood that he has consented to enter the race, and will make an announcement to to that effect the coming week upon his return from Washington to which city he was called on Wednesday.

The final decision of the farm organizations was arrived at after a series of meetings at which the qualifications of the several proposed candidates for Governor were thoroughly discussed. The three candidates most prominently mentioned for the office were Mr. Campbell, Sen. Herbert F. Baker, and L. Whitney Watkins. For a long time efforts to center upon a candidate acceptable to all seemed hopeless. In the absence of any sentiment from the rank and file of the farmers, we suggested to the committee that it await the outcome of Michigan Business Farming's straw vote as a thoroughly representative expression from the farmers, before deciding upon a candidate. This the committee agreed to do, and the results of the straw vote were placed before the committee at its meeting in Lansing last week The canvass at that time showed Mr. Milo D. Campbell having a substantial lead over all other candidates, and it was mutually understood before the meeting adjourned that Mr. Campbell would be the choice. However, the Gleaners were not represented at the meeting, and official action was deferred until the week later when all members of the committee were in attendance and after spending many hours in discussion unanimously voted for Milo Campbell.



MILO D. CAMPBELL

Taxes Increase; Efficiency Decreases

The conviction that agriculture ought to take a greater interest in state affairs and officers has been growing for some time. In recent years, taxes have increased enormously. Part of this increase is justifiable; part of it is wholly unnecessary and is the result of an extravagance that seems to have been gradually creeping into all departments of the state from the chief executive office down. Numerous commissions and other state positions have been created during the past several years, resulting in a division of responsibility and effort which has encouraged waste and inefficiency and added materially to the cost of government. There has been a well-founded suspicion among the farmers that a number of these jobs were created for no better purpose than to repay friends of the administration for political services, and this feeling has, of course, tended to arouse the farmers to greater interest in the state's political affairs. This is a condition that has likewise attracted the interest of other people beside farmers and there is a general revulsion of feeling against the indubitable growth of the patronage system. The farmers feel that they can no longer depend upon the promises of self-seeking politicians to correct these conditions and that as good citizens they must project themselves into the campaign and take an active part in electing men who can be absolutely trusted to bring about the desired reforms. Possibly this general sentiment might not have crystallized into an active force had it not been for the rebuff which the last legislature handed to both producers and consumers of farm products when it turned down the resolution giving the people the privilege of voting on the proposed warehouse amendment. But this was the "straw that broke the camel's back," so to speak, and put the people upon a defensive which is rapidly changing to a formidable offensive, and is sure to be felt in the next campaign.

Nothing to Fear From Farmers

There are certain people in the state who do not look kindly upon the new interest which the rank and file of taxpayers are taking in the selection of their public servants. For long years they have fed from the public eating table and carried meal tickets charged up to the state. They are a little afraid, and they have a right to be, that should the farmers take hold of the state government they might be denied a place at the patronage counter. So they are trying to discredit the farmers by telling the business interests of the state that the farmers' platform is socialistic, bolshevistic, confiscatory, and altogether inimicable to legitimate business. This is maliciously false, and the farm organizations realize that they have a considerable task ahead of them to counteract this sort of propaganda and establish the true facts in the minds of the people. At the annual meeting of the Michigan State Grange, the writer in responding to the toast, "What do the Farmers of Michigan want politically," said: "The farmers want nothing politically that will injure legitimate business. Farmers, being themselves business men, believe that business which is conducted honestly and with due regard for the public welfare, should be conserved and protected The legitimate business interests of the state have absolutely nothing to fear from

the farmers. On the contrary the farmers' platform should appeal strongly to such interests, for it advocates economy in state government, elimination of useless jobs, and the conduct of state affairs along the same rigid and efficient lines as private business affairs." This is the sentiment that the farm organizations endorse and which should make a poweful appeal to all taxpayers.

Farmers Interested in Legislature

It should not be thought that because the farm organizations have endorsed a man for governor that they are oblivious to the importance of electing farmers to the legislature. On the contrary they fully intend that local campaigns will be conducted in legislative and senatorial districts for the nomination and election of representative farmers. Manifestly, it would be impossible for them to endorse candidates in the local contests, because of the fact that the farmers themselves might be divided as between two favorites and lose sight of the larger objective. In districts where there is little chance that farmers might become candidates, the farm organizations will make an effort to induce the farmers to put a candidate in the field. The sentiment for farmer governor and farmer legislature is so strong in the rural districts that it is believed that the farmers will have little difficulty in sticking together and electing their candidates.

Following are the members of the committee th at officially endorsed Mr. Campbell: J. C. Ketcham, N. P. Hull, J. C. Hutchins, representing the Grange; Grant Slocum, Ross Holloway, George Strachan, of the Gleaners; A. B. Cook, Colon C. Lillie, Alfred Allen, of the Farmers' Clubs. In the absence of Mr. Lillie, Mr. Jas. N. McBride, former market director acted as the third member of the Farmers' Club committee. Mr. A. the committee, and Mr. George B. Cook, of Owosso, is chairman of Strachan, secretary-teasurer.

Detroit, January 6th, 1920.

Mr. Milo D. Campbell,
Coldwater, Mich.

The Federated committee of the Michigan State Grange, the Gleaners, and the State Association of Farmers' Clubs, acting under instructions from their respective bodies have had under consideration a request to some representative citizen to become a candidate for governor.

After thorough discussion we unanimously petition you to become a candidate for the governorship in 1920, and hereby pledge you our support.

We believe in the destiny of Michigan as one of the greatest agricultural and manufacturing commonwealths. We believe a prosperous and progressive agriculture absolutely essential to a great program of industrial expansion such as is possible for Michigan.

We invite your earnest consideration to the unequalled opportunity to unite Michigan farmers, laborers and business men in a great movement that shall place our state where her resources, geographical location and the character and accomplishments of her people entitle her to be.

We believe that the expenditure of money for the promotion of a political campaign in excess of the legal limitations is against public policy and holds a grave menace to our Republican institutions. We subscribe to the principle that the office should seek the man and not the man the office.

We believe that your candidacy will attract not farmers alone, but all classes which support the constitution of the United States. We do not ask nor desire a governor who is solely the representative of farm interests, but one who knowing their needs is still broad enough to represent equally all classes of citizens. There must be no class legislation and what we oppose in others we cannot and do not ask for ourselves.

We believe that in the present period of under-production and industrial unrest there is no room for a single track administration, but that business, agriculture, labor and all classes of good citizenship should sit in the councils of state and that those councils should be guided by the stalwart Americanism expressed in Lincoln's Gettysburg address.

We believe there must be increased production, honest work with adequate pay for all without exception, which shall not be taken away by the tolls of uneconomic distribution. We believe that speculation in foodstuffs should be curbed.

There must be strict economy but not parsimony in state expenditures.

We know that you are entirely in accord with the above principles and that if successful, as we are confident you can be, your administration will be one of which the whole state will be proud.

Signed—Federated Legislative Committee.

Michigan State Grange, Gleaners, State Association of Farmers' Clubs, by A. B. Cook, Secretary.

Who is Milo Campbell?

Milo D. Campbell was born, Oct. 25, 1851, in Quincy township, Branch county, Michigan, and has always been a resident of Branch county. His father was the owner of a small farm of 32 acres. The father was not a strong man and the mother besides caring for the family of four children at home, earned enough with her needle to clothe the children. At fourteen years of age, Milo began working out by the day and month on farms in the neighborhood. After that age he never received any support or help except from his own earnings. He attended school winters and studied at home until he could pass examination for teaching. By his own efforts and working for his board he afterward graduated at the high school in Coldwater, and later upon examination and a short time at Ypsilanti, graduated from that institution.

He afterward studied law and practiced the same for some years, and until the public demanded his services in positions of public trust.

He has served one term in the legislature, was private secretary to Gov. Luce for four years at Lansing. Under Gov. Winans the prisons and reformatory institutions of the state were placed under a bipartisan board. There were three Democratic appointees and Milo D. Campbell was chosen as the Republican. The board afterward made him the president of the same. He was afterward made Secretary of the Railroad and Street Crossing board by Gov. Rich.

Gov. Pingree made him Insurance Commissioner, and after having served for two years, upon the creation of a State Tax Commission by the legislature, Gov. Pingree insisted upon Mr. Campbell becoming the president of the same. He was intent upon Mr. Campbell managing both the insurance office and becoming the president of the tax commission, claiming that he had obtained counsel upon the same and that it could be done. Mr. Campbell declined this double honor and responsibility, resigned the insurance office and accepting the presidency of the Tax Commission.

Mr. Campbell has been three times the mayor of the city of Coldwater, making a record of economy and efficiency, giving to the city sewers and other needed improvements that have been greatly appreciated.

He has been two terms United State Marshal of the eastern district of Michigan.

He is now director of the Michigan Milk Producers' Association, president of the National Milk Producers' Federation, chairman of the general board of the National Board of Farm Organizations, chairman of a committee of five growing out of "Our Country First Conference" at Chicago, also a member of the Executive Board of "United Americans" in the country organized for the same purpose.

Mr. Campbell has always claimed to be in heart and sympathy a farmer. His chief income is from his farms. He has for nearly forty years been a member of the Grange but has always affiliated with other farm organizations.

M. B. F. Readers Nominate Campbell

THE READERS of MICHIGAN BUSINESS FARMING may well feel proud that they have been largely instrumental in naming the "farmer candidate" for Governor, by their ballots in the M. B. F. straw vote. As explained elsewhere, these ballots constituted the only actual expression from bona fide farmers and the committee was fortified in its decision by the knowledge that this representative test bore out their own convictions. The ballots received at this office were from every county in the state of Michigan. The large majority of them were individual votes. A number of them were the result of canvasses that had been made at farmers' meetings.

It is worthy of mention that the votes received from Milo D. Campbell's home county were practically all for Mr. Campbell and were accompanied by fine expressions of confidence in Mr. Campbell's integrity and ability. The same can be said of the votes received for Herbert F. Baker, Nathan F. Simpson and others; showing beyond a doubt that the farm leaders of the state stand well with their immediate neighbors, a fact that does not always apply to people in other walks of life.

We presume our readers have been awaiting with a deal of curiosity the result of our straw vote. Up to the Monday night meeting a total of 1,278 votes had been received during the six weeks the voting was conducted—496 votes were for Milo D. Campbell, 322 were for Herbert F. Boker, 195 for Nathan F. Simpson, 30 for L. Whitney Watkins. Tuesday morning additional votes were received which increased Mr. Campbell's total to 545 votes, Herbert Baker's to 370 Nathan F. Simpson's to 230. Forty-four of the forty-nine additional votes received Tuesday morning for Mr. Campbell were from the Quincy Grange No. 152 and were accompanied by the following resolution:

"WHEREAS, it is with pride that Quincy Grange No. 152 of Quincy has heard the call from kindred organizations throughout the state that Hon. Milo D. Campbell, one of our members, be nominated and elected to the office of Governor of the state of Michigan, and

"WHEREAS, his birthplace and early life was within one half mile of this our grange home and we well knowing of the boyhood years spent working on the farms of this vicinity, his many struggles and privations to earn the money with which to aid in securing his education, and

"WHEREAS, we have watched his growth and development, his unswerving fidelity to principles, his fearless stand at all times upon public questions, his position demanding a square deal for every one, a better state and a one hundred per cent American government, how he has filled every position of public trust with which he has been connected with honor.

"Therefore, be it resolved, that without regard to politics or social divisions, it is with unanimous voice that we as a grange unite in asking our honored fellow members to permit his name to be used for such nomination and election." (Appended the names of 44 voters.)

A Record of Faithful Service

DETROIT JOURNAL — JANUARY 11TH, 1901

Useful Public Service

The Hon. Milo D. Campbell's career in public life has been distinguished by uncommon unselfulness. His standard of duty has ever been high and measurably unselfish and his performance of it, within the limitations prescribed by law has been high-minded and incorruptible. Throughout his varied and responsible public service he has been mindful of his good reputation and preserved it from successful attack either by political opponents or factionists within his own party.

In July 1897, he was invited to accept the office of insurance commissioner with a view to reforming existing and growing abuses. He accepted the invitation and signalized his assumption of the duties of the place by inaugurating a campaign to exclude from the state all insurance companies that could not show actual organization, adequate capitalization and active adjustment of losses. Fake and fly-by-night concerns were driven from the state. The business systems of more than a hundred companies were reorganized and improved in obedience to his official orders. Exorbitant rates were scaled down to a fair basis and approximately two millions of dollars were saved to the people in this reform.

Early in 1899 he was appointed a member of the newly created tax with reluctance because he wisher commission an honor he accepted to complete the work he had begun in the insurance department. He was promised, however, that after systematizing and organizing the tax board he would be returned to the insurance department, a promise that cannot now be redeemed inasmuch as the appointing power has changed. As a member of the tax commission he has employed all his time in carrying out the requirements of the law creating the board.

DETROIT EVENING NEWS—JULY 1899

A Good State Tax Commission

In view of the enormous and unusual powers bestowed upon the state tax commission by the Oren law it is of the utmost importance that the members of that body be men of experience, intelligence and integrity. In the hands of unfit men the arbitrary authority created by this legislative act might easily become the instrument of geater evils even than those now existing in our tax system. It is therefore a matter for public congratulation that the Hon. Milo D. Campbell is to be a member of the first board. In his capacity as insurance commissioner under the Pingree administration he has displayed in an unusual degree those qualities which make for public confidence in a public officer.

Courage, zeal, honesty, intelligence and devotion to the public welfare have characterized his conduct first to last. With fidelity pitifully rare in the chosen servant of the people, he has worked diligently for the enforcement of the spirit of the laws enacted for the protection of the people against careless or deliberately fraudulent methods in the insurance business. He has never been deterred by the power, wealth, influence or standing of the persons whom he deemed to be in conflict with the law or arrayed against the rights of the insured. While bending every energy to the enforcement of the law he has found time to clearly and vigorously point out its defects and urge their correction. In short, he has proved himself a reformer with whom principle is the prime consideration; who could not be awed by threats, influenced by partisan considerations or turned aside by cajolery.

Gratiot Farmer Gives Views on Farm Bureau

Will Support Organization, and Believes M. B. F. Stand has "Saved Farm Bureau in Michigan"

THE ANNUAL meeting of the Michigan State Farm Bureau will be held at East Lansing during Farmers' Week, Feb. 27th. At this time the officers for the ensuing year will be elected, and undoubtedly important plans will be considered for future work. The delegates from every county should be bona fide farmers, in whom absolute trust can be placed. They should be instructed to ask that all the cards be placed on the table, and if they have not been dealt right to ask for a new deal. If there is anything about the relations between the executive committee of the Farm Bureau and the Coalition Committee that will not bear scrutiny and cannot be satisfactorily explained, the delegates should insist that these relations be terminated immediately. The coming annual meeting will afford the rank and file of the new membership the first opportunity to take a hand in the affairs of the state organization, and they will be false to agriculture if they do not insist that this great movement be freed of all questionable alliances and go forward, "clean, open and above-board."

AMONG the scores of letters received by MICHIGAN BUSINESS FARMING as a result of the publication of the facts regarding the loan transaction between the Coalition Committee and the Michigan State Bureau, was one from R. C. Blank, a prominent farmer of Gratiot county, and a member of the Gratiot County Farm Bureau. We are reproducing Mr. Blank's letter below for the reason that he seems to have fully grasped the purposes of the pronouncement and the wisdom of the majority of our recommendations. Moreover, Mr. Blank, in common with every other farmer correspondent upon this subject clearly understands that the sole desire of MICHIGAN BUSINESS FARMING, in setting forth the actual facts, is to have the Farm Bureau start "clean, open and above-board" as he expesses it, and avoid the mistakes that have overtaken and destroyed so many other promising farm organizations.

It is playing upon the imagination considerably to charge that some master mind is directing the various State Farm Bureaus through picked officers to create division and dissention among the farmers, and use them to promote other selfish interests. Yet this charge has been made by responsible individuals. A long chain of coincidental circumstances is pointed to as bearing out the contention. We might as well be frank about this, and look the facts squarely in the face. Here they are:

1st. The hasty adoption of a resolution at the Chicago convention, which a Michigan delegate frankly says was "rushed through," urging the immediate restoration of the railroads.

2nd. The charge by Dr. Spillman that David F. Houston of the Department of Agriculture, is influenced by the Rockefeller interests, and opposed to farmers making investigations into production costs or attempting to secure through organized effort a price based on the cost of production.

3rd. The charge by the Intermountain Farmers' Ass'n. of Utah and Idaho that the Farm Bueaus of those states are financed by the western sugar manufacturers for the purpose of dictating the terms of the sugar beet contract. As a result two contracts have been presented to the western farmers, one by the Farm Bureau, at $12 to $13 per ton, and another by the above association, asking $18 a ton with sugar at 12 cents.

4th. The well known fact that the Coalition Committee for Michigan, one member of least of which is a sugar manufacturer, has voluntarily offered to finance the Michigan Farm Bureau to the extent of $15,000.

5th. The presence on this committee of men who prior to September of 1919 looked with unfriendly eyes upon the farmer, viewed with suspicion his efforts to organize and better his position, and took absolutely no interest in the problems of agriculture.

6th. The appointment of a publicity manager who until very recently has been a staff correspondent of a daily newspaper that has ridiculed the farmer, garbled reports of farm gatherings, and otherwise injured the farmer in the eyes of the city consumer, a newspaper that is nearly always against the things the farmers are for, and for the things the farmers are against.

7th. The recent publication by this same newspaper of an editorial setting forth the false and misleading statement that a membership of 100,000 at $30 for three years would give to the Farm Bureau total resources of $3,000,000. It is a fact known to all officers of the Farm Bureau, its field agents and others that the campaign expenses of the Farm Bureau run from $600 to $1,000 per day, so that the net resources of the Bureau at the end of the campaign will fall far short of three million dollars. The critics of the Bureau are asking, "Why this deception? Is it not better to tell the facts now than to have a lot of excuses to make later on?"

8th. The recent pronouncement of an officer of the Farm Bureau that the Bureau would take no part in supporting a "farmer candidate" for governor.

9th. A constitution that provides that no county shall be entitled to more than two voting delegates to the state convention. These delegates have all the power of passing on resolutions, voting for officers, amending the constitution, etc., a tremendous responsibility in a big organization like the Farm Bureau is destined to become. The critics of the Farm Bureau make a great point of this disproportionate, undemocratic and inadequate representation as being a part of the diabolical scheme of the master mind to control the Farm Bureaus.

Coupled up with these major propositions are minor circumstances to which the critics point as savoring of a deliberate attempt to deceive the farmers, destoy their trust in their fellow-men, retard farm organization, and use the name and influence of the Farm Bureau to support questionable measures.

Whether or no there is any foundation in fact to these various conclusions, it is well that the members of the Bureau and the thousands of farmers who are yet to become members of the Bureau should be advised of them, and judge and act accordingly. If the charges are true, it will be a comparatively easy matter for the schemers to carry out their plans unmolested providing the farmers are kept in ignorance of certain facts which as members of the Bureau they are entitled to know, and sit back in meeting as farmers have the habit of doing and let someone else run the show. There is no chance in the world, however, that these plans can be carried out if the farmers are put in possession of the facts and will give unusual consideration to the type of men they put on their resolutions committee in their county bureau meetings, and more important still whom they send to represent them at the state convention.

As we have stated many times before, MICHIGAN BUSINESS FARMING has no interest in this matter except as an independent farm newspaper which looks to the welfare of all farmers rather than a chosen few. M. B. F. is aligned with no organization or special group of farmers, and it feels free to criticize or commend as the case may deserve, any and all organized movements among the farmers.

MR. BLANK WRITES

Dear Editor:—In view of the recent facts placed before us it is difficult for the average farmer to know where he is at. Myself and my neighbors up here in Gratiot want to see the Farm Bureau movement go through. We were ready to pin our faith to its banner, but we would like to see it start clean, open and above board.

I made up my mind more than a year ago that any nationwide movement to unite the farmers must come from the "top down." That it must start as an autocratic movement but when it is once down, then the power must be placed in the hands of the numbers absolutely. The best ideas of the best farmers as a whole are bound to be better than the best ideas of one or a dozen taken alone.

Now I heard Mr. Bingham explain the Farm Bureau proposition to a farmers' club up here. Now I was more interested in M. B. as a man than in what he had to offer, and as I size him up, he is "square," absolutely honest and above all has the required intelligence combined with the other qualities to pull this thing off. The only thing at that time that was hazy to us was, who was financing the movement. Mr. B did not make that quite clear; and now I understand why, but the BUSINESS FARMING has brought us the light. And also it has placed the officers of the State Farm Bureau where they can play the game in the open. Experience is a great teacher and any man or set of men who is to come up against the Big Corporations of the nation are bound to get experience at least. It is altogether essential that such men shall be big with a big B, far sighted and above everything not afraid.

I am not sure but what you are afraid and you have cause to be. I refer to clause 2 and 3 in your suggestions in M. B. F.. So long as we have used that money, let us accept it in the spirit in which it was supposed to have been given; pay it back at the earliest possible moment. Keep your men on the coalition committee to co-operate with them when possible and to watch it at all times. Their methods may be valuable to us. We trust that they will continue to combat this agricultural unrest. It is the one thing that we need. Let the farmer find that he has something tangible to fight and he will go over the top.

From this time on the American farmer has ceased to give the work of his children, the lives of his women and the fertility of his soil, that the city world may have cheap food. He is willing to do as much as the man in the office or the man in the shop or the man in the mine, but not to work twelve to fourteen hours to feed the man who only works six out of twenty four.

I consider that the firm stand of M. B. F. has saved the Farm Bureau in the state of Michigan.

If by placing men on the coalition committee we are giving up any rights or privileges remove them, otherwise return them, but it seems to me that we can better protect ourselves as members than as outsiders.

I still think I shall stand by the Farm Bureau and shall be delighted to see your paper lined up with the movement; but if you don't see your way clear to so do, we shall still expect to see you use your paper to keep us informed and protect us fellows out here in the brush. Thanking you in my behalf and in behalf of all the farmers of Michigan, I am, sincerely yours—*R. C. Blank, Perrinton, Mich.*

Michigan Breeders Form Shorthorn Ass,ns

Palmer Brothers, of Belding, Mich., have organized twenty co-operative Shorthorn Breeding Associations in Montcalm, Mecosta, Kent, Calhoun, Livingston, Muskegon and Ottawa counties. They have advanced the Shorthorn because they think the farmer finds profit in growing the Shorthorn, as this breed is particularly adapted to his varied requirements and purposes. The Shorthorn cow yields a liberal flow of milk of excellent quality. When she is not in milk she takes on flesh readily. So it is apparent she is working toward the profit mark through one channel or the other all the time, and the steers always look good to the butcher.

As to the advantages to be gained by a co-operative bull association, a few extracts from Farmers' Bulletin No. 993 issued by the U. S. Department of Agriculture upon the subject, follows: "Co-operative bull associations have existed in Europe for a long period. In the United States the first co-operative venture of which there is any record was started in 1908 by the M. A. C.

"The history of co-operative bull associations shows that it is especially adopted to small herds, where a valuable bull for each herd would constitute too large a part of the total investment. Thus the organization enables the owner of small herds to unite in the purchase of one good bull, so that each may own a share in a registered sire of high quality."

THIS animal is a prince in several ways. First his name if Claret Prince, owned by Palmer Brothers, of Belding, Mich. Then he is the aristocrat of the splendid herd of these well known breeders. Moreover he has won many prizes at fairs.

Western Beet Growers Present 1920 Contract

Intermountain Farmers' Ass'n Asks $18 for Beets With Wholesale Sugar at 12 Cents

MICHIGAN sugar beet growers have gone a long way toward securing the recognition of the manufacturers to their rights as the first and most essential party to the sugar beet contract, but when we read what the growers of the western territory are attempting to do, we realize how far we Michigan folk are yet from solving the fundamental differences between grower and manufacturer.

The Intermountain Farmers' Association is a federation of beet growing associations of the States of Utah and Idaho. It has had its troubles, like all farmer organizations in getting a square deal from the sugar manufacturers. It has pleaded, it has compromised, and it has often yielded before the iron resistence of the manufacturers, but it has grown tired of those humiliating and profitless tactics and is now taking a determined stand for a fair and profitable price. It recognizes that the farmer should be the one to present the manufacturer a contract and ask him to sign it rather than let the manufacturer take the initiative and accept what he has to offer. The contract for 1920 that has been drawn up by the Association recognizes this principle. In presenting this contract for the consideration of its members, Secretary Patterson of the Association, makes the following plea:

Fellow sugar beet growers: We submit a beet contract for your consideration. This contract gives the farmer $10 for beets when sugar is 8 cents a pound, $12 when it is 9 cents, $14 at 10 cents, $16 at 11 cents, $18 at 12 cents, $20 at 13 cents, $22 at 14 cents, $24 at 15 cents.

Prior to the war the cost of making sugar in Utah and Idaho after the cost of beets was taken out, was about one and a fourth cents a pound.

Let us allow an increase in factory cost to 3 cents a pound (240 per cent) on account of war conditions and here is how this contract figures for the company.

Two hundred and fifty pounds of sugar per ton of beets. Sugar 8 cents pound. Value of sugar per ton of beets $20. Cost of beets, $10. Cost of making 250 pounds of sugar, $7.50. Factory profit on ton, $2.50. Sugar company profit on one acre producing 8 tons beets, $20; 10 tons beets, $25; 12 tons beets, $30; 14 tons beets, $35; 16 tons beets, $40; 18 tons beets, $45; 20 tons beets, $50. Pulp and molasses not counted.

Sugar 9 cents pound. 250 pounds sugar per ton. Value of sugar from ton of beets, $22.50. Cost of beets, $12; cost of making sugar, $7.50; factory profit on ton of beets, $3.00. Sugar company profit on 8 tons, $24; 10 tons, $30; 12 tons, $36; 14 tons $42; 16 tons, $48; 18 tons, $54; 20 tons, $60. Pulp and molasses not counted.

Ten cent sugar. Value of sugar from ton of beets, $25. Cost of beets, $14; cost of making sugar, $7.50. Factory profit on ton of beets, $3.50. Sugar Co. profit on 8 tons, $28; 10 tons, $35; 12 tons, $42; 14 tons, $49; 16 tons, $56; 18 tons, $63; 20 tons, $70. Pulp and molases not counted.

This contract is fair to the company. Under it dividends can be paid that ought to satisfy the business. Under this contract the companies can increase the wages of their employees, take care of depreciation and accumulate a surplus to meet any emergency. When a factory can get beets it can make sugar and for years to come there will be a sugar shortage. Sugar made can always be sold at prices to insure a profit on production. We repeat: there is no factory risk any more. The sugar business is established, safe, sure, certain as a flour mill.

But the farmer still has the same old risks. Plant diseases, frosts, drouth, storms and insects still assail him. Only about one year in four or five does he have a full crop. We believe in paying for risks. But where there is no gamble there should be no gamblers profit. Let the farmer be paid for his labor and the risks he must assume. Eliminate the farmers risks and there should be no risk charge. But as long as the risk remains so should the risk charge remain.

The time has come for business to content itself with reasonable earnings. It is dangerous for the wealth of the nation to become centralized. It is contrary to the principles of democracy for the many to be at the mercy of the few. Let the wealth of the nation be equalized by a fair division of the profits of industry. Let the organized commercial interests of this nation remember that when the farmer prospers factories are busy, railroads are working overtime, bankers are delighted, merchants happy, and doctors and lawyers satisfied.

We believe in giving the farmer boys and girls a chance. Because we believe this way and work to this end does not make us anarchists, bolshevists, socialists, radicals or the enemies of any man or set of men. We have farms and families—every one of us. We have property to protect. We stand for law and order. We know that law and order are rooted in the principles of justice and fair dealing. We therefore stand for justice. We are loyal American citizens, fighting for the welfare of our country in approved American fashion—using no underhanded methods—coming out in the open on every point—soliciting support from honest men everywhere and inviting co-operation from every source where justice and the square deal are a slogan.

We are striving for the development of the beet sugar industry. It is one of our greatest agricultural assets. And we would not secure this development at the expense of the sugar companies. We expect them to make money—sufficient of it to pay reasonable salaries to management and labor, return reasonable dividends on capital invested and accumulate a surplus sufficient to care for depreciation and meet emergencies. This done and capital should be satisfied. Not until a policy is adopted that will pay the beet grower for his labor and risks in the business will the sugar industry develop to capacity. Until this condition can be brought to pass our country will remain in the clutches of the foreign producer anr the American farmer will be denied a source of wealth that is now undreamed of.

We stand for united action. We commend the beet sugar manufacturers of this country for forming the United States Sugar Manufacturers Association. It is good business on their part. It shows that the business of making beet sugar in this country is in competent hands. Through their association they can do many things for the good of the industry that could not be done without organization.

We stand for united action on the part of the farmers. Until they display as much wisdom as the sugar companies they may expect to lose money in their beet growing ventures. The organized sugar companies ought to encourage the farmers to organize. They cannot be consistent unless they do.

Brother farmer, where do you stand in regard to this program? Do you believe in it? Will you help bring it to pass?

Our country is what we make it. If things are not right we are to blame. If things need changing we must change them. Let us change them by all working together.

(Note: Copy of this Association's contract may be found on page ten.)

Michigan Sugar Men Stand Pat

THE Michigan sugar manufacturers have so far refused to meet with the beet growers' committee and discuss the terms of the 1920 contract. The committee will meet Saturday at Owosso to discuss what steps should now be taken. The psychology of the manufacturers' attitude is about as understandable as that of the mule who balks and must needs have a fire kindled under him before he will go ahead. The manufacturers are by their stubbornness and greed, pursuing the one sure course to kill Michigan's sugar beet industry. Their refusal to even meet with the committee is prima facie evidence that they dare not lay their cards on the table. And by this refusal they force the farmers to adopt an offensive which may become exceedingly warm when another contract season rolls around. Watch for the report of the Beet Growers' Committee in next week's issue.—Editor.

How Club Work Was the Making of Three Nebraska Farm Boys

"WHAT WILL my boy get out of this club work? Will he be more or less contented to stay on the old farm?" These two questions have been asked thousands of times by thousands of farmers when they have been approached by a club leader for their consent to their boy becoming a member of one of the clubs supervised by the U. S. Department of Agriculture and the state agricultural college.

The story of three club boys who live in Seward County, Neb., is full of strong evidence of the value of club work to a farm boy. These three boys, Peter Pratt, Norval Clark and Walter Briggs, won the first prize in the livestock judging contest at the Interstate Fair at Sioux City last fall. To win the blue ribbon in a contest where twelve state champion teams competed against each other and at which four classes of live stock were to be judged, required more than a superficial knowledge of the good points of an animal. The boys, to win, required more knowledge than that possessed by the average adult farmer. All three members of the Interstate Champion judging team were brought up on farms, but their ability to judge came largely through handling their own club stock and through the training in stock judging given them by their club leader. The success of the boys at Sioux City was gratifying, but the permanent results at home from their club work is even more so.

BOYS, GET interested in club work. It will reveal to you delights and opportunities in farming that you have never dreamed of. Does not the story of these three Nebraska farm boys interest and thrill you? Similar stories can be duplicated a score of times here in Michigan. Mr. Ray Turner, of the M. A. C., is the leader of boys' and girls' club work in this state, a fine, enthusiastic and capable young man who will tell you all about the work if you will write him.—Editor.

Will Stay on the Farm

Perhaps the biggest result of all is that all three are content to stay on the farm and make farming and animal husbandry their life work. Considering the proportion of farm boys who have gone to the city in the past, it is probable that outside of club work at least one of them would have chosen a city job. These three boys, as well as the other tens of thousands of boys in club work, have learned that the boy on the far mtoday has a big opportunity and that the city can offer the average boy no better. Is this not a big result? Ask any farm father who has a restless boy on his hands.

Inter-State championship .live .stock judging team: Norval Clark, Beaver Crossing, Neb.; Walter Briggs, Seward, Neb., and .Peter N. Pratt, Beaver Crossing, Neb.

The farmer whose son has heard the call of the busy streets is apt to think of the city as a modern Lorelei whose song has enticed his boy away from him. Few have realized that

Norval Clark, Beaver Crossing, Neb., and his championship boar.

one of the main reasons the city has seemed the Mecca of all things desirable to the boy has been his own father's and mother's constant complaints as to the hardships of the life in the country and the invidious comparisons they have drawn between their lives and those of the city people whom they know. Unwittingly they fed and watered the discontent common to all youth.

Club Work Effects Shown

The boys' and girls' clubs bring social life to the children in the rural districts, who hitherto have had little of it; it teaches them the advantages to be found in country life and ways of making money of their own. Incidentally it shows their parents the wisdom of making the boys and girls partners in the homes if they wish them to be interested and satisfied with life in the country. How this works out is well illustrated in the Seward County boys' story.

Walter Briggs is the son of a man who has always grown purebred pigs. But Walter, up to the time he went into club work three years ago, had no property ownership in the business. When he joined the pig club he started with one Duroc Jersey sow. Now, after three years he has a valuable herd. One litter of five, which he raised during the past year was sold for $5,000. The boy owner reserved the right to exhibit the pigs during the fair season and won many prizes with them. Before the close of the fair season their new owner had been offered $7,000 for the five. Walter and his father have

Modern Views on Movement of Moisture in Soil

Recent Contributions on this Important Subject Add Considerable to our Former Knowledge

By M. M. McCOOL

THE MOVEMENT of soil moisture in the soil is of utmost importance. It has long been a theory that the rate at which water drains from the soil largely governs its productivity and that the crop depends to a great extent upon the film or capillary movement of water in the soil. Moreover, the efficiency of soil mulches is due to the breaking of the capillary connection near the surface and thus stopping the upward translocation. Several of these assumptions are not considered to be true by many today.

It is known, however, that water moves in the soil as gravitational, as film and in the form of vapor. In this article I propose to present the more recent contributions to our knowledge of this subject.

Several millions of acres of land in Michigan are unproductive because of the faulty moisture conditions—chiefly the presence of too much water which is not drained off.

Movement of Gravitational Water Through Soils

The translocation of surplus water under the force of gravity is termed percolation and is sometimes spoken of as "seepage." The free water that passes downward thru the soil together with that which runs off the surface makes up much of the water in lakes, streams, springs, rivers and the sea water. The direction of percolation may be downward, lateral, and in some cases upward or toward the surface. The rate is measurably affected by atmospheric pressure, weight of the water column, temperature, the texture, and structure of both the surface and the subsoil.

It is a notable fact that the rate of water flowing from tile drains, certain springs and the height of water in some wells fluctuate with changes in the barometric pressure. There are on record instances of 15 per cent increase in the flow of water from tile drains during a period of high pressure. When the pressure is high the air in the soil above the free or "ground" water tends to force water into drains or springs and when the pressure is less the resistance is less and hence the rate of flow is decreased. Moreover, as the thickness of the column of free water present in a soil increases the weight of the mass increases and consequently there is an increasing tendency for the rate of percolation to become greater.

Soils drain more slowly in the spring than in summer. Field observations, as well as laboratory experiments, show that cold water percolates through the soil more slowly than warm water. Consequently soils lose surplus water in this manner less rapidly in spring than in summer. An increase in the temperature of 10 degrees of saturated soils hastens the rate of drainage about per cent. This is due in part to the fact that warm water is less viscous or the fluidity is greater than cold water.

Texture and structure of the surface and subsoils have a tremendous influence upon the rate of drainage or the movement of gravitational water through them. Water passes thru sandy soils much faster than it does through fine textured ones. Where large containers were filled with different kinds of soils and water poured on them, the rate of percolation of water through the soil was found to be as given in Table 1. These results show very strikingly that coarse soils are likely to be "leachy" and that the condition with respect to structure or tilth governs to a large extent the penetration of water in the soil.

Table 1. Passage of water thru soils. Duration of experiment 30 minutes.

Sand, loose, 220 gal.; compact, 80 gal. Loam, loose, 4 gal.; compact, 2 gal. Clay Loam, Loose, .5 gal.; Compact .0 gal.

Where the mass of subsoil is fine in texture yet not cemented together the drainage situation may be quite troublesome, still if outlets for tile or open ditches can be provided it may be handled to advantage. But it may be easily seen that the laterals must not be placed far apart, otherwise the water will not be removed rapidly enough to be effective. Soils that are underlaid by very fine textured material naturally drain very slowly. Moreover, compact layers commonly spoken of as plow soles may form at the bottom of the furrow slice in fine textured soils and obstruct drainage to a remarkable extent in some instances. Again there are present in some subsoils hardpans or layers of varying thickness from a few to several inches that are cemented together by means of iron or lime. If these layers lie near the surface the soils are usually poorly drained and suitable only for the production of grasses or shallow rooted crops. As a general rule it is impracticable to break up these formations by explosives on account of the great cost of the operation; of course, if a few shots can be stragetically placed the water may pass downward, especially if the lower layers are rather porous.

Movement of Film Water Through Soils

There is a slight tendency for film water to move in the soil from regions of high to those of somewhat lower water content, the translocation taking place either upward, downward, or horizontally. The rate and distance of transfer depends upon a number of conditions. but chiefly upon the water content, texture, the distance from the water table and the temperature of the soil.

The rate of film movement in the soil depends largely upon the water content of different layers. It was formerly held that film water may move about rather readily in the soil from one section to another, and if removed by a plant at one place, the loss is rather rapidly made up. There is, however, much available evidence to show that the movement of water in soils, water content of which is slightly below the maximum film water capacity takes place over relatively short distances. Such being the case a crop growing on a soil makes use of the water confined mainly in the zone of root penetration, or that which falls during the growing season. This has been definitely proven by the Nebraska Experiment Station, as well as by others. I shall discuss this question rather fully because of the radical changes in views concerning the moisture relations of soils that apparently are held by many today. The water content of a loam soil devoted to different crops was determined at various depths.

Table 2. Depths to which crops use moisture. Average percent of moisture in soil at harvest time, Six years.

Crop	Depth	Av. per cent
Oats	1	8.8
	4	9.2
	5	12.7
Spring wheat	1	9.0
	4	8.6
	5	12.3
Barley	1	9.9
	3	8.9
	4	10.0
	5	14.5
Corn	1	12.2
	3	10.4
	4	12.5
	5	15.8

It is notable that there is a rather sudden increase in the amount of water present in the soil about one foot below the depth of root penetration of the different crops. That is to say the roots of plants draw mainly on the water in their feeding zone or the area which they penetrate, and the translocation from cooler from below this region during the growing is too slow to be of much importance, unless as shown later the water table is near.

Wheeting determined the water in samples of sandy soil, at East Lansing, taken at different depths vertically and horizontally from an isolated hill of corn when it was wilting, due to lack of water. His results show that film movement had not taken place much more than one foot from the roots of corn, either vertically or horizontally. This goes to show that the translocation of water in sandy soils to supply the crop is almost negligible in amount —that is where the water table is too far below the surface to be active.

It was formerly held that water may rise long distances from the water table to supply the crop, but recent experiments show that the distance and rate of transfer were over-estimated at least for immediate crop production. Large galvanized iron tanks were sunken in the ground at East Lansing, and filled with sand and muck soil. They were so arranged that the water table was two, four and six feet from the the surface of the sand, and four, six and twelve from the surface of the muck. They were seeded to oats and covered with glass to prevent rain from entering them. The results obtained show that water will rise less than 4 feet above the water table in sand to supply the crop with water and less than six feet in case of the fine black muck. We have observed low lying sandy soil in which the water level was lowered to a depth of six feet by means of drainage canals, that are now droughty when there is a scarcity of rainfall. Field observations have shown that peat and muck soils dry out at the surface if the water table is lowered too much. Peat soils pull water from the table through shorter distances than do the fine black muck soils. Naturally the nature of the rooting systems of the crops grown is of utmost importance in this respect. Such crops as onions, celery, radishes, etc., suffer far more quickly from drouth where the water table is rather low than do such crops as corn, oats, barley etc.

(To be continued)

Collective Bargaining Aim of Hersman Bill

BY FAR the most important subject confronting the farmers today is their right to sell their products collectively. Existing laws have been held by the courts to deny the farmers this right, and our readers are quite familiar with many cases in which farmers have been prosecuted and held up to public scorn because of their efforts to secure a profitable price for their products. For several years there has been a steadily growing demand for legislation that would remove the farmers from the monopolist class to control which the law was evidently brought into existence. About the only opposition that has developed to this demand has come from the distributors of farm products who see a possible menace to their business when farmers co-operate in marketing their products at profitable prices. The consumer is apparently not worried over the prospect that the farmer might use this right to arbitrarily increase the price of his products to any level simply because he might have the power to do so.

A bill known as the Capper-Hersman bill, jointly framed by Senator Capper of Kansas, and Senator Hersman has been introduced and there seems good reason to believe that it will become a law. The purpose of the measure is to amend the Act of October 15, 1914 entitled, "An Act to supplement existing laws against unlawful restraints and monopolies." The amended portion would then appear as follows and would specificially give the farmers the right which they seek, to deal co-operatively in the marketing of their products at prices they deem fair, without being harrassed by the law:

"Sec. 6. That the labor of a human being is not a commodity or article of commerce. Nothing contained in the antitrust laws shall be construed to forbid the existence and operation of labor, agricultural, vineyardists, dairy, or horticultural organizations instituted for the purposes of mutual help, and that pay annually no greater dividends on stocks or membership capital investment than the minimum legal rate of interest of the state where organized, or to forbid or restrain individual members of such organizations from lawfully carrying out the legitimate objects thereof; nor shall such organizations, or the members thereof, be held or construed to be illegal combinations or conspiracies in restraint of trade or commerce under the antitrust laws.

"Associations, corporate or otherwise, with or without capital stock, of farmers, horticulturists, vineyardists, planters, ranchmen, or dairymen engaged in making collective sales for their members or shareholders of farm, orchard, plantation, ranch, dairy, or vineyard products produced by their members or shareholders are not contracts, combinations, or conspiracies in restraint of trade or commerce.

"Contracts, agreements, arrangements, or combinations made by such associations of the members, shareholders, officers, or directors thereof in making such collective sales and prescribing the terms and conditions thereof are not contracts, combinations, or conspiracies in restraint of trade or commerce, nor are they combinations or conspiracies to monopolize or to attempt to monopolize any part of trade or commerce.

"Nothing contained in this Act or in the antitrust or other laws shall forbid or be construed to forbid the existence and operation of associations, corporate or otherwise, with or without capital stock, of farmers, vineyardists, horticulturists, planters, ranchmen or dairymen engaged in making for the producers therof collective sales of farm, vineyard, orchard, plantation, ranch or dairy products, and, incidental thereto, packing, drying, churning, storing, grading or otherwise processing or preparing such products for market, or to forbid or restrain individual members, shareholders, directors or officers of such organizations from making such collective sales and prescribing the terms and conditions thereof; nor shall such organizations or the members, shareholders, directors, or officers thereof so engaged in making such collective sales and prescribing the terms and conditions thereof be held or be construed to be illegal combinations or conspiracies in restraint of trade or commerce under the antitrust laws; nor shall any of the Acts specified in this section be construed or be held to be violations of any law of the United States."

CURRENT AGRICULTURAL NEWS OF THE WORLD

GRINNELL9

MICHIGAN MAN CHOSEN OFFICER OF SHIPPERS

Mr. Elmer C. Compson, a progressive farmer of Remus, Mecosta county, was elected vice president of the National Federation of Co-operative Livestock Shippers at the convention recently held in Chicago. Many of our readers will remember Mr. Compson as taking an active part in the fight against the discriminatory potato grading rules, he being a large grower of potatoes. Mr. Compson also took considerable interest in the formation of the Michigan Co-operative Live Stock Shippers Ass'n and was made one of the officers. This federation is composed of several hundred local co-operative associations scattered all over the state.

It is estimated this association saved Michigan livestock men thousands of dollars in 1919 through the sale of their stock. The purpose of the association is to eliminate the middleman from the long chain between the farmer and consumer and also to secure better prices for the farmer for his livestock.

"The objects of this federation in a general way," said Mr. Compson, "are as follows: To encourage better and more economical methods in the production and distribution of livestock products; to promote co-operative education and to encourage the organization of co-operative livestock marketing organizations; to develop uniformity in the plan of organization and method of operation of local livestock shipping associations; to aid such organizations in problems of general interest in transportation, handling and marketing; to lease, buy, build, own, improve, mortgage, sell and control such buildings and other real and personal property as may be necessary in the conduct of its operations; and to perform any other work which may be of benefit to its members or helpful to the industry."

Mr. Compson points out that short courses for managers and others interested have been held at St. Louis, Mo., and Kansas City, and that it is proposed to give a similar course at the market terminal in Detroit shortly after the holidays. Arrangements have been completed with the United States department of agriculture to have a representative of the Chicago bureau of markets supervise the school.

Hartman Leaves G. R. & I. R. R.

Mr. W. P. Hartman, who for the past seven years has been agricultural and industrial agent of the Grand Rapids & Indiana R. R., has resigned his position to become production manager for the Falk potato industry. Mr. Hartmann has been a conspicuous figure in Northern Michigan agricultural development. He secured his training in this line of work in the east and the innovations he made as agent of the G. R. & I. were many and valuable. He has been directly responsible for bringing thousands of settlers into western and northwestern Michigan through newspaper advertising, exhibits of agricultural products, tours, etc. By the resignation of Mr. Hartmann, Michigan will lose one of its most enthusiastic agricultural boosters.

Washington Farm Labor Unionized

In the state of Washington the farm laborers are members of the labor unions. Dairymen pay their help $100 a month and board and cannot get enough workers to take proper care of their work. When there is a dispute over wages it is necessary for the farmers to act in concert upon it. Therefore the Washington state grange has an executive committee to which is delegated the duty of meeting the executive committee of the Washington state federation of labor. Each side acts collectively. Thus far it is said the plan has been much better than the old way of farmers trying to deal individually with their unionized laborers.

Another element of co-operation between the Washington grange and the labor unions is in marketing. The two organizations formed a company for the purpose of direct service between producers and consumers. The grangers put in $50,000 capital and the labor unions the same amount. The bureau handles the entire production of the farmers interested in the organization, which is sold at cost to the union members, cost including the expenses of operating the bureau.

Further than this relations between the grange and the federation of labor, do not extend, according to information at hand. There is a tacit agreement between the two organizations to co-operate in matters upon which co-operation is possible and to "agree to disagree" upon all other matters.

City Man Says Farmer Earns All He Gets

H. H. CHARLES, president of the Charles Advertising Service of New York City, has made an extensive study of farm production costs and income, and has come to the inevitable conclusion that the "farmer is not a profiteer." Moreover, Mr. Charles does not hesitate to tell the people of the cities so, and in a recent statement to the press, he said:

"Everyone wishes to blame somebody else for the high cost of living." He continued, "so it has become fashionable in some quarters to make the farmer the 'goat.' But official data shows that the farmer is certainly not getting more than his just share of the national prosperity.

"Some writers have made the mistake of assuming that the farmer receives cash for all his crops and then have proceeded to add the receipts from livestock to form a huge total. In this way, the farmer's income has been made to seem prodigious when the fact is that crops to the value of four or five billion dollars annually are fed to the livestock on the farm and never appear on the farmer's income sheet except in the guise of milk, cheese, beef, pork, etc.

"Such writers also often forget that before getting a single dollar for himself or family, the farmer must first pay for hired labor, taxes, insurance, interest, or rent, repairs, farm machinery, fertilizers and mill feeds. Further, he must assume the risk of crop failures and of loss thru such livestock contagions as tuberculosis and foot and mouth disease, etc.

"The average net labor income of all farmers for 1918 (the latest figures available) is given as $1,200. And it must be remembered that this represented the net labor income of an entire family, not merely that of the farmer himself. And farm families average much larger than city families. The wife worked as long hours as her husband. Besides doing the housework, she raised the chickens, washed the separator and largely cared for the garden. The boys mornings and evenings all worked and girls helped with the chores during vacations. There was no talk or agitation for an eight hour day, no thought of forty-four hour week. In most cases, the farmer filled a twelve or fourteen hour day to overflowing six days in the week and for good measure spent several hours on Sunday in caring for the livestock. Who will grudge him and his family a labor income of $1,200 in these days of inflated living costs?

"Again referring to the government figures, we find that the farmer received for his crops a price 98 per cent higher than in 1914, and for his livestock a price 97 per cent higher than in 1914. But note this: He also paid 90 per cent more for the articles that he had to buy. In other words, the increased prices on what the farmer purchased practically offset the increase in what he sold and left him approximately in the same relative position as before the war.

"It is interesting to note that the farmer, himself, is doing some vigorous thinking along economic lines. At a recent meeting of the New York State Grange, for instance, a statement was issued challenging the city worker to a cost accounting 'that all the world might see who earns his wage.'

"The plain truth is that, in the past, food has been kept cheap by much unpaid labor on the part of farm women, girls and boys, also by 'mining' rich virgin soils. But the farmer and his wife are studying cost accounting and they are beginning to demand a fair return for every day's labor, just as do their city cousins. They are also learning that an investment must be made every year in building fertility if crop yields are to be maintained and increased.

"If we are to safeguard the future food supply of the country and stabilize national prosperity, we must be prepared to pay prices which will assure farm folks a fair return for their labor and permit the fertility of the soil to be maintained and increased."

The Story of a Suit of Clothes

By Edward Frensdorf

THE FARMER has been getting his share of blame for the increased cost of clothing. "Yes, you must understand," say the astute manufacturers, "we are paying the highest price in our history for wool, and of course that makes the suit of clothes higher." And the average consumer, being as a rule a more or less gullible chap, accepts the explanation, pays over his hundred dollars for the all-wool suit and goes on his way rejoicing that some day he may be a farmer and garner in profits from the sale of wool.

A little light has recently been let in on the cost of the wool that enters into the making of a suit of clothes by Mr. Edward Frensdorf, Hudson banker, farmer and former member of the Board of Control of Jackson prison. Mr. Frensdorf is considered an excellent authority upon a wide range of topics and his opinion is frequently sought. Recently he was asked by the Associated Publishers' Syndicate to contribute a brief article upon the wool and clothing situation, and here is what he said:

"The largest percentage of Michigan grown wool will grade three eighths combing, worth today seventy-two cents in the grease; this is the extreme Boston market costing dollar thirty-six scoured and approximately three dollars and twenty cents in the yarn. The usual suit of clothes takes three and one quarter yards but we will allow three and a half yards of twelve ounce cloth which would make the cost of the material in the suit of clothes not to exceed eight dollars and forty cents. Of the hundred dollars you paid for that all-wool suit, eight dollars and forty cents represents the real material used, ninety-one dollars and sixty cents covers the cost of manufacturing cloth paying for the trimmings and the profits in between. Of this hundred dollar suit the farmer that produced the wool for it receives less than $3.60."

MASON COUNTY FARMERS PRESENT UNUSUAL PROGRAM

The farmers of Sheridan township, Mason county, are no slouches when it comes to drafting a political program. They have a pretty clear idea of what they want and they have no difficulty in making those wants known and understood. Below is a summary of the "planks" in their "platform:"

"We are in favor of organized 100 per cent American labor.

"We favor state-owned, terminal, farm produce, storage houses in all large cities and wholesale same in small lots to the people.

"We favor state ownership of all telephone lines, similar to post office management.

"We favor the abolishment of 1,376 political jobs, created by the state legislature and costing the taxpayers $10,000 each day and over $4,000,000 each year.

"We favor the Plumb plan of railroad settlement.

"We favor all water transportation, whenever practicable.

"We favor adoption of the league of nations.

"We condemn the method taken by the national senate in regards to the league of nations.

"We favor abolishment of the national and state senates.

"We recommend Herbert F. Baker to our brother farmers and organized American labor in Michigan, for governor, on any old ticket.

"We recommend Jake Landis to our brother farmers and organized American labor in Mason county, for state representative on any old ticket.

"Brother farmers and wage earners, remember that in union there is strength. Let us get together and do something for ourselves, not on the European plan, which is by the budget and butcher knife, but on the safe, sane, peaceable, 100 per cent American plan—the ballot. Our majority at the polls is 9 to 1."

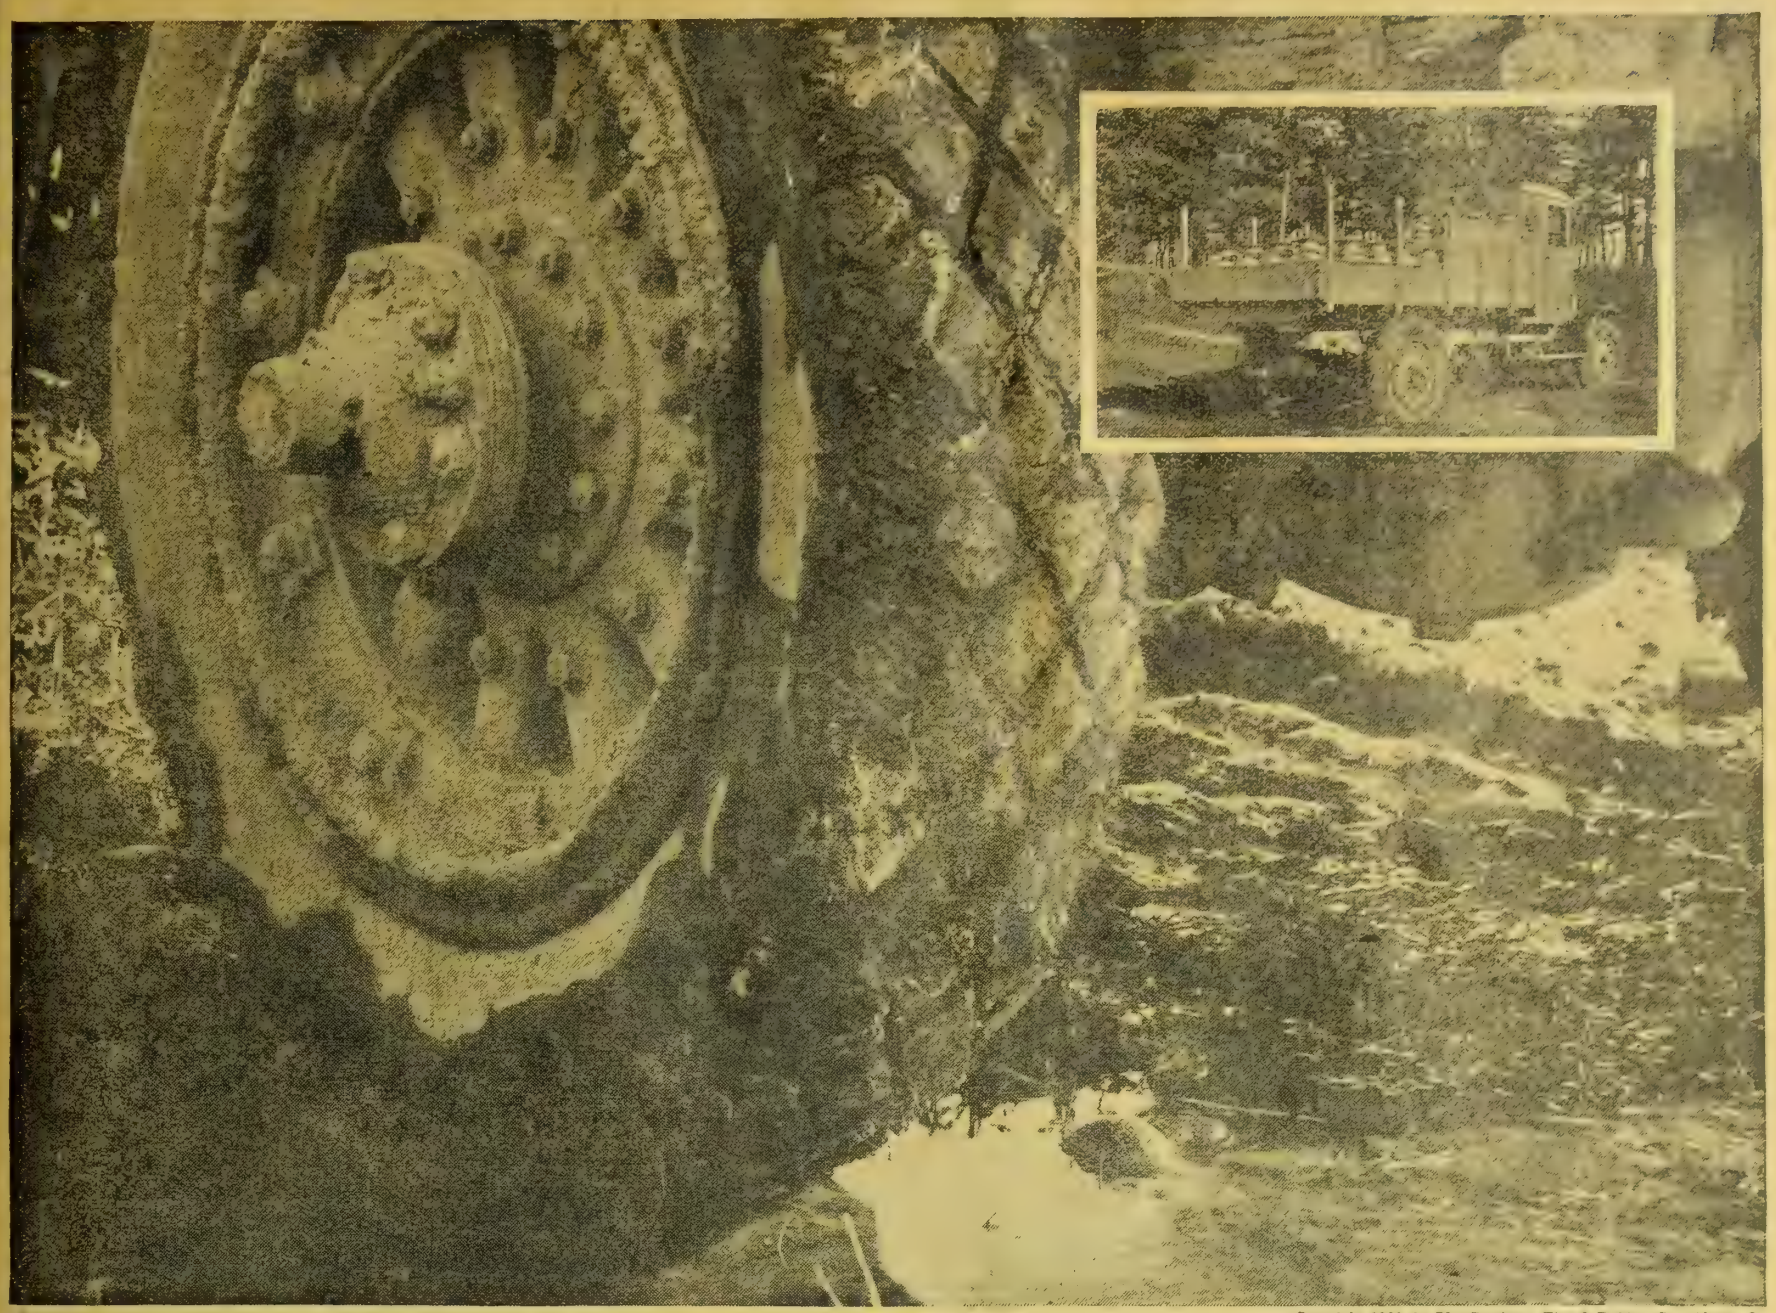
Cow Testing in St. Josph

The Cow Testing Association in St. Joseph Co. has 26 members in the association at the present time, 24 of these have pure bred sires on their farm. All together they have about 300 cows in the association; about 50 per cent of these are pure bred cows. They have bulls in this Association such as Pogis 99th, the 11th of the Hood Farm, owned by O. B. Graham, of Mendon, Mich. He has one of the best Jersey herds in the county. The Wah-be-me-me Farms, of White Pigeon have for their sire, Segis Pontiac De Nijlander; he is the grandson of Michigan's great 35-lb. champion cow, Pontiac De Nijlander.

The association is in the third year run. It has in the county a Jersey club, a Holstein Association, a Shorthorn club and many other clubs. All members must use a pure bred sire on farm.

The leading cows in the December month were: 1st, a Jersey, owned by Ray Carwright, 813 lbs. milg, 50.4 lbs. butterfat; 2nd, Jersey, owned by Ray Cartwirght, 914 lbs. of milk; 46.5 lbs. butterfat; 3rd, the highest average herd was owned by Wm. Robertson, with an average of 35.8 lbs. butterfat.

Members of the Association of St. Joseph Co. follow: H. O. Gleason, Three Rivers; Ray Mohney, Three Rivers; J. W. Bulluck, Three Rivers; C. L. Harder, Three Rivers; C. A. Brody, Constantine; J. C. Trasy, Constantine; H. E. Crow, Constantine; A. G. Wade, White Pigeon; E. L. Brown, Schoolcraft; E. Sheep, Sturgis; R. E. Rice, Sturgis; Chas. Hoopinganner, Sturgis; Chas. MacKerlie, Sturgis; A. C. Deno, Burr Oak; R. A. Wilcox, Burr Oak; R. E. Yeater, Colon; J. M. Stowell Colon; Dan Stowell, Colon; John Chivers, Mendon; C. B. Graham, Mendon; J. A. MacKindley, Mendon; W. M. Worthington, Mendon; Wm. Robertson, Mendon; Dan Kulm, Mendon; Ray Cartwright, Mendon.



Copyright 1920, by The Goodyear Tire & Rubber Co., Akron, O.

"MY Goodyear Cords have paid for themselves in ten months with all-round savings of time, labor, repairs, etc. I figure the reduction in gasoline alone will pay the cost of these tires over solids. They have traveled nearly 10,000 miles to date and are good for another year at least."—Herman Marks, Farmer and Rural Expressman, R. F. D. 6, Waukesha, Wisconsin

THE advantages of hauling on pneumatics, as demonstrated by this dairy farmer and motor expressman, are proving of extreme importance to many farmers otherwise hampered by the scarcity of labor.

With motor trucks relieved of the handicaps of solid tires, they now haul across soft fields and through deep mud and snow on the tractive pneumatics.

The cushioning of these tires is a source of valuable protection to perishable produce and prime livestock which must be marketed quickly and smoothly to secure top prices.

Both of these qualities of the pneumatics have a firm foundation in Goodyear Cord construction, pioneered by Goodyear years ago and today the basis of the country-wide success of cord pneumatic truck tires.

It is this Goodyear Cord construction which has made pneumatics practical for farm truck service, and thus has enabled farmers to motorize most effectively by using pneumatic-tired trucks to keep their power-driven farm machinery working at capacity.

Authentic information, describing how farmers employ pneumatic-tired trucks and what they save as a result, can be obtained by writing to The Goodyear Tire & Rubber Company, at Akron, Ohio.

MARKET FLASHES

WHEAT REACHES PEAK

WHEAT PRICES PER BU., JAN. 7, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.46		2.65
No. 2 White	2.44		
No. 2 Mixed			
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.30	2.30	2.36
No. 2 White	2.26	2.28	2.34
No. 2 Mixed	2.26	2.27	2.33

Wheat prices have gone up to the peak of the season. And the peak seems to be going higher yet. Well posted wheat men in Minneapolis predict that cash wheat is going to sell for $4 per bushel. Part of the sudden upward jumps of wheat prices were due to the new reports of a decline of several million bushels of wheat in the visible grain supply. Exporters have been heavy buyers of wheat of late and the home demand has been good. The bulls, of course, are now putting in their best licks, since the wheat is practically all out of the hands of the producers.

Canadians have had a great deal to do with the price of wheat in this country in the past few weeks. Following a slump in the American wheat markets recently, the Canadian Wheat Board announced an advance in the price to mills in that country of 50 cents per bushel, to a basis of $2.80 for No. 1 Northern at the head of the lakes. The embargo on flour imports from the United States was also lifted. The Canadian wheat crop was short and its quality as poor as that this side of the international boundary.

Starvation in Austria and parts of the Balkan, Russian and Turkish districts, due to the shortage of bread grains and other foods, is likely to be a further impetus to high prices. Freezing and thawing and drifting snowstorms have all had a bad effect on the wheat in the fields of the American farmers and the Hessian fly has made big headway. Spring wheat farmers are being looked to for making up the shortage assured by the inroads of the fly in the winter variety.

Weekly Trade and Market Review

THE NEW YEAR has opened with a set of conditions unprecedented in the nation's history. In the first week of 1920 we find a demoralized financial condition, especially in the foreign exchange market, for example, the Austrian crown formerly valued at 20 and 1-3 cents, is now valued at one-half cent. While the foreign exchange is about as low as it is thought it can get, operators are playing the game in Wall Street to benefit by fluctuations up and down. In the past few days, the money rates have virtually dominated the various factors in the Wall Street market. In our financial system, reserve rates of the reserve system as a whole have fallen to the lowest point in history.

Another big factor beginning to loom up into the world of business and trade is that of the coming election, for this is the campaign year, so often injurious to stable and firm prices for the producer. Although it is generally thought that the steel and coal strike are events of the past, an announcement has just been made that one-third of the entire body of steel strikers is still on walk-out basis. As for the coal situation, the strike has put the nation back so far that industry is to be crimped for a long time to come. The delay of the peacemakers of the world has still further complicated matters. It is believed that the Germans will not make possible the final peace terms until toward the end of January.

As for the grain markets, a general rise has occurred this week and numerous localities report higher prices to producers. Rye and wheat have gone to the peak of the season and corn rose somewhat. A temporary rally has occurred in nearly all live stock markets.

CORN MARKET RALLIES

CORN PRICES PER BU., JAN. 7, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow		1.53	1.68
No. 3 Yellow	1.50		
No. 4 Yellow	1.46		
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow			1.71
No. 3 Yellow	1.58	1.53	1.65
No. 4 Yellow	1.53	1.49	1.66

Corn around the holiday season, took occasion to slump at times, but it has made quite a decided rally this week. The general upward trend of wheat, rye and oats has been the latest factor. The prediction of many experts that wheat is going to a level of $4 per bushel indicates that that high level would make corn look very cheap at its present low level. So the corn bulls have high expectations of a strengthening of their line.

Trading has not been especially active and receipts have been slight, although last week saw considerable shipments on certain days. The railways hold out little hope for an increase of cars or motive power, so the receipts of corn are not expected to swell much right away. Foreigners have bought a large amount of corn from dealers along the coast. The strength of the hog market assisted in the bullishness of corn.

Professional operators are known to be at work full blast in the corn markets, so predictions have little weight, excepting the prophecy of a general upward soaring with wheat at the peak at $4.

OATS GO TO FOREIGNERS

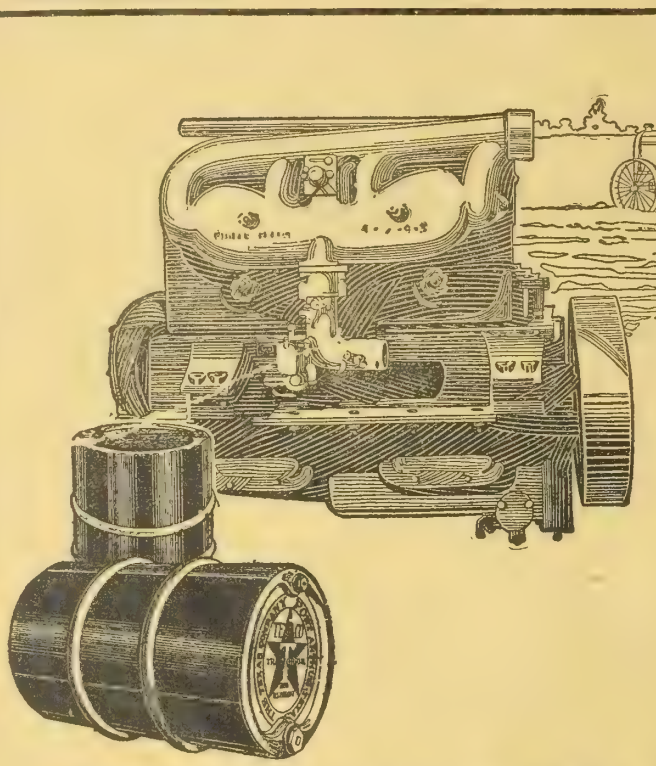
OAT PRICES PER BU., JAN. 7, 1920			
Grade	Detroit	Chicago	N. Y.
Standard	.89	.88	.88
No. 3 White	.88		
No. 4 White	.87		
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
Standard	.73	.74	.81
No. 3 White	.72	.73	.80
No. 4 White	.71	.71	.78

Oats are being sold in large quantities to exporters and to foreign buyers in large quantities, despite the low rate of exchange. The result is a firm condition in the oat markets, with almost daily rises in the price. Very small shipments of oats have been arriving at terminals. For example, Detroit reports as low as two cars received per day. Not much improvement in the car situation is looked for during the month of January, so the bulls have strong hopes.

RYE AND BARLEY

Rye has followed pretty closely in the heels of oats, and millions of bushels have been sold recently for the foreign trade, although the exchange is off. The Europeans are using huge quantities of rye bread and apparently will continue to do so. Continual rises in the rye prices

TEXACO MOTOR OIL ★ THUBAN COMPOUND ★ HARVESTER OIL ★ AXLE GREASE



No engine can last unless it is carefully lubricated

TEXACO

TRACTOR OIL

No tractor can live any longer than its engine. No engine can last, or even perform consistently and successfully, unless it is carefully lubricated. It merits the best oil you can get, and that is Texaco Tractor Oil. Scrupulously refined, it is clean, perfectly uniform, and correctly bodied. It is an oil with "staying" qualities. It doesn't unduly vaporize under engine heat. This makes it, not only efficient in service, but extremely economical—just as are all Texaco red Star and green T products. Texaco Tractor Oil comes in 33 and 55 gallon well-built steel drums, wooden barrels and half-barrels, and five gallon cans.

TEXACO REG. U.S. PAT. OFF.

Petroleum and Its Products

General Offices Houston, Texas. Offices in Principal Cities

DISTRICT OFFICE — CHICAGO, ILLINOIS — McCORMICK BUILDING

have occurred in the various markets since the holidays. Detroit quotes Cash No. 2 rye at $1.85. Barley, cash No. 2 at around $3 per cwt.

POTATO MARKET FIRM

SUDS PER CWT., JAN. 7, 1920	Sacked	Bulk
Detroit	4.00	3.50
Chicago	3.50	3.90
Pittsburg	3.65	3.60
New York	3.25	3.00
PRICES ONE YEAR AGO		
Detroit	2.00	1.90
Pittsburg	2.06	1.95
Chicago	1.85	1.80
New York	2.10	2.00

The potato market in Detroit is quoted firm with small supplies available in the city. There is not an especially active trading, but the price keeps up well. Various points about the state report improved prices for spuds. Greenville quotes potatoes at $3.15 per cwt.

Chicago reports an advancing market for white potatoes. In that city the holidays did not have their usual effect upon the trade and price kept up well. The East also reports a firm condition, largely because most farmers are holding back their stocks.

BEANS STEADY, NOT ACTIVE

BEAN PRICES PER CWT., JAN. 7, 1920			
Grade	Detroit	Chicago	N. Y.
C. H. P.	7.25	7.75	7.75
Red Kidneys		13.75	14.75
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
C. H. P.	9.00	9.25	10.50
Prime	8.00	8.50	9.75
Red Kidneys	12.00	12.00	12.75

Navy beans have suffered slumps and rallies since the holidays and have ended up in a steady, but not active condition, at $7.25 per cwt. in the Detroit market. A rather strong tone is thought to indicate reserve strength for the bulls.

As for the condition in other states, New York reports a very firm market with previous prices maintained. Stocks in the Empire state are very low. With few beans in that great consuming area, dealers predict a rapid rise soon. *The Chicago Packer* carries a dispatch predicting an unusual demand for seed in York state for heavy plantings.

RED KIDNEY BEANS REACH HIGH LEVEL

Early last spring Mr. Grant Slocum advised M. B. F. readers thru these columns to plant red kidney beans. He told them that there was a great shortage of this crop, and that prices would inevitably be higher. At that time red kidneys were being quoted at $12 per cwt. On Dec. 27th a New York firm wired a Michigan jobber that they would pay $14.25 per cwt., for choice Red Kidneys.

It is not too early to consider the financial possibilities of this crop next year. Despite the efforts made in 1919 to increase the acreage the increase was very slight if any at all, and prices are the highest ever known. It is impossible to believe that the 1920 acreage and yield will be adequate for the demands, and consequently as high if not higher prices are expected to again prevail next year. In fact, many bean men of the state are of the opinion that farmers will make no mistake in planting Red Kidneys next year.

Good seed is obtainable at the present time, but how long it may be we do not know. The beans are leaving the state very rapidly, and by planting time there will be so few left that it is doubtful if all farmers can supply their wants at any price.

SUPPLY INCREASES

After the holidays a great supply of fresh eggs began to come in the markets and the prices including the retail, dropped off several cents at many points. This has been especially true of the poultry folks farther south. Buyers have shown less of an eagerness to grab up the fresh stuff lately and an easier tone results. The shortage of beets has resulted in the sale of great stocks of cheap eggs and the activity in cheap storage egg trade continues active. There is not much activity in the butter line, but prices have risen somewhat.

Quotations follow:

DETROIT—Butter: Fresh creamery 61 to 61 1-2; fresh creamery, in 1-lb. bricks, 62 to 62 1-2c. Eggs: Fresh eggs, 68c per doz.; storage eggs, according to quality, 47 to 51c per doz. Cheese: Michigan flats, June make, 33 1-2c; Michigan flats, new make, 32c; New York flats, June make, 34c; Michigan single daisies, 32 1-2 to 33c; brick, 31 1-2c; long horns, 33 1-2c; Wisconsin double daisies, 34 1-2 to 35c; domestic block Swiss, 36 to 40c; domestic wheel Swiss, 52 to 65c per lb.

LAST MINUTE WIRES

DETROIT—Small offerings strengthen grain markets; potatoes firm; beans quiet and steady. Seeds are active and steady. Hay firm and buying active.

CHICAGO—Corn prices go up. Oats gain. Provisions bearish. Hog market falls due to great receipts.

NEW YORK—Butter steady; creamery, higher than extras, 70 to 70 1-2c; creamery, extras (92 score), 69 to 69 1-2c; packing stock, current make, No. 2 47c. Eggs firm; fresh gathered extras, 78c; firsts, 76 to 77c; firsts, 74 to 75c; state, Pennsylvania and nearby western hennery whites, first to extra, 78 to 82c; state, Pennsylvania and nearby hennery browns, 80 to 81c; do gathered browns and mixed colors, 77 to 78c. Cheese easy; state, whole milk, flats, current make specials, 31 1-2 to 32c; do average run, 30 1-2 to 31c; state, whole milk, twins, current make, specials, 31 1-2 to 32c; do average run, 31c.

HAY FIRMS UP

Hay is in good demand in Detroit and the market is firm. During the past two weeks, however, there have been freer receipts in many western markets and the hay market has been a little off. Lighter country loadings and better demand, beginning with the new year, have given much hope for the bulls. Eastern markets have been lightly supplied and prices have been firm in most cases, including some gain. The prospect for satisfactory markets for the month to come seems bright, in the face of low supplies all around. January should see steady prices, unless loadings are unusually heavy.

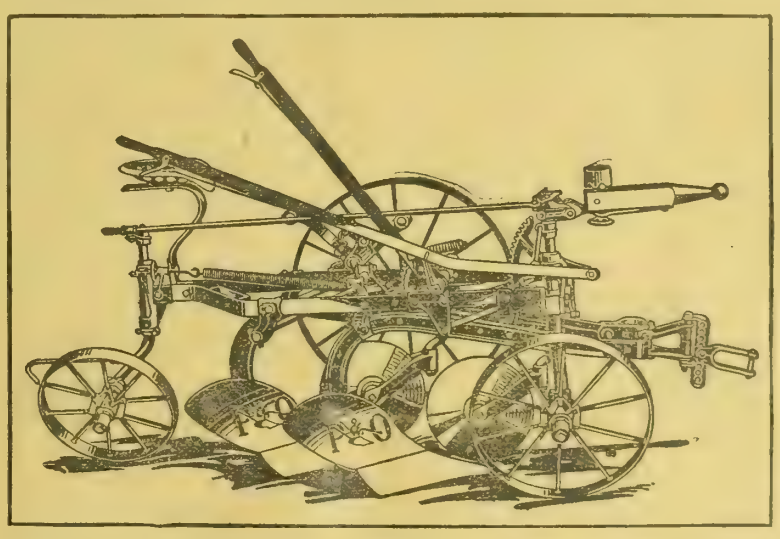
Light-Draft Plows

EVERY detail in the construction of the P&O Line of Light-Draft Plows is worked out on the lines laid down by the founders—making for Simplicity and Strength. The popularity of these famous plows shows that the policy of the founders was right—they "knew how."

Used by Three Generations of American Farmers



78 Years of "Knowing How" Hammered into Every One of Them

P&O Light-Draft Plows cover a wide range of work, not only for all ordinary plowing, but for the unusual and the extraordinary. *For Horses:* Walking, Sulky and Gang, both moldboard and disk, in all standard sizes and models of bottoms. *For Tractors:* From 2 to 6 bottoms, both moldboard and disk. *Special:* For grading, ditching, hillsides, root ground, cut-over timber land, orchards, etc. There is a P&O plow for any section, and for any condition of soil.

Whether you own or operate a horse-plow farm or a tractor-plow farm, get a P&O Light-Draft Plow, and be a satisfied plowman.

Write for P&O Plow Catalog, or call on the nearest International dealer. Tell us your plowing problems—we believe we can help you.

Is Your Farm for Sale?

Write out a plain description and figure 5c for each word, initial or group of figures. Send it in for one, two or three times. There's no cheaper or better way of selling a farm in Michigan and you deal direct with the buyer. No agents or your farm, send in your ad today. Don't commissions. If you want to sell or trade Just talk about it. Our Business Farming Farmers' Exchange gets results. Address Michigan Business Farming, Adv. Dept., Mt. Clemens.

Pointers to Business Farmers on Judging Live-Stock

How to Determine and Judge the Merits of Cattle You Buy or Sell

A REAL NEED in agricultural regions today is more widespread knowledge of how to judge live stock properly. While the judging of the finest animal is likely to remain an art in which relatively few persons can attain the highest standing, nevertheless, farmers as a whole should be thoroughly familiar with the general principles of judging stock. Knowledge of this sort is a real asset.

The art of judging beef cattle is the foundation of all beef cattle shows, and also is largely the means of determining the value of cattle offered in public sales. It serves as a basis for every man who buys and raises cattle to seek improvement along well recognized lines.

If a breeder is not a good judge he can not mate individuals so as to get the best possible offspring. Knowledge may be obtained through long experience, but a systematic course in judging may accomplish the same end at a cost of fewer mistakes and a much shorter time. If a farmer is a competent judge of feeders, for example, he can go to the market and save the buying charges or commissions on a deal which otherwise would have to be handled through commission men.

For the man who feeds cattle for commercial purposes, it is more important to study how to judge feeders than fat cattle. Judging the former requires more skill than judging the latter.

Without standards, stock judging can not be made a success. The smallest cattle owner as well as the man who owns a large herd needs to be familiar with the ideal beef type. This animal, when fat, must have a low set body which is broad, deep and smooth, with level lines, having a thick, even covering of firm flesh. Hair, hide, and bone of good quality, together with general character and style, also serve as an indication of the inner parts which can not be seen.

Three Classes of Cattle

From the butcher's standpoint, cattle may be divided into three classes—fat cattle, feeders, and breeding cattle. The first comprises animals ready for the butcher's block; the second is the "unfinished product" and the third constitutes the class from which the others are produced. In fat cattle, one must judge according to what the cattle are at the time. In feeders, the animals which give promise of putting on the biggest and cheapest gains, and developing into the best beef form when fattened, are the ones desired. In breeding cattle, the true beef form is of prime importance, but there must also be assurance that the beef characteristics will be transmitted to the offspring.

Judging Fat Cattle and Feeders

Fat cattle, so called, include steers, heifers, calves, cows and bulls. Fat steers and heifers constitute by far the largest percentage. Each must be considered from the butcher's standpoint, the finish and quality of flesh being of prime importance. Cattle bred especially for beef purposes have a tendency to produce marbled meat or to deposit layers of fat throughout the lean meat, while in cattle bred exclusively for dairy purposes, the tendency is to deposit a surplus fat, principally around the internal organs, where it becomes a relatively cheap suet and does not tend to improve the quality of the lean meat. In judging feeders, it must be borne in mind that they are "unfinished" cattle and therefore do not have the width and flesh covering of fat cattle. In general, the same qualifications apply to feeders as to fat cattle, except that certain points of the score card must be emphasized and other minimized. The desirable feeder is one that will dress out a high percentage of high-priced meats when finished and slaughtered.

Juding Breeding Cattle

Breeding cattle, first of all, must have the true beef form. In that respect they are intermediate between feeders and fat cattle so far as flesh is concerned. Early maturity and easy fattening qualities should be present to a marked degree. Good handling qualities are essential, as excessive fat, showing that the animal has been pampered, is undesirable. Heavy flesh is necessarily of importance, but breeding cattle should be judged more by their value as breeding stock than by the flesh they carry . Superabundance of flesh may hide defects. Too much emphasis can not be given to the fact that animals being judged should have ability to transmit their usefulness and desirable characteristics to their offspring. In fact, prepotency should be so strong and the line of breeding so well defined for the specific purpose, that the animal will have a tendency to produce better individuals than itself. Prepotency is obtained by consistent breeding toward a definite type and therefore is to be expected most frequently among animals true to their breed type.

Suggestions About Judging

In judging a class of cattle or inspecting a single individual, one should first make a general survey of the animals of animal, examining the general features from a distance and noting the general outline and typical beef form.

When first approaching an animal, note the front view and the features of the head and the width and depth of the chest. On moving toward the side, note the depth of the body and the lowness of the flank. The rear view will give the width of the back, spring of the ribs and thickness and development of the hind quarters, particularly the thighs and twist. After a survey of the animal from a short distance a close inspection of the various parts of the body should be made, beginning at the head.

In the case of beginners, judging work usually should commence with the use of the score card, after the various parts of the animal have been identified and the use of the card has been explained. One should make a complete examination of the individual before the various cuts are noted on the card. The score card is intended primarily for beginners, and is to be used in learning the details of comparative judging. Comparative judging is employed exclusively in placing the awards at public beef cattle shows.

The judge-to-be should gradually acquire facility in summarizing the total of the qualifications of each animal. Use of the score card is a step toward efficiency in the difficult task of comparative judging. Only in close competition in comparative judging does the experienced judge need to place side by side the smallest details.

Sample score cards for fat and feeder beef cattle and for breeding beef cattle, together with a model card for comparative judging by class or team, constitute part of the material contained in a recent Farmers' Bulletin issued by the Department of Agriculture, entitled "Judging Beef Cattle." The 21 pages of text discuss in popular language the various features of judging beef cattle, and it contains suggestions regarding their scoring. The bulletin may be had free upon request.

Beet Contract Proposed by Western Farmers' Ass'n

THE GROWER agrees to grow in the year 1920..acres of sugar beets and to deliver and sell the same to thhe company, and the company agrees to purchase and pay for such beets as may be delivered to it upon the terms and conditions hereinafter set forth.

1. The grower will prepare and cultivate the land and harvest the beets grown thereon in a husbandlike manner and deliver all beets with the tops cut off with reasonable care consistent with the nature of the work, at the base of the bottom leaf and without unnecessary mutilation or damage from topping knives equipped with hooks, the use of such knives being permitted, and will follow the instructions of the company in the matter of irrigating his beets after he is ordered to harvest same.

The company will furnish seed when requested at the market price and will plant the same when requested at the rate of one dollar per acre, the grower to exercise his option as to how much seed shall be planted and the planting to be done in a manner satisfactory to the grower.

11. Delivery of beets shall be made as directed by the company until October 15, after which date the grower shall deliver at his pleasure the company reserving the right to reject beets which do not analyze more than 11.99 percent sugar, and at its option to reject beets not delivered before December 16.

111. The grower will deliver his beets at the nearest receiving station of the company and the company agrees to furnish adequate facilities for handling of beets at said station and in case the grower is required to shovel his beets after he is equipped to have them dumped the company shall pay 25 cents per ton for such shoveling and the company shall pay at the prevailing rate of wages per hour per team for all delay in unloading at the receiving station, except that delays of 30 minutes or less shall be allowed under this agreement. No time for delay shall accrue after a way has been provided for him to begin operations and the grower has been notified to unload. The company shall provide weighmen and taremen to be on duty at dump and scale hours from 7 a. m. to 7 p. m.

IV. The company shall not be bound to accept diseased, damaged, frozen or improperly topped beets or beets which do not show by analysis to contain more than 11.99 percent sugar and the weight of dirt delivered with the beets shall be deducted in the customary manner; provided however, that the company shall pay the grower one-half the rate paid for sound beets in case of a refusal to accept because of being diseased, damaged, or frozen by causes which the grower could not prevent.

V. The growers shall have the privilege of selecting at their own expense representatives which shall be privileged to check tares and weights of beets grown and delivered under this contract, and such selection by the growers shall be conclusive.

VI. The price of beets per ton of 2,000 pounds, after all proper tare reductions shall be determined as follows: On the 15th of each month the company will pay to the grower the sum of $10 per ton for all beets delivered during the preceding calendar month and on October 1, 1921, the company shall pay to the grower a further sum on all beets delivered under this contract, said sum to be determined as follows to-wit: The average price of fine granulated sugar, f. o. b. New York, for the months of November and December, 1919, and January, February, March, April, May, June, July and August, 1920, shall be determined by adding the daily quotations issued thru the regular channels of trade during the time designated and dividing the sum thereof by the total number of days in which said quotations are issued, and the company shall pay the grower of the rate of $2 per ton for each cent or fraction thereof which the said average price exceeds 8 cents per pound.

VII. The company shall have the privilege of sampling beets taken from the growers' fields at pleasure. In case the grower is not satisfied with the analysis by the company he shall be accorded the privilege of submitting samples to a qualified chemist. In case of disagreement between the company and the growers' chemist an umpire shall be chosen whose decision shall be conclusive. The expense of the umpire shall be borne by the losing party.

VIII. The price of pulp purchased from 1920 sugar beets shall be the market price. The grower shall be entitled to receive pulp until Feb. 1, 1921, on the following conditions: The grower shall state in writing to the company the amount of pulp he agrees to take during the season. For each ton of pulp asked for, which amount shall not exceed 25 per cent of his total beet tonnage, there shall be charged to him 20 cents, which amount shall be deducted from any of his payments for beets and in case of failure to take pulp as agreed he shall forfeit this advance. Provided that the grower shall have the right to disposo of his pulp holdings by transfer to other parties and the company will honor the written order of the grower transferring any portion of his pulp holdings.

The company will allot the grower his proportionate share of molasses, accumulated during the season's run, and sell the same to him at the market price. As soon as practicable the company will ascertain the quantity of molasses that will accumulation and be held for market during the season's run and will post notice giving the quantity that will be allotted per ton of beets at every scale then being used by the company in weighing beets or pulp. If the grower fails to notify the company of his intention to accept the whole or any part of his molasses allotment within 15 days after the posting of said notices such grower shall forfeit his right thereto and the grower who fails to remove his molasses within 45 days after the posting of said notice shall forfeit his right thereto but the grower shall have the right to dispose of his molasses allotment in the same manner as pulp transfers are made.

IX. In case any part of the grower's beets is frozen in the ground, the grower having used due diligence in prosecuting his beet harvest, the company shall pay the grower one-half of all legitimate expense incurred in the production of the beets thus frozen. The company shall have the right to harvest the crop of any grower whom it suspects of not diligently prosecuting his beet harvest and where that is done the prevailing prices for labor in the beet fields shall be allowed and the company is authorized to deduct payment for the work performed for the grower out of any payment made on his beets.

Big Helps to a Bigger Farm Income

EVERY BUSHEL produced now adds more to the farm income than two bushels under normal conditions. Prices for farm products are likely to remain high. Every farmer has the opportunity to increase his income by better planing and the use of better methods, to keep down the cost per bushel by making his acres, his labor and his equipment produce more. To help you do this, we offer free our **"How-to-get-a-Crop"** books, each dealing with a special crop.

These handy, little books are crammed full of valuable information. They tell about seed selection, seed treatment aud seeding,—diseases, enemies and spraying,—soils, cultivation, harvesting and marketing. They are different from other crop books. Every farmer should have them. What crops do you grow? Send for the books which interest you. Use the coupon.

Use A·A·C· Fertilizers

and secure maximum crop yields. They are specialized fertilizers made to supply plant food in the right forms for different crops. There are special fertilizers supplying plant food in the right forms for corn and grain, potatoes and vegetables, and other crops. A. A. C. Fertilizers are made of high-grade available materials selected on the basis of many years of actual field results.

USE THIS COUPON

Please send me the books checked (X). I expect to use.....tons of fertilizer.

Fertilizer is highly concentrated. It is many times richer than manure. It must be applied properly. When planting by hand, the fertilizer should be well covered by the soil or thoroughly mixed with it, before the seed is dropped.

If applied by machine select one that mixes the fertilizer with the soil thoroughly. Some corn planters have a special attachment for mixing t fertilizer with the soil. If you have one, be sure to attach it.

If fertilizer is applied broadcast, sow it evenly.

Fertilizer should not be applied to grass or grain that is moist. Apply around, and not on, other plants.

Live-Stock Men War Against Tuberculosis

Breeders' Associations Urge Congress to Increase Appropriation for this Work

THERE was recently held in Chicago a breeders and veterinarions conference for further consideration of accredited herd regulations. This meetings was attended by officials of the Bureau of Animal Industry, State Live Stock Sanitary officials, the Sanitary Committees of the Chicago Live Stock Exchange, and representatives of the twelve leading cattle breeding associations as follows:

American Shorthorn Breeders Association, American Polled Shorthorn Association, American Aberdeen Angus Association, American Red Polled Cattle Club, Brown Swiss Cattle Breeders Association, Holstein-Friesian Breeders Association of America, American Jersey Cattle Club; American Guernsey Cattle Club; American Galloway Breeders Association; Aryshire Breeders Association.

The greater part of the time was devoted to a discussion of the accredited herd regulation now in force. Some of the breeders and veterinarians were of the opinion that the regulations should be modified to permit the keeping of a reacting herd bull in segregation on the same farm with a tuberculosis-free accredited herd. This position was taken because it is possible to use a valuable reacting bull on healthy cows without transmitting the contagion to the cows bred or to the offspring, if the bull is kept under proper supervision in a stall some distance away from the healthy herd. These men were of the opinion that this modification would cause a large number of breeders who have valuable herd bulls to place their herds under Federal and State supervision, whereas without this provision they would be disinclined to have the herd tested under the accredited plan. Other breeders and veterinarians were opposed to any such modification on the ground that if a reacting herd bull is kept on the same farm with the healthy herd, even under segregation, it could not be rightfully called a tuberculosis free accredited herd. The outcome of the discussion on this and other matters resulted in the passing of a motion to appoint a committee of five breeders to meet with a committee of five veterinarians, appointed by the president of the United States Live Stock Sanitary Association, with instructions for this committee to make such recommendations concerning changes in the accredited herd regulations that they deemed advisable.

This committee in joint session recommended that breeders be permitted to keep a reacting herd bull, in which case such a herd can be designated as under Federal and State supervision, but not entitled to be called tuberculosis free accredited herd, unless the herd bull as well as all other animals are entirely free from this disease. It was also recommended by the committee that after a herd is certified as free from tuberculosis, if one or more reactors on later test should be discovered, the owner should be permitted to have other tests made so that the herd can be put back on the list at the expiration of six months instead of one year as previously provided. These regulations were accepted by the United States Live Stock Sanitary Association and the U. S. Bureau of Animal Industry.

Previous to this discussion a number of brief reports were made by state veterinarians and Dr. Kiernan of the U. S. Bureau of Animal Industry on the progress of accredited herd testing. There are now approximately 15,000 herds of breeding cattle under Federal and State supervision for annual testing. Although the accredited herd plan was launched as a nationwide movement at a similar meeting held two years ago, there are now 1,500 herds in the United States which have passed two successful tests and are accredited. A much larger number have passed one successful test and it may be expected that the accredited herd list will grow very rapidly from now on. The Federal Government is cooperating with forty-three states in this work at the present time. In a large number of these states there are from one hundred to two hundred herds on the waiting list. When the applications are properly signed and all breeding cattle in the herd are tested regularly, the work is done free of charge and partial indemnity is paid to the owners of reactors slaughtered by the Federal government and state co-operating.

The following memorial to congress was unanimously passed:

As representatives of the twelve American Cattle Breeding Associations, in convention assembled, Chicago, Illinois, December 1st, 1919, we endorse the action of the last Congress in providing an appropriation of $1,500,000 for the eradication of tuberculosis—a disease that is causing a loss of millions of dollars annually for meat condemned and for cattle that die of tuberculosis on our farms.

We heartily approve and commend the plan adopted by the officials of the United States Bureau of Animal Industry co-operating with the State Live Stock Sanitary officials in combatting this disease with the result that this menace which has heretofore been increasing in its destructiveness is now actually declining.

We urge that the present congress provide liberally for the continuance of this important work, that a larger force of field inspectors may be appointed to take care of the increasing number of requests from breeders for the annual tuberculin testing of their entire herds in the performance of which work the present force is inadequate.

We recommend and urge congress to make an appropriation of $2,500,000 annually, the entire fund to be available for the payment of either operating expenses or indemnities, as necessities may require, under the terms of the law now in force.

The eradication of tuberculosis will not only conserve for human consumption, great quantities of beef and pork anuually condemned as inedible but will also encourage the production of both meat and dairy products.

"Is there a good-natured person in our lodge?"

"Yes."

"Well get him down to the meeting tomorrow night. We'll have a lot of disagreeable work to load onto him."
—*Detroit Free Press.*

The Lost Ideal

THE RECENT utterances of some of our prominent men and the editorials of certain of our great metropolitan newspapers remind us that ideals as well as ideas may change with the years. How short the time has been since the popular clamor went up for war. The militarists had sought from the very inception of the European conflict to draw us into the maelstrom, but the president and the people resisted their arguments. We hated war and we found it well nigh impossible to convince ourselves that we should go in. But we loved justice and mercy. The cries of smitten Belgium tortured us. The position of France and England became precarious, and finally as if with a single mind, the United States rose up over night and plunged herself into the conflict.

We had no selfish aims to satisfy. We made that very clear to those nations with which we joined our forces. There was nothing sordid or materialistic about our new-formed decision. Ah, no. We entered the war primarily to help the Allied nations and with them to make the world safe for democracy. This wonderful ideal drew us on and on, like a star in the heavens. It was inspiring to think that we were destined to be the savior of the world in its hour of peril. We walked on air,—treaded the castles of our own conceit, as it were, and even boasted of our big-hearted brotherliness to the rest of the world. And the rest of the world took us at our word. With but few ungrateful exceptions the neutral and Allied nations hailed us as their deliverers!

Skim over the succeeding pages of history and stop at most any record up to a couple or three months ago. If the historian has illustrated the record we may find our picture there. To be sure, here it is. Ugh, what an ugly thing! The cartoonist has paid us no compliment. A fat man, with pockets bulging full of money, vulgar diamonds, a rotund stomach, a face gross with high living, pouches under the eyes. We can scarcely realize this is the same being who, three years before, entered the fray a clean, lean, eager, active young man, with a halo about his head. What says the record of this transformation? "Careful, cautious capitalists who knew how to turn the misfortunes of the war to financial advantage, are draining Europe dry of its every liquid asset until today the United States is the richest nation on earth. Burdened by its excess wealth it is rapidly becoming a gross, materialistic nation, sleeping the sleep of self-contentment and becoming less and less sensible to the needs of the rest of the world."

What an indictment! But is it not in a measure based upon good evidence? Where three years ago we had compassion, today we have distrust. Then we were seeking nothing for ourselves. We only wanted to protect our brothers across the seas and bind up their wounds. Now we have forsaken them to chase the rainbow. If we are ever to find the pot of gold it must be now while the world's competition is throttled. We have left the bandage yet unwound, so to speak, and the stricken nations cry out in sore travail.

Can we not as a nation see that if there was need in the world three years ago for a magnificent ideal of service to mankind, that there is infinitely more need for such an ideal today? If we saved Europe from the hands of the Prussian destroyer, we saved her for a worse fate, unless we go again to her aid. Europe is in want. She has drunk her cup of resources to the dregs, and nearly every dollar for which she can give credit has been spent in America. Yet her needs are not satisfied. She hungers for more,—food, machinery, clothing,—almost everything that are necessary to life and industry. But the billions of wealth she has spent in this country have undermined her credit, and like Shylock, we demand our interest and security, before we will make her further loans or sell her more goods.

It may not be good business to trust Europe. It may cost us something, but our greatest loss in a business transaction would pale into nothing compared with the loss which our devotion to an ideal cost us in the war. If that ideal is lost, God help Europe! Yes, God help us! Nations that are strong in material resources have more to fear from within than from without. Rome conquered all, but was itself consumed by the fires of its own selfishness.

The Farm Bureau and Politics

SECRETARY BINGHAM, of the Michigan State Farm Bureau, has been quoted as saying: "It is more important for the farmers of the state to decide what they want a governor to do than whom they want for governor. The farm bureau cannot see any way to join hands with the men who are booming a farmer or any other man for governor." This doesn't sound good to the farmer, but it makes the politicians and the partisan-bound press of the state rub their hands in glee.

It is the idea of Mr. Bingham that "if the farmers are organized so that their voice cannot be misunderstood nor lost in the uproar of state politics, results will be forthcoming irrespective of the personality of the governor."

Mr. Bingham makes the same mistake as the American Legion in supposing that the fear of organized forces will compel men elected to office to walk the straight and narrow, irrespective of their individual training or beliefs. The Saturday Evening Post, in commenting upon the attitude of the Legion toward politics, says in a recent editorial under the caption, "Muffing their Mission."

"The American Legion at its recent convention in Minneapolis adopted a resolution of which this is the gist: 'This organization shall be absolutely nonpolitical and shall not be used for the dissemination of partisan principles or for the promotion of the candidacy of any person seeking public office or preferment.' In other words, the American Legion voted to keep out of politics.

"The theory that brought this resolution to adoption is understandable, but the wisdom of it is doubtful. The men who compose and shall compose the American Legion are the men who fought the war for freedom of the world and won it in its first stages. They fought for and made possible new conditions, new alignments and new liberties.

"These new conditions, these new alignments and these new liberties thus born will not live unless the men who fought for their birth fight for their growth and continuance. Our Government is a party Government, and on the quality and character of that Government all these outcomes of the war must depend, in this country as well as in the world, largely, for success.

"As our Government is a party Government it is therefore a poltical Government, and as we rely on the Government for our progress, of which it is the dictator and measurer, so must the Government depend on ourpolitics for its strength or weakness.

"What higher or more important mission can these returned and victorious soldiers have than to take part, as a body as well as individuals, in the work of making our politics what our politics should be? How can the lessons they learned in the war be brought to the aid of the whole people in a more effective manner? What were they fighting for if not for a better America, which means a better Government and a better politics to make that Government? Because former organizations may have been partisanly political is no reason why this organization should not be righteously political. It seems apparent that the young men who adopted this resolution considered only the obverse of the situation. The country needs them as much as the country needed them in 1917, if not more."

The same arguments apply with equal force to the Michigan State Farm Bureau. Instead of fighting shy of political issues and candidates, it ought on the contrary to challenge those issues and candidates and see if they ring true to the farmer. The organized strength of the farm bureau will be of no value to the cause of good government if it is not to be used until after the battle is over. The time for farmers and all good citizens to examine the candidates for office is before and not after the election. By failing to show the proper interest in the character of the next governor and legislators of Michigan, Secretary Bingham plays directly into the hands of the political ring that has saddled so many txaes upon the poor old state the past four years that she groans under the burden, and will continue to pile up the taxes unless the farmers take a hand in the next campaign and elect men who will practice a little economy. The partisan press is already using Mr. Bingham's statements in an effort to show that the farmers are divided upon the proposition of taking an active part in the 1920 campaign.

But our disappointment over Mr. Bingham's opposition to the farmers' political movement is tempered somewhat by the knowledge that the opposition is almost exclusively Mr. Bingham's. Thousands of Farm Bureau members tell us that they are going to help elect men to the governor's chair and the legislature who are known to be in sympathy with agriculture, and we can't imagine that Mr. Bingham's personal views will change their decision.

Farm Tenantry

IN A SPECIOUS attempt to quiet without remedying agricultural unrest, a certain farm paper attempts to prove that farm tenantry is on the decrease. Ergo, all is well with the farmer. This is the soothing syrup method. It is a trifle less harsh than that employed by Nero, who, instead of arguing with the people and trying to convince them that they had no grievances, promptly cut off the heads of the dissenters. But the effect desired is the same. "You really don't need a doctor," says the pacifier, "a dose of this soothing syrup will cure your bellyache."

The propaganda that has been so assiduously scattered over the four corners of the universe against industrial and agricultural unrest is all out of the same bottle of soothing syrup. It soothes the aches of the body politic temporarily, but after a time they return with reinforcements and sooner or later there must be an operation.

The assertion that farm tenantry is on the decrease will not hold water, and it is injurious to the farmers' real grievances to use the deception as an argument that farmers have no cause for complaint. John C. Ketcham, master of the State Grange, quite properly takes the editor of the farm paper in question to task and criticizes him severely not only for his juggling of the facts but for the unworthy accusation that all who preach these facts are circulating "socialistic propaganda." Mr. Ketcham shows to what extent tenant farming is on the increase, and says: "We must do everything possible to change tenant farmers into farm owners. It will not help much to deny the plain facts of increasing farm tenantry nor will it encourage the efforts of earnest workers in this cause to have what they believe to be the facts characterized as "socialistic propaganda."

Detroit's "Fair-Price" Committee has quit. It performed its job well and lived up to the best traditions of investigating committees. It succeeded beyond all expectations in shielding the actual gougers. It raised the cost of living a trifle higher. Several of its members roundly denounced the farmers as profiteers, and told the consumers how sorry they were that prices were so high. But that's about as far as most of our "high-cost-of-living" investigations go.

WHAT THE NEIGHBORS SAY

WHY FARMERS ARE LEAVING THE FARMS

Why are the farmers all leaving the farms? Well, I will tell you as I have been master of the Oldorado Grange for fifteen years and come in contact with the members and about al the farmers of Isabella township, Isabella county, and the main question is the help on the farm. We cannot pay $4 to $6 per day on the farm and farm implements are so high in price that we cannot afford to buy them. I don't blame the boys for going to the city where they can get $6 to $10 per day when we on the farm are only making $1.50 and not figuring the interest on $10,000 or $12,000 invested in farm stocks and tools. Are you not, brother farmer, in the same boat? Wake up, brother farmer and either organize or strike. This is a serious matter and this country will be in worse shape than the European countries for want of foodstuffs and if the government does not take immediate steps to change the situation in the farmers' favor there will certainly be a serious time in getting food. The city people blame the farmer for the high cost of living but it will be well for them to study this matter before they go hungry.

Mr. Editor, why would it not be a good plan to publish the names of those senators that opposed the ratification of the peace treaty so we can have them for future reference. They took our boys, about all of them off the farm and we old men got into the harness and worked the land to grow food to feed them while they were winning the war. What is the government doing for our boys that sacrificed all for our flag and country. Look what Canada is doing for her returned soldier boys.—*Robert Dunn, Isabella County.*

I once heard a well-known manufacturer discuss this problem of boys leaving the farms for the city. He talked for an hour and a half upon the subject without even suggesting a remedy for the situation. I vaguely gathered from his remarks that he was of the opinion that the farmers ought to do "something about it". But was it the farmer who started this cycle of high wages and high prices? Hardly. It was the employers of men in the cities who bidding against each other for labor doubled the wages, tacked an increase onto the consumer, including the farmer, and when the latter boosted his price the employer of labor again doubled wages to enable his employees to meet the advancing cost of living, and again tacked the increase upon the consumer. The problem of high wages is not for the farmer to solve. He cannot solve it. It is something over which he has no contrfol. That lies entirely within the hands of the large employers of labor, and if they cannot bring about a fair level of wages at which farmers can compete with the prices of farm products at the present comparatively low level the consumer is in a fair way to suffer from food shortage.

It would not be entirely fair to accuse all senators who voted against the ratification of the Peace Treaty with being moved by selfish motives, but it would be the part of good citizenship for every good American to look into the arguments presented by these men and if they do not apear sound to prevent such men from again holding political office. Both of Michigan's senators, Chas. E. Townsend and Truman H. Newberry, were listed among the "reactionary fourteen" who were responsible for the defeat of the Treaty in its original form. —Editor.

FROM MASON COUNTY

We note that you are conducting a straw vote for governor. I enclose mine for Mr. Herbert F. Baker and am pleased to state that he would poll a large vote in Mason county.

While it is very essential to have a governor of Michigan in sympathy with the farmer we wish to state that the governor is merely the executive branch of our state government. It is true he has a veto power, but even this can be set aside by the legislative branch. It appears to us therefore that if we farmers expect to get relief we must get it through the legislation part, for we have seen the legislature blast the good intentions of more than one governor. In order to do this it appears to us that we farmers have got to quit our old method of politics, for if Bill votes Republican, John Democrat, Mike Socialist, Jim Socialist-Labor, Sam Anarchist and we follow up and vote Bolsheviki, we are simply divided (there is no bundle of sticks about it) and we accomplish nothing. We may be in error but we cannot help but have a suspicion sometimes that this is the hidden motive of some of the many "farmer organizations," to keep us divided.

We believe in our America. We believe in our democratic form of government, nature has "not forsaken" us farmers; for the sun rises every morning, it rains, snows. We have the seed time and harvest promised us the same now as in 1776, in fact we believe the United States is the best country on earth and there is nothing wrong with it, not a blamed thing, except that it has got a great big overdose of "rotten politics" from national, clear down to township.

Mr. Farmer, it is not necessary for you to have the present conditions in your country, unless you want it and if you don't want it, it is very easy to get rid of it. All you have to do is read over the old fable of the Lark and her Young Ones, in the field of corn. The farmer said, "we will not wait for help any longer, tomorrow we will cut the corn ourselves." That night the lark moved and none too soon, next day the corn was cut.—*Mason County Mike.*

P. S.—Please print the affirmative vote in the senate for the terminal warehouse bill and the negative vote in the legislature.

Farmers are not so far apart on fundamentals as they used to be. We would hardly accuse any farm organization of trying to keep the farmers divided, but it is certain that the farm organizations have not done as much as they should have done and could easily have done to bring the farmers closer together. But inasmuch as they are now trying to break their old habits of isolation and distrust, one for the other, let's not criticize. They are all committed to the election of a farmer-governor and a farmer-legislature, on a platform that should command the support of every good citizen. To win, they will need the support of every farmer and farm woman. If they win there will be better government in store for Michigan.

Senators voting for farmers' warehouse amendment: Baker, Bierd, Brennan, Bryant, Clark, Condon, Davis, DeFoe, DeLand, Harvey, Hayes, Lemire, McNaughton, Mellen, Miller, Penney, Rowe, Scully, Smith, Stoddard, Tufts, Vandenboom, Watkins, Wilcox, Wood.

Representatives voting against warehouse amendment: Allard, Atwood, Averill, Barnard, Dafoe, Daprato, Dunn, Fitzgerald, Glaspie, Gowdy, Blinn, Brower, Brown, Chase, Copley, Croll, Curtis, Griggs, Harris, Hartway, Hopkins, Ivory, Jackson, James, Jerome, Koovers, Leighton, McGillivray, Martin, Merriman, Franklin, Moore, O'Brien, Olmstead, Edward G. Read, Reutter, Robinson, Ross, John M. Smith, Toepel, Ward, Warner, Wells, Welsh, White, Woodruff.—Editor.

PREDICTS HIGHER SEED PRICES

I notice what you say about spuds in your last issue and I believe you are dead wrong.

In the first place, Statistican Snow, of the *Orange Judd Farmer*, a man I have never known to make a mistake on the potato or any other crop for that matter, has been telling us ever since the middle of the summer that the spud crop was a very short one. The number of bushels per capita for the whole population would be nowhere near normal. I see also according to the *Rural New Yorker*, the car lot movement out of this short crop has been the heaviest up to date ever known and movement by truck has been still heavier.

The territory for 75 miles around Grand Rapids, and that takes in the heft of the Greenville territory, is almost entirely cleaned out. I don't believe there is over 10 percent of the 1919 crop left. The crop was planted in May, ripened early and was trucked into Grand Rapids long ago. The movement by truck was something fierce. The oldest living man here has never seen its equal. If scarcity has anything to do with the price you will see prices next spring up to $3 and even $4 per bushel, the same as they were in the spring of '17.—*A. A. Lambertson.*

Well, friend Lambertson, here's hoping you're right. We must remind you, however, painful as the duty is, that you bet us the price of three new subscriptions that the 1918-19 price to the farmer would reach $2 per bushel before the end of the season. You lost. Figures compiled by the Bureau of Crop Estimates thirty days ago show that only slightly more than half the potato crop had been moved to market. This same department estimated a yield higher than the five-year average. On the one hand we have the constantly advancing price of potatoes as seeming evidence that the top of the market has not been reached, but on the other hand we have a better than normal yield, a large part of the crop yet to move to market and the fact that Canada has thus far imported into the United States nearly a thousand cars more than she imported during the entire season of 1918-19. How many potatoes our Canadian neighbors have yet to send into this country we do not know, but it doesn't take many thousand cars of potatoes shipped down through Maine to the eastern markets to break the price. Of course, the colder weather will cause a let-up in these shipments but when spring comes we may expect their renewal in larger quantities. Since our Dec. 20th issue was published prices have advanced all over the country, quite in opposition to the usual trend at this season of the year, so it seems as if you have the "edge" on us a little bit. But we'll buy you a new hat if your local dealer offers you $3 a bushel or better on or before June 15th.—Editor.

MACHINERY IS OUT OF GEAR

Who is the profiteer, and why does not the high cost of living come down? This question comes from many lips. What is the cause of this inflation? Is it caused by underproduction? Then give the farmers more help so they can produce. The farmers are doing all they can with the help they have at their command. The farmer feels the pinch just as bad as anyone because underproduction spells to him a small surplus to sell even if the price of his products are high. It is true that the farmer is a seller but he is also a buyer and everything he buys is extremely high. Besides wages and taxes have doubled in the last few years. A few years ago when common labor was $1.50 per day it took a man 3 1-3 days to earn a barrel of flour at $5 per bbl., and now wages at $5 and flour at $15, it takes him three days to earn it, so the purchasing power of the dollar has increased, not alone in this instance but in many more. Shoes that formerly cost $4.50 or three days' labor, the price of the same shoe today is about $9 or less than two days' labor. But the public never stop to look at what they earn; they simply look at the high cost of what they eat.

There is no question but what everything is too high but if labor continues to strike and demands shorter hours and more pay, every commodity must go higher. So, if we expect cheaper wares they must be produced cheaper and that means cheaper labor. If it is underproduction then why not work 10 hours instead of eight at the same wage, namely $5 per day? The country is short of men in all trades. Nothing is being run to capacity.

We have just passed through the most critical period of our lives, namely the World War, and while it terminated to the satisfaction of the Americans it was a detriment to this country. We will feel the evil effects of it for years to come. It has thrown the cogs of our government out of gear and has caused dissentions among our people. It took our young men across the sea; it paralyzed our industries; it took the young men from the farm, many of whom will never return to the soil Manufacturers paid excessive wages and the farmer could not compete. He is left to dig or die and eke out his existance and work himself and family to death in order to make both ends meet. And the whole blame is placed upon him. The farmers were patriotic and did all that a human being could do during the war and should receive credit for what they did and likewise a compensation. Some farmers made some money during this crisis and it rightly belongs to them. They earned it by the sweat of their brows, trying to keep the multitudes from starving and all this agitation and talk about the farmer profiteering is the only reward he gets for making a slave out of himself and family in order to be patriotic and a good American citizen. For years to come there will be a great demand from foreign countries for food, clothing, etc., and just so long as this demand keeps up the prices will go higher.

The whole machine is out of gear; the belts are slipping and the cogs do not mesh. It needs overhauling from A to Z. Wages must come down; then the cost will follow. When the adjustment takes place it must affect all alike,—the wage earner the producer and the consumer.—*J F. Boes, Bay City, Mich.*

The value of a dollar is determined by the amount of goods it will purchase. It matters not whether commodities increase twenty-five fifty or a hundred per cent in price providing the purchaser's income increases proportionately. The evil of rapidly changing values, whether from a high to a low level, or a low to a high level, lies in the fact that all values do not change simultaneously. It takes several years for fluctuating values on such important commodities as labor, food, clothing, etc., to be distributed equally to all industries, trades and professions which are inevitably affected. When this complete transition once takes place, however, and those who receive higher incomes are forced to pay out the same proportion as formerly, reckless spending is automatically stopped. Many doubt that prices, as measured by the buying power of a dollar will ever go back to their former level, and it is a great problem to know where the start should be made. There is much greater danger to the country in declining values than in advancing values so it is greatly to be hoped that any downward revision of prices will come very gradually.—Editor.

The Week's Editorial--"The American Farmer"

By Dr. FRANK CRANE

According to the annual report of the Secretary of Agriculture, the American farmer leads the world.

After all, the farmer is the fundamental producer. His class, if any class, is the indispensible one.

For we can live without preachers, lawyers, editors and artists; we can live without senators or congressmen or school teachers or governors; we can live without Sam Gompers or Judge Gary or Woodrow Wilson or Henry Cabot Lodge —poorly, perhaps, but we could manage to rub along somehow—but we could not live without the men who raise corn and cattle.

When it comes to production, wealth creating, and all that, the farmer wrote it.

Taking both acreage and yield per acre into account, the American farmer produces 2.5 times as much as the Belgian or German, 2.3 times as much as the British, 3.2 times as much as the French, and over 6 times as much as the Italian.

He produced three times as much in 1919 as in the five year period preceding the war.

The aggregate value of all crops this year is put at $15,873,000,000. During the five year period above mentioned it averaged only $5,829,000,000.

For the last 25 years the average rate of increase in all crops has been about one-half of one per cent.

We are moving forward all the time.

Live stock this year, $8,830,000,000; last year, $8,284,000,000.

The farmers of the nation planted 33,000,000 more acres in wheat than the pre-war average.

These are interesting production figures for 1919: Wheat, 918,471,000 bushels; corn, 2,910,250,000 bushels; cotton, 10,000,000 bales, and tobacco, 1,316,553,000 pounds.

Also, says the secretary, "they increased the number of milch cows over 1914 by 2,700,000, of other cattle by 8,500,000, of swine by 16,700,000 and of horses and mules by 1,000,000, or a total of over 28,000,000.

We shall raise one million bushels more wheat this year than in 1918, and have the second record wheat crop.

We shall have a corn crop of 2,910,000,000 bushels, which will be over 300,000,000 greater than that of 1918.

And at that we have still 60 per cent of tillable land unused.

The only limits to our expansion are capital and labor.

And yet there are those who preach that we ought to swap our American institutions for those of a country where the people are dying like flies of starvation, where labor is crazy and capital has fled.

(Copyright 1919, by Dr. Frank Crane)

WHAT WE CANNOT HAVE

"I would rather appreciate what I cannot have than have what I cannot appreciate."

Health, that greatest of all assets, is more often abused and unappreciated than any other of our possessions. In our mad rush for wealth and position, we often fail to take time to be happy; to read and even to calmly think. And too often it does not force itself upon our consciousness until it is too late.

Only recently we have seen several cases of strong men, stricken in their prime—men who were ambitious to do a little better for themselves or their families, and who never took time to enjoy life as they went along. That wonderful mechanism we call our bodies, finally took these men to task—their hearts—stop watches of their factory—gave warning, and now they are forced to eat more slowly, walk more and ride less, live on a purely vegetable diet, and take time to "take stock" of their lives.

If we only know of these cases—and they abound in every locality, could only profit by them; could take life a little less seriously; play a little more (even if we played at work,) and enjoy health—what a blessing it would be.

Did you ever, as you walked to town imagine that you were a millionaire; were lord of all you beheld, and in letting your imagination run riot, find a song upon your lips? How much better to be able to appreciate what you cannot have, than to really have the limousine and not be able to walk. After all, if you have a good imagination you own the whole world.

SEEN IN CITY SHOPS

January is the time when, if you have saved your money, you are indeed fortunate—for it is the month of sales. All through the streets of the cities you will find the shop windows full of white goods—linens and cottons—for this is the month when milady takes stock of her linen chests and replenishes her supply. Linens are so scarce and expensive, that all manner of substitutes have been devised, chief among them being the new lunch runners instead of lunch cloths. It doesn't take so much cloth, and if you have a good looking table, the linen runners hemstitched and crossed in the middle make an attractive dress for the table for breakfast and lunch especially if your family is no larger than four.

In the art shops I noticed that the embroidered initials and monograms were conspicuous because of their size—they are so small that on a sheet or tablecloth they look like mere flowers But Dame Fashion has decreed that the huge letter of the past shall give way to this little neat letter.

And the heavy bed spreads have stepped aside to let the light weight cotton crepe take their places. They are so much easier to launder that it will be hard for our sisters across the waters to sell their heavier wares again, methinks even when the ban is lifted and linen is once more plentiful in this country.

And then there are the furs—sales are going on in every store carrying this kind of luxuries. A woman whom I recently met and who travels a great deal told me that she had found that the rat coat wore better than anything else she had ever had and as her businss takes her on the road most of the time she wears our numerous coats.

WINTER EVENINGS WITH THE CHILDREN

How to amuse the children when their Christmas toys have palled on them a bit and the books they received have all been read, and at the same time teach them to play games that will call into action their ingenuity, is a question which occurs to every mother during the long winter evenings.

We are sure that the following suggested games to be played by making things from newspapers can be used many evenings very effectively, and will be welcomed by our readers who have small children. It is written by Mrs. Louise H. Peck, of the Kindergarten Department, Washington, D. C.

Kindergarten lessons may be taught with simple material found in every home if only the mother possesses with the play spirit, the idea of working toward perfection in every smallest thing. Never discourage any effort, no matter how crude, but remark: "You have worked well, and next time your work will look even better." If possible, do the work yourself first, alone, so that you may explain it clearly when working with the child.

"HARVEST HAND" IN ROUMANIA

Pretty Roumanian girls work around threshing outfits pitching straw. This girl was working alongside a husky peasant boy of about 20 years of age and was pitching the bundles over to the cutters as fast as the boy could pitch them to her. Harvest of the Roumanian wheat crop has given the country some surplus grain. Owing to the German requisitions and the general looting of last autumn the country was left without breadstuffs which were supplied by America during the winter and spring.

Never take a child's work to show him how to do it. Show him with another piece. His work is strictly his own.

The following suggestions are for children of all ages, from four-year-olds to grownups, and it is much more fun when different ages work together. For our fun, we need only flour or prepared paste, and the newspapers which have been folded carefully away, waiting for us all this long time.

CHAINS—Cut the white margins from several newspapers very straight and all the same width. Then cut these in strips five inches long, all exactly the same length and with ends cut straight. Take one strip, and paste ends evenly together to form a ring, holding for a moment until the paste catches. Slip another ring thru this ring, paste the ends as before, and now we have two rings, one linked within the other. Go on in this way until a long chain has been made. Sometimes brown wrapping paper strips may be alternated with the white newspaper strips. Later, make chains that will teach numbers: one brown, one white, two brown, one white; three brown, two hite, using all kinds of combinations.

Don't cut the strips for the children. The preparation of their on material is a wonderful part of the lesson.

When several long chains have been made, they may be swung to music or singing, or used as a jumping rope swung back and forth slowly but not over the head.

Pussy Chains

These are also made from evenly cut margins, and in as long strips as possible. Lay the ends of two strips across each other at right angles, and paste together. Fold the under strip over across the pasted end of the upper strip, but do not paste. Keep on folding one strip over the end at exactly right angles until they are used up. Paste on other strips to make the chain longer, and paste ends together to finish.

These chains are pretty made of two colors, and may be used as decorations for a Christmas tree or as a rope for jumping or to hang on the wall.

Paper Sticks

Now let us make some paper sticks for laying patterns or pictures on the table as we would with toothpicks. Cut a strip from the white margin or from the printed paper, half an inch wide and twelve inches long. Dip one corner of one end in water and begin to roll tightly at a slant Keep on rolling tightly, holding the tip with the right hand while the left hand folds and rolls the strip. When completely rolled into a paper stick of five or six inches, hold firmly and fold over the end. No paste is needed. This makes the old-fashioned lamplighter or spill. Illustrated newspaper sheets make pretty variegated sticks.

When fifty or more of these sticks have been made, use them for laying pictures of houses, trees, fences and other objects. Sometimes we bend the sticks for roofs, curves and corners. If the child wishes to keep a picture, have him make a penciled drawing of it in a scrapbook prepared of smooth wrapping paper. All kinds of geometric figures may be made with paper sticks: oblongs, squares, circles, triangles and so on.

The bent sticks are kept in one box, the straight ones in another. In still another box we have all kinds of queerly bent paper stricks. These are our jackstraws, and we make our wand for lifting the sticks, from a longer strip of rolled paper, bent at the small end to make the hook.

Paper Pipes

These are made of whole sheets of newspaper, rolled into long loose cylinders, measuring three to four inches across the end, the ends being folded or bent tightly in toward the center to keep the pipe from unrolling. To make water pipes, slip the end of one into the end of another, and lay as many as are desired, following the mopboards or anywhere else about the room.

These rolled sheets may be stood on end for a stockade fence, or placed across each other to build a log house.

Stepping Stones

Half sheets of paper placed on the floor, a long step apart, make good stepping stones over a running brook, the floor being the "water." Care must be taken to step straight and squarely on the paper to avoid slipping. The game is a fine one for developing quick balance. Sometimes we play "Eliza crossing the Ice," with the dolls held tightly in our arms.

Castles

Roll doubled sheets of newspaper into cylinders, big short ones, and big high ones. Look at some good castle picture and see how to pin the cylinder towers together, with long balconies. Good drawbridges and portcullis may be made by skillful fingers, also a moat from brown paper. The growing castle in the corner of the room has been known to make a whole family study pictured castles as never before, and when everyone helps in the building, there is more than a castle being built.

Women in Politics

Conducted by JUDSON GRENELL

If to be ignorant were as safe as to be wise, no one would be wise. Table talk proves that nine out of ten people read what amuses them rather than what instructs them. The last thing people read is something which tells them disagreeable truths. To the mass of the people, nothing is so costly as thought—*Herbert Spencer.*

NATIONAL PROBLEMS

UNDER THE present system of electing a president and vice-president of the United States those elected are just as apt to be the choice of the minority as of the majority of those voting. Each vote—man or woman—counts one in the state where it is voted; the electoral collage representing the choice by

states, finally decides who is to preside at the White House. Thus a minority candidate, so far as the popular vote is concerned, may win the election. Michigan has as many votes in the electoral college as it has senators and representatives.

President

The United States has been fortunate in its plurality presidents. Lincoln, for example, and now Wilson. Some majority presidents have not been equal to the responsibilities of their high office. Thus it happens that a president may hold one set of political opinions, while the representatives in congress, which are undoubtedly closer to the people, may entertain entirely different views as to what the government should do. However, in times of stress, these differences disappear. But when conditions are once more normal, or tending to normal, methods and measures are approved or disapproved according to party principles.

Congress

Congress is composed of senators and representatives, the senators representing the states and the representatives representing state districts. Each state is represented by two senators, without regard to area or population. The representatives are proportioned to each state according to population. Michigan has 13 representatives in congress, each one representing, according to the last census, from 200,00 0to 250,000 people.

Just as the political principles held by the president may be different from the political principles of the majority in congress, so too, the political principles of state senators may differ from the political principals of a majority of the state representatives.

In consequence of all this, neither the president nor congress is responsive to the will of the people. But democracy is still young; voting is a new exercise of authority, and while the man voter has blundered in shaping a democratic form of government, he has been omproving the machinery. And no greater step in this direction was ever made in Michigan than when women were given the ballot.

Home Interests

In voting for a president or for a representative in congress, the voting woman will naturally think of home. And though "charity begins at home," it doesn't stop there; the home is not absolutely everything. There are 20,000,000 homes in the United States. What is the better, to vote for something that will favorably affect but one's own home, or to vote for what will favorably affect a majority of the 20,000,000 homes. This is one of the problems up to the Michigan woman voter to help decide. In making a decision perspective is needed. Will the woman voter be equal to this emergency? How often has the voting man failed to see farther than the end of his nose?

Both men and women are naturally short sighted in this matter of selecting national officers and laying down national principles. Their vislons are bounded first by the home, second by the state and lastly by the country at large; and the nearest object though smallest, always seems the largest.

Rely on General Principles

In this as in all other instances where there is the least doubt as to one's duty, the only safe plan is to rely on general principles. And while general principles may seem to run counter to what is best to do (and there are occasional instances where it does not fit into the unusual local conditions prevailing,) they are notwithstanding, the only safe guides to follow.

A course of political action which unfavorably affects any considerable number of fellow citizens must more or less disastrously react on all citizens. Industrial prosperity in one section of the country, at the expense of other sections, is sure to be followed by a reaction which in some cases is liable to seriously affect the prosperity of all sections.

Vision Needed

No candidate, presidential or congressional, is the best candidate for the Michigan voting woman to favor who does not possess an imagination that takes in the whole world. Presidents and congressmen must now wrestle with world problems. They must decide what is best for humanity. No congressman can do his duty by his immediate constituency unless he has this outlook. For, after all, isn't the greatest happiness to be attained by considering humanity, by and large, as of one family? And cannot the woman, more than the man, be depended on to have this great and inspiring vision?

Sentiment

After all, sentiment is a greater moving force in the world than logic. The woman is pre-eminently a sentimentalist. Man is the more selfish of the two. He too often votes only for himself or for his own personal interests. Women can well say, and she more often will say, "I shall vote for the happiness of the whole human race."

It is a great honor to help elect a comparatively small body of legislators sufficiently broad-minded and intelligent to wisely legislate for the interests of 100,000.000 people. How important it is that these officials be equal to their responsibilities! They must have imagination. It is a poor legislator indeed who can see no further than his own back yard.

Taxation

Before the world war started it required about a billion dollars a year to meet the expenses of the national government. The amount seemed large then; since the nation's expenditures have run into the tens of billions, on account of the war, a billion dollars of expenses seems trivial. The billion dollars was almost entirely raised by tariff internal revenue and income taxes; the tariff taxes through customs houses, and the internal revenue taxes being indirect. The war has necessitated the increase in indirect taxes and taxes on incomes, and as

READING, MICH.

The Children's Hour

DEAR CHILDREN: I know a lot of my little folks received books for Christmas, and as we all are anxious to learn of the new books which are most interesting, I wish you would tell me what books you received and which one interested you most and why, in the next letter you write me. Perhaps you have read a book which others would enjoy reading.

That's the way we all profit in life—by passing the good things around. Not only in books, but sharing with others all we have. It wouldn't be a bit of fun to have toys or pets on a desert island where there was no one to enjoy them with us, but when we can share them with others how much nicer they seem.

Our artist tells me that there are a couple of prizes to be awarded but he was so busy this week that he didn't get time to tell me which ones, so that will have to keep until next week. Affectionately yours—Laddie.

Heigh-Ho!

The wind is chill, the sky is gray
And snow is in the air;
The summer birds have flown away
And all the trees are bare.

But high the logs blaze in the grate
And Zip! the corn grains pop;
We plead that we may stay up late
So that the fun won't stop.

Heigh-Ho! we cry for winter's here
And winter joys you know
Are far the best in all the year
For they mean ice and snow.

And ice and snow mean skate and sled
And snowball battle's din;
And after play a downy bed—
Safe cuddled warm within.

FROM OUR BOYS AND GIRLS

Dear Laddie:—This is the second time I have written to you. The first time I wrote my letter was not in print. My father takes the M. B. F. and likes it very well. I read the Doo Dads and like them. I live on a 40-acre farm. For pets I have three cats. We have two horses, two cows and about 25 chickens. My name is Avis Smith and I am nine years old and in the 4th grade. The name of my school is Wolcott. I will close, hoping to see my letter in print.—Avis Smith, Blanchard, Mich.

Dear Laddie:—This is the first time I have written to you. My father takes the M. B. F. I like the children's page. The Doo Dads are queer little fellows, aren't they? I am 15 years old and in the 8th grade. My teacher is Miss Margaret Beemer. She is a good teacher. I live on an 80-acre farm. We have two horses, six cows and seven calves. We also have a cat and two rabbits. I go to the Edwards school. I will close now, hoping to see my letter in print.—Gladys Burt, West Branch, Mich.

Dear Laddie:—I am a girl 12 years old. I am in the 6th grade at school. My teacher is Miss Maxson and I like her very much. I go to school all I can. I have been sick two weeks. I hope my letter will escape the waste paper basket. I wish some of the girls would write to me. I will answer all the letters I can.—Mary Milliman, Augusta.

JUNIOR COOK—CORNMEAL MUSH

Three cups of water; three-quarters teaspoon salt. Put in a two quart can and bring to a boil. Just before the boiling begins, while the bubbles are ready to dance up from the bottom, shake in very slowly: One cup of yellow cornmeal. Stir till smooth and then cook for ten minutes over a slow fire. The success of this cornmeal depends on adding the cornmeal gradually just before the water boils. If done right the mush will be smooth and delicious. Serve at once with cream and brown sugar. This makes a nourishing dish for lunch or supper and is very quickly prepared. This amount serves four large dishes.

RIP SAW TEETH, SHOWING SHAPE,-FILED STRAIGHT ACROSS.

ONE of the first things a workman will need in starting construction work is a saw. There are many other cutting tools, it is true, but a saw has a definite use that no other tool can be put to and accomplish the work as well.

Saws are used for cutting many kinds of material, but the ones we shall consider here are those for cutting wood only. They are of two general classes. crosscut and rip. The crosscut is used only for cutting across the grain of wood, and the rip saw for cutting with the grain.

If we have a board several feet long and wish to divide it into several short lengths, we would have to do our cutting across the board, that it, at right angles to the length. The grain in this case would be in the direction of the length of the board, in cutting across the board we would also be cutting across the grain, hence would use the crosscut saw.

If instead of wishing to cut the board into short lengths we wish to divide it into several strips of the same length as the board, our sawing would have to be done from end to end, that is, in the same direction as the grain runs, so we would use the rip saw.

In order to accomplish this different cutting, it is necessary to have teeth of special shapes. In figures 1 and 2 we see the teeth of a crosscut saw from two positions. In figure 1 we are looking down at them, not straight down, but at an angle. In figure 2 we are looking at them from the side—at right angles to the side of the blade of the saw.

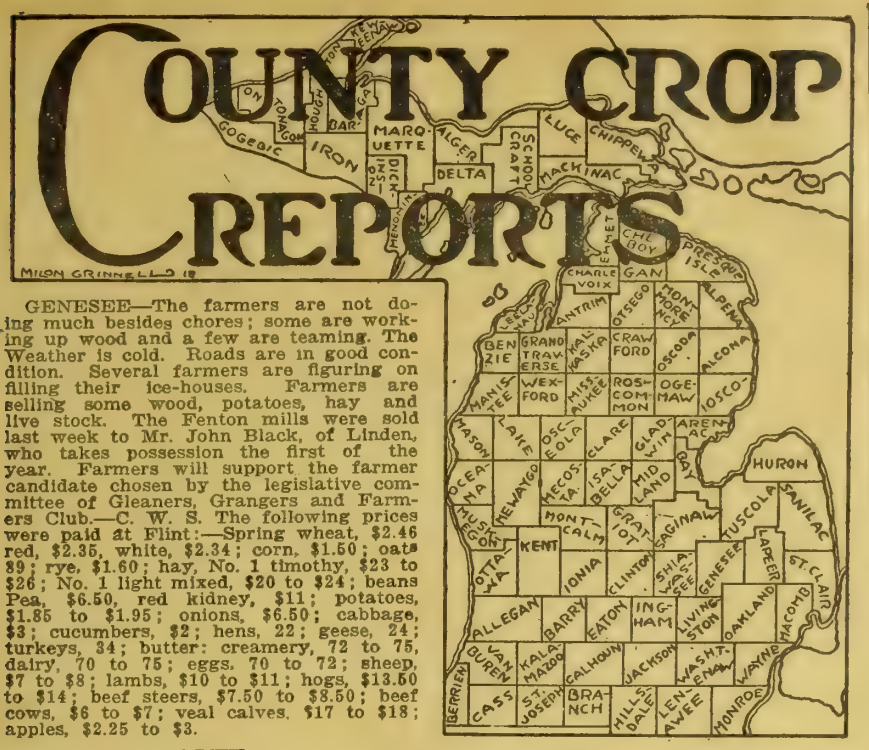
It will be seen from these figures that the edges of the teeth are similar to a knife and when forced across the grain the fibres are cut off. It will also be noticed that the points of the teeth are bent alternately from right to left. Let us see why this is.

If we attempt to cut a piece of wood in two with a knife by moving it back and forth and pressing straight down, soon we will be unable to continue owing to the thicker part of the knife coming in contact with the sides of the cut. It is necessary that some part of the stock be removed to allow passage of the blade. In this case it would be secured by removing stock from the sides, and as this must cause a wide V cut to be made, and cannot be done evenly at best, the method is not satisfactory. In the case of the saw, we have said that the teeth are bent outward from the side of the sawsaw. As the points of the teeth start the cutting, it is evident that the path through the wood will be wider than the saw blade, hence no binding occurs. The bending of the teeth is called setting, figure 5. Note figure 3. The sharp points start cutting first, making a long scoring mark across the grain as in figure 4. As pressure is applied to the saw, it works farther and farther into the wood, the parts broken or cut off are carried out of the cut by the movement of the saw, and a clean, straight cut results.

The rip saw teeth have a different action to perform, so are of a different shape. The rip saw cuts with the grain instead of across it. The cutting action is quite different. The wood is forced out in longer parts. This is noticeable in the case of ripping a board that is not real dry. The waste material comes out in strings, the action of the saw being more on the order of separating the grain—that portion that is in front of the teeth being pushed out. Rip saw teeth are filed straight across—at right angles to the side of the saw. Compare the shapes of the teeth before going any farther—figures two and eight. Examine figure 7 carefully. This shows the cutting action very nicely. A further comparison might be made with the cutting action of a chisel. Study all the figures and you cannot help but get a good understanding of the difference between the operations of the two kinds of saws.

Figure 9 shows a handsaw as generally referred to—it may be crosscut or rip. The saw shown in figure 10 is also handsaw but is always referred to as back saw. It has a metal strip along the back to give stiffness for accurate work. It is shorter than the handsaw.

COUNTY CROP REPORTS



GENESEE—The farmers are not doing much besides chores; some are working up wood and a few are teaming. The Weather is cold. Roads are in good condition. Several farmers are figuring on filling their ice-houses. Farmers are selling some wood, potatoes, hay and live stock. The Fenton mills were sold last week to Mr. John Black, of Linden, who takes possession the first of the year. Farmers will support the farmer candidate chosen by the legislative committee of Gleaners, Grangers and Farmers Club.—C. W. S. The following prices were paid at Flint:—Spring wheat, $2.46 red, $2.35, white, $2.34; corn, $1.50; oats 89; rye, $1.60; hay, No. 1 timothy, $23 to $26; No. 1 light mixed, $20 to $24; beans Pea, $6.50, red kidney, $11; potatoes, $1.85 to $1.95; onions, $6.50; cabbage, $3; cucumbers, $2; hens, 22; geese, 24; turkeys, 34; butter: creamery, 72 to 75, dairy, 70 to 75; eggs, 70 to 72; sheep, $7 to $8; lambs, $10 to $11; hogs, $13.50 to $14; beef steers, $7.50 to $8.50; beef cows, $6 to $7; veal calves, $17 to $18; apples, $2.25 to $3.

BAY, (S. E.)—The weather is cold and very little snow. The wheat went into winter looking good and had a good start. Grass fields very short. Farmers all busy. Some are drawing mine rock on the roads. The young men are working in the coal mines and doing other work; the older men can do the farm chores. Not much being sold off now. Some hay to bale yet. Corn mostly all husked and turned out good. The health of the people is good.—J. E. A. The following prices were paid at Bay:—Wheat, $2.31; corn, $1.40; oats, 84; rye, $1.56; hay, No. 1 timothy, 22; No. 1 light mixed, 21; beans, $6.50; potatoes, $2.50; cabbage, 4; hens, 21; springers, 21; geese, 22; butter, 70; eggs, 70 to 75; lambs, 17 to 18; hogs, 17 to 18 dressed; beef steers, 10 to 12; beef cows, 9 to 11; veal calves, 19 to 20.

LAPEER, (East)—Weather is very cold this week with some snow and wind. Farmers pressing some hay with price a little better. One of my neighbors sold this week for $24 clear of the press. It was good hay. Some farmers are preparing to rebuild their barns and other buildings which were destroyed in the storm of Nov. 29. Some of the farmers have contracted for an increased acreage of beets for this year; it seems as if they paid out pretty well this year.—C. A. B. The following prices were paid at Imlay City:—Wheat, $2.10; oats, 75; rye $1.20; hay, $18 to $24; rye-straw, $6; wheat straw, $6; oat straw, $5.50; potatoes $1.10; butter, 62; butterfat, 65; eggs, 68; wool, 60; apples, $4 bu.; beef steers, $7 to $10; beef cows, $4.50 to $7 veal calves, $10; sheep, $3 to $5; lambs, $12; hogs, $13.

MONROE, (N. E.)—We are having very fine winter weather, but no snow, and wheat is beginning to suffer. Farmers are busy doing chores, cutting wood and hauling. Less cattle and practically no hogs nor pigs of any kind carried over, also some land will lie idle next year. Markets are bracing up all the time, except beef and pork, which are hard to move. Farmers ask what is the use of stopping at a farmers' candidate for governor. Why not have a clean-up all along the line? They seem to think it would be good for all concerned.—G. L. S

CALHOUN—Farmers are cutting wood and doing chores. There is some hay going into town. Wood is in good demand at $5 per cord. The weather is cold and clear and not much snow. Hogs are bringing a little better price. The following prices were paid in Battle Creek:—Wheat, $2.40 to $2.38; oats, 85; rye, $1.50; hay, No. 1 timothy, 30; No. 1 light mixed, 28; potatoes, $2; hens, 25; springers, 25; butter, 60; eggs, 75; lambs, 10 to 15; hogs, 14; beef steers 8 to 10; beef cows, 5 to 7; veal calves, 10 to 16.—C. E. B.

JACKSON, (S.)—Weather moderate. Roads good. Not much grain being marketed at present. Poor market for beans. Coal scarce; considerable amount of wood being sold. Hay very scarce, marsh hay bringing $15 per ton; hay in barn selling at $32. Eggs sold at 85c but not many to be had even at that price. Butterfat, 70c. Good muskrat hides bring $3, but the farmer boys find it difficult to secure many on account of the ice. Taxes very high.—G. E.

HILLSDALE—The City Delivery Ice Co. of Cleveland, O., is harvesting several thousand tons every day, the biggest day so far being 26,000. The ice is 11 1-2 inches thick and the best quality ever harvested. The company employs from 200 to 300 men. We are having nice winter weather. Stock is in good condition. Considerable timber is being sold.—H. J. B.

HURON—The following prices were paid at Caseville:—Wheat, $2.26; oats, 80; rye, $1.59; hay, No. 1 timothy, 24; No. 1 light mixed 23; beans, $6.50; potatoes, $1.30; onion, 10; hens, 14; ducks, 30; geese, 27; butter, 60; butterfat, 65; eggs, 70; hogs, 16; beef steers, 9; beef cows, 7; veal calves, 17; apples, $2 50.—C. G.

MASON (W.)—The days are short and farmer folk are kept busy with chores, getting wood and feed, and the many odd jobs always to be found on a farm. Some feed, hogs and an occasional load of potatoes being marketed. Weather mild.—B. M.

CHARLEVOIX, (S. W.)—Farmers are doing chores and cutting wood; a few are cutting hogs and selling them. The price is fair but the scale is not. The company uses Doyle's rule up to 24 in., as that favors the buyer and above 24 in. they use Scribner's as that favors them some more. We used to pay $5 per M for sawing at the company's mill; later it was raised to $8 and on Dec. 23 it was raised to $15; over 100 per cent. Wages did not go up.—C. M.

MIDLAND (S.)—A cold wave struck here recently. It keeps the farmers busy doing their chores and sitting by their stoves, also hauling wood and buzzing. No produce at all going to market. A quantity of corn is in the shock—J. H. M.

SAGINAW, (S. W.)—We are having fine winter weather. Plenty of ice is being put up at present. A number of farmers are baling hay and finishing husking their corn. Not very much farm produce going to market at present. A number of farms are being sold, farmers moving to town to live.—G. L.

MISSAUKEE—The farmers are getting wood and trying to keep warm as winter is here in all its glory; eight below zero this morning and 10 inches of snow. Mitchell Bros. Co., which has been lumbering here for 20 or 25 years, has finished and is moving out, leaving the land pretty well cleared up.—H. E. N.

ST. CLAIR—Farmers not doing much just now. Paying taxes is the main business at present. Weather is fine for all kinds of work. Ground is frozen hard. There is no sleighing, but the wheeling is fine. Some hay and grain being sold. The health of this community is good at this time.—I. J.

CHIPPEWA (W)—Weather somewhat milder; plenty snow for good sleighing. Rustling and sawing wood is the order of the day. Some farmers have gone to lumber camps. Some hay now being hauled at fair prices.—J. L. R.

SHIAWASSEE, (S. E.)—Weather is very cold with little snow. Roads are icy. Many ice houses being filled with solid, clear ice, eight and ten inches. Owing to the scarcity of timber in this section not very much wood as logs are being cut. Farmers are depending on coal for fuel. Quite an acreage of fall plowing has been done here this season. Owing to the unsettled market conditions of the prices for the coming season, very few contracts for sugar beet acreage have been signed as yet.—D. H. M.

ALLEGAN—We are having a spell of very moredate weather. About three inches of snow and the roads in perfect condition for wheeling. Nothing much doing among the farmers except chores. Not much produce moving, except a little rye. About 2,000 new members were secured for the Allegan County Farm Bureau in the recent drive.—W. F.

INGHAM—Steady cold winter weather with very little snow. Chores about all that is being done. Some little stock being sold. A few are getting out logs for a portable mill to saw for farmers. Some are planning to burn some. The new condensed milk factory for Mason has commenced and expects to be ready by the first of April. Over 4,000 cows are promised by farmers to furnish milk.—C. I. M.

MANISTEE, (W.)—The farmers are hauling hay, cutting wood and doing work around farms. Weather cool, snowy and blustery. Soil frozen. Not much of a crop at present. Auction sales in progress. I am confident that farmers are holding their beans and potatoes for higher prices. Potatoes are now $1.50 a bushel and beans have advanced lately. Farmers are not building much or buying except at auction sales.—H. A.

MANISTEE, (N.)—Farmers are cutting wood and doing chores. Some are hauling a few logs; others are hauling wood to town. Weather is milder and the snow is going fast. Some potatoes are going to market these days as they have raised a little. Another auction sale in the near future. Some road-building and some logging, but not much. Some hogs and cattle being sold. One neighbor sold a hog that weighed 735 pounds.—C. S.

YOU NEED THIS!

It's a matter of getting more from your labor in the way of crops, of getting more from high priced seed, of making expensive land earn more. For that is exactly what the Burch Pulvo-Packer does. It adds the profit to the crop.

IT EARNS MONEY FOR YOU

Because it prepares a seed bed that gives the plants an opportunity to grow, by pulverizing the clods so plants can break through, gently packing the soil around the seed, pressing out the air spaces, and covering all with a fine mulch that preserves moisture.

It's the finishing touch that insures the profit. No other implement can take its place. Strong, simple and light draft.

BURCH IMPLEMENTS

are always reliable, up to date and effective. They have been used for 45 years in this territory, and represent the conscientious effort to build what the farmer needs. Burch plows, harrows and pulverizers stand up in service, are convenient and durable. Made only in Crestline, Ohio.

Uncle Rube Spinach Says:

JEST THINKIN'

IT MAY seem strange to readers of these articles that on the day this is written, Jan. 1, 1920, the beginin' of the new year, your Uncle Rube should be thinkin' of death, an' funerals, an' flowers. You perhaps wonder why such thoughts should come on a day when everyone is shoutin', "Happy New Year," an' joy is everywhere. Well, listen to me now:

We can not think of life without thinkin' of death. The two thoughts are inseparable.

But in life how seldom do we think of givin' flowers. It is only when Death steps in an' some poor soul has passed to that bourne from whence there is no returning, that flowers enter into our consideration. Then we vie with each other to see who can bring the sweetest blossoms, the most elegant wreathes, broken wheels, an' beautiful pillows, suggestin' rest.

An' what is all this to the one, who, perhaps, has never had a flower given durin' the troublous life he or she may have lived? An' there are so many kinds of flowers, an' so many ways of givin' em!

Death is not such a terrible thing. Life, with all its cares, responsibilities, disappointments, doubts, an' fears, is a more terrible thing; an' yet life has to be lived only one day at a time. What we need to make life beautiful to all about us, an' with us, is flowers.

The dead do not require flowers—provided they have had them during life. But the livin'—the beatin' human hearts that laugh an' weep—require flowers an' they need 'em now.

An' what is all this to the one, who, give? No expensive ones are needed, that is sure; just kind words, a friendly handshake, a hearty "hello," with a little slap on the shoulder, is worth more to the man a feelin' blue, than all the blossoms, wreaths an' pillows that could be piled onto his coffin, tho they cost thousands of dollars.

Flowers, you say, make death less terrible, an' funerals less gloomy. That may be true; is true, of course. But if that is true of death, how much more true is it of life. At a funeral, the principal actor—the one in the casket, realizes nothin,' sees no flowers, senses none of their sweetness, an' receives no benefit. But to this same person, flowers given durin' life might have meant everything.

So, dear friends, if we have flowers to give, let us give them now; now, when our friends an' those who need them, can enjoy them; give them freely an' with a lavish hand; for, in givin' them to others they will come back to us a thousandfold.

Let us speak no unkind word to a fellow being. We can not know the heart that is beating, even beneath the tattered coat or simple, homely dress—the human heart is unfathomable, an' oftentimes a kind word once spoken, brings sunshine out of gloom, joy out of sadness, an' changes the whole world to some lonely, homesick sufferin' soul. This is why the thoughts of death, funerals an' flowers come at this time.

It jest happened to occur to me that we are gettin' the notion that funerals are about the only time when flowers are appropriate. They are always in style an' the time to give them is NOW. An' please remember that smiles, kind deeds, cheering words, an' friendly acts, are flowers.

So, let us include in our New Year resolutions this resolution: We will be a little more considerate of others, a little more kind an' a little more forgivin' than ever before—an' will try an' make as many people happy as lies in our power to do.

A Happy New Year to all. Cordially yours—*Uncle Rube.*

The Use of Green Bone as Poultry Food

By R. B. RUSHING

THERE is no time in the year when fowls need as much intelligent care as at this time—midwinter. They are wholly dependent upon their owner or attendant for food. The ground is covered with snow much of the time, and it is impossible for them to get the food that is supplied by nature at other seasons of the year.

In order to get the best results the condition should be made as near the conditions as the summer season as possbile. Now only should the fowls be comfortably housed, but great care should be taken to provide the different foods or their equivalents that nature provides during the warm season. When at liberty in the summer time a hen's daily ration is made up of grains, seeds, green stuff, insects and worms. It is a noteworthy fact that a hen when at liberty will leave any other feed, no matter how tempting it may be, to chase after an insect or gobble up a big juicy worm. Throw down a handful of any kind of grain and a few pieces of meat, and the meat is always the first to be eaten. A flock of hens will ravenously devour a mouse if the little rodent is so unfortunate as to get in their clutches.

There is a reason for all this. Man will load up on pie and pudding and other things simply because they are pleasing to the taste, but I have always had my doubts as to whether the hen really has the same sense of taste at all. If she had, she would not be in such a hurry to swallow her food. The truth of the matter is, the hen is a creature controlled perhaps entirely by animal instinct, and instead of seeking food to satisfy her sense of taste, she seeks to satisfy the necessities and cravings of nature.

Yes, it is natural for hens to lay some eggs, but in order to produce an egg she must have food that will supply the constituents of which the egg is composed. These are found in a greater or less degree in the grains and vegetable foods, but practical experience has thoroughly established the fact that fresh cut green bone is among the bes food for laying hens, containing as it does, more nearly all the elements that enter into the composition of the egg.

Being strong in protein, green bone serves the double purpose of furnishing egg material and also supplying material for the building up of the tissues and organs of the body which are constantly wasting away from use. This can only be done by the protein in the food, and no other food can take the place of green bone for this.

There is no one food, however, that can be fed exclusively with profit. A variety is necessary. At this season the poultryman is feeding for eggs (or at least should be,) and it is money in his pocket to select foods that will best serve his purpose. The real value of the foodstuffs depends largely upon the amount of protein and fat they contain, when feeding for eggs, as protein enters so largely into the composition of the egg.

WOMEN IN POLITICS

(*Continued from page* 15)

well as stamp and other taxes, and until the world returns to its normal industrial condition all these taxes will continue.

Hastily laid taxes are usually inequitably placed, and the present tax laws of the national government furnish numerous examples. Many things are inadequately taxed, many other things are taxed too high to furnish revenue, some taxes ruin business, while others increase the profits.

In Michigan's country districts state, county and local taxes are paid at one time, and acknowledged on one receipt. Today no woman can tell just how much taxes she is paying, because some of these taxes are direct and some indirect. For example, taxes on incomes and land values are direct; they cannot be shifted; the indirect tariff taxes are first paid by the importer, who adds the tax to the price charged the wholesaler, who in turn adds the tax when he bills the goods to the retailer. Then the retailer considers the tax a charge against the goods and adds it to price charged the consumer. *(To be continued)*

Live Stock Market Booms, Then Slumps

LIVE STOCK shippers have been pleased the last few days because of a firming up in the live stock market in Chicago, Buffalo and Detroit and other centers. One of the notable features in the live stock news in the rise in the hog market Chicago of 35 cents in one day. Crop reporters say that better prices are being given. But big receipts have caused a slump temporarily. Quotations follow:

DETROIT—Cattle: market steady; best heavy steers, $12@12.50; best handy weight butcher steers, $10.50 to $11; mixed steers and heifers, $9.50 to $10; handy light butchers, $8.50 to $9; light butchers, $7.50 to $8.50; best cows, $9 to $10; butcher cows, $7.50 to $8.50; cutters, $6; canners, $5.50 to $$5.75; best heavy bulls, $10; bologna bulls, $8 to $9; stock bulls, $7 to $7.50 milkers and springers, $60 to $135. Veal calves: market strong to good; common, dull; best steady; best, $22 to $23; others, $10 to $20. Sheep and lambs: market steady; best lambs, $18 to $18.50; fair lambs, $16 to $16.75 light to common lambs, $12 to $15; fair to good sheep, $9.50 to 10; culls and common, $4 to $8. Hogs: market strong, all grades, $15.25. grades $15.25.

CHICAGO—Hogs: active, 25 to 35c higher; bulk, $14.95 to $15.15; top, $15.25; heavy, $14.95 to $15.15; medium, $15 to $15.25; light, $14.90 to $15.15; light lights, $14.50 to $15; heavy packing sows, smooth, $14.40 to $14.85; packing sows, rough, $13.75 to $14.40; pigs, $13.75 to $14.75. Cattle: strong; beef steers, medium and heavy weight, choice and prime, $18.75 to $20; medium and good, $11 to $18.75; common, $8.75 to $11; light weight good and choice, $13.50 to $19.25; common and medium, $8 to $13.50; butcher cattle: heifers, $6.75 to $14.75 cows, $6.60 to $13.50; canners and cutters, $5.50 to $6.60; veal calves, $15 to $17.25; feeder steers, $7.50 to $12.50 stocker steers, $6.50 to 10.50. Sheep: lambs, $16.20 to $18.90; culls and common, $12.50 to $15.75; ewes, medium and good, $8.50 to $11; culls and common, $5 to $8.25.

EAST BUFFALO—Cattle: steady to 25c higher; prime steers, 16.50 to $17 shipping steers, $15.50 to $16; butchers, $10 to $15.50; yearlings, $14 to $15.50; heifers, $6 to $11.50; cows, $4.50 to $10.75; bulls, $6.50 to $10.50; stockers and feeders, $6 to $10.25; fresh cows and springers, $55 to $175. Calves: 50c higher, $6 to $23. Hogs 25 to 50c higher; heavy, mixed and yorkers, $15.50 to $15.75; light,do and mixed pigs, $15.75 to $16; roughs, $13 to to $13.50; stags, $10 to $12. Sheep and lambs: strong, 25 to 50c higher; lambs, $11 to $19.50__; yearlings, $10 to $16; wethers, $11.50 to $12.50; ewes $4 to $10.50; mixed sheep, $11 to $11.50.

Detroit Produce Market is Reported Firm

Nearly all kinds of produce are firm in Detroit markets and some are quoted higher. Onions are higher. Poultry is in active demand and receipts are not large. There is little activity in the fruit market and apples are dull. Cranberries have declined with the close of the holiday season. Quotations follow:

Cranberries—Cape Cod, $10.00 and $10.50 per bbl; boxes of one-half-bbl, $5 and $5.50.

Apples—Western, boxes, $3.25 and $3.50; Spy, $3.25 and $3.50; Baldwin, $3.00 and $3.25; Greening, $3.00 and $3.25 per bu.

Popcorn—Shelled, 15c per lb.

Cauliflower—$2.50 to $2.75 per case.

Honey—White comb, 32 and35c per pound.

Potatoes—$5.75 and $6.00 per 150-lb. sack.

Celery—Kalamazoo, 50 to 75c pe bunch.

Onions—Indiana, $5.75 to $6.25 per 100-lb sack.

Cabbage—Home gornw, $80 to $100 per ton.

Tomatoes—Six basket carrier, repacked, $6.50 to $7.50.

Dressed Hogs—Best, 18 to 19c; heavy, 17 and 18c per lb.

Calves (dressed)—Fancy, 25 and 26c; choice, 23 and 24c per lb.

Nut Meats—Almonds 65c; walnuts 85c; pecans, $1.25 per lb.

Sweet Potatoes—Jersey, crates,$3.00 and $3.25.

Lettuce—Iceberg, $4 and $4.25 per crate; hothouse, 26 and 27c per lb.; Florida, hampers, $2 and $2.25.

Dressed Poultry—Turkeys, 55 and 58c; chickens, 30 and 35c; ducks, 42 and 43c; geese, 32 and 34c per lb.

Nuts—Peanuts, fancy roasted, 16c; Jumbo, 40c; Tarracona almonds, 35c; paper shell almonds, 38 and 40c; hard shell almonds, 30c; Brazil, 28 and 30c; filberts, 30c; pecans, 23 and 28c; Chile walnuts, mixed, 33 and 38c per lb.

Live Poultry — Spring chickens, large, 32 and 34c; Leghorns, 28 and 29c; hens, 32 and 34c; small hens, 26 and 27c; roosters, 20 and 22c; young geese, 31 and 33c; ducks, 38 and 40c; turkeys, 52 and 54c.

Cucumbers, hothouse, $4 per doz; garlic, 50 and 60c per lb; radishes,40c per doz; green peppers, bulk, $5 and $5.50 per large crate; parsley, 50 and 60c per doz; carrots, $2 and $2.25 per bushel; turnips, $2.75 and $3 per bu; beets, $2 and $2.25 per bu.

Club Work Made Three Nebraska Farm Boys

(*Continued from page* 4)

always been good pals. His father has now taken him in as partner in the raising of purebred pigs. Walter has shown the possession of the knowledge and ability valued in business.

Another Father's Partner

Norval Clark bought a purebred Poland China sow when he became a pig club member. His father had always raised pigs, but they were just pigs and not purebreds. Norval's herd increased until in September, 1919, he had a herd large enough and good enough to produce prize winners to send to the Sioux City fair. His junior boar won first place in the junior classes at the Interstate Fair at Sioux City, and fourth place in the open classes. He competed with the best animals from 12 states. Norval's experience has convinced his father of the value to the farmer of purebred stock. He and his son, also, entered into a partnership last fall. They plan to raise purebreds and purebreds only in the future.

Peter Pratt, the third in the judging trio, has raised good stock since he went into club work, and his father, like many others whose sons have taken up club work, has learned through him the value of better stock to the farm and the value to himself and the home place of his boy's fresh interest and the knowledge of scientific farming he has acquired through the club.

The leaders in the boys' and girls' club work do not want to keep boys in the country who are better fitted to do some other work than they are to carry on farming operations, but they aim to put the advantages of farm life in the limelight so they won't be overlooked. The main objects the organization strives for is to teach the boys and girls better farming and home making methods, to enable them to make money of their own, to make an interesting game by competitions of farm and home work, and to give its members social good times.

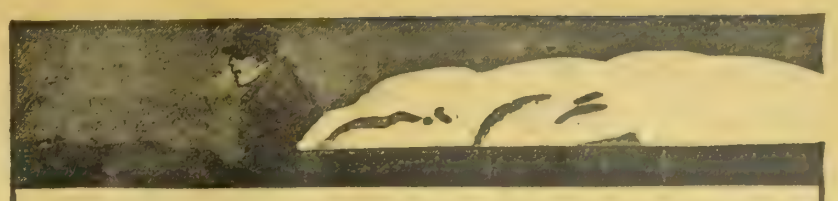
It Does

At poisoned booze
The world can scoff
It makes it easy
Swearing off.

His Record

"Uncle Rippey over there seems to be an exceptionally bright old man," said the spectacled guest.

"Eh-yah!" replied the landloard of the Petunia tavern. "He is eighty nine years old but his mind is as clear as a bell. I'll betcha there ain't been an important law passed by the government since anybody around here can remember that Uncle Rippey hasn't declared unconstitutional.



Haul Now—Pay Later

In order to insure delivery of Solvay Pulverized Limestone, Arcadian Sulphate of Ammonia, and "U-S" Potash—Order Now.

To make it convenient for you to do this—

We will postpone all payments on shipments of these products made during the months of January and February.

These shipments will be billed April 1st. 1920, with the usual terms of net cash by July 1st, 1920, or 3% discount if paid by April 10th, 1920.

We urge early ordering because we know that when spring comes orders will be sent us in such tremendous quantities it will be difficult to make shipments. Your shipment will be on your farm when you need it if you order *NOW*—if you delay you take the chance of being delayed.

Another Special Offer

Thru a special arrangement with the John Deere Plow Company, we are able to offer the Van Brunt Lime and Fertilizer Sower for shipment from stock which we maintain at Sibley, Michigan.

We shall be glad to give full details about the John Deere Van Brunt Lime and Fertilizer Sower and about this special service of ours to you, upon request.

Would a Bigger Milk Check Be Acceptable?

This Holstein holds the WORLD'S BUTTER RECORD, 1504 lbs. butter in a year. Perfect health made her record possible.

All you need do is to pay closer attention to cow health. A big milk yield is a genuine health certificate; if the quantity falls off the chances are the cow is suffering from some impairment of her digestive or genital organs—the starting point of nearly all cow ailments.

KOW-KURE is a cow medicine designed to act directly on these vital organs. There is nothing "just as good" for the treatment or prevention of Abortion, Barrenness, Retained Afterbirth, Scouring, Bunches and Milk Fever. For more than a quarter-century it has been used in the most successful dairies. Feed dealers and druggists sell KOW-KURE—in 60c and $1.20 packages. Send for free treatise,

"THE HOME COW DOCTOR."

It gives full instructions on treating cow diseases—should be in every farm library.

What the Neighbors Say

(*Continued from page* 12)

WANTS CAMPBELL GOVERNOR

I am enclosing coupon clipped from M. B. F. and have placed an X after Milo D. Campbell's name as my choice for governor of Michigan.

If M. Campbell allows his name to go before the primaries there is many a reason why the voters of this state should see to it that he is nominated, not alone because he is a farmer, but because he is the right type of man, speaking from every angle, to hold the office of governor of Michigan.

Michigan wants a level-headed, intelligent, broad-minded business man, one with plenty of practical knowledge of governmental needs, how to practice them, etc., and thru the number of years that I have known Mr. Campbell, I have become thoroughly convinced that he is the man to vote for and to work for at this time.

No candidate with a cleaner record could be mentioned, and certainly when we take into consideration everything Mr. Campbell has done, both at home and in Washington, he has already proven himself a good and true friend to his fellow farmers.

Mr. Campbell has raised objections to farm organizations affiliating with the National Labor Federation, not because he objects to organized labor but because he believes—as every farmer should believe and feel—that farmers are business men, manufacturers and producers.

There are so many good points in favor of Milo D. Campbell for the Republican nominee for governor that it would take quite a considerable space in your paper to print, but there is plenty of time to quote more after he decides to become a candidate, which I trust he may.

My advice to all voters is this: make a careful study of Milo D. Campbell of Coldwater, before you cast your votes—and I doubt not but that we will have the right man selected after the primary vote is counted.—*Charles Evans, Northville, Mich.*

SOME FACTS ON THE SUGAR BEET SITUATION

Your article relating to sugar beets is a good presentation of what the farmer asks for his 1920 beets. This should, I believe, be followed by a very strong article setting forth the facts as to just why and the reasonableness of this price. First, it should be shown that the one dollar per ton advance was not a fair deal and since beets on the average test from 12 to 22 lbs. sugar a contract based on 12 per cent beets is unfair. We should be presented something like this even if beets did not produce over 12 per cent sugar and sugar should go to 20 cents per lb., on what beets were raised in Michigan this year, 1,250,000 tons, the manufacturers would run ahead of the farmers' share $6,750,000; this discrepancy only amounts to 20 cents advance in sugar per ton on 12 per cent beets but is a very important thing in case sugar stays above 9 cents per lb. Then if beets should average 15 per cent sugar (on good authority the manufacturers averaged to get 16 per cent out last year) this would make the companies a neat sum of $9,750,000 more with sugar at the present price of 13 cents or $4,250,000 more still if sugar should go to 20 cents or a grand total of $20,750,000 of which the farmer is entitled to one-half or $10,375,000

It should also be shown that the farmers should be urged to stand squarely behind their organization and committee which has been organized and which will be incorporated under the state laws and the directors of which are capable men, big farmers of means, some of whom were educated and graduated as lawyers. The secretary and treasurer being a very careful and conservative man and the position of the president, being held by head of the state Grange and a live wire. The Michigan Beet Growers' Association present a lineup of men that will merit the support of every beet grower in Michigan. It is proposed that (which is now being done) the entire state be organized into locals having their own officers and locations where most convenient and that every member pay a membership fee of a dollar, and a cent a ton on the beets he raises as dues every year thereafter and that one fourth of this money stay in the hands of the locals to meet their expenses and 3-4 to the state organization to operate on.

It should be shown that no radical measures will be resorted to; that every action will be based upon reason and common sense and for the best interests of the entire beet sugar business in general in which the farmer, manufacturer and the consuming public are all concerned in more ways than one. It should be shown that the farmer spends his money in Michigan and locally and should be entitled to what is coming to him as a general good for business and to promote the production of sugar of which we face a shortage for several years to come. France having lost 145 of her 206 factories during the war, Germany, Austria, and Russia having starved people on their hands will have to plant their land to grain to raise bread, all of which will show that sugar production must be promoted in the U. S. to meet the demand which is on the increase instead of the decrease, consumption having increased to around 100 pounds per capita in the states.

Farmers that have already signed contracts for 1920 should be urged to request that they be held up pending approval of the Association, the care of which has been hampered with on account of the holiday season and some of the manufacturers being out of the states.—*C. E. Ackerman, Durand, Mich.*

We are glad to add this information to our present knowledge of the world's sugar situation. If you will refer to the Dec. 20th issue of M. B. F., you will note that the merits of the farmers' claims for a fairer share of the consumer's dollar were thoroughly discussed.—Editor.

A PRACTICAL FARMER FOR GOVERNOR—WHY NOT?

The time is drawing near when the people will be called upon to select and elect, from their numbers the man who will be made responsible for the execution of the laws of the state—a very responsible position and the incumbent should be selected with much care.

The great importance of agriculture in the state's prosperity, it being the foundation upon which rests the material welfare of the people—all wealth to be derived, primarily from the soil—it would seem that the farming class of Michigan's citizens have not had their just "innings," heretofore, and the various farmers' organizations within the state are united in asking that the next governor of Michigan be chosen from the large class of practical farmers, which contains in its ranks men, ably qualified to fill acceptably the highest office within the gift of the people.

At the recent annual meeting of the State Association of Farmers' Clubs, held in the Senate chamber, a resolution was adopted in accord with the sentiment above expressed. The honorable records of Michigan's governors who were chosen from the farming class of her citizens, give abundant grounds for the assurance that there is "grand timber" for the duties of governor to be found in Michigan farmers.

The writer would desire to present for the people's consideration, the name of an ex-president of the State Association of Farmers' Clubs, being also an ex-member of the State Legislature and, at present, serving the state as a member of the State Board of Agriculture. The man referred to is Hon. L. Whitney Watkins, of Manchester, Washtenaw County. Having been interviewed on the subject, Mr. Watkins expressed himself as emphatically opposed to being a seeker after political office, but stated that if it be shown to be the general desire of the people that he serve them in the capacity of governor, he will give to the duties thereof "the best there is in him."

The spirit of extravagance and unrest, so prominent in these days, calls for a steady hand at the helm.

Statesmanship is the demand of the times and no "hybrid" is called for and no reflection is intended on those gentleme who have but exercised a citizen's right by "throwing their cap into the ring."—*J. T. Damiells, Ex-President of the State Ass'n. of Farmers' Clubs.*

FARMERS SERVICE BUREAU

CAN'T FLOOD NEIGHBORS

Dear Sirs—I'd like to find out whether or not a neighbor has the right to ditch his land so that my land will be flooded. He has been working on this ditch for two weeks or more. I'd like to find out what I could do, or has he the right to do so without notifying me?—A Reader, Montmorency Co.

An upper proprietor has no right to ditch his land down to his neighbors and cast the water upon him in any greater quantity and in any different manner than would come in a state of nature. One who gathers the water from his own premises by ditches or furrows and casts them upon his neighbor's land is liable for all of the damage caused thereby. The lower owner may have an injunction to restrain a threatened injury.—*W. E. Brown, legal editor.*

HOW TO DRAW UP NOTES

Dear Sirs:—Will you please tell me either thru M. B. F. or by letter how to draw up a note for ten years, principal and interest to be paid back in ten equal yearly payments? For example: A loans B $100 for ten years to be paid back with interest at 5 per cent in ten equal payments or $12.75 each year. After the members of a co-operative association have agreed by a unanimous vote at a regularly called meeting to do a certain thing, can the board of directors do otherwise? Suppose that the motion and vote were purposely left out of the minutes of said meeting could the members ask that it be replaced on the records and their motion complied with? Thanking you for these favors.—N. V., Antrim County.

Either make ten notes payable each year after date, with interest payable annually at 5 per cent or use the following form:

$100. Homeville, Oct. 13, 1919.

For value received I promise to pay John Jones, on order, ONE HUNDRED DOLLARS, payable ten dollars annually after date, until the full sum of ONE HUNDRED DOLLARS is paid, together with interest at 5 per cent per annum, payable annually, upon all sums remaining unpaid, all payable at the First National Bank of Homeville, Michigan.

JOHN BROWN.

Your letter does not state what the directors "unanimously" agreed to do. There are some things they might bind the corporation by unanimous agreement. However, the management of a corporation is in the hands of a board of directors who have practically the entire control. One of our books on corporations has the following to say about stockholders in a corporation: "The functions of stockholders are exceedingly limited. The theory of a corporation is that the stockholders shall have all of their profits, but shall turn over the complete management of the enterprise to their representatives and agents called directors. Accordingly there is little for the stockholder to do beyond electing directors, making by-laws, increasing or decreasing the capital stock, authorizing amendments to the charter and dissolving the corporation."—*W. E. Brown, legal editor.*

FACTS ABOUT JOINT DEED

All real estate we have is jointly deeded to husband and wife also all money in the bank is put in jointly. We also have about $2,500 or $3,000 worth of personal property. What I would like to know is in case of husband's death could his relatives get any of the property or not? There are no children, our banker tells us that the wife can hold personal property to the amount of $3,000. Answer through the columns of your paper. Yours truly—A Subscriber.

All real estate held in the name of husband and wife will go to the survivor upon the death of either without probate or other proceedings. The money in the bank in account payable to either and to the survivor will go to the survivor without further proceedings than to establish the fact of the death of one. If the personal property is owned jointly one half will belong to the survivor and the balance belongs to the estate of the deceased. The personal property, if it does not exceed $3,000 will be assigned to the widow. This law may be changed at any session of the legislature to increase or decrease the amount. It is better that a man should make a will bequeathing the personal to his wife so that whatever the law she would get it. The personal may be transferred to a third person by bill of sale and that person transfer back by bill of sale to them as "husband and wife and to the survivor" and in that case no probate would be needed.—*W. E. Brown, legal editor.*

PAY TAXES, THOUGH "BROKE"

I paid my taxes Saturday before I found I had been assessed in another school district from which I've always been assessed. This change gives me at least $15 additional school tax as they raised more money than usual this year. The supervisor died this fall and the new man who fills this vacancy says he just copied the assessment roll. Now I was wondering what could be done about it as I can ill afford to pay more than is justly mine to pay. Sincerely yours, —W. J. M., Otsego County.

If you were lawfully transferred from one school district to another and the assessment was lawfully made by the proper officers you will have to pay the additional tax as the law does not recognize one's ability to pay in levying taxes. It is not an unusual thing for every one to find that their taxes are much higher this year.—*W. E. Brown, legal editor.*

PRICE SET FOR SUGAR

Sirs—Would you please tell me if the government has a price set for sugar at 11 cents per pound, and if our grocers have a right to sell for more than 11 cents?—R. E. N.

I am under the impression that the government has indicated what would be considered a fair price to the refiner. I do not call to mind whether the wholesaler and retailer have had a price fixed to them or not. I believe the grocer has a right to ask more than 11c.—*W. E. Brown, legal editor.*

Hot Water Treatment of Wheat Seed

Treated grain can be sown as soon as dry enough to run freely through the drill. Owing to the swollen condition of the kernels the drill should be open inside enough to sow the proper amount of seed to the acre. Several demonstrators found it convenient to use the oat side of the drill. The seed may be treated any length of time before seeding. Testing the seed for germination affords a chance to increase the rate of seeding if germination is low.

If a central treating station, with more elaborate apparatus is desired, the following equipment, such as was used in Indiana last year is suggested.

1. A supply of live steam.
2. Two large vats, about 5 feet long, 40 inches wide, and 4 feet deep, one for hot water at 120 degrees F., and the other at 129 degrees F.
3. Steam pipe coils or merely sections of perforated pipes to be placed on the bottom of the vats for heating and maintaining the water at the desired temperature.
4. A drum, wooden or iron framed, about 4 1-2 feet long by 2 feet in diameter, lined on the inside of or galvanized iron or zinc sheeting, the frame with heavy wire screen, with perforation large enough to permit free flow of water through the grain, but small enough to hold the grain within the drum. A drum of this size will treat about 5 bushels at a time. It should never be more than two-thirds full, or three-fourths at the most. The drum can be constructed so as to be turned by hand or by motor power. A door is provided on the side for placing in and taking out the grain.
5. A pulley for raising and lowering the drum.
6. Tested thermometers for registering temperature of the water.
7. Sufficient floor space for at least temporary drying of the treated grain. The drying can be completed if desirable, by each grower at home.

The treated seed should be sown on a plot of ground as far away from untreated wheat fields as can be conveniently done to prevent any infection that may come from such fields. The seed plot should be gone over after the plants head out and any smutted heads, or plants of rye cheat, cockle, or other especially undesirable weeds that may appear may be removed.

Bring In or Ship In—
A Square Deal Either Way!

We like trappers to bring in their furs to us, to see the great Taylor establishment, and to watch how we handle their furs at every step. But most furs coming to Taylor are in the form of shipments. The trapper who ships knows he will get the same square deal as the trapper who brings his furs in. Raccoon, skunk, opossum, mink and all furs bring you the highest prices on the market when you ship to Taylor! Mark your bundle to Taylor today!

Taylor
INTERNATIONAL FUR EXCHANGE
St. Louis, MO. U.S.A.

The Taylor shipper gets fair treatment and satisfactory returns every time! More than a million trappers have found that out in the last 49 years. This is why Taylor does more business direct with trappers than any other fur house in America. "You can't go wrong when you ship to Taylor."

Highest Grading

Taylor graders are experts who have had a life-long experience at the business; they know every fur from every locality. They know how to get the most value out of a pelt; and their instructions are to grade every pelt as high as possible. This grading is absolutely dependable; Taylor insures your getting largest returns for your furs!

Prompt Returns

Every day is pay day at Taylor's. You don't want to wait for your money. By efficient handling of furs, we are able to mail you back your check the same day your bundle is opened. Six St. Louis banks vouch for our reliability. Ask any old timer about Taylor. To turn furs into most cash quickly, ship to Taylor.

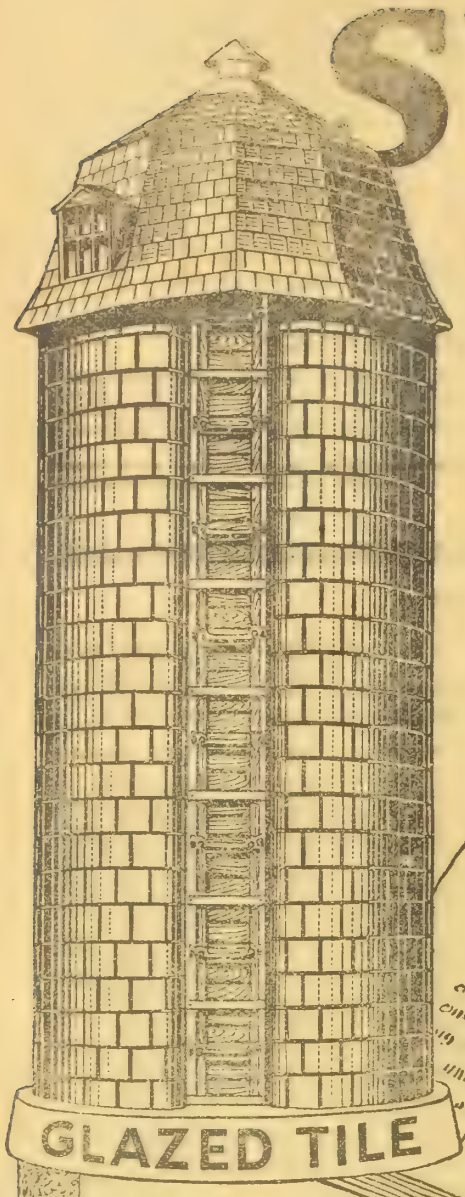
Farmer's Week, February-2,3,4,5,6.

SUPERIORITY

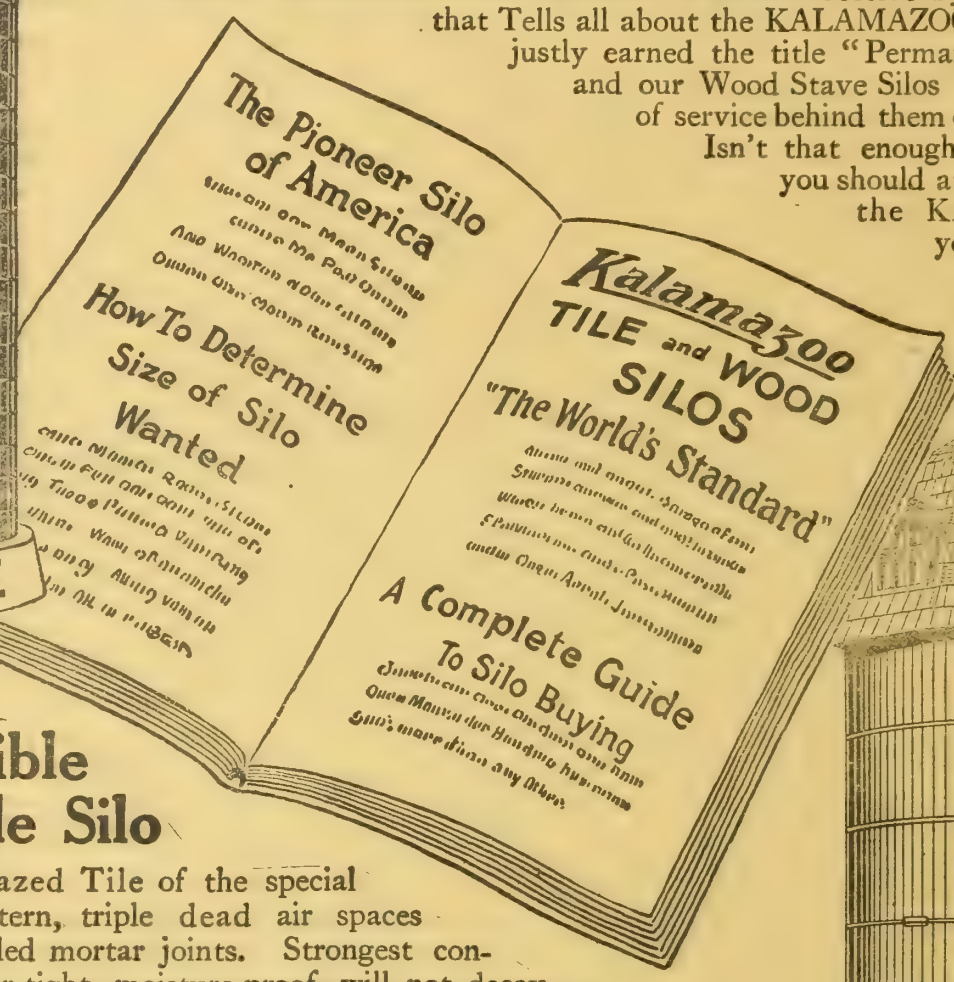


Equip your farm with a KALAMAZOO Silo and you can point to it with pride and truthfully say: "There is None Better." Farmers who bought the KALAMAZOO 29 years ago are still saying that today. They are the men who KNOW. Ask us about them. The KALAMAZOO, through it corps of manufacturing engineers and practical farm experts, has adopted every device or improvement worthy of KALAMAZOO endorsement. Your interests as a farmer are our interests, and whatever goes to you under the *Kalamazoo* name is not an experiment but a Tried-and-True SUCCESS.

Get the Book that Tells

SEND US YOUR NAME, and receive by return mail the Book that Tells all about the KALAMAZOO. Our Tile Silos have justly earned the title "Permanent as the Pyramids," and our Wood Stave Silos have the longest record of service behind them of any silos in existence. Isn't that enough to convince you that you should at least INVESTIGATE the KALAMAZOO before you buy?

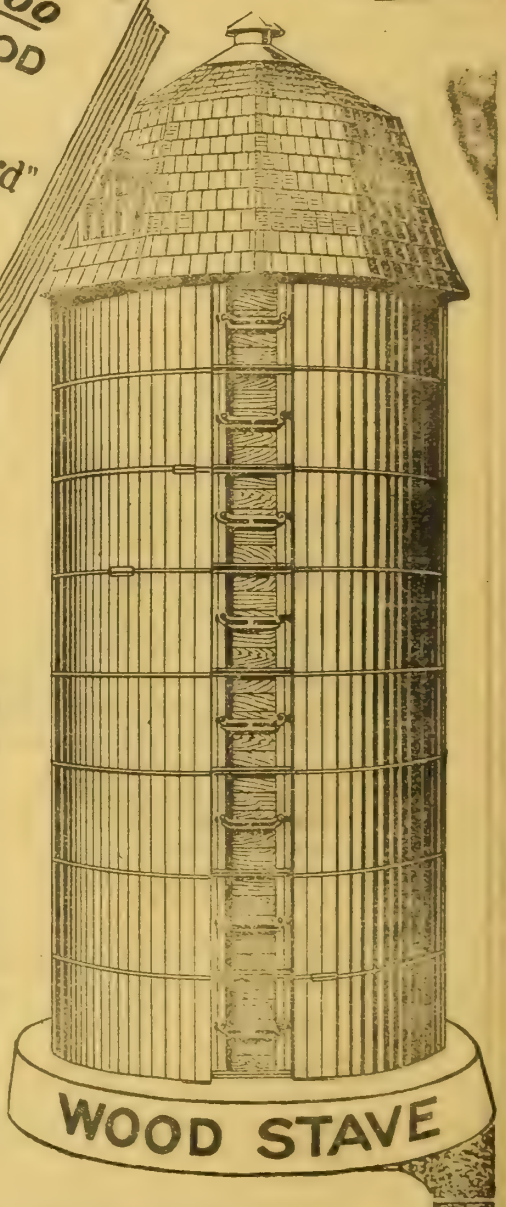
Write today for this book!



The Pioneer Silo of America
How To Determine Size of Silo Wanted
Kalamazoo TILE and WOOD SILOS
"The World's Standard"
A Complete Guide To Silo Buying

The Indestructible Glazed Tile Silo

Made from Glazed Tile of the special KALAMAZOO pattern, triple dead air spaces and keyed, dove-tailed mortar joints. Strongest construction made. Air-tight, moisture-proof, will not decay, burn up or blow down. Anchored by its own weight. Easy to erect by our special method. A monument of industry for your farm that will last for ages and save its cost many times over. We ship blocks from many different points, and will save money for you on freight charges.



Wood Stave Silos

KALAMAZOO Silos received the first patent ever issued. That they have given unquestioned satisfaction for over 29 years is our best recommendation. They are still in the lead. Your choice of five different kinds of wood. When built they are as tight as a jug, perfect ensilage savers. The time-tried Silo Success. Erect it yourself. No nails, no screws.

All Kalamazoo Silos equipped with continuous doors and galvanized steel door frames, insuring great strength and preventing sticking of doors and admitting of air or moisture. Every silo convenience worthy of your acceptance is found in the KALAMAZOO.

Easy Terms. Order now. Pay later. Let the Silo be earning for you. Be ready to save the entire 1920 crop this time. The Silo Habit makes bigger farm profits. Send us your name TODAY. Investigate the Kalamazoo Ensilage Cutter. None better anywhere.

KALAMAZOO TANK & SILO CO. Dept. 244-S **Kalamazoo, Mich.**

MICHIGAN BUSINESS FARMING

MOUNT CLEMENS, SATURDAY, JANUARY 17, 1920

An Appeal For Good Government

A GOVERNMENT that is of, by and for the people is like an intricate piece of machinery. The only great difference is the human equation. The cogs, wheels, pinions, bolts, shafts and levers of the machine take the form of men and women in the government, who being human, do not perform their allotted tasks quite so faithfully and well as do the parts of the machine. But the two are alike in many respects. The wheels must have an occasional cleaning; they clog with dirt and do not run smoothly. Parts must be frequently examined and replaced; there are often defects in the material; it becomes worn and useless and threatens to interfere with the efficient operation of the entire machine.

We are supposed to be living in an age of wonderful efficiency. Our factories and our farms and our public utilities are supposed to be models of system, rendering maximum service at minimum cost But the thing that ought to be the special object of our pride and solicitude,—our government,—is in a lamentable condition of disorder bordering closely on the chaotic. This would not be so bad were the people who are the real makers and caretakers of government impressed with the need and desire for taking prompt steps to curb the wastefulness, repair the damaged parts, discharge the custodians who have permitted it to fall into such a disgraceful condition, and fill their places with men of character.

We need to hark back to the founders of this government and relearn our lessons on democracy and our duties as citizens. George Washington is speaking. It is his farewell address.

"The Unity of Government, which constitutes you one people, is also now dear to you—it is justly so; for it is a main Pillar in the Edifice of your real independence; the support of your tranquility at home; your peace abroad; of your liberty; of your prosperity in every shape; of that very Liberty which you so highly prize * * * it is of infinite moment, that you should properly estimate the immense value of your national union to your collective and individual happiness;—that you should cherish a cordial, habitual and immovable attachment to it; accustoming yourselves to think and speak of it as of the Palladium of your political safety and prosperity; watching for its preservation with jealous anxiety. * * * *"

It is a noteworthy fact that the early days of the Republic produced many of the nation's most able and distinguished leaders. This can be easily understood. The hard-won freedom was like a rare jewel, far more precious than the lives it had cost. Once secured, it must be made secure. It could not be entrusted to careless or deceitful hands. It must be surrounded and guarded by proven men whose pledge to the government would be held inviolate. Our forefathers laid down rigid requirements for the protectors of their new government. Thus, only the best men of the nation came forward to direct the affairs of government, and we may reasonably believe that the most of them were moved by a sincere desire to aid the struggling Republic than to secure empty political honors for themselves.

Time has wrought great changes; the infant Republic has grown into stalwart manhood, and those who, in periods of its immaturity watched with anxious eyes when dangers threatened, have long since relaxed their vigilance leaving the Republic to the mercy of its enemies. The motive for seeking office has largely changed from a desire to serve to a desire to be served. Men of evil intent aspire to office and gain office by evil methods to which good men will not stoop. Consequently there is corruption in high places; the dirt of graft clogs up the wheels of government; careless men are at the levers; everywhere is evidence of inefficiency and waste of energy.

The ignorance of the average citizen of the workings of the government is truly appalling. If he but knew the opportunities that exist for unscrupulous men in official positions to influence and corrupt other public servants with whom they come in contact, or was fully impressed with the consequences of vicious laws or total indifference to the need for good laws his attitude toward "politics," the "science of government" would quickly change, and he would be as meticulous in the future in the selection of the men who run for office as he would be of the men whom he would put in charge of his private business. The seeds of evil which are sown by corrupt men in positions of public trust do not as a rule, unfortunately, bear their fruits of demoralization until long after the sowers have retired to private life. So it is not always easy to trace the responsibility for unjust laws, growth of special privilege, subordination of government to special interests, high taxes and other evils.

At the moment we seem to be in a conflict between various contenders for special favors. The ease with which capitalism has reached its pinnacle of power under the protecting arm of the law and frequently in defiance of the law has aroused the envy of others and tempted them to try the same measures. They are seeking to unseat capitalism from its present position, but capitalism is resisting with very poor grace the reforms that must be brought about before the unrest of the nation can be soothed, thus inciting the reformers to the adoption of a program which, if carried out, would be as full of dangers to our liberties as those which now encompass them.

I am not a crier of calamity. Eventually all will be well. Emerson says:

"This law (of action and re-action) writes the laws of cities and nations. It will not be balked of its end in the smallest iota. It is in vain to build or plot to combine against it. Things refused to be mismanaged long. Though no checks to a new evil appear, the checks exist, and will appear. If the government is cruel, the governor's life is not safe. If you tax too high, the revenue will yield nothing. If you make the criminal code sanguinary, juries will not convict. Nothing arbitrary, nothing artificial can endure."

But we ought not to await the conditions which will automatically set the Emerson law to working. On the contrary, as long as there are peaceable means for overcoming the defects in our government and in our social order, those means ought now to be employed. But they will not be employed if the mass of citizens who make up the commonwealth and the nation cannot be moved to action. It is to their interests, first and primarily, that these corrections should be made.

There must be an awakened civic consciousness on the part of every man and woman. They must be made to feel as their forefathers felt, that free government is the most precious of all their earthly possessions, and that it must be studied, understood and wisely managed if it is to perform its functions and give to all their fair portion of its benefits.

"The less government we have the better—the fewer laws, and the less confided power," says Emerson. "The antidote to this abuse of formal government, is, the influence of private character, the growth of the individual * * * We think our civilization near its meridian, but we are only at the cock-crowing and the morning star. In our barbarous society the influence of character is in its infancy * * * *"

May we not put aside all other considerations when naming those to represent us in government except characer and capacity for serving? The nation is not without men of character, but those who will always do the right thing instead of the expedient thing are very rare, indeed. The principal tribute that can be paid to a good many men in public office is that they were good politicians. The poor politician seldom captures an office in a spirited contest, although as a man of character he may stand head and shoulders above his successful opponent.

Good government is difficult of attainment and perpetuity. It cannot possibly be secured by indifference to the changing needs of the commonwealth or to the character of the men who are chosen to provide for those needs. Good government is within reach. The gap can be bridged by first, an overwhelming desire for good government; second, knowledge of what constitutes good government; third, acquaintance with the responsibilities, duties and opportunities of good government; and last, the careful selection of honest, upright men of proven character to administer the government and pass upon its laws.

Whirlwind of Events During Farmer's Week

Farmers Expected to Attend Meetings and Hear Prominent Speakers at East Lansing, Feb. 2-7

By VERNE E. BURNETT

MR. FARMER is going to be the man of the hour at the celebration now being prepared by the Michigan Agricultural College and many co-operating bodies. This event is the famous Farmers' Week, to be held this year at East Lansing, February 2-7 inclusive. Last year more than 5,000 farmers turned out to the meetings and exhibits, but next month more than 8,000 are expected to attend.

In addition to thousands of farmers coming as individuals or as families, a dozen or more meetings of state agricultural associations will make East Lansing the Mecca, the first week in February, of great throngs. For example, the Michigan State Farm Bureau members, who will number somewhere around 20,000 by February first, will hold their regular winter session—which will probably be one of the most important gatherings in the history of that organization.

Members of the Michigan Crop Improvement Association will also assemble at the college during the red letter week on the farmers' calendar for February, 1920. The Crop Improvement folks will go to the meeting elated with the recent victory of their handicraft at the International Hay and Grain Show at Chicago.

The Michigan Milk Producers' Association will be another of the high lights on the program of Farmers' Week. The splendid work of that association during the past year against terrific odds, together with the chances for much better work the coming year, will assure great interest on the part of its many thousands of members in this state.

So much progress has been made recently in the marketing of the spuds grown in Michigan that the gathering of the Michigan Potato Producers' Association during Farmers' Week will certainly create its share of attention. The Michigan Veterinary Association and the Michigan branch of the American Poultry Association will both have special features at their sessions which will make it worth while for all members to pack their grips and attend. A splendid poultry show will be one of the headliners on the bill.

Faced with extinction, unless remedial action is taken, members of the Michigan Maple Syrup Makers Association say that it is of prime importance for all engaged in their trade to attend the sessions at East Lansing during Farmers' Week. Other meetings which will help put the event big include those of the following:

Michigan Muck Farmers' Association.

Michigan Milk and Dairy Inspectors Association.

Park Superintendents and City Foresters.

Rural Y. M. C. A. Secretaries.

Other organizations may join in line for the especially opportune time for a gathering. Meetings are arranged so as not to conflict with each other to any great extent, and the speeches of the many notables on the program will be held at separate times and at hours when no meetings are in session. Authorities at the Michigan Agricultural College are delighted at being of more service now than ever in their history; and one of their greatest services just now to farmers in general is the opportunity and encouragement the college is furnishing for the benefit of organized ruralists through such means as Farmers' Week.

Much can be said of the importance of every organization's work on the program—importance not always generally recognized. For instance, the Rural Y. M. C. A. secretaries in Michigan are hanging up a record unequaled anywhere. Five years ago Michigan had one third of all the rural "Y" workers in the United States, and the state has gone considerably ahead since that date.

All-Star Group of Speakers

Just to get an idea of the unusual strength of the speakers' program for Farmer Week, we quote the following extract from a letter from the Michigan Agricultural College, in response to inquiries from Michigan Business Farming; the letter shows other facts as to the great importance of the occasion:

Michigan Business Farming,
Mt. Clemens,
Michigan.

It is felt here at the college that the list of speakers is the best ever gotten together for a state agricultural convention anywhere. You will note that any one of five or six of the speakers would be a headliner at any other event of this kind.

The members of the various agricultural associations meeting together here during the week will mark about the biggest gathering for the year for farm leaders of the state. Members will have an opportunity to attend one or more of the meetings, and at the same time "take in" the attractions of Farmer's Week.

Exhibits will be very interesting this year. We will have guides and charts to help visitors find their way about the college. In fact, more will be done this year to make this a big and successful convention for farmers of Michigan than ever before.

J. B. HASSELMAN.

Dean Alfred Vivian, of Ohio State University, will provide one of the big features of the program of the speeches. His set of illustrated lectures on "Farmers' Tour Around the World" are already very famous. Dean Vivian has studied at first hand the agricultural conditions of practically every country in the world and he has a treasure of splendid illustrations. One of his lectures will be given each day during the week.

List of All-Star Speakers

J. R. Howard, president of the American Federation of Farm Bureaus.

H. C. Taylor, chief of the Farm Management Bureau of the U. S. Department of Agriculture, in charge of gathering cost of production data.

Former Congressman A. F. Lever, member of the Farm Loan Board, and successful sponsor of such legislation for the welfare of agriculture.

Governor Frank C. Lowden, of Illinois, one of the Republican possibilities for the coming presidential nomination.

Dean Alfred Vivian, of Ohio State University, who will give a daily, illustrated lecture on "Farmers' Tour Around the World."

Dr. C. V. McCollum, of Johns Hopkins University, famous writer and scientist.

Dr. W. G. Gunsolus, president of the Armour Institute of Technology, of Chicago; former pastor of nation-wide reputation.

A. J. Kiernan, chief of the government work on tuberculosis eradication, Bureau of Animal Industry, Department of Agriculture.

Kenyon L. Butterfield, president of Massachusetts Agricultural College.

President G. C. Creelman, of Ontario Agricultural College.

Henrietta W. Calvin, of the Bureau of Education at Washington.

A. F. LEVER
Member National Farm Loan Board, who will be one of the Farmer's Week speakers.

The speakers show that the week will be a three-ringed circus and Fourth of July celebration combined. For instance, a presidential 'candidate" is one of the speakers alongside a famous British poet and war correspondent. Then there is a silvery tongued preacher and college president; super experts in various lines of farm work including an ex-congressman, now engaged in federal service for benefit of farmers.

Gov. Frank C. Lowden of Illinois, is the Farmers' Week speaker who is often mentioned as a possibility for the Republican presidential nomination. Cecil Roberts is the famous English war correspondent and poet who will be on the M. A. C. program. The college for years has been carrying on a lecture course of big calibre speakers, such as Mr. Roberts, who take the students and farm visitors away from "shop talk" for an hour or so, now and then. This is in line with a broad-mindedness which the farmer class has been showing strongly—that is, the farmer wants to understand his brother human beings in all other classes and make decisions from the standpoint of what is best for the greatest number.

One of the most important speakers is to be J. R. Howard, elected this winter as president of the American Farm Bureau Federation, during the famous convention at Chicago, where the farm bureau organizations from 35 states arranged to affiliated as a national body. Mr. Howard is a product of the middle west, Iowa, and has a great message. The thousands of Farm Bureau members who expect to attend the sessions at East Lansing assure Mr. Howard of a big and enthusiastic audience.

H. C. Taylor, another of the "heavy artillery" on the M. A. C. program, is the new chief of the Farm Management Bureau of the United States Department of Agriculture at Washington. Upon Mr. Taylor's shoulders rest the responsibilty of working out the cost of production figures for the farmers of the nation. Michigan is one of the leading states in the work of seeking accurate costs of production and many a farmer is expected to get some helpful tips from the work which Mr. Taylor will explain.

Former Congressman A. F. Lever, who has been responsible for much of the recent legislation toward the country life improvement, is a strong figure on the bill at the M. A. C. He is now well known to farmers thru his work as a member of the Farm Loan Board.

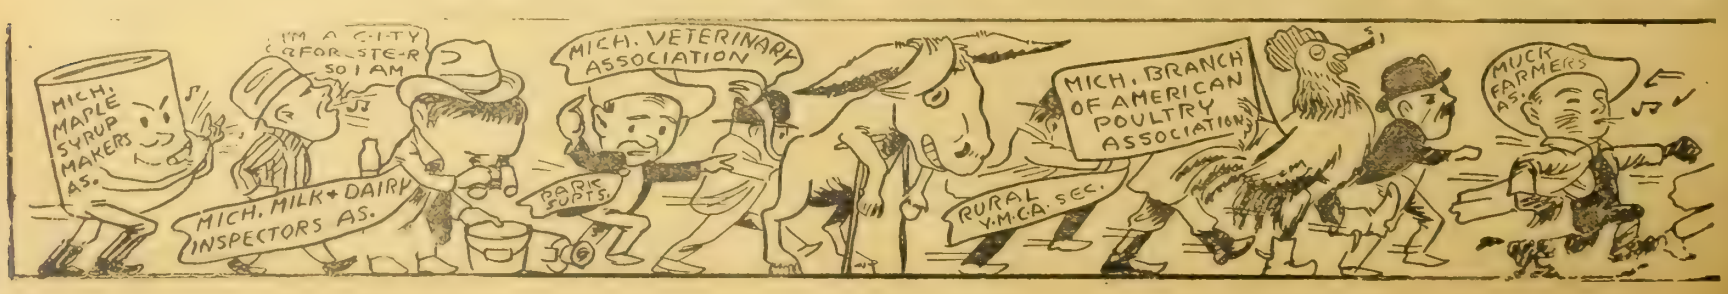
One of the men on the list who has created a high reputation both with the general public and the farmers is Dr. C. V. McCollum, nutrition expert at Johns Hopkins University. His writings may be found on the tables of almost any progressive dairymen in the State of Michigan, as well as any other state. The general public knows him best, perhaps in connection with his research and explanations of "vitamines." Dr. McCollum was formerly at Madison, Wisconsin, and is quite widely known in Michigan as well.

Others who will address meetings include: Dr. W. G. Gunsolus, former pastor and now president of the Armour Institute of Technology, Chicago; A. J. Kiernan, chief of the tuberculosis eradication, Bureau of Animal Industry, Department of Agriculture, Washington; Kenyon L. Butterfield, president of the Massachusetts Agricultural College, author and noted authority on agricultural problems; Henrietta W. Calvin, Bureau of Education, Washington, D. C.; President G. C. Creelman, of Ontario Agricultural College, who is expected to say something about the splendid work of the United Farmers of Ontario.

Exhibits of Top Notch Class

The exhibits at Farmer's Week will cover every division of agricultural life. They will be new this year and will all bear directly upon the farmers' problems.

The major divisions of the display will cover farm crops, horticulture and animal husbandry. Practi-



MICH. MAPLE SYRUP MAKERS AS.

PARK SUPTS.
MICH. BRANCH OF AMERICAN POULTRY ASSOCIATION
RURAL Y.M.C.A. SEC.
MUCK FARMERS AS.

cally every department at the college will be represented, however, in some of the exhibits.

In fact, the College itself will be on dress parade. The sights over the beautiful grounds are ever-changing, ever new, to the many thousands of visitors who stroll every year over the grounds and through the buildings of this excellent institution of the State of Michigan. It certainly is a splendid monument of the public to the greatness of agriculture. There are the fine new structures, and the old ones with many memories. There is the Museum with the old Civil War stuffed horse and the stone age fossils, and, better than that, the up-to-date scientific displays of modern agriculture.

It surely is an inspiration for the young folks on the farm to look at and study the wealth of information gathered at the College. It is an appeal to their manhood and womanhood to see the gymnasium work and the drills in the field; and it is a huge argument for the young folks to stay right on the farm with Dad and Mother, when the best that the College can show is set before them. There are the splendid purebred cattle, and all other kinds of stock, which produce profits to such an extent as to make all of them mortgage lifters. Then there are the exhibits of grain which take the international prizes. All the up-to-date methods of the business of farming are at least touched upon at the college. It is an inspiration for any boy or girl of the farm to take a peek at what the College has to offer—what it has to say on behalf of the profession of farming.

Nearly all of the exhibits which the college sent to the recent International Hay and Grain Show at Chicago will be on display in the crops section. The competitive exhibits in the Michigan Crop Improvement Association Show will also be features of this section.

In regard to the hay and grain exhibits, great interest is bound to be shown at Farmer's Week this year by the farmers of Michigan. Did you know that eight out of the sixteen prizes awarded for samples of rye and more than half of all the premiums given out in the class for wheat are among the victories scored by Michigan producers at the International Grain and Hay Show at Chicago this winter? And the farmers of Michigan walked away with many other prizes at that great exhibition, so they come with the flush of victory to the Farmer's Week show where most of the Chicago prize winning exhibits will be repeated.

In their class for wheat, soft red winter, Michigan growers competed against the entire United States and Canada, such states as Kansas and the Dakotas, famed for their wheat, being included. In spite of the high class of competition met, the state's farmers came out with their heads up and their pockets full of premiums—more than half of those offered in the class.

There was but one class for rye, including splendid exhibits from Canada and many parts of the United States. Out of the 16 prizes awarded, the Michigan men bore off with eight.

One feature of the show of which the Michigan Agricultural College can boast is the rosen rye and red rock wheat victory. The College for a long time has been advocating the use of these excellent varieties, and its samples proved to be head and shoulders over anything else at the show. Rosen rye took first, second, fourth and fifth prizes in its total of eight prizes out of a possible 16, while none of the other varieties succeeded in gaining a noticeable success.

The same was true of wheat. Red rock took the first three places in its class, along with many other lower awards, and was easily the outstanding wheat of the show. Although first place was lost to Michigan in the wheat entries (John Dunbar, of Rudyard won the second honors,) local growers carried off the blue ribbon with a Michigan product—Red Rock.

The Michigan Educational Exhibit at the show was the largest and best entered, the Michigan Crop Improvement Association, the Michigan Potato Growers Exchange and the Michigan Agricultural College uniting to prepare the display. A large map of the state upon which were posted views of the varied farming industries, a mound of selected Petoskey potatoes, bins of Rosen Rye and Red Rock wheat, and a special display for the Upper Peninsula were features of the state display.

"Practically all the Michigan exhibits which were at Chicago will be on hand for the Crop Improvement show during Farmer's Week at the College the first of February," says J. W. Nicholson, secretary of the Michigan Crop Improvement Association. "Other growers who did not exhibit at the International will get into the game at this time and see how their samples compare with the best in the state. The result will be one of the best grain shows ever seen in Michigan, or any where else, for that matter."

A practical demonstration to show the actual working of a cow testing association, exhibits to show the effects on successive generations of good breeding and stock specimens from the Chicago stock yards to illustrate daily market quotations, will be found among the animal husbandry booths.

An entire building is to be given over to the horticultural show alone. The second annual state championship poultry show, household arts and science displays, and exhibits of farm machinery and veterinary medicine work will be prominent during the week.

The Michigan State Round-up Poultry Show, a blue ribbon exhibit which will bring together all the best birds in the state, will be held at the College in connection with the many other features. Nearly 100 different poultry establishments in the state will enter a total of over 500 fowls.

Inasmuch as only those birds which have won premiums at other shows will be eligible for entry at the college sweepstakes, competition will be unusually keen. The birds which take prizes at East Lansing will have to be champions among champions.

All entry fees are to go to the prize winners in each class, forty per cent for first place, and thirty, twenty and ten per cent for the next three places respectively. Every bird which places will get at least a ribbon. The entry fees are to be fifty cents for single birds and two dollars for pens. Prof. C. H. Burgess, head of the Department of Poultry Husbandry, is in charge of the exhibit.

One of the special features of the many headliners at Farmer's Week will be the opening of the series of truck and tractor schools to be conducted by the M. A. C. this year. The first of these four weeks' schools opens February 2, and visitors at Farmer's Week can get a chance at least to look in on the experimental work. A much larger enrollment is assured than last year's, and numerous innovations are planned. Gasoline power is going ahead by jumps and the need of skilled workers for trucks and tractors is becoming great among those in the farm business. Farmers who expect to visit the College during the February events are urged to look up the truck and tractor work which is making such headway.

More than a dozen makes of tractors will be used and each student will know how to run all the machines before finishing the course as well as repairing them. Things to be emphasized in the course will include ignition, valve and spark timing, carburetor adjustments, brake and fuel combustion tests, and lighting and engine trouble work.

A. M. Berridge, of the M. A. C., is head of a committee comprised of men from every department of the college designated to take charge of the gigantic task of completing preparations for Farmers' Week. Knockers may come and knockers may go, but there can hardly be any knocking this year in regard to Farmer's Week. The College authorities have been going their limit in arranging for the best possible hospitality and entertainment for the farmers of the state, and it is believed that the great majority of farmers appreciate the efforts being put forth.

Said one prominent official at the M. A. C. the other day, "the College belongs to the farmers of Michigan and it wants all the farmers to get away and take physical possession of the institution for the first week in February this year. We want as many farmers as possible to see that the College is doing real, vital, practical business. By coming to Farmer's Week the farmers can not only find out these things for themselves, but also they can take one more step in the great business of getting together."

Farmer's Week has a splendid tradition to keep up. Before last year it had done good work under the name of "Farmers' Week and Housewives' Congress." But last year it broadened out into wider fields simply under the name of "Farmer's Week." The Michigan Livestock Breeders and Feeders Associations, the Farm Bureaus, the Crop Improvement Association, the Muck Farmers, the Poultry Breeders, Drain Commissioners and Maple Syrup Makers and others joined in making the affair a big one. More than 5,000 attended last year.

This year, the great advancing strides are expected to keep on, and some estimates put the expected number of visitors at around 10,000. The college is resounding with preparations for the event and hopes to make this by far and large the best Farmer's Week in history.

List of Organizations to Gather for Farmer's Week

Included in the list of organizations which will hold meetings at East Lansing during Farmers' Week are these:

The Michigan State Farm Bureau.
The Michigan Crop Improvement Association.
The Michigan Milk Producers' Association.
The Michigan Potato Producers' Association.
The Michigan Maple Syrup Makers' Association.
The Michigan Veterinary Association.
The Michigan branch of the American Poultry Association.
The Michigan Muck Farmers' Association.
The Michigan Milk and Dairy Inspectors' Association.
Rural Young Men's Christian Association Secretaries.

Collective Bargaining vs Collective Dictation

THE following statement, given out by Hon. Jonathan Bourne, Jr., president of the Republican Publicity Association, coincides exactly with the arguments that Michigan Business Farming has presented against the collective "dictation" of labor unions in comparison with collective "bargaining" desired by the farmers:

"The hope of labor union leaders that they would be able to enlist the aid of organized farmers was doubtless due to the fact that the agricultural producers have been endeavoring for many years to better their condition through the adoption of the policy of 'collective bargaining.' says Mr. Bourne. The labor union leaders failed, however, to note one vital difference between the policy adopted by themselves and that pursued by organized farmers. The farmers have endeavored to utilize collective bargaining in a thoroughly democratic manner. The labor union leaders, on the other hand, have endeavored to transform collective bargaining into collective dictation in a manner that is autocratic.

"Fruit producers, grain producers and cattle producers have endeavored to secure better prices for their products by pooling their output and bargaining with buyers for the sale o fthe total. They have never, however, forbidden or endeavored to forbid any other farmer fro mselling his product anywhere, at any time, at any price. The effort of the organized farmers has been entirely legitimate, conducted for a proper end and by proper means.

"With collective bargaining on the part of labor unions there is no material fault to be found so long as it is bargaining in fact. The flaw in the labo runion procedure has been, however, that the union not only proposes to sell its own labor at prices which it may fix by collective bargaining or dictation, but it proposes to deny to any other man the right to sell his labor at any other price. It denies the fundamental principle of individual liberty. It endeavors to enforce the rule that no man shall work unless he first subscribes to the contracts of the labor union and renders himself subject to the mandates of the walking delegate.

"This policy the farmer has never adopted and never will adopt. Such a policy is contrary to the principles of the American government, and, though it may succeed temporarily, it must fall eventually because antagonistic to the public welfare. It is quite possible that a group of agricultural producers could organize its particular branch of agriculture so extensively and adopt methods so severe as to practically dictate the price of its output. Organized dairymen, for instance, might for a time intimidate non-union dairymen by overturning their milk wagons, shooting their drivers, poisoning their herds, and bomginb their families, but such methods would not long succeed. Nor is there any danger that such methods will be adopted. Agricultural producers are owners of property; they are heads of families; all their interests are aligned with law and order; all their methods therefore will be in accordance with law, and with full recognition of the rights of others.

Better Crops Thru Knowledge of Soil Moisture

Taking Advantage of Facts About Relationships Between Water and Plant Life

By M. M. McCOOL.

IN THE LAST article the ways in which the water in the soil is held and the water retaining capacity of different kinds of soil were considered. In order that the reader may have a better understanding of the discussions of moisture control that are to follow, the relationship of crops and soil moisture is to be presented.

It has been long known and appreciated that the water relations of soils and crops are of tremendous importance in crop production. The loss of water from the leaves of plants and the conditions that may increase or decrease this amount have been studied from time to time by many investigators since about 1699, and as a result we have at our disposal much valuable information regarding this subject. In view of the importance of this matter we are to discuss in this article, 1, what water does in the plant. 2. How water enters and leaves the plant. 3. Root systems of crops. 4. Water requirements of crops. 5. Conditions that affect the water requirement, and 6, how to make the best use of soil moisture.

It was stated previously that water is the means of conveyance of the mineral plant food from the soil to the roots of the plants. Upon entering the roots these must be transferred to the stems and leaves and flowers of the plant, and here again water is essential. Just as soon as there is a deficiency and the plant wilts; the movement of these into and within the plant ceases and growth likewise leaves off. Furthermore, water in itself is a plant food and becomes a part of the plant tissues. Moreover, leaves of plants that are supplied with water may be cooler by several degrees than the temperature of the air surrounding them. In some instances this is probably a means of protection against extreme heat.

Practically oll the water that leaves the plant does so through the root system and is removed mainly as the film water that surrounds the construction, or structure of the root construction, or structure oft he root system of plants is essential for full understanding of the moisture relationships of soils and crops. Under ordinary field conditions the main absorbing portion, or the part that actually removes water from the soil is generally spoken of as root hairs. These are minute very thin walled elongated single cells that are sent out from the surface of the very young portions of the roots. On account of their soft or mucilaginous like nature they are able to pass between or around the soil grains or groups of soil particles, thus affording very intimate contact with them. The tips of growing roots are also instrumental in taking in water. These are composed of masses of soft thin walled cells.

The number of root hairs and therefore the extent of the absorbing system of plants vary with the moisture content, as a rule, when the water supply becomes somewhat low, there results an enormous increase in the numbers. It has been estimated that the root hairs present on the roots of corn under average conditions increase the surface in contact with the soil mass about five times, and barley twelve times. If the water content is decreased the surface in contact with the soil may be more than doubled. This, of course, affords a wider feeding zone of the root system. Moreover, the nature and amount of the plant food present affects the numbers formed.

Owing to their thin walls, their intimate contact with the soil particles and therefore, the film water, the root hairs are able to readily withdraw water from the soil mass. As the water enters these it is pulled or forced inward and upward thru the larger portions of the root systems, and from thence into all parts of the above ground portions, and is finally given off to the atmosphere through small openings in the leaves of the plants.

The methods of penetration of roots through the soil mass is extremely interesting. Nature wisely so arranged that the development of the roots of plants takes place just back of their tips. The divisions at the tip are few in number, and thus the root advances by means of continually forming cells. In other words, the whole root is not pushed through the soil as one would a wire but only a small and continually forming point does the advancing. Fortunately the root hairs are formed just back of the advancing tip, and are therefore not dragged or pulled off as it enters the soil mass. Moreover, it is well known that the root hairs usually become inactive after they are a few days old.

It was shown in the previous chapter that the film movement of water in soil is quite slow and that most of the water that plant removes from the soil is that which lies within the zone of root penetration, and that which falls as rain during the growing season. Such being the case, the depth of the root penetration of crops is of vast importance, so far as the water supply is concerned. The nature and extent of root development of crops differ markedly. Some crops are coarse, some fine, some deep, some moderately deep and some shallow rooted.

There are several conditions that may and do affect appreciably the extent of the root system of a given crop. It is generally considered that roots of plants penetrate more deeply in soils formed in regions of low rainfall than they do in those under humid conditions. Again, if the moisture content is somewhat low there is a greater root development than if it is higher. Moreover, numerous investigators have shown that the branching or roots is much greater in soils that contain an abundance of plant food materials than in those which are lower in them.

Water Requirement of Crops

It was previously stated that there is at all times a movement of water from the soil to the roots and from them to the above ground portion of the plant, and it necessarily follows that there is a constant loss of water from these above ground portions to the surrounding atmosphere. This loss is spoken of as transpiration, or we say corn plant, for example, transpires or loses so much water during a given period. There is another term that we shall use in this discussion, namely, the water cost of a crop. By this is meant the amount of water required to produce a given weight of dry plant material, expressed as the number of pounds of water required to produce one pound of the dry material.

Now the water cost of a given crop varies with such conditions, as 1. Climate or temperature, water vapor in the air, wind movements, 2. The soil, or the nature and strength of the soil solution, and 3. Crop or the extent of leaf surface, and the age of the plant.

The temperature of the air greatly affects the water cost of crops. Where it is low, other conditions the same, the amount of water transpired is less than where it is higher.

A single corn plant on a very hot dry day may lose 10 lbs. of water through its leaves, whereas on days of more normal temperature much less. It has been shown that the natural vegetation is a good indicator of crop production, so far as climate is concerned. Attention should be called to the occurrence of short grasses, such as buffalo and grama grass in the semi-arid region extending from Montana to Texas. On the westward it is limited by arid conditions and on the east by competition with other grasses. In this belt in Montana the annual rainfall is 14 inches, while in Texas it is 21 inches. The difference in the amount of rainfall is affected mainly by difference in temperature.

In addition to temperature the amount of water vapor in the air or its relative humidity is important. Where the air contains much water vapor the loss of water from the leaves of plants is less than if it contains very little. Thus plants growing in low moist situations require less water for their development than those growing under drier conditions. Celery grown on low lying muck land uses less water than if it is grown on the same soil transported to higher situations because of the dampness and cooler temperature of the air.

Now if the temperature is high, the relative humidity low, and the wind movements are strong the amount of water that the soil must furnish to the plant is indeed greater than if the wind movement is much less noticeable. During a hot, windy day corn and other plants may wilt but when the air is cooler and the wind dies down at night they again become rigid.

It was proven many years ago that crops grown on fertile soils have a lower water cost than if grown on soils low in fertility. Recently Kiesselbach, of Nebraska, determined the water cost of corn grown in soil of different degrees of fertility.

He found the water cost to be about 569 pounds where the corn was grown on very poor soil whereas it required 494 pounds in soil of intermediate fertility and only 333 pounds in fertile soil.

It is very probable that the tendency for some of Michigan's thinner farm lands to suffer early from drought is due to an insufficient supply and lack of proper balance of plant food elements in them. Careful husbandry or rotation of crops and intelligent soil fertilization should affect the conditions favorably. At first consideration one might lay too much emphasis on this feature. Suppose by the free use of plant foods that the leaf and stem development was markedly increased, although the water cost per unit of dry matter formed would be decreased, the great drain on the soil's supply of moisture by the large development might at a given time result disastrously. Or it seems if the addition of manure, or fertilizer, appreciably increases the plant growth, the total amount of water the soil must furnish to the crop is greater than if the fertility had not been increased unless the rate of seeding is thinner.

The water cost of different crops varies greatly. The amount of water required to produce one pound of dry matter of several crops in the latitude of central Michigan lies between 300-500 lbs. Weeds require about as much water for their growth as the ordinary crops, as the estimates given bring out.

Relative Water Costs of Plants

Legumes, pounds	450-700
Small grains, lbs.	300-450
Sorghum, lbs.	250-350
Millet, lbs.	250-350
Weeds, lbs.	300-550

It should be remembered, however, that the climate and soil conditions spoken of above may either increase or decrease these amounts.

Now, let us suppose that the water cost of wheat is 400 and the dry matter produced is two tons per acre. This means that 800 tons of water must be supplied by one acre of soil, or about 7 inches of rainfall. Moreover, we should not lose sight of the fact that enormous quantities must be supplied in short intervals of time, more than the weight of the plant on hot days must be furnished, as was stated to be the case with corn and that this estimate does not take into consideration the loss from the surface of the soil.

An important consideration in arid, or regions of low precipitation is the effect the extent of the leaf surface exposed has upon the water cost. It has been shown by the Nebraska Experiment Station that where the leaf development of corn was reduced 14 per cent by selection that the water cost was reduced 16 per cent. Moreover, varieties of the same crops may differ appreciably in the amount of water required to produce a given yield.

It has also been shown that young plants require more water for the production of a given amount of dry plant material than do older ones, and this is held to be of some importance in grazing lands under conditions of low rainfall. One would obtain more dry matter for a given amount of water in the soil by not grazing until an appreciable growth had taken place.

In order to make the most economical use of soil moisture which must be done over large areas each of the above conditions that affect the amount of water required should be considered. If the rainfall is deficient or not properly distributed through the growing season, crops with extensive root systems should be grown if possible, inasmuch as they have larger soil areas from which to withdraw water than do the shallow or less extensive rooted crops. Moreover, if a section is so situated that the temperature and wind velocity are high crops that mature early in the season or that have a minimum leaf surface and low water cost may be grown. Frequently, south slopes are unsuitable for certain crops when the opposite or north slopes are ideal for them. Again, crops that have large leaf surfaces and require large amounts of water are usually more suitable for low moist areas than they are for upland or exposed situations. As will be shown later on some crops thrive best on soils of fine texture, and others on soils of coarse texture, and as a general rule, they make the most economical use of the water at their disposal if they are adapted to the soil and other conditions under which they grow.

Getting the Edge on Drouth and Storm

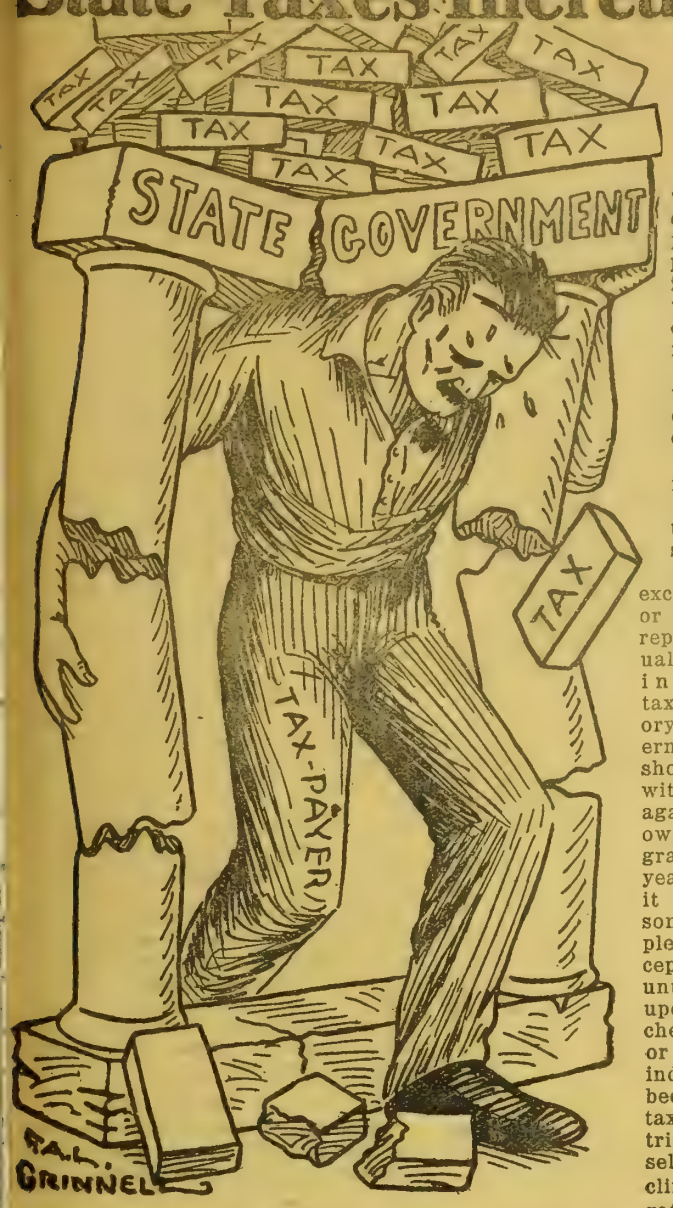
FARMERS are going out harder every year in their age-old fight to conpuer natural conditions which tend to ruin or hinder crops. A thorough knowledge of soil moisture in relationship to crops is one of the greatest helps in this fight; so Prof. M. M. McCool, soils expert at the Michigan Agricultural College, has gathered the best available facts on the subject.

This article, while containing valuable tips, is more or less introductory to some of the articles which will follow.

In order to understand better the gold mine of information which is to follow, it is a mighty good hunch to hear what the leading soils authorities have to say on the subject in this installment.

State Taxes Increase 750 Per Cent. in 24 Years

Corruption in High Places, Inneficiency of Public Officials, and Multipliciiy of Commissions Blamed for Huge Increase



A WISE OLD philosopher observes that people abhor taxes. He finds that about the most persistent human trait that has come down through the centuries from the days when the first tithe where in evidence in the expenditure of the public's money, it must be that we get far greater value for the money we pay in taxes than did the people of the early European dynasties.

The most fruitful cause of rebellion since the earliest stages of government has been excessive taxation, or taxation without representation, usually resulting in excessive taxation. The history of many governments seem to show that, starting with a nominal levy against property owners, the tax was gradually increased year by year until it became burdensome and the people revolted. Except in cases where unusual demands upon the public exchequer to pay war or other abnormal indebtedness have been satisfied the tax rate in all countries advance, and seldom if ever declines. So the tax rate becomes a matter of concern to every citizen, to be watched and weighed, lest it become a millstone about the neck and drag him to ruin.

Taxes in this state have increased so rapidly the past few years that was collected is the habit of bewailing and evading taxes. A citizen, he says, may cheerfully meet any expense of commodity and luxury and feel that he is getting the worth of his money, but he invariably pays his tax bill under protest and escapes it altogether if possible.

It is not the part of good citizenship to be perenially complaining about the taxes. We have taxes because we have schools, highways, public institutions, police and fire protection, and numerous other advantages which are only possible under some form of central government or authority. The necessity of some kind of tax against the people who enjoy the benefits of the tax is established, and we have now only to treat with the methods of taxing and the amount to be collected. Under the old despotic form of government people were taxed into veritable serfdom, but we of today pay a ridiculously small part of our income to the state. And this is true despite the fact that our form of government is much more complex and expensive to administer than the old monarchial forms. Notwithstanding the extravagances that are everywhere in evidence they have become a real problem and a burden upon the average land-owner. Farmers are complaining bitterly that they cannot afford to pay such high taxes. Thep point out that while the market value of their farms has increased very materially the last ten years, the producing value has remained practically stationary, and that the increase of taxes is wholly out of proportion to the higher prices received for their products. MICHIGAN BUSINESS FARMING does not desire to complain against taxes for the pure sake of finding fault. It feels, however, that taxes are needlessly high, and believes that the subject should be thoroughly discussed and the next legislature importuned to adopt remedial measures. The accompanying article is the first of a series to be published during the balance of the winter months upon the subject of taxation.—EDITOR.

* * * *

E. C. FERRIS, of Alma, Gratiot county, owns a farm of 80 acres. Twenty-four years ago the farm was assessed at $1,600, and Mr. Ferris paid a tax of $18.73. His tax receipt, dated Feb. 22, 1896, is reproduced below. Twenty-two years later, the assessed valuation had been increased to $9,000, and on Dec. 18, 1918, he paid a total state, county, township, etc., tax of $245.47, an increase of over 1,000 per cent. The following year, the valuation of his farm was increased to $14,000, and according to his tax receipt printed below, he paid taxes aggregating $334.60, or an increase over 1896 of nearly 1,800 per cent. What's the answer?

The answer is partially this: The cost of living has increased. Food, clothes and supplies in our public institutions cost nearly double what they did a few years ago. Salaries to instructors are higher; road materials cost more, and we are building a much more expensive type of road than formerly and upon a larger scale. As population increases, the cost of developing the government and its various functions for meeting the needs of the people, also increases. But that answer will not provide a complete solution to the increase in taxes.

Another reason for higher taxes is the inefficiency of government. Political parties and politicians have fallen into the evil habit of using the offices and influence of government to provide salaried positions for their friends, and their friends' friends. Scarcely a session of the state legislature passes by but what some expenditure is authorized which is not to satisfy an urgent need, but to give patronage to somebody in payment of political debts. Instead of creating positions, boards and commissions to meet expanding needs, our legislature too often casts about for work to keep their boards and commissions busy. The number and cost of state boards and commissions have increased enormously the last few years. The citizens of the state will, for instance, live in fancied security until the legislature meets and discovers that the burglars and highwaymen and murderers are abroad in the land and the people must be protected. Hence, a bill is rushed through creating the state constabulary. And why not? It only costs a half million dollars a year to maintain, and look at all the grapes the constabulary will save from the marauding bands who make our highways and by-ways a perpetual menace! Or, again, someone discovers that the state is drifting into an aenemic, effeminate condition that needs to be remedied by instructing the youth in the manly art of boxing. So the legislature creates the boxing commission and the brutal pastime of prize-fighting is with us again.

Almost every session of the legislature brings to Lansing some inspired legislator who feels that he is the ordained exponent of some mighty mission that can only be carried out by the adoption of new laws or the making of new commissions. Not infrequently he succeeds in convincing the majority of his colleagues that his pet idea is vital to progress, or perhaps his colleagues, being gentlemen of foresight readily agree to his proposal to put him in their debt since the time may undoubtedly come when some among them may have an idea they want to sell to the state. Thus jobs are created, boards and commissions come into being, expenditures climb and the tax rate takes the air route.

Another reason why some taxes are high, those of our Gration county friend, for instance, is because some other citizen is not paying his just share. The state of Michigan generally, but the county of Wayne and the city of Detroit, in particular, have been blessed with wonderful expansion and prosperity the last decade. The population of Detroit has doubled; the property value has tripled and quadrupled, and it surely seems that the increase of wealth ought to be sufficient to meet the growing expenses of government with but very little if any increase in the tax rate. A comparison of the taxes levied in Gratiot and Wayne counties shows that the Wayne county tax has been increased over the Gratiot tax about as two to one.

On the face of it this looks like a fair spread, but when we take into consideration the enormous development of Detroit and the increase in the valuation and rents

Changing Michigan Sand Lands to Fertile Acres

Schmidt Farms in Iosco County Revelation of what can be done with Soils once Believed Unproductive

By JUDSON GRENELL

HAVE you learned any new wrinkle in farming this year?" The question was put to Carl E. Schmidt, as we sat toasting our shins around his fireplace one cool August evening. The logs were merrily blazing. Outside the wind was rising, and the chill in the air made the fire attractive and comforting. For Walhalla is far enough up state to get early intimations of fall weather, though this notification is modified by the fact of being less than a mile from Lake Huron which continues to take the "nip" out of the air long after localities further inland have been frostbitten.

Walhalla is some eight miles north of Oscoda. It is in the very heart of the pine barrens region. What with scrub oak and jack pine plains, and sand "reaching to China," one might travel the world over without finding a locality less likely to offer encouragement for profitable farming. Indeed, when Mr. Schmidt decided to become a farmer, some 14 years ago, he said to his buyer:

"Find me the very worst land in Michigan on which it is possible to raise crops."

That is why Walhalla came to be located in Iosco county.

Mr. Schmidt answered offhand my question as to the latest wrinkle in farming. Anything new he discovers in the farming line is free to the world. And he is willing to advertise his failures as freely as his successes. For each failure, as well as each success, holds a lesson for those who are willing to profit by the experience of others.

"I have learned this year at least one thing that will eventually be of great value to all farmers," said Mr. Schmidt. "I have learned how to keep crows out of farmers' grain fields. And the thing is so simple that it is a wonder no one has before caught on to it. Hereafter, if any farmer suffers loss from the depredation of crows, it will be his own fault. It is only necessary to mix tincture of aloes with red, blue or green analine dye, and sprinkle this mixture on the seed before planting.

"Crows will not bother his field more than once. The first taste satisfies them that it is no feeding ground for crows. Nothing doing. They leave severely alone the seed thus treated.

"And the cost is nominal—not to exceed five cents a bushel. If, because of the moisture, the seed has a tendency to stick together, mix it with some fine sand. I have tried it and it works. There will be no failure."

Mr. Schmidt now has 800 acres of sand lands under cultivation, and producing profitable crops. He has 2,000 acres of grazing land—land that has been cleared and seeded—and on which are 500 sheep, 50 cows and calves, 40 or more horses, 1,500 chickens and a dozen pigs. And he has demonstrated that on Michigan's most undesirable soil, from an agricultural point of view, it is possible to successfully and profitably raise crops.

Walhalla farm house, in the heart of Iosco county sand plains.

A Real Land Problem

"The sand goes down 40 feet," says Mr. Schmidt. "Then there is a layer of rock salt, say 10 feet thick. And after that is more sand—25 feet of it—and again a layer of salt, but not so thick as the first layer. Then more sand and more salt in layers. Finally at 400 feet down shale rock is struck. What comes after that I do not know."

That is the kind of soil with which Mr. Schmidt has been experimenting. "I have no interest in naturally fertile soil," he said, "I wanted a real land problem to solve, and I got it good and plenty when I began with these Michigan pine barrens."

Fourteen years is too short a time in which to obtain a proper perspective of what Mr. Scmidt has accomplished in Iosco county. When, 50 or more years hence, this part of the state is all properly utilized—the sand plains under cultivation and the swamps drained and put to good use—the historian will find a rich vein of information in the data Walhalla and Serradella farms will furnish. Cedar Lake, seven and a half miles long and in some places half a mile wide, separates the two farms, but both are the property of Mr. Schmidt. Most if not all of the cultivated portion of this "domain" consisting of several thousand acres—lies west of Cedar Lake. Walhalla itself consists of the residence proper ,the up-to-date poultry buildings, the stables for high bred horses, the buffalo and elk parks, and the buildings occupied by the house help. Serradella is the working farm.

The Schmidt residence is modest looking in outward appearance, but is spacious within and contains all the conveniences associated with wealth and comfort. It is approached by a causeway, each edge planted with poplars and cutting the lake in two. Swans, geese and several varieties of ducks—among them a nice flock of domesticated mallards—utilize the lake, which is well supplied with fish.

The heating (steam) lighting, (electric) and water systems (tank pressure) are the latest in these necessaries to cultured living.

The names of these farms run into legend and utility. "Walhalla" has to do with Norwegian mythology—a resting place for fallen heroes. "Serradella" is from a Spanish legume which was imported through Germany where it had been thoroughly tried out; and Mr. Schmidt found it would also bring fertility to the sand plains of Michigan.

Soil Building

The problem of soil building is the problem of making these sandy areas commercially profitable. In this direction Mr. Schmidt has done remarkable work—not to say performed miracles.

"I am a tanner, and at first blush it would seem as if farming had nothing in common with tanning," remarked Mr. Schmidt. "But such is not the fact. Both, to be successful, require knowledge of biology and chemistry.

"What is the soil ?What is the skin? What must you know in order to raise crops? What is needed in order to tan leather?

"Without basic chemical knowledge and capital, failure is sure to follow either industrial activity. I have seen 27 tannery companies go out of business mainly because they were short on knowledge of chemistry; and I have seen where many times that number of farmers have failed because of lack of chemical knowledge and a few dollars."

So when Mr. Schmidt started in endeavor to make a success of farming on what in the opinion of most people, was absolutely worthless land, he started with knowledge of the necessity of discovering the secret of arable soil. There must be nitrogen, the chief food for vegetable life, but nitrogen will not stay in stand soil without humus.

What is humus? Simply decayed vegetable matter. What is the quickest, best and most economical method of adding this humus to the sandy soil of Iosco county? Plant certain kinds of crops, and when they have reached maturity turn them under. Plant what? First lupin; next, serradella—both leguminous plants.

There, in a few words, is Mr. Schmidt's philosophy of soil building. Legumes gather nitrogen from the air. When you have humus, you can get your nitrogen; and in nitrogenous soil crops will grow. And never spare the common but valuable barnyard manure.

Making the Soil Stick

Have you ever noticed the cloud of dust raised by a strong wind blowing over a sandy plain? You will not see this on Mr. Schmidt's cultivated acres. The soil has body it stays down! and it is aided in this by the peculiar way in which it is rolled—in ridges piled at an angle other things—clove among them.

After lupin and seradella come other things—clover among them. Then follows grain—wheat, rye, oats etc. After the soil has been built up it will raise corn and potatoes—two kinds of farm produce which mean death to pine barrens farmers if their farming is started with them.

A drive of 50 miles or so through Iosco and Alcona counties brought to view many evidences of where farmers had started the wrong way to make their industry a financial success. These evidences were in the shape of abandoned farms.

Wandering over these sandy plains one August afternoon with Mr. Schmidt, and getting stuck occasionally in a sand pit, there was seen a newly started homesteaded farm of 80 acres. A pole fence surrounded a primitive house of logs and a couple of still more rudely constructed outbuildings. On one side of the house was a potato patch; on the other side a cornfield. Neither was promising, but possibly a few bushels of corn and potatoes would be harvested.

"Here is what these poverty stricken farmers all do," said Mr. Schmidt. "They must have something to live

Views on Schmidt farm, showing modern tenant buildings, barns, office and other up-to-date farm quarters.

on from the very beginning, and so they plant what is most likely to provide food.

"But potatoes and corn are voracious eaters; they need plenty of nitrogen. This first crop will exhaust this light soil of its nitrogen, and next year's crop will not be worth gathering. The third year the man, thoroughly discouraged, will abandon the farm. By doing odd jobs for farmers near by the homesteader may hang on a little longer, but by the end of the fifth year his vision of owning a farm will have vanished."

There is hardly a mile of this section of the state that does not indicate in some spot the futility of a poor man trying to successfully farm on these pine barrens. Trees will grow, why not crops?

Indians, Potatoes and Moisture

Some few miles west of Walhalla is an Indian settlement. AuSable is the geatest shipping point in Michigan for huckleberries. A few Indians are still left, obtaining a sort of living from scraping the soil of a few acres where there happens to be some clay, and eking out a living by berry picking and occasionally being a helper to some sorely driven farmer.

"Drink and the devil has done for the rest. Mainly drink. However, I noticed one very good looking potato field that seemed to warrant attention.

"Fine looking potatoes," I said.

It was Mr. Schmidt's opportunity.

"These Indians," he remarked slowly, "have learned a great secret about potato raising, and they discovered it without any help from their white neighbors. No matter how dry the season may be, and other farmers' fields are burning up, their potato fields will always have all the moisture needed."

"How do they do it?"

"They plant between each row of potatoes a row of onions, and that solves the problem of moisture."

"What is the philosophy of it?"

Mr. Schmidt was in his element. The question gave him opportunity to parade his knowledge of farming.

"You see," said he, "the onions bring tears to the eyes of the potatoes, and the moisture problem is solved."

All of which demonstrates that Mr. Schmidt does not spend all his time thinking out agricultural problems.

Most of these Indians are half-breeds only a few have any of the characteristics of the "noble red man," but an occasional squaw shows in her figure and the way she carries herself why so many of the early pioneers developed a taste for squaw wives.

A Highway Death Trap

Returning over another road marked "to Harrisville," was seen a startling example of indifference to public interests. The Detroit & Mackinac railroad had worked a great gravel pit alongside their right of way. The sides had caved in so that the great hole extended directly across the highway. Traveling in an automobile at night, if the driver should be ignorant of this particular trap, and did not discover it in time the result would be a plunge over a 30-foot embankment. And nowhere has there been placed any sign to indicate danger. Approached in the daytime, one might escape the trap, but should the machine be brought too near the edge of the pit, it would crumble before it could be backed.

The roads—most of them once logging roads—across the pine barrens run in every direction. People have wandered in them become confused as to direction, and circled around for hours, sometimes for a day and a night before being able to extricate themselves. Only expert woodmanship or familiarity with the locality can save the lost from extreme worry, not to say heart failure.

Nor need one expect some one to come along in a little while and give proper directions. The region is almost entirely uninhabited and even the main highways are not much if any different in appearance from the old logging roads.

Returning to Walhalla over a highway that would make advocates of good highways almost give up in despair of ever being able to interest people of this section in the good roads proposition, the "civilized section" of Iosco county was finally reached, and a near view was had of Mr. Schmidt's farming system.

National Co-operative Live-Stock Shippers Expand Organization

E. E. Compson, Michigan Manager, Describes Work and Plans of National Association; School of Instruction to be Held in Detroit

E. E. COMPSON
Mgr. Michigan Live Stock Exchange

OVER 300 co-operative livestock shipping delegates, representing 21 states and four Canadian provinces recently assembled in Chicago and unanimously perfected a permanent National Federation of Co-operative Livestock Shippers. The following states in the order named were represented by the largest delegations: Iowa, Michigan, Indiana, Illinois, Wisconsin, South Dakota, Minnesota. Other states represented were: Nebraska, Ohio, Kansas, Oklahoma, Washington, Colorado, North Dakota, Missouri, Tennessee, New York, California, Kentucky, Louisiana, Pennsylvania and Canada.

Officers and Directors

The following officers were elected: Knute Espe, Ames, Iowa, president; E. E. Compson, Remus, Mich., vice president; John Miller, Galva, Ill., treasurer; Selby E. Peterson, Waconia, Minn., acting secretary; Earl J. Trosper, 906 Royal Insurance Building, Chicago, organizing secretary; C. Hoover, Longmount, Colo., director; T. M. Paterson, agricultural college, Miss., director; A. S. Anderson, Beresford, S. D., director; C. H. Gustafson, Omaha, Neb., director; H. M. Phillips, Palmrya, Mo., director; J. F. Larson, Ellsworth, Wis., director; M. E. Sherman, Kendallville, Ind., director.

Officers Recognized Leaders

Knute Espe has organized 12 livestock shipping associations in his home county (Story) one of which he serves as president. He is associated with W. T. Barr, famous Chester White breeder, who is well and favorably known among the livestock men of the country.

E. E. Compson is state manager for the Michigan Federation of Co-operative Livestock Shippers and is one of the most able men in the movement.

John Miller is president of the Farmers' Grain Dealers' Association of Illinois, an officer in one of the oldest livestock shipping associations in Illinois, and a recognized leader.

Selby Peterson is treasurer of the Minnesota State Federation of Co-co-operative Livestock Shippers. It has been largely through his efforts that eight bills of immense benefit to the Minnesota livestock shippers have been put through the Minnesota legislature.

Earl J. Trosper is the originator of the National Federation idea and it has been largely through his efforts that the federation has been successfully launched. He is a recognized agricultural leader and both practical and impartial in his work.

All of the directors are recognized leaders in their respective sections.

Objects

The objects of this federation in a general way are as follows:

To encourage better and more economical methods in the production and distribution of livestock and livestock products; to promote co-operative education, and to encourage the organization of co-operative livestock marketing organizations; to develop uniformity in the plan of organization and method of operation of local livestock shipping associations; to aid such organizations in problems of general interest in transportation, handling and marketing; to lease, buy, build, own, improve, mortgage, sell and control such buildings and other real and personal property as may be necessary in the conduct of its operation; and to perform any other work which may be of benefit to its members or helpful to the industry.

Basis of Financing

The national and state federations will be financed on a small membership fee and a per car charge basis which will be regulated from time to time to meet the needs of the shippers.

All Shippers Strong for National and State Federations

Such men as E. E. Compson, Remus, Mich.; W. A. McKerrow, secretary Minnesota State Federation of Shippers; J. R. Howard, Clemens, Iowa; H. C. Wallace, DesMoines; I. S. Brooks, Ottawa, Ill.; S. D. Hall, Bureau of Markets, Washington, D. C.; H. W. Danforth, St. Louis, Mo.; M. R. Myers, Chicago, Ill.; J. F. Larson, Ellsworth, Wis.; representing the American Society of Equity; J. C. McGregor, Ontario, Canada, United Farmers of Ontario; M. P. Tullis, Regina, Canada, Department of Agriculture; Clifford Thorne, famous Chicago transportation attorney and others, gave strong, constructive talks favoring national and state organizations.

Sentiment Unanimous

Throughout the entire two days session the large delegation of livestock shippers, representing 21 states refused to disagree. The National constitution recommended by the official committee was adopted without an important change. All states delegations were eager that the organization stand on its own feet to the end that all co-operative livestock shippers, regardless of location of affiliation with other farm organizations, be accorded uniform recognition.

States Makes Definite Plants to Organize

The following states went on official record at the meeting requesting the service of the organization secretary in helping them perfect state federations of livestock shippers at Indian, Fort Wayne, Dec. 11; Colorado—Ft. Collins, Feb. 15; Illinois, prior to Feb. 15. Iowa, South Dakota, Wisconsin made definite plans to federate, date to be announced later.

Short Courses for Managers

Successful short courses for managers and others interested have already been held at St. Louis and Kansas City. Similar short courses will be held at all leading terminal markets including: Omaha, Sioux City, Denver, Chicago, Detroit and St. Poul. The dates are as follows: Detroit Michigan, Michigan Central Stockyards, Feb. 10 and 11; Chicago, Ill., Feb. 17, 18 and 19; Omaha, Nebraska, Feb. 23 and 24; Sioux City, Iowa, Feb. 26 and 26.

The national federation has completed arrangements with the U. S. Bureau of Markets to have Doty, of the Chicago Bureau of Markets supervise the various schools.

Note: The National Federation will welcome letters from the agricultural press requesting specific information for publication also offering constructive suggestions as to need in their territory.

Notes: A bulletin covering organization and developments to date will be available for distribution in the near future.

Milo Campbell Announces Platform on Which All Interests Can Unite

Candidate for Governor Takes Progressive Stand on Issues in which People of State are Vitally Interested

MILO CAMPBELL has definitely accepted the invitation of the farm organizations to become a candidate for Governor, and has publicly announced that he will make the race on the Republican ticket, having been a life-long adherent to Republican principles. Mr. Campbell also announces a "platform," which makes his position clear upon the most important matters now before the public eye. It contains a good deal that should appeal to the common sense of the average citizen, man or woman, farmer, laborer or commercialist. There is nothing in the program that savors of class distinctions or a desire to secure class privileges through the power of the law. Legitimate business interests that have shrunk from the idea of farmers taking a hand in state politics lest they abuse the privilege, may find reassurance in Mr. Campbell's pronouncements, quiet their fears and co-operate with the farmers in the name of good government.

Mr. Campbell returned last Sunday from Washington and will devote the major part of his time from now on to his candidacy. He is a born campaigner, a good "mixer," because he understands the problems of most of the people whom he meets and can discuss them familiarly and with authority. Moreover, he is a good platform speaker, and being heart and soul with the themes he has preached during his long career of public service, will have no difficulty in holding his place with any of the other gubernatorial candidates. Those who have never met Mr. Campbell will now have that opportunity as we are informed that he intends making an aggressive speaking campaign thruout all the rural districts of the state.

News of Mr. Campbell's candidacy has spread rapidly throughout the state and the majority of the press comments thereon have been of a favorable nature. Several newspapers have voiced their disapproval of Mr. Campbell's having been announced as a "farmer candidate," believing that the governor of Michigan should be elected by and made responsive to all classes of people. Otherwise, this publication regards Mr. Campbell in a very favorable light. Except for the fact that Mr. Campbell has been active as a farmer and a farm organization leader and has been endrosed by the farm organizations, he will run as the candidate of ALL the people, as he properly should. There can be no question about this. Farmers will support Mr. Campbell because he is acquainted with their problems and will give them the attention which their importance deserve, but at the same time he will not overlook the needs of other people.

TO THE PEOPLE OF MICHIGAN:

I have just received an urgent request that I become a candidate for governor from a conference committee appointed by the various farm organizations for that purpose.

I have previously received pressing invitations to the same effect from organizations in other lines and from widely different sources.

As a result I have decided and now announce that I am a candidate for the Republican nomination for governor.

In doing so, I wish to say that I shall endeavor to become the standard bearer of certain great principles which I regard as vital, and in their interest shall devote all my energies to a vigorous campaign, not merely in the hope of becoming governor, an honor which I do not covet for itself alone, but in the hope of furthering those principles, which is the highest ambition of my life.

There will be no pussy-footing in my campaign. I shall, from time to time, make plain statements of my position on public questions, realizing that I may invite serious opposition but believing the people are entitled to know what to expect from me.

I shall stand on the following platform:

FIRST—Americanism.

SECOND—Republicanism. Subject to my duty as an American, I shall adhere to the principles of the Republican party, of which I have been a lifelong, active member.

THIRD—Collective bargaining for both farm and industrial labor.

FOURTH—Improved conditions and an adequate wage for labor.

FIFTH—A basic eight hour day in industry but not a shorter day. With the present pressing need for production we cannot prosper on half time.

SIXTH—Against the demands of the "red" element in labor unions and for the apparently successful effort of constructive leaders to prevent their domination.

SEVENTH—Proper relief for disabled soldiers and sailors. Where the federal government has failed to function adequately for this purpose, I believe the state should supplement its work.

EIGHTH—Reduction in the number of state boards by combining groups of related activities along the lines successfully worked out in Illinois.

NINTH—The proper recognition of women in matters of government.

TENTH—Certain reforms in insurance laws which, without injury to insurance companies, will greatly benefit the insured. But not state insurance.

ELEVENTH—Good roads and such internal improvements as will make Michigan a better state.

TWELFTH—Official independence. I shall make no promises in advance of the election, either of positions or policies except as contained in my public announcements.

Hoping my platform and candidacy will win your approval, I am,

Sincerely,

MILO D. CAMPBELL.

JUST AS interest was beginning to get lively in our straw vote for Governor we are obliged to bring it to a close because the farm organizations have endorsed their man, and there ought not to be any other choice for the farmers. A total of over 1,700 votes has been received to date, and had the vote run another month we are sure that at least 5,000 votes would have been cast.

A number of our readers are taking considerable interest in the presidential situation, and at their request we will begin in the next issue a straw vote for President. There are any number of candidates for the job, but whether any of them measure up to presidential requirements is a matter upon which the public differs. There is some talk of booming Ford as a possible Michigan candidate on the Democratic ticket. Wood and Lowden supporters are busy in the Michigan field and a number of "Wood for President Clubs" have already been organized. Sen. Poindexter of Washington, who was the first to declare his candidacy is finding it hard to drum up sentiment in his behalf. As the Detroit News recently puts it, "has anybody seconded Sen. Poindexter's nomination?" The press generally does not take the Poindexter candidacy seriously. The Senator is too "western" to suit our cultured eastern brethern. Hiram Johnson has filed petitions in several Republican preferential elections, and will be a factor to be reckoned with. Harding of Ohio also looms up as a possible contender.

On the Democratic side, Wm. Jennings Bryan is loose again, and he threatens division if not disaster among the Democratic ranks.

His determined stand on the League of Nations has considerably upset many of the strongest democratic leaders, principal of whom is Wm. G. McAddo, the president's son-in-law, and it is declared that with-in-law, A. M. Palmer has showed himself a good politician if nothing more. He has forced himself into the limelight with reckless abandon the past few months, staging spectacular verbal fights against the profiteers, and more recently employing the secret service in some very questionable raids and arrests without regard to their constitutional rights of those affected.

Another proposition that will be included in the straw vote is the disposal of the railroads. The question as it stands today is whether the government shall continue to operate the roads at present with a small monthly deficit but no increase in rates, or whether they shall be returned to private owners, and freight rates increased enough to pay the owners a six per cent net on their watered stock. The farmers are the big freight payers of the country. Let them decide what shall be done with the roads. The Cummins and Edge bills are now in conference. Neither railway executives or employes approve of all provisions of these bills. A compromise may be affected, however, within another five or six weeks, so if the farmers are to make their wishes known, they must get busy AT ONCE. Watch for the coupon. ALSO, WRITE YOUR CONGRESSMAN AND SENATOR.

Beet Growers, Turned Down by Manufacturers, Begin Organized Fight

THE FIGHT is on. The sugar beet growers of Michigan, thru their committee, have failed to gain a conference with the manufacturers on the 1920 contract, and there is no alternative now but to hoist the flag and scrap the issue out upon its merits.

This is what the growers' committee definitely decided to do at their meeting in Owosso last Saturday afternoon. Chairman Ketchan who had sought by every honorable means to secure the attention of the manufacturers to the terms of the growers, presented letters to the committee from various manufacturers, all stating in effect that they did not care to meet in conference, that the present contract was good enough for them, that the sugar beet content this year is low anyway, etc. Not a single manufacturer gave the committee any encouragement that the growers could expect a more equitable share of the 1920 sugar profits.

The committee will lose no time now in thoroughly organizing the entire sugar beet territory. Despite the claims of the manufacturers that the majority of the contracts are signed, investigation proves that this is not the case. It is true that some farmers have signed, but a good many of them did not grow beets last year, and are not generally classed as beet farmers. It seems very evident that the majority of farmers who have grown the majority of beets in the past have not yet signed their contracts for the 1920 acreage. So the success of the growers in getting a better contract depends wholly upon the extent and strength of their organization.

Mr. C. E. Ackerman of Durand has been put in charge of the work of organizing and the campaign will be started at once. As noted above, mass meetings are already scheduled for the following week when committees will be appointed and all the townships of the principal beet growing counties intensively canvassed.

As the sugar beet situation stands today the manufacturers will make enormous profits on the 1919 and 1920 crops, and they have failed to produce a scrap of evidence to the contrary. Some farmers may be satisfied with the terms of last year's contract but the great majority are not. Bay county farmers are determined almost to a man not to grow a single acre of beets unless assured of a price that will net them $15 per acre or better. While farmers of other counties do not feel quite so strongly about the matter, there is plenty of sentiment showing that the dissatisfaction over the old contract is widespread. Even were the farmers entirely satisfied that they were making fair profits under the old contract they ought to insist on a fairer division of the consumer's dollars. The manufacturers ought not to be permitted to make a greater profit than the farmer, in proportion to the investment and risk involved.

Sugar beet growers, this is your opportunity to show your loyalty to your brother farmers and to the sugar beet industry of the country. Michigan is not the only state where the growers have been compelled to organize to secure their just rights. The contest ha sbeen staged in other states and the national convention of growers to be held soon in Salt Lake City, will be a mighty protest against the aribtrariness of the sugar manufacturers and their autocratic manner of dictating the terms of the contract. The eyes of beet growers in other states will be upon the Michigan growers. If we in Michigan succeed in the undertaking we have inaugurated, they will be cheered to push ahead with their campaign. If we fail, they may fail and the backbone of the farmers' honest efforts to secure what plainly belongs to him may be broken. We consider the issue between the growers and the manufactures of vital consequence to all Michigan agriculture. The fight MUST be won. There can be no compromise. The sugar manufacturers MUST be forced to come to the front and lay their cards on the table alongside the farmers! The farmers are willing to let the public judge the merits of the case, but the manufacturers shrink from such a parading of their profits. Organization will turn the trick for the farmers, but it must be 100 per cent organization, without a single slacker in the bunch. Talk this proposition over with your neighbors. Stand by the organization and you'll be amply repaid for your loyalty.

ATTENTION, BEET GROWERS

Mass meetings for the purpose of thoroughly organizing against the arbitrary stand of the manufacturers will be held at the places and on the dates listed below:

St. Johns, Clinton couny, Jan. 19; Ithaca, Gratiot county, Jan. 20; Owosso, Shiawassee county, Jan. 21; Saginaw, Saginaw county, Jan. 22; Pigeon, Huron county, Jan. 23; Sandusky, Sanilac county, Jan. 24.

Farmers and Labor Heads Petition Congress to Retain the Railroads

Big Conference at Detroit Also Takes up Proposal to Eliminate Food Middleman

THE FIRST conference between farmers and laboring men ever staged in Michigan took place last Friday at the Fort Shelby Hotel, Detroit. The primary purpose of the meeting was to discuss the railway problem and take action toward advising Michigan congressmen and senators of the wishes of Michigan labor and farm organizations as to the further operation of the roads. All present declared themselves strongly opposed to the Cummins bill and in favor of the retention of the railroads for a further period of at least two years or until such time as congress can pass legislation that will adequately protect the interests of all parties concerned in the country's transportation.

Most of the labor heads declared themselves in favor of the Plumb plan, but the farmer representatives withheld whatever views they had upon the plan and cautioned the labod delegates that they were not in a position to speak officially for their members upon that proposition. Some of the labor heads also spoke against putting the meeting or any delegates upon record on the Plumb plan, frankly admitting that many of the railroad men themselves who had not studied the plan were quite divided on the matter.

The action taken by the farm leaders was merely supplementary to what the organizations themselves had taken in state convention. At the annual meeting of both the Farmers' Club and the State Grange, resolutions were adopted favoring continued government operation for a period of two years, and the executive committee of the Gleaners had similarly spoken for its membership.

Grant Slocum, president of the National Gleaner Federation, was chairman of the convention. Jennie Buell, secretary of the Michigan State Grange was present, and was one of a committee of five to draft the resolution that was wired to the Michigan delegation. The Farmers' Clubs were not officially represented, but Mr. A. B. Cook, chairman of the legislative committee of the association, had previously advised that he was in hearty accord with the purposes of the gathering, but because of another engagement would be unable to be present. Over fifty officers of local, state and international labor organizations, representing almost every branch of railroad labor were in attendance and took an enthusiastic part in the program.

One of the principal figures at the convention was Benjamin C. Marsh, secretary of the Farmers' National Council of which organization, Sen. Herbert F. Baker is president. Mr. Baker was unable to be present owing to the serious accident which befell him a couple of weeks ago when an acetylene tank exploded, burning him severely and nearly depriving him of his eyesight. He sent a telegram, however, announcing that he was in sympathy with the move.

Railroad labor organization heads told many instances of the deliberattempts on the part of railway executives to discredit government operation. One of the labor heads said emphatically that the government made a mistake by keeping in executive positions men who were opposed to government operation. "They should have been fired on the spot," he said.

At the evening session Mr. Oscar H. Megill of Seattle, secretary of the All-American Farmer-Labor Co-operative Corporation, gave an address on what had been accomplished in the state of Washington by way of co-operative marketing, from producer to consumer. He stated that they had found, that while not all of labor's and farmer's interests were mutual, many of them are, and that out in Washington, they had co-operated on such projects as were mutual and left others strictly alone. No definite action was taken to bring about a co-operative exchange of goods, but everyone present evinced a great interest in the proposal

The following statement and resolution was adopted, signed by each one present and sent to Washington.

"At a meeting held in the city of Detroit, January 9th, attended by representatives of the Michigan State Grange, the Michigan Federation of Gleaners, State Ass'n of Farmers' Clubs, and delegates of labor organizations, comprising in all fifty-six delegates, representing at least 70 per cent of the voters of Michigan, it was decided after careful consideration of the railroad situation and the rights of organized farmers and organized labor and the people of Michigan as a whole that government control and operation of the railroads be extended for a period of at least two years and that congress enact legislation making such extension mandatory. The State Grange, the Michigan Federation of Gleaners, State Ass'n of Farmers' Clubs, comprising in their membership over two-thirds of the farmers of Michigan, have recently adopted resolutions demanding such action. All the railroad organizations and state and local federation of labor have taken the same action. An overwhelming majority of the people of the state are in favor of a two-year extension. At this meeting the following resolution was adopted:

"That we instruct the Michigan delegation in the House of Representatives and the United States senators for our state to introduce immediately and to work unremittingly for the prompt enactment of legislation making mandatory a two year extension of government operation of the railroad from March 1, 1920."

Signed,

David H. O'Connor, Business Representative, Local No. 514. Int'l. Brotherhood of Electrical Workers; Fred'k G. Palliter, Sec'y. Detroit Bldg. Trades Council Detroit; J. H. Staley, Gen'l sec'y-treas. All American Farmer-Labor Co-Operative Commission

An all American Famer-Labor Co-operative Commission has been organized as a result of the Farmer-Labor Co-operative Conference held in Chicago, November 21 and 22nd, last, of which Sen. Herbert F. Baker was chairman.

The objects of the commission are to co-ordinate and encourage co-operative effort between and among organized producers' and consumers and to unify action in eliminating speculation and profiteering in the necessities of life; to develop intelligence, mutual understanding and good will.

The Vice Presidents of the Commission are: L. E. Sheppard, president of the Order of Railway Conductors, Herbert F. Baker, president of the Farmers' National Council, J. W. Kline, General President of the International Brotherhood of Blacksmiths and Helpers of America, E. O. F. Ames, President of the Pacific Co-operative League, J. M. Anderson, President of the Equity Co-operative Exchange.

The activities of the All-American Farmer-Labor Co-operative Commission are being centered upon organizing the All-American Co-operative Congress to be held in Chicago, February 12 to 15th. The sponsors of the movement feel it is most appropriate to start this Congress on Lincoln's birthday, for the object of the co-operative movement here is to Americanize American industry and make it truly efficient for the service of the American people.

Requests for information should be sent to Mr. Oscar H. McGill, General Secretary, No. 35 Bliss Building, Washington D. C., or to C. F. Lowrie, Chairman Committee on Arrangements, 342 River Street, Chicago, Illinois.

Supreme Court Upholds Decision in Auyer-Postal Usury Case

Sears Farmer Saved Nearly $900 by Resorting to Court against Usurious Interest

THE SUPREME court has upheld the decision of Judge Hal Cutler of the 19th judicial circuit, who held that the payments of all money made by Mr. Fred Auyer, of Sears, Mich., to the Postal Bank at Evart as interest on a mortgage loan, were void because the interest charged was usurious.

The Auyer case was one of the comparatively few protests against the very common practice of usury indulged in by many banks in the sparsely settled sections of the state. The details of this transaction were published in the June 28th issue of M. B. F. A brief summary of the cases follow:

Fred Auyer, a farmer living near Sears, in Osceola county, secured a loan of $1.231 from Jas. Postal of the Evart Savings bank, giving as security a warranty deed to farm property, valued at $4,000 and upward. As interest on this Postal exacted a bonus of 10 per cent plus the highest legal rate of interest, 7 per cent. Auyer was hard pressed for money. His wife was ill, and doctor and hospital expense had eaten up all his savings. There was nothing for him to do except to accept Postal's terms. Mrs. Auyer died, and there was more expense. The usurious interest charges became burdensome, and Auyer was obliged on several occasions to give notes for the interest. Finally in desperation, he asked Postal regarding the bonus and demanded that it be returned to him. There was considerable argument over the matter, and finally Mrs. Postal, whom it was claimed, had actually loaned the money, deeded the farm to an attorney who started foreclosure proceedings. At this point Mr. Auyer came to Mt. Clemens and sought the aid of Michigan Business Farming in an effort to save something from the sale of his farm. The case was turned over to our legal editor, Hon. Wm. E. Brown, who defended Auyer in court and secured a verdict which relieved Auyer from ALL interest charges and applied what he had paid as interest upon the principal of the loan, reducing amount claimed by the bank from $1,600 to $992.22.

Fred Auyer, Sears farmer, and the wife whose illness and death put Auyer into the hands of the usurers.

The Postals appealed to the Supreme Court which as before noted upheld the decision. The court's findings as rendered by Chief Justice Brooke, are as follows:

The Supreme Court, State of Michigan, William F. Umphey, Plaintiff and Appellant vs. Fred Auyer, Defendant and Appellee.

Before Full Bench: Plaintiff as assignee of Margaret I. Postal, brought suit to foreclose a real estate mortgage held as collateral to a promisory note. At the time the loan was made the defendant executed two promissory notes to plaintiff's assignor, one for $1,300 and the other for $59.42. It is claimed by defendant and admitted by plaintiff that included in these two notes is a ten percent bonus or commission to Jas. R. Postal, husband of plainti's assignor, through whom the loan was negotiated. Defendant in his answer set up facts which he claimed constituted usury. The case was heard in open court, all the parties in interest being examined orally and a decree was entered providing for the foreclosure of said mortgage, but holding that the transaction was a usurious one and limiting the amount of the decree to the principal sum unpaid. From this decree the plaintiff appeals.

Justice Brooke, (after stating the facts).

"There would appear to be no dispute between the parties upon the facts in this case except that the plaintiff claims that the ten per cent was exacted by Jas. R. Postal as a commission to himself for negotiating the loan from his wife to defendant, while the defendant claims that the ten per cent was exacted by Postal as a bonus to his wife for making the loan. This conflict in the claims

CURRENT AGRICULTURAL NEWS OF THE WORLD

GRINNELL

GERMANY'S GREAT FOOD NECESSITIES ARE EXPLAINED

The immediate needs of Germany, according to a government report, are: (1) Food for her workers; (2) Concentrated feeding stuffs and manures for her agriculture; (3) Raw materials for her manufacturers.

In order to stay the constant deterioration in the productivity of the soil it would be necessary to import raw phosphates and concentrated feeding stuffs. In the reconstituting of the agricultural conditions, one of the most pressing needs, if the younger generation is to be saved for future work and production, is to increase the present inadequate supply of milk in the great towns and industrial regions whose need of a daily supply of 3,000,000 to 3,500,000 liters (792,500 to 924,600 gallons) of milk represents the minimum requirements for the children and invalids in these areas. This is equivalent to about 500.000 tons of concentrated feeding stuffs per annum.

If the wheat necessary for human consumption is introduced unground and the milling rate is diminished to 80 per cent, a considerable amount of offal will be available for this purpose. Assuming the importation of 1,000 000 tons of wheat, there will be 200,000 tons of offals.

Growers of Canning Crops Organize

Believing that there is no sufficient reason why growers should be paid a variety of prices for canning crops, according to the section, and that in general prices paid growers for canning crops are too low, a representative meeting of canning crop growers was held at Rochester, N. Y. The meeting gathered at the call of the Monroe County Farm Bureau, New York State College of Agriculture, Cornell University and the state department of Farms and Markets.

The skeleton of an organization was formed. Papers of incorporation will be filed and the organization perfected without delay.

It was argued at the meeting that the time for the individual to bargain successfully with the canning industry for the purchase of his peas, corn, tomatoes. beans and other canning crops has passed, that only through collective bargaining can the grower hope to get fair returns for his efforts and capital invested.

Development Bureau Wants Corn

"This has been one of the best corn growing years in the history of Michigan," says Sec'y Marston of the Northeastern Michigan Development Bureau. "and because corn is fast becoming one of the standard crops of the district I would like to have a really first class display of the product for the windows of the bureau office. where it would be seen every day by hundreds of people, a large part of whom are strangers to Bay City and this section of the state. I would appreciate it very much if the farmers of the bureau territory who have choice grown corn this year, would pick out three or four ears and ship them to me at Bay City so that I can display them at the bureau office together with the name and address of the grower."

M. A. C. Plan Tractor School

Truck and tractor schools which will be conducted by the Farm Mechanics Department of the Michigan Agricultural college during February and March are expected to draw an even larger enrollment of farmer-students than in previous years, according to officials in charge of the course The constantly increasing use of gasoline power in farm work and the need for adequately trained men to handle the machinery have made the motor schools among the most popoular of the winter courses offered at the college.

More than a dozen makes of tractors will be used during the school, each student being required to become familiar with the different machines.

Ignition, valve and spark timing, carburetor adjustments, brake and fuel consumption tests, lighting and engine trouble work will be among the things emphasized in the course. Actual adjustments and repairs on trucks and tractors in the laboratories at the college will play a prominent part in the work.

Each school will run for four weeks, the first opening on February 2, and the second on March 1.

Sporting Events at Fairs

G. W. Dickinson, secretary-manager of the Michigan State Fair, and president of the International Association of Fairs and Expositions, the national body which includes in its membership the executives of all the leading fairs in America, declares that sporting events will play a greater part in future fairs than they have in the past.

At a recent meeting of the national body in Chicago, at which time the Detroit fair leader was chosen president, fair secretaries from all over the country asserted that the interest in sports aroused among the soldiers during the war makes it imperative that sporting events be given greater consideration in their coming expositions.

"While the fairs were originally for agricultural encouragement, the exposition of today has outgrown that idea," Dickinson explained. "Our fairs have become gigantic institutions, not only dealing with agricultural pursuits, but the industrial, commercial and entertainment phases of human activity. While sports have been well represented in fair programs, in the future they will cover a wider scope."

Sugar Company Builds Beet Dump

The Columbia Sugar Co., will build a $40,000 wagon beet dump at its plant at Mount Pleasant, according to an announcement recently made by the company.

Much complaint has been made by the farmers because of the tedious work in unloading beets by hand, and at the mass meeting of the growers at Saginaw a month ago, the subject came up. It was the general opinion that the sugar manufacturers should provide unloading devices. Out in the western sugar beet territory, the farmers don't pass resolutions telling what they think the sugar companies "should or should not" do. They write it into the contract that if the sugar comies want the farmers to unload the beets they must pay for the job. The following clause is in the contract that has been drawn up by the Intermountain Farmers' Ass'n to be presented to the sugar manufacturers:

"The grower will deliver his beets at the nearest receiving station of of the company and the company agrees to furnish adequate facilities for handling of beets at said station and in case the grower is required to shovel his beets after he is equipped to have them dumped the company shall pay 25 cents per ton for such shoveling and the company shall pay at the prevailing rate of wages per hour per team for all delay in unloading at the receiving station, except that delays of 30 minutes or less shall be allowed under this agreement."

EMMET COW TESTING WORK

The Emmet County Co-operative Cow Testing Association, No. 1, finished its first month's work December 31. The tester visited 26 herds with 210 cows on test. Considering the newness of the work the first month's results were good. Thirteen cows produced thirty pounds or more of butterfat for the month. Of this number three produced over forty pounds of fat. Five herds had an average of over 600 pounds of milk or 25 pounds of butterfat.

Three herds were not put on test but will be entered in the January testing period. Interest is being awakened for another cow testing association and it is hoped that in the spring, association number 2 can be started.—*Paul Hayward, tester.*

State Crop Value $342,602 000

The value of the leading crops in Michigan during the past year was $342,602,000, the greatest on record according to the report of the Bureau of Crop Estimates. This larger total was chiefly due to the higher price level and not to greater acreages of yields.

The report includes grain crops, hay and potatoes, sugar beets, cloverseed, apples, pears and peaches, but not such crops as small fruits, truck crops, chicory, mint, etc. The total acreage of crops included, exclusive of fruits is 8,856,000. This is an excellent showing, the report says, in view of the movement from the farm to the city and the difficulty of securing labor. A severe drought and grasshoppers also served to reduce the yields in some sections. The season generally was good.

The acreage and yield of some of the larger crops were: winter wheat, 844,883 acres, 17,153,613 bushels spring wheat, 76,653 acres, 860,225 bushel; rye, 841,084 acres, 11,258,657 bushels; oats, 1,182,707 acres, 28,247,541 bushels, barley, 215,358 acres, 3,646,485 bushels and beans 220.265 acres and 3,031,000 bushels.

FEARS MEXICAN HEMP CONTROL

Conditions in the hemp producing section of Yucatan, Mexico, resulting from the action of the Mexican government officials, are alarming, Michael J. Smith of New York, a hemp merchant, testified at a hearing investigating Mexican affairs.

"Unless something is done to relieve the situation," said Mr. Smith, "it is practically certain that within a few years the farmers of the United States will be without binder twine for their crops."

Smith said the planters had been robbed by the Mexican authorities and were on the verge of bankruptcy. Because of the monopolistic practices exercised by Mexican authorities for the purpose of controlling hemp production and prices American farmers, Smith testified, paid an excess of $12,500,000 from 1916 to 1919.

Under regulations brought about by Salvador Alvaredo, former governor of Yucatan, he said, hemp prices advanced from 7 3-8 cents a pound in 1917 to 16 3-8 cents that year and to 19 1-4 cents in 1918. This year the price fell to 15 1-4 cents because of accumulated stocks.

GOVERNMENT BULLETINS FREE

A copy of any of the publications listed herein, except otherwise noted, may be obtained free upon application to the Chief of the Division of Publications. United States Department of Agriculture, Washington, D. C., as long as the department's supply lasts.

Juding Beef Cattle, by E. H. Thompson, Animal Husbandry Division. Contribution from the Bureau of Animal Husbandry. Farmers' Bulletin 1068.

Poultry Houses. Contribution from the Bureau of Animal Industry 1919. Department circular 19. For members of boys' and girls' poultry clubs.

Sweet Potato Diseases, by L. L. Harter, Pathologist, Cotton and Truck Diseases. Contribution from the Bureau of Plant Industry. Farmers' Bulletin 1059.

Buckwheat, by Clyde E. Leighty, Agronomist in Charge of Eastern Wheat Investigations. Contribution from the Bureau of Plant Industry. (Farmers' Bulletin 1062.) Gives method of planting, fertilizing and harvesting buckwheat.

The Flat-Headed Apple Tree Borer, by Fred E. Brooks, Entomologist, Deciduous Fruit Insect Investigation. tomology. Farmers' Bulletin 1065. Describes life history and habits of this pest and suggests methods for its control.

Tuberculosis in Live Stock; Detection, Control and Eradication. by John A. Kiernan, Chief of Tuberculosis Eradication Division and Alexander E. Wight, Assistant Chief. Contribution from the Bueau of Animal Industry. Farmers' Bulletin 1069.

The Bean Ladybird and its Control, by F. H. Chitenden, Entomologist in charge, Truck Crop Insect Investigations. Conrtibution from the Bureau of Entomology. Farmers' Bulletin 1074.

SUPPOSE THE FARMER SHOULD STRIKE?

By REV. C. W. STEPHENSON

The following poem was sent to us by Mrs. C. E. Lonsberry, a Dimondale subscriber, who tells us that the author, C. W. Stephenson, is a minister of the goSpel seventy-four years old, of the Methodist Protestant denomination, and is a resident of Lansing. The poem was published in a recent issue of the Lansing State Journal. Mrs. Lonsberry thinks it is too good not to be published in a farm paper. We agree with her, so here it is:

The farmer, with patience and hearty will,
Works through the long, dragging hours;
He does not demand a shorter work day,
Nor fail to exert all his powers.

Before the bright sun in the east is aglow,
While city folks cuddle and dream,
His song may be heard in the crisp morning air,
He catches the day god's first gleam.

Before the old clock on the mantle strikes five,
His horses and cows are all fed;
He knows he must till the broad acres or die
For work means the bringing of bread.

He thinks of the millions needing his aid;
The corn and the wheat must be grown,
He coaxes the cane and sugar beet forth;
No harvest if seed isn't sown.

He knows how to care for cattle and sheep,
He sprays the fine orchard with care,
He fills his great cribs and cellars for us,
Asks only that we treat him fair.

Through summer's fierce heat and winter's chill blast;
Through the mud, the snow and the rain;
Through autumn and spring—no vacation for him—
He thinks not alone of his gain.

Suppose he'd sit back and shirk his great task,
A cowardly slacker he'd be!
Suppose he should strike for a six-hour day,
Who, then, would feed you and me?

Suppose he'd lay by the plow and the hoe,
Let mower and reaper decay?
Suppose he'd lie idle week after week,
While he shouted: "Less work and more pay!"

Suppose he should say: "It is nothing to me
How many are hungry and cold;
I won't do a thing to help anyone else;
My god is the glittering gold!"

With nothing to eat and little to wear,
We'd curse the good farmer right well;
We'd say: "He's a hog in his selfishness great!"
And we'd wish to see him in hell!

But the farmer plods on from morning till night;
He's a friend to and masters the sod;
He produces the things we all need so much;
His heart he keeps right before God!

There's a Satisfied User Near You

Do you realize what this means?

No matter where you live—in Maine or California—Oregon or Florida—Somewhere among your neighbors and friends you will find Delco-Light.

And where you find Delco-Light you invariably find "A Satisfied User."

And these satisfied users—over 80,000 of them altogether, are the concrete evidence of Delco-Light leadership in the Farm light and power field.

Look up a Delco-Light user in your neighborhood—

Ask him what Delco-Light is doing for him—

Note the smile of satisfaction that comes over his face as he tells you of the never-failing, day-after-day service that Delco-Light is giving him—

Of the abundant electric light that it is furnishing for his house and barn—

Of the electric power that it is providing to pump the water, operate the washing machine, the churn, the cream separator and the milking machine—the vacuum cleaner, electric iron and other similar conveniences—

Of the contentment and happiness that it has brought into his home on account of the improved living conditions.

And of the actual saving in time and labor that make it the best paying investment he has on the farm—It is little wonder that Delco-Light users are Satisfied Users.

A complete electric light and power plant for farms and country homes, self-cranking—air cooled—ball bearings—no belts—only one place to oil—thick plates—long-lived battery.

Valve-in-Head Motor
—Runs on Kerosene

The Spellbinder

By Octave Thanet

Author of "The Man of the Hour," "The Lion's Share", etc.

(Copyright, Bobbs-Merrill Co.)

THE FROZEN soil rattled under the horses' hoofs; the wagon wheels rattled on their own account. A December wind was keen enough to make the driver wrap his patched quilt closer and pull his battered straw hot lower over his ears. He was a man of thirty, with high, tanned features and eyes that would have been handsome but for their sullen frown.

"I should call it getting good and ready for a blizzard," observed the other man on the board (seat the wagon had none); "maybe he won't come."

"He'll come fast enough," returned the driver; "you don't catch buzzards staying in for weather!"

"I don't know. He's a pretty luxurious young scoundrel. Bixby says he had a letter from him—very particular about a fire in his room and plenty of hot water and towels. Bixby is worried lest the boys make a fuss with him in his hotel."

"Bixby is a coward from Wayback," was the driver's single comment or reply. The other man eyed the dark profile at his shoulder, out of the tail of his eye, rubbing his hands up and down his wrists under his frayed sleeves. He was a young man, shorter of stature than the driver. He had a round, genial, tanned face and a bad cold on him. His hands were bare because he had lent his mittens to the driver; but he wore a warm, if shabby greatcoat and a worn fur cap.

"I don't suppose," he said in a careless tone, "you fellows mean to do more than scare the lad well."

"We scared the last man. Doc Russell got him fairly paralyzed; told him 'bout the Shylock that turned out the Kinneys, and Miss Kinney's dying in the wagon, she was so weak; and Kin—somebody ('course he didn't mention names) shooting that man; and their arresting Kinney, and the jury acquitting him without leaving the box. Oh, he told a lot of stories. Some of 'em I guess he made up out of his own head; but that Iowa lawyer swallered the whole batch, hide and hoofs and all. And he couldn't git out of town quick enough! But what's the good? Here's this young dude come again. Say, do you know it's his pa that owns most of the stock in the trust?"

"No?"

"Yes, sir. He's got the upper hand of 'em all. They've bought up every last bit of foreclosed land 'round here. Yes, we was so mighty smart, we fixed it that nobody'd dare to buy; and nobody around here would dare, even s'posing they got the money, which they ain't—"

"There certainly ain't much loose money around here, Wesley. At least, when I ran the paper I didn't find it; I was glad to rent an abandoned farm and trade my subscription list for enough corn to pay the first installment on some stock and a cultivator."

"Did you pay any more?"

"No; times got worse instead of better. I'd have lost the stock and the cultivator and every blamed thing in the way of implements I've got if it hadn't been for you fellows running the implement man out of the country; he'd a chattel mortgage that was a terror. But what were you saying about the land? Nobody would buy?"

"Of course nobody would buy, and we hugged ourselves we was so durned slick. Oh, my! Now, here comes along one of them bloody trusts that's eating this country up, and goes to the company and buys the foreclosed land for a song. It goes all the cheaper because its known far and wide that we elected the sheriff not to enforce writs, but to resist 'em, and the same with all the constables, and we'd pull down any man that tries to push us off the earth. [illegible]

and the investment company sold cheap as dirt. They knew they couldn't git anybody to take up a farm 'round here. Look a' there!" He jerked the point of the switch that served for a whip in the direction of a dark bulk looming against the glowing belt of red in the west. The outlines of a ruined chimney toppled over the misshapen roof. The door and window openings gaped forlornly; doors and windows were gone long since, wrenched off for other needs.

"That farm belonged to as hard-working, smart a feller as ever handled a plow. Look at them fields, gone to desolation like everything else, but the furrows use to be as straight as a line with a ruler. He fought the hard times and the drought till his wife died, and then he said to me, 'I'm beat; I'm going to take the baby back to Winnie's folks. If I'd only gone last year I could have took Winnie, too. The company kin have my farm, and I hope to God it'll be the curse to them it's been to me!' There the farm is. And look further down" —shifting the switch to another direction— "there's another dropping to pieces. Lord, when I think of the stories they told me about the crops when I fust came and put in four hundred dollars that I'd worked hard for in a sawmill, and I think how we used

"THAT FARM BELONGED TO AS HARD-WORKING, SMART A FELLER AS EVER HANDLED A PLOW"

to set around the fire evenings, my wife and I, talking about how the town was a growing and what it would be when the trees was growed and our children was going to school, and how we'd have a cabinet organ and we'd have a top buggy, and we'd send for her mother, who didn't jest like it with Bill's wife—we was jest like children, making believe! But that ain't what I was driving at. Here it is. We calculated that we'd be alone, because the poor, miserable remnants of stock and machines and farms we got simply wasn't worth outside folks taking, and inside folks wouldn't risk their lives by dispossessing us. That's how we sized it up, ain't it?"

"I don't see yet what you're after, Wesley."

"You will. We reasoned that way. But along comes this company, this —trust, that's clean against the law and don't give a curse for that, and it buys up the whole outfit. I tell you, Mr. Robbins, there ain't five men in this community that that trust ain't got the legal right to turn out on the prairies tomorrow. They've all been foreclosed, and the year of grace is up. Most of us here ain't got no show at all—legally.

"But who'll they get to buy, Wesley Orr?"

"They're not needing much buying. They're on to a new scheme—going to turn all these farms into big pastures and fatten cattle with alfalfa, raise it and ship it; then the lower part of the county, down below town, they intend to run a ditch through from the river and irrigate it. They will fetch in a colony who will pay them about ten times what they paid, I expect, and—"

"But we won't let them—"

"Depends on how many guns the colony's got and how much fight there's in it. They'll try it anyhow, unless—"

"Unless—" repeated Robbins uneasily.

"Unless they're scared off, unless they think it's death for a man to tackle us."

"I kinder wish," said Robbins, "that he came from another town."

"What's the difference about the town?"

"Oh, none I guess. But that town, it's in Iowa, and it sent the best things we've ever had. One woman put in a lot of jams and jellies and tea—such tea! My wife was sick then, and I didn't know but I'd lose her. I gave her some of that tea and some jam, and she began to pick up from that day. It was a quince jam, and made her think of home, she said. Her father was a Connecticut man, and they had an orchard with quince trees in it—I remember—" He did not finish the sentence, but he sighed as he absently ran his eye over the gaps in the harness mended with rope.

"I bet he didn't have nothing to do with that box," said Orr; "most like, the people sent us that were poor folks themselves and had to pinch to make up for the things they sent us. 'Taint the rich people are sorriest for poor folks. This young Wallace—his father's the owner of a big paper, and rich besides, and he's got this boy in training for editor; and when that first duck could do nothing out here, the old man said he'd buy in, and the young one thought it a mighty smart thing to do to come over here and turn a lot of half-starved women and children out in winter. What's he care? What do any of these rich folks care?"

"I don't think you're fair, Wesley," said Robbins. "All rich folks aren't mean. I know more about them than you." He spoke with a dawning of pride in his [illegible] deepened a little.

"Yes, I know you used to belong to them," said Orr, "and I guess you were decent to the poor. But you'll admit you didn't have no notion how it cuts to work every muscle in you and to lay awake thinking yourself half crazy to puzzle out better ways to make money and yet to feel every year you're a sinking deeper in the slough! I've worked five years here, and 'cepting the first year, every single year has piled interest on the mortgage. Every year we've had less clothes to wear and poorer stuff to eat, and it's been mend instead of buy, and we've had more debts and more worries every year. I tell you, Mr. Robbins, I thought it would kill me, once, to come on the county. I'd a said I'd starve first; but you can't see your wife and the children starve. I went in last winter and asked for relief. I'd that old hound dog of mine with me; you knowed him. He'd been a good dog. He came with us when we come here, running under the wagon. All the children had played with him. I took him into town, and I asked every one I knowed would he have that dog for a gift; I showed off all his tricks, feeling like I was dirty mean deceiving him, for I done it so somebody would be willing to take him home and feed him and take care of him, for it's God's truth I hadn't enough for him and the children too. But nobody wanted him; he was pretty old, and he wasn't never handsome. And one store I was in, as I went out I heard a drummer that was trying to sell goods say, 'I saw that feller at the Relief, but I notice he's able to keep a dog. Lets the children go hungry ruther'n the dog, I guess.' I kinder turned on him, then I turned back again, and I whistled to Sport, and I looked at him and saw how his ribs showed and his eyes was kinder sunk. He wagged his tail and yelped like he used to, seeing me look at him; and then I went straight to that drug store Billy used to keep—Billy Harvey. He moved away last year; he was a good friend of mine. I said to him, 'Billy, you got something that would kill a dog in a flash, so he'd never suffer or know what hurt him?' And Billy—he understood and he said he had. 'You jest put it on his tongue and he'd never know what killed him.' Billy was sorry for me. He gave it to me for nothing, and he gave me some bones and corn bread and milk; so Sport had a good dinner. And he come right up to me and looked me in the eyes, wagging his tail. His eyes was kinder dim, but they was just as loving as ever. And he was wagging his tail when he dropped. Then I went home and the children asked me where was Sport, and little Peggy cried—oh, Lord!"

"It was awful hard on you, Wesley," said Robbins gently.

"I suppose it wasn't nothing to what some men have suffered. There was poor Tommy Walker, give up his farm when it was foreclosed—thought he had to—and went off tramping to Kansas City, and after he'd tramped a week there, looking for a job, gave it up and jumped into the river. And you know how old man Osgood killed himself, honest an old man as ever lived; always kept his machines under cover, too; he couldn't stand it. They found it harder—and lots more, too; but I've found it hard enough. And I know I'd shoot that sneaking, sneering young Shylock, and not mind it near so much as I minded killing poor Sport."

"I don't know but we'd all better quit," said the younger man with a sigh. "This isn't a living country. Three years of drought would break any country up. It's not meant to live in. We had a fair crop this year, but it's so low; and freights though they're lower, are pretty high. I don't see any way out of it. And I declare I think if we run this young fellow off we'll only get a bad name for the place."

"I don't care for bad names," said the other sullenly. "I got a wife and three children; I was foreclosed a year ago—so's you, so's a lot of the boys; we're at the end of our string now—legally. So what did we say? We said we didn't care was it legal or illegal; that laws was made to skin the poor man; and we elected a sheriff we could depend on not to enforce the laws, and we drove off the blood suckers they sent out

here. They say one feller was killed. I don't know. Guess that's one of Doc Russell's stories. The boys talk a lot about the cause of all this here trouble, and how we're going to have a revolution; and how referendum and initiative will help and how free silver will help—I gues myself, a little more rain three years ago when corn was up would have helped more'n anything—and they talk how they're fighting the battles of the poor man, and the eastern bloodsuckers has ruined us, and the Shylocks are devouring us, and they roller the roof off. I listen to-'em, but I don't believe 'em any more than you do."

"But," interrupted the other man eagerly, "I voted with the people's party—"

"Of course you did. We was going to be unanimous, and you dass not stand out; but you didn't believe in it. Me either. I ain't makin' any pretense, but I'll tell you it's jest here—I'm down to bed-rock. If I get my farm be took away, and my stock what's going to become of my wife and children? You can call it stealing, or resisting the law, or anything you please, but I'll kill that feller before I'll let him turn me out."

"Don't you think we can scare him off? Killing's a nasty word."

"My father was with John Brown and he helped kill a man. He never lost no sleep about it; I shan't neither. Look here, Mr. Robbins, I got lots of time to think, winters—lots. Remorse and all them fine feelings you read of, they don't belong to folks that are way down in the dirt. You got to have something to eat and wear, and not have your stomach sassing you, and you half froze most of the time; when your body is in sech a fix it's keeping your mind so full there ain't any show for any other feelings. And look a' here, there's worse"— his voice sank. "Why, you git to that pass you ain't able to feed your own wife and babies. When this morning Peggy kept hushing the baby, and she was fretting and moaning, and Peggy says to me, couldn't I git a little crackers in town; maybe the baby could eat them? I didn't feel nothing 'cept a numb aching. I kept saying, 'I'd 'a felt that, once!' But I didn't feel it now. And all of a sudden, it come to me 'twas because I was gitting past feeling—like you do when you're froze, jest before you die. I read a story once, when I was a little shaver, that kept me awake nights many a time,—"

"Look here, Wesley," his companion interrupted, "quit it! You're getting light-headed. Get rid of such fool thoughts as those or you'll be going off to the insane asylum; and mighty little use your family will have of you there!"

Orr gave him no answer. Robbins watched his impassive face and frowned.

Silently the two men looked at the bearing lights, while the wagon creaked and swayed and rattled over the road.

There were enough lights in the windows to reveal the wide untidiness of the street, the black, boarded windows of the empty shops, the gaps in the sidewalk, the haggard gardens, where savage winds had blown the heart out of deserted rose-trees and geraniums. In general the sky-line was low and the roofs the simplest peaks; but it was broken in a few places by three and four-storied brick buildings of the florid pomp on which a raw western town loves to lavish its money. Now they loomed, dark and silent, landmarks of vanished ambition. The sole sparks of life in the place were at the hotel. It had been built "during the boom"—a large rectangle of wood, with a cheap and gaudy piazza, all painted four shades of green, which the climate had burned, blistered and bleached into one sickly, mottled brown. Long ago the stables of the hostelry had been abandoned, but this night the hitable yard was full of wagons.

The upper story of the hotel was dark, and the greater part of the lower story; but the kitchen was bright, and yellow light leaked thru every chink and crack in the office blinds.

"Boys have turned out well, I guess," said Robbins.

"They better turn out!" said Orr.

* * *

The office was full of men, gathered about the stove, talking to each other. The innkeeper sat behind his counter, affecting to busy himself with a blotted ledger. Originally he had been a stout man, but he had lost flesh of late years. He was wrinkled and flabby, and the furtive eyeshots that he cast toward the stove were anxious beyond his concealing. Anyone, however, could perceive that matters of heavy import were being discussed. The miserably clad men about the stove all looked sullen. There was none of the easy-going badinage so habitual with westerners.

"Where is he?" said Orr, in an undertone to a large man in a buffalo coat. The large man was the sheriff of the county. He jerked his thumb over his shoulder in the direction of the dining-room.

"What's he like?"

"Little fellow with a game leg."

Orr frowned. Robbins felt uncomfortable. A gaunt man on the outskirts of the circle added: "He's powerful slick, though; you can bet your life. That girl Susy is all won over already; and she's suspecting something, sure's shooting. I guess she's warned him there's something in the air."

"Well, if there is, I don't know it," said the sheriff.

"You never will known anything about it, either," a gray haired man added.

"That's right, Kinney," two or three spoke at once. But immediately a silence fell on them. Robbins who felt himself an outsider, could see that the others drew closer together. Once or twice he caught sinister murmurs. He began to wish that he had not come.

"It would be no earthly use for me to chip in and try to soften them," he thought. "They're crazy with defeat and misery and the fool stuff campaign orators have crammed down their throats."

Just then the dining room door opened, and Robbins was the only one of the group to turn his head. The other men gazed at the fire, and the heavy silence grew heavier.

(*Continued next week*)

Thank'e, Kind Friends, for Words of Cheer

Keep the Good Work Going

"Keep the good work going on. The farmers are gaining. Oftimes feel like writing to you and saying "thank you" when reading the M. B. F. In regards to the candidate for governor will say farmers are all right but I think we need a governor that is used to the ways at Lansing as the lobbyists are too well versed in the ways. Last winter gave us a good idea what farmers will do when new at the job. I believe farmers should be at the first table, but go slow. Feel the way.—*E. T., Berrien Springs.*

We value your paper very much for the market reports, particularly on farm produce.—*Glenn Ellis, Oakland County.*

Enclosed please find one dollar to pay my subscription another year. That's the paper with backbone to it. I hope you success and good luck the coming year.—*Elmer Straub, Mecosta County.*

Have been a reader of your paper for three years now and we all enjoy it very much; it sure is a good farm paper.—*Fred LaCass, Genesee County.*

Me think M. B. F. is one of the finest farm papers published.—*Wm. A. Cameron, Huron County.*

Iwish to say I find your paper very helpful in my business of farming.—*Ray Down, Ionia County.*

I claim the M. B. F. is the best farm paper for business, that a Michigan farmer can read.—*L. B. Merrill, Roscommon County.*

We think your paper the best of all farm papers we take—Leslie Simpson, Eaton county .

The Sensible Leader of the 1920 Tractor Field

NOWADAYS the chug-chug of the farm tractor is heard in every corner of the land. Tractors are at work in the fields of many thousands of farms and if you look them over you will find them a mixed lot.

Tractor farming is still in its youth. Novelty is still in the surge toward power farming.

The impractical theorists are still in the ring, limping but not out of the running. Adventurers who swarmed into what they termed the "game" are still "playing." The hazards facing the farmer in search of reliable power are many.

In all this turmoil, one tractor like a steady star has lighted the way. That tractor bears the trusted name—**Titan 10-20.** It has led because it is the product of practical builders of good farm machines; because it is backed by many years of experience and unquestioned reputation.

Today **Titan 10-20** is the standard-setter among all tractors. During the past year it has been the topic of conversation on the tongues of farmers and tractor makers the nation over.

Selling at the popular low price—**$1000 cash f. o. b. factory—Titan 10-20** faced a sensational demand. A few months ago this desire for Titan ownership had flooded the factory with thousands of orders which could not be filled at once, though a new Titan was being turned out every few minutes.

Every effort is being directed to greater production and to continued Titan 10-20 pre-eminence during 1920. In view of manufacturing difficulties however, this is earnest advice to the intending purchaser:

Orders for Titan 10-20—and also for International 15-30 and International 8-16—must be placed far in advance. No other course will assure delivery.

Five Years, 260 Issues.....$3.00

Advertising Rates: Forty-five cents per agate line, 14 lines to the column inch, 764 lines to page.
Live Stock and Auction Sale Advertising: We offer special low rates to reputable breeders of live stock and poultry; write us for them.

OUR GUARANTEED ADVERTISERS
We respectfully ask our readers to favor our advertisers when possible. Their catalogs and prices are cheerfully sent free, and we guarantee you against loss providing you say when writing or ordering from them, "I saw your ad. in my Michigan Business Farming."

Entered as second-class matter, at Mt. Clemens, Mich.

"Pleased to Meet You"

WE'LL MEET you at East Lansing Farmers' Week. Of course, you'll be there. It's the big annual get-together at our agricultural college for all the folks who farm, all the folks who would like to farm, and some folks who couldn't run a farm if they had to. But whatever their fitness or lack of fitness for farming, their hearts—at least, most of them—are in the right place. They will gather from all parts of Michigan, thousands of them, to discuss and perchance to solve some of the problems of agriculture Fine speakers, big men all, will be there from all over the country to give the farmers the benefit of their wide experience and their viewpoint. Annual meetings will be held by the Farm Bureau, the syrup makers, the spud growers, the grain breeders, the milk producers, and other farmer associations. You don't have to belong to one of these associations to attend their gatherings. Watch these columns for the detailed program and you will find many things that will interest and help you. The dates are Feb. 2-9. Plan to be there. We'll be pleased to meet you."

"Ouch, Get Off My Foot"

TAXES TO A farmer are like a bunion to a foot. They are both sore objects to tread upon. Unlike the bunion, however, taxes are necessary. Perhaps the Bolsheviks don't believe in taxes. But they do not need to. They confiscate enough wealth to pay the cost of government. We're not so civilized as that in this country. We have a foolish theory here that every man who owns property and enjoys the privileges and protection of government should pay a proportionate share of the cost of supporting the government This theory doesn't always work out in prictice, it is true. Some people always have paid more than their fair share of taxes. Some have paid less, but that's no reason why we should abolish taxes altogether and go a-bolsheviking.

The good citizen will not complain of taxes that go to pay the legitimate expenses of government and the public institutions. Neither will the good citizen complain when, during years of extraordinary state expenditures, the rate is a trifle higher than in pervious years. But Mr. Good Citizen's patience ceases to become a virtue when his tax receipts shows an increase of eighteen hundred per cent in a quarter of a century, or twenty per cent in a single year. He howls, "get off my foot," and we heed his cries with compassion and understanding.

Of course, the cost of maintaing the government, the public institutions, the schools and highways increases year by year. But don't be fooled. That isn't the reason for high taxes. The reason for high taxes is that somebody, or a good many somebodies, are not paying their proportionate share. Taxes ought to be collected against income rather than upon the intangible value of property which yields the income. There are at least three almost neglected sources from which the state could and should realize a large income, thereby easing the burden now placed upon landowners. They are the income tax, the tonnage tax, and a much greater tax upon the water power companies who utilize the streams and millions of acres of land adjacent thereto.

There is work ahead for the next legislature.

Interlocking Directorates

IT HAS been seriously argued that milk, being one of the necessaries of life, should be put in the class of public utilities along with gas, electricity, railroads, water, etc., and the charge therefore be regulated by ordinance. While it is true that this would be pretty tough on the farmer who has been getting "rich" out of the dairy business, there is no need for discouragement. There's a neat little way to get around ordinances and all other rate-making legislation. The railroads have tried it, and it works fine.

When the state determines what profit the farmer shall have on his milk and fixes the price to the consumer, the farmer, if he is a good business man, will tap his "money bags" and buy an interest in the dairy food trust, or the milking machine trust, or the milk pail trust, and when his profits from his milk are not satisfactory, he will ask the directors of the various trusts in which he is interested to charge him more for dairy feed, milking machines, milk pails, etc. This extra charge he will bring to the attention of the price-making body as an argument that the price of milk ought to be raised. Of course, the law could not compell this poor farmer to operate at a loss, so up goes the price of milk, and when the first of the year rolls around, Mr. Farmer receives his extra dividend checks from the milk-pail trust.

This simple illustration will serve the reader in getting a better understanding of what is meant by "interlocking directorates", of the railroad companies and scores of other concerns which furnish them with supplies. J. P. Morgan may be a director in a half dozen railroad companies. At the same time he may be a director in a locomotive factory, a car-shop, a steel mill, a brake trust, or a half hundred other concerns which sell material to the transportation companies in which he owns a block of stock. The Interstate Commerce Commission has jurisdiction over the rates for which Mr. Morgan may charge the patrons of his railroad systems, but it has no regulating powers whatever over the many corporations which furnish the supplies. In other words, the profits in transportaion are fixed by the government, but the profits of the other corporations may be as large as the traffic will bear. We are not, therefore, surprised at the charge that the directors of railway companies have for years purchased supplies from other companies in which they were interested charging themselves much higher prices than they would have to pay elsewhere, and passing the extra cost onto the patron, thereby affecting not at all the transportation profits, but increasing very largely the profits of the supply companies.

These "interlocking directorates," it is claimed, are found existing between nearly every railroad of importance and the corporations from which they buy their supplies. So the next time some special privilege zealot tells you, "the government hasn't any business running the railroads," ask him what he knows about "interlocking directorates."

The census-taker will get you, if you don't watch out!

Boozers Beware.

BOOZERS, beware! A. C. Graham, anti saloon league official and a dyed-in-the wool prohibitionist, has been appointed federal prohibition director for Michigan. This appointment gives the people of Michigan positive assurance that the prohibition law will be enforced to the letter.

A few weeks ago when it became generally known that a director was to be appointed for Michigan, there was some fear that the Democratic appointee might be a man who would keep one eye closed and the other eye winking at violators of the law. All the influence Michigan drys could muster was directed in favor of Mr. Graham whose well-known attitude toward booze and the saloon left no doubt as to how the law would be administered in his hands.

The government is without doubt making a sincere effort to enforce the federal prohibition amendment, and its choice of enforcement agents is to be heartily commended. The extent to which prohibition will prohibit depends in a very large measure upon the character of those officials, and the one sure way to make the people disgusted with prohibition is to let the boot-leggers and other whisky purveyors ply their trade with only an occasional spectacular arrest and confiscation. With A. C. Graham to assist the splendid work that Fred Woodworth, dairy and food commissioner, and his corps of assistants have been doing to make the state bone dry, we predict that the illegal traffic in Michigan will soon shrink to harmless proportions and in a few years cease altogether.

A Bad Bolshevist Bill

CERTAIN INTERESTS in the United States shrink in fear from the menace of Bolshevism which throws its black shadow to the uttermost ends of the earth. In the hysteria of fear, the Department of Justice has been importuned to gather in the disciples of Bolshevism and radical socialism, and the raids that have recently been conducted upon peaceful gatherings and the arrests that have been made without warrant or reason would be highly ridiculous were they not so serious in their consequences. If danger threatens the Republic from this source it must be because there are grounds for dissatisfaction, and if there are grounds for dissatisfaction, raids and summary arrests will never pacify. That such danger impends, we firmly assert. That there are evils which give specious substantion to the arguments of the radicals, we do not hesitate to acknowledge. But the repressive measures that are being used to curb public discussion strike deeper than now appear and arouses not only the ignorant and suspicious but the intelligent and trustful to a sense of oppression and a violation of sacred rights guaranteed under the Constitution.

A bill is now pending in Congress to perpetuate the war-time sedition act. It was drafted by the Department of Justice and has already passed the Senate. The purposes of the bill are all right, but it puts a dangerous weapon in the hands of officers of the law, who are given discretionary powers which may easily be abused. If the officers of the government can thus employ the law to ferret out and punish plotters against the government, they may not find it so very difficult to find a way to punish constructive critics and reformers whom they would like to think are plotting against the government. Frankly, we are afraid of this bill. We fear the time may come when the people will weep bitter tears of regret that they ever permitted it to become law.

A western farm paper: "The average farmer will be so busy looking after his politics from now on that he won't have time to raise anything but h--l." "Profane, but prophetic," says Industry. At that he'll produce a better brand of citizenship and government than the good old U. S. has had in many a day.

WHAT THE NEIGHBORS SAY

THE FARMER AND LABORING MAN

I read in your last issue what one labor paper thinks of the farmer. I feel free to say what I think of such sentiment thus express, for away back in times when I used to work with union labor when the men went on strike for a ten hour day in the mills of Michigan, I saw the power of organization to make workingmen's "lives worth living."

I well remember the first ticket I ever voted the picture at the top of a skilled mechanic with a compass in one hand stepping over a pile of cog wheels and machine parts to shake hands with a farmer between the "stilts" of a plow.

Let the readers compare that old word picture with the raving of the so-called Union and I will not worry over the expected verdict should the time ever come when his chosen candidate and the great labor party candiates are up in opposition for honors. *Union* says government expends forty million a year through the Department of Agriculture to "isolate a bug." M. B. F. has done better. It has not cost so much to republish the item and has surely isolated a bug and one worth keeping in public view that it may do no more harm. Union labor and farmers under various party names have had many splendid men in congress, senate and in executive and legislative departments in every state since the time above referred to and will again in spite of *Union*. All American. Some farmers.

Can you imagine the need of a middleman standing between a Huron county farmer with a bag of beans at $12 and a miner with a young growing family of Scranton, Penn., to keep them from abusing each other. Nonsense, nothing between them but a freight rate and want made known; and same applies to every food product as well as clothing, although beans are so near a perfect food for a working man if he can just get a little water and fuel. Nothcan be used in comparison to convince the reader of the vital point of view. The more we study the needs of our great consuming centers the more we are ashamed of our utter failure to keep a good supply of staple food and clothing product handy to sell at a profit, the moment our great cities of laborers near the coal, steel, cement, machine and shipping plants are in need any time during the year and I further believe in the light of what has recently transpired it would be well to keep a large cache of coal handy near the homes of Michigan men.

A farmer is by nature a storekeeper in many ways. If he were not, farming would soon run down at the heel, but I think he should not have all his store at his farm. No real union labor man could find fault with this since it would cost him nothing and would also tend to make him feel safe; with this needs in plenty in sight.

I wish to make a few assertions:

The farmers of Michigan have capital enough to do this. The present laws are sufficient. Agriculture in Michigan must not go begging of other classes of capitalists! No need of it. Farmers as a rule do not look for large rates of interest, though they sometimes pay high rates. The farmers of Michigan would be satisfied with a lower rate than they pay if they were assured it was to maintain the storehouse of the nation. I believe the system could be financed by a trust and loan company with a central clearing house and branches in every county with 30,000 or more poplation. Such an organization would be a tremendous force politically as the state bank is now. We must appeal to all farmers. We must be prepared to withstand temporary disappointment in season.

I have long urged the farmers with whom I have come in contact in pursuasive argument that it is folly to say I must have a farmer for governor or representative, when all we have to do is to refer to the record as to how our farmer governor and legislature and even our supervisors have voted. You will no doubt be surprised to learn that the Detroit delegation did more for the farmer at last session than the farmer legislators also governor who is also a farmer. Take the Warner administration for instance. He canvassed the state as a farmer but he kept the old mortgage tax law on the statute books and a psychologist governor come in power by accident and brushed the nefarious law away. Dr. Ferris made one great mistake, however, when he signed the amended drain law and the present governor has won the lasting friendship of many a good farmer when he signed the present drain law, the best we have ever had and still in need of urgent repairs. Also the Covert road law needs some help as it is almost a good law. Yes, the drain laws and road laws will during the next decade be the cause of our largest item of taxation. We realize it and live in hope and in great fear. Osborn for governor for he is not afraid to leave the beaten path.—*Agricola Publicus, Port Hope.*

The recent announcement that organized farmers and organized railway men would attempt a co-operative plan for the exchange of commodities shows us that the day of the food middleman and speculator is passing away. We need laws to facilitate collective and co-operative bargaining, and ought to elect men to office who have the vision to see the wonderful opportunities that lie in this direction. The trouble with a good many of the "farmers" who were in the last legislature was that they were steeped and parboiled in politics long before they reached the legislature and couldn't resist playing the political game. Most men are only human in this respect. We need a few Simon-pure farmers in the legislature who have not been corrupted by partisan politics and politicians.—Editor.

SUGAR BEET CONTENT

Your publication has brought to my attention certain statements concerning the manufacture of beet sugar which call for comment.

I quote the following from your issue of Dec. 13 in an article entitled, "Growers ask for a Better Sugar Beet Contract." Last year beets tested 16% sugar, hence that means that from every ton of sugar beets, the manufacturer extracted 320 pounds of sugar. At the prevailing price of 9 cents per pound, the manufacturer received $28.80. To extract the sugar, pay interest, depreciation, and profits, they have left $18.80. This takes no account whatever of the presumably large value of the pulp, molasses, and other by-products."

I note scattered throughout the article quoted, and that of Dec. 27, entitled, "Beet Growers ask for 50-50 Split of Profits," statements that you are actuated only by a feeling of justice and fairness to both sides involved in the question and that: "We will be glad to correct any statements which they (the manufacturers) prove incorrect." Presuming therefore on your sense of fairness thus set forth, and upon your expressed willingness to correct any erroneous statements, I take the liberty of calling these facts to your attention:

First, in any chemical process where organic materials are involved, it is impossible to make a 100% recovery. This statement should require no involved technical proof as oyur own good common sense will tell you that this must be so. As an example, consider that all of the butterfat in milk does not go into the butter but part of it goes into the skimmed milk and part into the butter milk. Yet the processes involved are very simple. You can readily see that in the highly complicated processes of beet sugar manufacture the losses might naturally be greater. As a matter of fact a standard beet sugar factory is doing very good work indeed to recover 80% of the sugar in the beet. I am a chemical engineer with nine years' experience in the manufacture of beet sugar and I will be glad to give you a supporting affidavit to this effect.

Again you mention, "The presumably large value of the pulp, molasses and other by-products." We assume that you know that molasses contains sugar, and as an authority on farming subjects, you should know that beet pulp likewise contains sugar. Let me ask you where this sugar comes from if, as you say, the manufacturer sells as refined sugar 320 lbs. from a 16% beet. Your statements contradict themselves and should be sufficient proof to you of their inaccuracy

Allowing an 80% recovery instead of the 100% which you assume, a ton of 16% beets would yield the manufacturer $13.04 instead of the $18.80 as stated in your article. When you deduct from this $1 to $2 to pay freight, rehandling costs, agricultural and seed expense you have left $11 or $12 from which to pay manufacturing costs, interest, depreciation and taxes.

I will not mention the risks which the manufacturer must take or the years when a drop in price has robbed him of his profits. I am not advancing any arguments to promote the raising of beets at any price, and I do not wish to enter into any controversy with you on the subject, but hope that your sense of justice is such that you will be glad that I have called to your attention the inaccuracies mentioned and that you will be anxious to frankly correct them.—*E. E. Stiff, Holland, Mich.*

The correction is gladly made. Mr. W. H. Wallace, president of the Michigan Sugar Company, was my authority for the statement that the 1918 beets yielded 16 per cent sugar. Our understanding was that the Michigan Sugar Company extracted that much sugar from each ton of beets. We find upon inquiry and investigation that our statements in this respect were incorrect. We note that you do not care to enter into a controversy as to the justice of the farmers' demands for a more equitable contract. Accepting your figures as correct, and adding in the value of the by-products, does it not appear to you that the sugar manufacturers are getting considerably more than their share of the sugar profits? Come, be as fair with us as we have been with you and tell us your views upon THAT subject.—Editor.

The Week's Editorial--"Pork Plenty and Scarce"

Hogs are worrying Kansas. Senator Arthur Capper writes a letter to Secretary of Commerce Alexander telling the troubles of Kansas. He says 1,600,000,000 pounds of surplus pork are left on the hands of the meat producers of the west and the stockman must face enormous losses unless assistance arrives promptly.

Europe has stopped buying American pork, the Senator says, and it is his judgment that some arrangement should be made to extend credit to the people across the sea that they may be enabled to take the fats which they need and that the stockmen and farmers of the United States may not be forced out of business. Besides he advocates as a further remedy, the reduction of ocean-carrying charges, thus makin geasy in every way th unloading of the vast accumulation of meats which the American people cannot use.

The citizens of Detroit who carries home a microscopic slice of ham purchased at 30 to 50 cents per pound, or who feels the necessity of cautioning his children to "go light on the pork chops or they won't go round," might wonder why a little of this enormous surplus couldn't be shunted off the European routes into Michigan.

Senator Capper says the situation is so critical that farmers are compelled not only to reduce their breeding stock but also in many cases have gone out of business of stock breeding altogether. Wouldn't it be too bad if both Europe and America should have to go hungry for pork just because the western farmers have too much? What's the matter with this crazy world anyway? *Detroit News*

A REAL MAN FOR GOVERNOR

What I want for governor, if he can be found, is a man of the Abe Lincoln type. I don't believe he ever wore kid gloves and his hands were hard and calloused splitting the rails he did.

Politics at Lansing are getting almighty rotten. There needs to be a housecleaning there the same as the farmer does to his corn crib when it gets infested with rats. Our taxes are increasing by leaps and bounds. I am informed that there has been created at Lansing about 1,500 needless and useless jobs and offices so that Tom, Dick and Harry could pay off their political debts without going down into their own jeans.

I don't know why a afrmer with a college education and well read and posted on all topics of the day besides, and there are such, needs any experience other than he gets on the farm to fit him for governor. An up-to-date farmer has a broader and a more diversified knowledge than any other man and if he is not qualified to be governor just tell me who is. And if he is thoroughly in sympathy with farming and farmers he will not be so apt to join the clique and become a "king."—*A. A. L., Kent County.*

"We, the farmers of Michigan, hereby agree not to support any candidate for office who wears kid-gloves." My, what a shedding of kid-gloves by the politicians there will be! Glove factories will go into bankruptcy and the leather market will be shot to pieces. But would we have any improvement in our political situation? No doubt, the old woolen mits are a better guide to an honest heart and a broad mind than kid-gloves but it does not always follow that the mittened man is always a wise and good man, or the kid-gloved individual a knave. You're quite right about the situation at Lansing. The state needs a house-cleaning, from cellar to garret, and when we elect men for the job, we not only want to look for those who will pledge themselves to clean house, but who also know how to do it. There are a good many men in Michigan who, in their younger days wore callouses on their hands just as Abraham Lincoln did, but like Lincoln, were pushed into positions where they had to use their brains more and their hands less and are today just as dependable and certainly better equipped to serve the people than in their younger days. There must not be any question about the attitude of the next governor of Michigan toward the farmers. He must be either an actual farmer or a man who has been actively identified with farm affairs, and he must be broad-minded enough to give equal consideration to all essential interests of the state. If there is a man listed among the "farmer candidates" on our straw ballot whom you cannot trust to act as the next governor of Michigan, we'd like to have you name him.—Editor.

RETURNING THE RAILROADS

You ask for the sentiment of the people on returning the railroads to the private owners, and I can not seen any better way to get at it than by the way we used here in the little town of Winn. We took a vote on the matter here and out of sixty-nine men, three voted to have the roads returned, and forty-nine to have the government own and control them in the best interest of all the people, ten not voting either way. Among those who voted were two doctors, one preacher, four produce shippers, one barber, one meat dealer.—*W. W., Winn, Mich.*

This is interesting information. One of the arguments used by some of our congressmen for the immediate return of the roads is that public sentiment seems to be "so overwhelmingly in favor of it." But we imagine that if a poll were made among the "folks back home," they would not find this sentiment so "overwhelming."—Editor.

A FARMER FEDERATION

For many years the writer has favored and urged a working federation of the farm organizations of the state. We strongly favor the movement for a farmer governor and also for a larger farmer representation in our legislature and in Congress. A number of the farmer candidates mentioned we know will measure up in force, intelligence and ability with any men that can be named. Let us unite for a clean, broad-guaged and aggressive candidate and for an honest, clean and able administration of state affairs.—*Louis A. B., Outlook Farm, Bangor, Mich.*

The farm organizations have endorsed a man who will measure up to your requirements. Now, if the farmers will get busy in their local districts, organize and elect men in whom they have confidence, we shall have the kind of an administration that you describe.—Editor.

(*Additional Readers' Letters page 25*)

MARKET FLASHES

WHEAT AT ITS PEAK

WHEAT PRICES PER BU., JAN. 12, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.62		2.65
No. 2 White	2.60	2.70	
No. 2 Mixed			
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.30	2.30	2.36
No. 2 White	2.26	2.28	2.34
No. 2 Mixed	2.26	2.27	2.33

Wheat has attained a point on the American markets unequaled during the century. A car of dark No. 1 Northern spring has sold for $3.50 per bushel. Hard winters have been selling in Kansas City at over $3, and generally strong high prices are noted. In Detroit, the rise in price during the past week has averaged 16 cents per bushel for all grades.

The Grain Corporation has been selling some wheat to dealers but shipments have not been as large as desired. Julius H. Barnes, federal wheat director, has just come out with the interesting statement that wheat and flour handlers are confronted with price hazards which may follow withdrawal of government control when the activities of the Grain Corporation are brought to an end in June. His statement was issued to the 42,000 who hold licenses issued by the corporation.

Mr. Barnes emphasized the statement that "the reduction of commitments to the minimum required for the conduct of necessary current business" will be a wise policy for the grain trade upon the termination of two years of official stabilization and in view of the present world situation. He is encouraging in his prediction that thrift in the use of the nation's food supplies has begun to replace general extravagance.

CORN SLIGHTLY BEARISH

CORN PRICES PER BU., JAN. 12, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow			1.68
No. 3 Yellow	1.54	1.49	
No. 4 Yellow	1.50		
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow			1.57
No. 3 Yellow	1.47	1.40	1.55
No. 4 Yellow	1.42	1.36	1.50

Corn dropped off as much as two cents in the Chicago market according to opening quotations at the first of this week. For some time stock has been taken in the fact that usually there comes somewhat of a depression in the corn market during the month of January, even though the demand usually increases and snow delays shipments. One of the main reasons for throwing the corn market off color was the fact that the Federal Reserve Discount rates were tightened considerably.

Uncertainty as to shipping conditions has created much discouragement and given the bears a freer chance to operate. The railways of the nation are short somewhere around 300,000 cars, as compared to the theoretical requirements. Favorable weather may make possible the long predicted run of corn to the markets, inasmuch as the federal controllers have consigned many trains of cars to be used for deliveries of corn.

OAT MARKET STRONG

OAT PRICES PER BU., JAN. 12, 1920			
Grade	Detroit	Chicago	N. Y.
[illegible]	[illegible]	.85	.98
No. 3 White	[illegible]	.84	
No. 4 White	.87	.83	
PRICES ONE YEAR AGO			
Grade	Detroit	[illegible]	N. Y.
[illegible]	.73	[illegible]	.78
No. 3 White	.72	.67	.77
No. 4 White	.71	[illegible]	.75

Although the prices for oats showed a fraction of a cent decline at the markets' opening this week, oats technically are in about the strongest position of any of the grains. The temporary slump was due almost entirely to sympathy with corn. Eastern demand for Jul delivery has made for a firmer condition than May delivery.

There has been a persistent demand for cash grain for export and millions of bushels have been set aside for this purpose. And there is strong demand for all the stocks on hand in most markets. The oat crop in the United States this year fell well below the five year average, and the same condition applies to the output in Europe and the Argentine.

It is true, however, that oats may decline in case of sharp drops in the corn market, or in case some factor hampering foreign trade should arise.

LAST MINUTE WIRES

DETROIT—Scarce supply bolsters wheat markets; potatoes higher; beans strong and steady. Seeds are active and steady. Hay firm and buying active.

CHICAGO—Corn and oat prices drop slightly. Provisions bearish. Hog market dull, cattle higher.

Weekly Trade and Market Review

BUSINESS is generally in healthy condition, despite unrest in some quarters. Orders from big dealers are greater than ever before; the steel strike has officially closed and no other great strike is troubling America. The Peace Treaty, so far as the European nations are concerned, has at last been signed and trade has been resumed. America is still held up because of the Senate's delay in signing the treaty, but it is expected that a settlement must be made soon, causing an encouragement to world trade.

Among the factors which one should consider for the coming months is the fact that this is a presidential election year, during which government is likely to be swayed by motives of winning popular approval. Business this year will have to yield somewhat to the issues of the election, of the precedent of other election years holds true. It must be further acknowledged that there is a feeling of uncertainty and unrest in the nation; probably much of this is due to the breaking down of the war strain and conditions aggravated by much fiery and unusual talk by intellectuals, accompanied by some real grievances of the "underdogs." The government apparently has abandoned the intention of granting further credits to Europe which needs billions. The effect of this is feared to be dangerous for our export trade, although private corporations may arrange for great loans.

Wheat seems assured of general firmness for the time being, but there is considerable hazard in the corn market, due to the dumping of large stocks on markets, something which frequently happens in January. A great amount of buying, however, may save the day for the bulls. Potatoes seem to be going sky-high, compared with old prices. Hay stays firm, and live stock prices have gone down before heavy receipts. Crop reporters tell of higher prices for many prodcuts to the producers, and it is believed that in general the tendency should continue.

In the meantime, business in general is healthy, while the producers are being pestered as usual by the army of market manipulators.

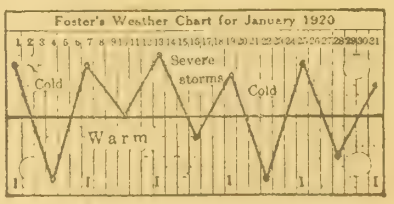
NOT ENOUGH RYE

It seems as though exporters are unable to get all the rye crops they want in this country to satisfy European demands, and they snap up quickly nearly all receipts at the markets as fast as the stuff arrives. Naturally the effect is very strengthening on the markets, although the prices have not advanced much. Detroit quotes rye at $1.86 for Cash No. 2.

The export demand for barley has not been so good of late and some slight ups and downs have occurred due to the export factor. Detroit quotes barley Cash No. 3 at $3.

THE WEATHER FOR THE WEEK

As Forecasted by W. T. Foster for MICHIGAN BUSINESS FARMING



WASHINGTON, D. C., Jan. 17,1920. —Warm waves will reach Vancouver about January 16, 22, 28 and Feb. 3, and temperatures will rise on all the Pacific slope. They will cross crest fo Rockies by close of 17, 23, 29 and Feb. 4; plains sections 18, 24, 30 and Feb. 5; meridian 90, great lakes, middle Gulf States and Ohio-Tennessee valleys 19, 25, 31 and Feb. 6; eastern sections 20, 26, Feb. 1 and 7, reaching vicinity of Newfoundland about Jan. 21, 27, Feb. 2 and 8. Storm waves will follow about one day behind warm waves, cool waves about one day behind storm waves.

These disturbances will dominate the weather of North America from near Jan. 17 to near Feb. 8. The week centering on Jan. 17 was expected to begin with high temperatures on meridian 90 and end with colder than usual, the cold reaching that line near Jan. 22. Then about the usual average of temperatures with no unusual changes up to Feb. 3. Severe storms are expected during that week about middle latitudes moving southeastward and on meridian 90. See Foster's Weather Map. If you have not received it send your address and a 1-cent stamp to W. T. Foster, 1625 1-2 North Capital Street, Washington, D. C. You cannot fully understand these forecasts without that map. It will not be sent you unless you are a subscriber to some newspaper or magazine that publishes my forecasts.

I give the dates that weather events reach certain places along the line benefit out of the forecasts. Nearly all the storms affect Vancouver, in the extreme northeast and you must do a little thinking in order to get most from the extreme northwest to the vicinity of which they move southeastward usually. When only meridian 90 is mentioned this vicinity or Vancouver is about two and a half days earlier and Newfoundland about the same time later. Middle latitudes are near 40 to 45. A storm on these latitudes affects the whole continent. It is warm southeast of the storm center, or low, and cold northwest of it.

W. T. Foster

BEANS IN FAIR DEMAND

BEAN PRICES PER CWT., JAN. 12, 1920			
Grade	Detroit	Chicago	N. Y.
C. H. P.	7.25	7.75	
Red Kidneys		13.75	
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
C. H. P.	8.75	9.25	10.25
Prime	7.75	8.50	9.50
Red Kidneys	12.00	12.00	13.00

Beans are in fair demand and steady this week after dullness some day last week, and especially during the holidays. During the last month farmers generally have shown a strong disposition toward holding back their beans until fairer prices are offered. Along with this factor, elevator men announce that more than half the Michigan bean crop is thought to have been shipped out of the state. Eastern states tell of very short supplies. Along with this is the condition of shortage in the bean production this past year—it is the lowest for about four years. Elevator men agree to a large extent, we are informed, that the farmers should get a higher price in order that the production continue in the coming season. Taking all these factors into consideration, the long hoped for boom in the bean market is confidently awaited by thousands of farmers who are holding their supply for a fair price.

POTATOES STILL CLIMB

SPUDS PER CWT., JAN. 12, 1920		
	Sacked	Bulk
Detroit	4.50	4.30
Chicago	4.50	4.30
Pittsburg	4.00	3.90
New York		
PRICES ONE YEAR AGO		
Detroit	2.15	2.00
Chicago	2.15	2.00
Ittsburg	2.10	2.00
New York	2.15	2.00

Potato prices in general have gone up during the past week or so, although increasing receipts endanger prices at some points. In the growers' markets in Detroit this week, as high as $2.50 per bushel was paid for the best grades. Greenville quotes spuds at $3.45 per cwt.

In the East the spud market is firm and prices are high. New York City reports receiving much frozen stock which had to sell at low prices but the good grades which arrived in good condition are bringing quite fancy figures. Aroostook county, Maine, reports that potatoes locally are bringing around $3.75 per cwt. In the cities, of course, the figures run higher. Eastern experts to a large extent predict somewhat higher figures in the potato market.

As for the middle west, Chicago shows the highest figures for the season on the potato market. Mild weather and an active demand with a pretty light supply shot up the prices to over $4 for nearby white stock. This bit of news is especially interesting to Michigan potato growers who are sending heavy consignments to Chicago this winter, much larger than in the winter a year ago. Experts in Chicago do not seem to be doing much predicting. And although some good authorities prophesy still further upward jumps, the bears tell of the havoc which unusually heavy receipts would cause.

DETROIT PRODUCE MARKET

The growers' markets in Detroit are notable for generally higher prices asked for all lines of vegetables, and for the limited amount of trading at the top figure. The demand for celery is good and sales are made all the way from 60c a dozen small stalks up to $1.15 for some extra fancy. Root crops are high in price and while the supply is heavy the movement is slow and the markets do not clean up until substantial cuts are made.

Potato growers have a hard time disposing of their truck loads at $2.50. Apples are plentiful and in fair demand at unchanged prices. Dressed pork is in light supply and slow demand.

Apples, fancy, $3.25 to $3.50 bushel; No. 1, $2.75 to $3 bushel; No. 2 $2 to $2.50 bushel; beets, $2 to 2.25 bushel; carrots, $1.75 to $2.50 bushel; cabbage, $2.50 to $3 bushel; celery, 60c to $1.15 dozen; French endive, 25c to 40c pound; horseradish, $3 to $3.50 bushel; leeks, 90c dozen bunches; leaf lettuce, 31c pound; onions, $3 bushel; oyster plant, 75c dozen; potatoes, $2.40 to $2.50 per bushel; parsnips, $2 to $2.50 bushel; pumpkins, $1 to $2 dozen; popcorn, $2.50 bushel; rutabagas, $1.25 to $1.50 bushel; squash, 2c to 2 1-2 cents pound; turnips, $3 bushel; live poultry, hens and heavy springers, 32c to 33c pound; light weight chickens, 27c pound; dressed pork, 18c to 20c pound; dressed veal, 26c.

Receipts of hay are light at all markets, due to light country loading, the car shortage and embargo restrictions. Trade is only fair, although it ha spicked up some since the first of the year. Sharp advances were made in New York owing to an unusual embargo situation, while at other points both East and West, supplies have been moderate and trade more active during the week. All markets report a good trade in the better grades, and that low qualities are more plentiful and less sought for.

CHANCE FOR MEDIUM WOOL

"It has struck twelve o'clock for fine wools" said a well-known buyer for a large mill at the close of the government sale recently. This sentiment is found to be more or less generally echoed through the trade. Nor does it necessarily go so far as to say that like the downward movement of the hour hand of the clock, the value of fine wool will steadily decline, for such is not the consensus of opinion. Rather, that the top has been reached and that the outlook at this writing is for an increasing interest in medium wools which long have been neglected more or less and consequently less pressure to buy fine wools and so push prices higher.

Quotations in Boston follow for Michigan and New York fleeces:

Fine unwashed, 67@68; Delaine, unwashed, 87@90; 1-2 blood unwashed, 80@82; 3-8 blood unwashed, 68@69; 1-4 blood unwashed, 65@67; 1-2, 3-8, 1-4 clothing, 55@57; common and braid, 41@42.

MORE STABILITY IN LIVESTOCK

The holiday season is over. The turkey has had his brief reign, and again the three staple meats come into their own. Unusually wide fluctuations have occurred in the markets of late. We have seen a sharp and regrettable decline in fat cattle values, but some later recovery, a meteoric rise in lamb values and a substantial advance on hogs. But withal there has been a dominant note—as they say in musical circles—of stability, a healthier tone to the general trade, a harbinger of more stable conditions, let us hope. It has not been hard to clear the offerings—for buyer and seller to come fairly early agreement as to values. Possibly the sharp weather has had something to do with it, for a long session in the yards these days is not a thing to be devoutly wished. A healthy demand means naturally a broad one—more buyers, more campetit on. The eastern outlet has shown distinct improvement. —Clay, Robinson & Co.

DETROIT LIVE STOCK

Cattle: Market dull; best heavy steers, $12 to $12.50; best handy weight butcher steers, $10 to $10.50; mixed steers and heifers, $9 to $9.50; handy light butchers, $8.25 to $8.75; light butchers, $7.25 to $7.75; best cows, $8.50 to $9.15; butcher cows, $7 to $7.50; cutters, $6; canners, $5.25 to $5.50; best heavy bulls, $9; bologna bulls, $8 to $8.50; stock bulls, $7 to $7.50; milkers and springers, $60 to $125. Veal calves: Market very dull; best, $19 to $22; others, $8 to $17. Sheep and lambs: Market 50c higher; sheep steady; best lambs, $19.25; fair lambs, $18 to $18.75; light to common lambs, $12 to $14; fair to good sheep, $9.50 to $10; culls and common, $4 to $7. Hogs: Market steady to 10c higher; all grades, $15 to $15.10.

STATE TAXES INCREASE 750 PER CENT IN 24 YEARS

(*Continued from page 7*)

of city property, as compared with the comparatively slight increase of values of Gratiot county, we raise a question as to whether or not Gratiot county is not paying considerably more than her share of the state taxes. We do not assert that this is the case, but we strongly suspect that it is. Anyway, it is a subject that deserves the attention of a tax expert who is not bossed by Wayne county or her politicians.

Another reason why some people are finding the higher taxes burdensome is because others are not paying according to their ability to pay. Adam Smith, in his "Wealth of Nations," says: "The subjects of every state ought to contribute towards the support of the government, as nearly as possible, in proportion to their respective abilities; that is, in proportion to the revenue which they respectively enjoy under the protection of the state."

This is good philosophy, and could well be applied to Michigan. Thousands of people in this state are today drawing salaries from $5,000 to $15,000 a year without having a taxable investment, and are accordingly enjoying the protection of government without paying for it. Manufacturers, too, are making large profits from which the state derives no direct benefit and very little indirect benefit. The man who saves from his income ought to be obliged to pay a small portion of those savings to the state, thereby relieving the man of property and particularly the farmer who, in occasional years, makes no profit from his operations, but whose tax like John Brown's soul, goes marching on just the same. It is an old saying that one man's fortune is another man's misfortune, so let the fortunate who can afford to do so pay the tax.

This tax problem is the biggest thing confronting the state at the present time. When state taxes jump in three years from $7,220,881 to $17,000,000 it's time to call a halt and make an investigation. It is to the advantage of every farmer and his wife to take an interest in this matter and send men to the legislature who will give the subject their serious attention instead of spending their valuable time trying to create more jobs to make more taxes to put more burdens on the taxpayer.

(*The second article in this series on taxation will appear in an early issue.*)

HUDSON SUPER SIX

Hudson's Four Year Old Prophecy Fulfilled

The Super-Six Motor Patented, Controlled And Exclusive to Hudson Has Met Every Promise

"The superior type which all must concede" is a claim we made for the Hudson Super-Six nearly five years ago.

Today close to 80,000 Super-Six owners and scores of official records reveal the truth of that prophecy.

Hudson originated through the Super-Six a principle which added 72% to power and 80% to motor efficiency. It reduced vibration almost to nil and thereby increased motor life. The forces which in other types destroy are in the Super-Six directed to useful employment.

They account for Hudson becoming the greatest speed, hill-climbing and transcontinental car ever built. Its position is not questioned. Everyone knows it.

Hudson Alone Controls the Super-Six

There is little doubt that all would adopt its invention were it not for the patents which Hudson holds.

Think what it means to add 80% to efficiency without increase of weight or sacrifice of simplicity. That advantage was recognized by engineers as soon as the principle was revealed. Everyone admits the unrivaled position of Hudson. Who questions its superior ability in any performance that calls for power, flexibility and endurance?

Further development of the first Super-Six was inevitable. But nothing has called for a change in the principle which gives it exclusive advantage. Improvements have come through refinement and in raising other car units to the standard of its motor.

Each Year Has Seen a Greater Hudson

No one at first realized the Super-Six capable of withstanding such punishment as it has taken in the hardest tests ever imposed on a motor car.

The fastest 100 miles ever officially recorded of a stock car did not show Hudson's limit. So harder tests were imposed. The twenty-four hour run was one; and although a Super-Six stock chassis in that time traveled a distance greater than from New York to Denver, its endurance limit remained unknown. The trip across the continent from San Francisco to New York, in a seven-passenger touring car, was made in 13 hours less time than its nearest rival. And then, since that did not show its endurance limit, the car was turned about and completed a test never attempted by any automobile before or since. The round trip was made in 10 days, 21 hours.

So the Present Hudson Is Even Greater

Each successive Super-Six model has added to Hudson's leadership. Each Hudson has become even more dependable, and now it seems to be as nearly perfect as it is possible to make an automobile.

And Everyone Admits Hudson Leads in Style

Look about in any assemblage of fine automobiles and note the dominant distinction of Hudson. Even sellers of rival cars, unwilling to admit the mechanical superiority of the Super-Six, because in that particular they know none other can use its motor, openly say Hudson sets the style in body types.

The Super-Six motor made Hudson the largest selling fine car in the world. Buyers have always had to wait for delivery of favorite models. They are waiting today. You will surely want a Super-Six sometime within the next year. Now is not too early to order.

Hudson Motor Car Company, Detroit

The Farm Home
A Department for the Women

"If you can keep your head when all about you are losing theirs and blaming it on you; if you can wait and not be tired of waiting or, being lied about, not deal in lies——The world is yours, and all that's in it; and, what's more, you'll be a man."—KIPLING.

SOME call it POISE; some call it SCIENCE, but whatever that thing is which gives us the grasp on ourselves and causes us to grip our mentality and hold fast to the things we know and not be led astray by the things we hear, is something most of us need to acquire more of.

A sharp reminder of this fact came to our attention when we were told that in one city in Michigan alone forty people were driven insane over their belief that on Deiember the seventeenth this old world would end. Some there were who dared dark deeds; while others remained in prayer all day, but Old Sol rose as usual and set again at nightfall, leaving no trace of the prophesied end with the exception of those people to whom the end of their reasoning power had come.

If each day we do our alloted tasks as best we may; if each day we treat our fellow men as if this were indeed the last day, then surely we have nothing to fear whether the end come now or fifty years from now, and in the meantime we might as well be found busy for in work comes contentment, and the man who is busy finds little time for these flights of fancy which result disastrously There is no gainsaying the fact that the mental condition of its people plays a large part in the health rate of any city, and when we realize this and also appreciate the fact that our mental attitude toward life and things in general rests with ourselves, then, and not till then will we have grasped the big fact that we can indeed be masters of ourselves and our destinies

The late Sir William Osler, who only recently passed away, was a great apostle of the doctrine of work. It was in an address in which he deplored the tendency to discard elderly men while they had still plenty of work in them that he made the remark that has been taken from its context, misquoted and given an entirely different meaning. I refer to his statement that if you take men still capable of good work from their employment and give them only a life of leisure, you might as well chloroform them. He referred to so many men retiring at the age of sixty, and from this statement came the "Osler" idea of doing away with all who had passed their period of usefullness, which was not as he meant.

And it is with women as with men. only perhaps to a greater degree, that if you do not keep the hands and mind busy with useful occupations, distorted ideas are apt to creep in. The best cure for any kind of "nerves" is useful occupation.

SEEN IN CITY SHOPS

Since early fall the tendency has been toward short sleeves. The light weight silk and satin dresses of winter had the short sleeves, but now that the shops are beginning to show the clothes for wear at the southern resorts, it is noticeable that all the smart frocks are short of sleeve and this is a sure indication of the coming season's styles, for whatever the winter resorts accept is usually to be depended upon as being good for the full season.

The new slippers which the shoe stores are displaying have a bow tie and yet they are not an oxford. However these are only a fad, for they will not take up the fad, just because it is something new. A slipper so fashioned that a bow is necessary, must needs always have that accompaniment. and unless that bow is fresh and neatly tied, it is tacky. Then again, unless the foot is small, it only serves to call attention to it.

WOMEN IN POLITICS

By JUDSON GRENELL

WITH THE HOLIDAYS past we have time again to turn to the consideration of more serious reading, and so we will this week publish an installment of Judson Grenell's Brochure, which many of our readers are following with profit as well as interest.

Broad-Minded Officials Needed

Michigan is a great mining, manufacturing and agricultural commonwealth. Its variety of industrial activities call for officials of more than usual broad-mindedness and proficiency. Available material for state officials is therefore not so easy to find. Too often the contest has been between candidates of mediocre ability; whoever won, the voters lost. Yet there is an abundance of good official material in Michigan, and it is now up to each woman voter to help find it. Apply commonsense to the situation. Seek for those who are—

Broadminded.
With executive ability.
Of high character.
Clean in their morals.
Not classbound.
Of wide experience.

As to Class Candidates

It has always been a mistake to elect a pronounced class candidate. Few, if any, can throw off class prejudice and discard the class viewpoint. A class candidate, if elected, will accentuate whatever most favorably affects his class, at the expense of other classes; and it makes no difference whether the class represented is one composed of mine operators, manufacturers, farmers or wage workers.

The woman voter must favor no class as against the mass. Here her intuition, if she will but submerge her own class prejudices, will be of great help to her. Intuition is only the combining of the judgment of all the senses enlisted to enable her to reach a wise conclusion.

Intuition, without seeing each link in a chain of circumstances, will leap wide chasms of unexplained and sometimes unexplainable circumstances and conditions, and arrive at a wise conclusion.

A majority of the Michigan legislature, composed of 32 senators and 100 representatives, makes the laws; the judiciary interprets them; the executive enforces them. To be worthy of any Michigan woman's vote, more than ordinary ability ought to be possessed by the candidate ambitious to be a state official.

Highways

Michigan has not yet found herself in the matter of highways. As this is written the question of issuing $50,000,000 worth of bonds, to be expended in improving roads, is being discussed. The state has some 75,000 miles of highways. Equally distributed, this $50,000,000 would allow the expenditure of $666.66 on each mile of highway. This is too much in the case of raods infrequently used, and much too little for trunk lines—those subjected to heavy traffic. One may well hesitate to say whether or not the expense of the benefit conferred by improving highways can be equitably distributed by bonding the entire state for benefits that cannot be equitably distributed.

Considerable sums expended within recent years for improving highways have been wasted. Sometimes attempts at economy have resulted in extravagance; sometimes there has been a profligacy in road building quite as bad. The immediate and greatest beneficiary of an expensive highway ought to be taxed in proportion to benefits conferred, and then the inferior beneficiaries should not be expected to pay for what in the very nature of the case can only incidentally benefit them.

Bonds

The woman voter, in voting for bonds, must also keep in mind the unquestioned fact that immediate expenditures of unusually large sums in any given direction deranges normal business and normal prices. The country's war expenditure experiences show this. Usually the increasing cost, because of this derangement, exceeds the immediate benefits. The losses more than offset the profits. Still, what is a large sum for a locality, may be reasonable, or even small, for a state to expend. Figures are relative. Today the country has become accustomed to big figures—to billions. It is sometimes sensible to "extravagant," in order to prevent greater extravagance in other directions.

Taxes

The cost of Michigan's state government runs into the millions. This cost ought to be equitably distributed, in proportion to the benefits conferred. The state collects most of its revenue from a general property tax. and a special tax on public utility corporations. The defects in the tax laws are so numerous that every legislature is called on to pass amendments, to shift taxes, or to increase or decrease the number of things taxed. The tax on personal property is acknowledged by all who have given any study to the problem to be so inequitable in its application as to shame the state. The taxes on public utility corporations are shifted to consumers, either by higher rates or by by inferior service, just as the war tax on places of amusements are shifted to those who attend such places of entertainment.

Taxation should favor the wealth producer as against monopoly or unearned increment.

Consider These Propositions

1. Favoring the broad-minded candidate with experience, as against the one who represents a class.
2. Making institutions for the unfortunate, as far as possible, self-supporting.
3. Placing authority and responsibility in as few hands as possible by advocating the short ballot.
4. Frowning upon all attempts to use state property for private gain.
5. Carefully scrutinizing bonding propositions, to the end that the tax burdens laid may be borne by those directly benefitted.
6. Encouraging thrift by untaxing wealth.
7. Cultivating the intuitive faculty where complete knowledge of a candidate or a problem is not to be obtained.

A Poem for Parents

"I took a piece of plastic clay
And idly fashioned it one day,
And as my fingers pressed it still,
It moved and yielded at my will.
I came again when days were past,
The bit of clay was hard at last,
The form I gave it still it bore,
But I could change that form no more.

I took a piece of living clay,
And gently formed it day by day,
And molded with my power and art
A young child's soft and yielding heart
I came again when days were gone;
It was a man I looked upon;
He still that early impress bore
And I could change it nevermore."

OUR READERS' OWN COLUMN

Dear Laddie: As the children call you. I am sending you a sample of Bodi-Tone, and one of the letters I got. I have already taken some of this patent medicine, and if you will ascertain if it is really as good as they claim? I would like to give it a further trial.—Mrs. R. B.

The Food and Drug Department of the State of Michigan made an analysis of this patent medicine and report as follows: "This preparation contains the following: Iron phosphate, lithia, berberin, rhubarb, Peruvian bark, emodine bearing drugs.

There is nothing here which would prove injurious to the kidneys UNLESS the sufferer had an aggravated case, when harm could be possible as a result of taking the tablets."

You see, my friend, with this, like lots other patent medicines, a little will probably do no harm, but if you are troubled enough so that you need to take a quantity of any drug it might be far better to be under the direction of a reputable physician.

Editor, Woman's Department, M. B. F.: My hair is coming out at an alarming rate. In the cities you are close to hair dressers who make a specialty of this work and through their, treatments can probably stop this loss, but I want something that I can do at home to not only stop the hair falling but promote a new growth.

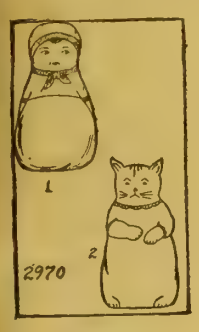
True, we in the cities are near hair dressers who do give treatments and charge big prices but the greatest good they do can be done right in your own home if you will only take the time. In the first place, try warm salt and water for the falling hair. Rub this well into the scalp every night, and then follow this with a brisk massage for one-half hour. If you will thoroughly rub the scalp, massaging it gently but firmly every night for one-half hour, you will find that your hair will stop falling and a new growth will be encouraged. The chief advantage is to get the blood circulating through

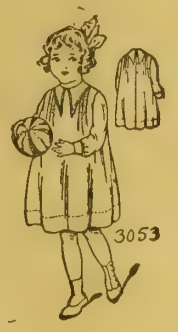
LATEST STYLES and New York Patterns

No. 2970.—A Set of Pleasing Toys for the Nursery. Cut in 1 size. Either stlye requires 3-4 yard of 27-inch material.

No. 3036.—A Popular Style. Cut in 7 sizes: 34, 36, 38, 40, 42 44 and 46 inches bust measure. Size 38 requires 5 5-8 yards of 44-inch material. The dress measure about 2 yards at lower edge with plaits extended.

No. 3042.—Girl's Dress. Cut in 4 sizes: 8, 10, 12 and 14 years. Size 10 requires 4 1-2 yards of 27-inch material.





No. 3037.—A Practical Model. Cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 38 requires 5 7-8 yards of 36-inche material. Width of dress at lower edge is about 2 1-4 yards.

No. 3053. Child's Dress. Cut in 5 sizes: 1, 2, 3, 4 and 5 years. Size 4 requires 2 1-4 yards of 36-inch material.

No. 2733.—Misses' Dress. Cut in 3 sizes: 16, 18 and 20 years. Size 16 will require 37-8 yards of 44-inch material. The dress measures about 2 yards at the foot.

No. 3034.—A Popular Style. Cut in 4 sizes: 2, 3, 4 and 6 years. Size 4 requires 2 5-8 yards of 44-inch material.

No. 2766.—Ladies' Apron. Cut in 4 sizes: Small, 32-34; Medium, 36-38; large, 40-42; and Extra large, 44-46 inches buse measure. Size 38 requires 3 7-8 yards of 36-inche material. The Sleeve protectors require 3-8 yard.

the little vessels which feed the hair follicles. Probably your system is below par and your circulation poor. This treatment if persisted in will do your whole system good and there are no bad after effects. Of course massaging is tiresome work, but if there are two women in the household who can take turns massaging each other's scalp, the result will warrant the effort.

PLAN YOUR GARDEN NOW

AGAIN the catalog and seed houses are sending advertising matter, reminding us that very soon will spring be with us and that we must plan our gardens early, order our seeds and if we are to plant berry shrubs, they are better ordered early as they will be more apt to grow if they are planted before they begin to sprout. Plants are dormant at this time and in excellent condition to handle.

It is usually the women of the farm who have to care for the garden and if berries are planted it is usually they who express a wish for them and have to see to their ordering. At the price which they have been bringing for the past few seasons they are a very profitable crop, and as the most of the work consisting of planting, etc., can be done before the heavy farm work begins, the men folks will not object to setting them out. Of course the picking will fall on mothers and daughters principally, but if women are to enter the class of gardeners, probably the small fruits such as berries are among the best things to begin on as fruit can be picked before the sun is high, and the work is lighter than any other kind of gardening.

Instruction for planting and preparing the soil will be sent you by any reliable shrubbery house for it is to their advantage that your shrubs and vines grow.

THE ETERNAL WOMAN

BACK of every question stands eternal woman. She has her way. She rules not from the throne, but from behind the throne; not in the council chamber, but in the desires and dreams of the councilors who sit there.

She has no voice, yet her arm is stronger than the soldier's.

She has no voice, but nations are moved by her smiles or her tears.

She is the secret of all, the solution of every puzzle, the clew to every maze, the splinter in every wound. As God is, so she is—silent, yet disposing.

She is the cause.

It was she who brought prohibition. "What," she said, "are your mouthings of personal liberty? Stop poisoning my boy. What are your gay nights on Broadway, the glitter of your revelries, the glow of your goodfellowship, the composing shadow of your skeptic customs? You are trampling my soul, while your hot eyes leer at my body.

"I must have my soul and my boy. Your Bacchic furies must go.

"I am tired of your intolerant passions and your debauched logic. I am done with alcohol."

She is behind the labor unrest.

"What I demand," she cries, "is the door of my dreams. I have borne children in poverty and dirt. My children shall have their chance. What care I for your laws and precedents? Give my boy his chance. I and the children of my body are human beings. What are property and capital and policemen and all authorities and magnificence to me? Unloose your strong systems and institutions, and let my boy breathe and be a man. How? I care not. One way or another you must do my will. I am a mother."

She is back of the peace council.

Only pompous men sit there. But behind every one of them is an unpompous mother.

"You prate of nations," she whispers, "of governments, rights and dignities. What are all such things to me? I want life, human life.

"I am tired of wars. I want to rock my cradle in peace. I do not want my sons brought up for slaughter, as pawns in your mad ambitions.

"What are your Monroe Doctrines and Croat-Italian quarrels, and Polish-German feuds, and your autocracies and bolshevisms? What about me?

"You have but one question before

(*Continued on page* 23)

What Makes Your Garden Grow

Good productive, well fertilized soil, free from weeds is one thing to produce big crops. But pure, tested, sterling quality seeds are first in importance to make your garden grow and yield the biggest cash returns.

Hardy, Big Yielding, Northern Grown

Isbell's Seeds
"As They Grow Their Fame Grows"

Have proved themselves the best by test. Earliness, hardiness are bred into Isbell seeds, through years of scientific culture. They produce big, thoroughbred crops the same as thoroughbred cattle produce thoroughbred offspring. They inherit a rugged, big yielding quality that makes them grow even in spite of hardships. It takes experience to produce such seeds and Isbells have had 41 years of it. We grow our own.

Write for Your FREE Catalog TODAY

Your name and address on a post card will bring you a valuable book—describes the best in seeds. Gives cultural directions. Shows how Isbell seeds are grown and quotes direct prices. It is one of the most helpful catalogs in America. Send for your copy now.

When you write any advertiser in our weekly will you mention the fact that you are a reader of Michigan Business Farming? They are friends of our paper, too!

"Keep M. B. F. coming!"

YOU WANT THIS WEEKLY IN YOUR MAIL BOX EVERY SATURDAY, BECAUSE—

——it brings you all the news of Michigan farming; never hiding the plain facts.

——it tells you when and where to get the best prices for what you raise!

——it is a practical paper written by Michigan men close to the sod, who work with their sleeves rolled up!

——it has always and will continue to fight every battle for the interest of the business farmers of our home state, no matter whom else it helps or hurts!

One Subscription price to all! ONE YEAR.....$1 THREE YEARS...$2 FIVE YEARS.....$3

No Premiums, No free-list, but worth more than we ask.

MICHIGAN BUSINESS FARMING, Mt. Clemens, Mich.

Dear Friends:—

Keep M. B. F. coming to the address below for.....years for for which I enclose herewith $..... in money-order, check or currency.

Name .....

P. O. ..... R.F.D. No. .....

County ..... State .....

If this is a renewal mark an X here ( ) and enclose the yellow address label from the front cover of this issue to avoid duplication.

The Children's Hour

DEAR CHILDREN:—We have recently awarded two prizes for original drawings, and if the artist is unable to get these in this week, I promise you that they will appear later. The prizes of "A Trip Around the World" in postal cards were sent to the winners, Myrtle Neuman, of Glennie, and Henrietta Droster, of Eagle, Mich.

And now I want to tell you what I have planned for the winter months and hope you will be pleased. You know in most of the home magazines they run what we call "continued stories," that is, stories which are too long to be printed all in one week and so a part is printed each week until the story is completed. This week we have a complete story, but beginning with next week and continuing for a number of weeks, we will have a continued story and at least every other week, and perhaps every week we will be able to have a puzzle. We want our page to be just as interesting as any other in the paper. Affectionately yours—LADDIE.

THE JUNIOR COOK

Orange Salad

Pick over and wash one head of lettuce. (A tender cabbage leaf might do.)

Wrap in a cloth and put in a cool place for at least two hours.

Just before meal time, peel and slice two oranges.

Arrange the lettuce leaves (3 to a plate is plenty), on a salad plate.

Put two or three slices of orange on each plate on top of the lettuce.

Into a measuring cup pour

Three tablespoonsful vegetable oil juice as preferred.

One and one-half tablespoonful of either white vinegar or lemon juice as preferred.

One-half teaspoonful salt.

One-half teaspoonful paprika.

Mix together well with a spoon and then dip over the dishes of salad.

Serve at once with wafers or tiny brown bread sandwiches.

One head of lettuce and two oranges will make eight plates of salad.

Fine for a holiday luncheon or dinner.

LETTERS FROM OUR BOYS AND GIRLS

Dear Laddie—I have never written to you before, so thought I would try my luck. I go to school every day. I haven't missed but one day and a half this year. I am twelve years old now. My birthday is the third of November. I am in the sixth grade at school. I have a little brother three years old, his name is Merton and his birthday is the 4th of July. We had a Christmas tree at school and at home too. I got a lot of nice presents. The snow is pretty well gone here now. We have a dog and cat. The dog's name is 'Shep". We live about six miles from the nearest town. We have a Ford car. I will close for this time as my letter is getting quite long. Hoping to see my letter in print.—Myrtie Hager, Vermontville, Mich., R. F. D., No. 3.

Dear Laddie—I am 11 years old. My father takes the M. B. F. My father has two colts named Bets and Maude. We have four horses and four cows, also two yearlings and three calves. We have 33 sheep and 29 pigs. We have an 80-acre farm. I am in thhe fifth grade ata school. There are 18 pupils in our school. My teacher's name is Miss Hill. I am going to be a farmer when I get big. My letter is getting quite long so I will close, hoping to see my letaer in print.—Basil Miller, Batavia, Mich.

Dear Laddie—I have written to you before, but didn't see my letter in print, so thought I would write again. I am 11 years old and in the fifth grade. I like to go to school. My teacher's name is Miss M. A. Thayer. I like her very much. There are 37 children in my room. Well I will close for now, hoping I will see my letter in print and hear from some of the other little girls and boys.—Ruby Randall, Webberville, Mich.

Dear Laddie—This is the first time I have written to you. I am ten years old. I have no brothers or sisters. For pets I have two cats, their names are Fuzzy and Buddy. We have two horses and eight cattle, I also have a pet calf, called April. The horses are Babe and Ophie. I will close.—Endora Kelsey, Mancelona, Mich.

PLANTING A TEA SET

By SARA E. WILTSE

(Copyright reserved).

MORE than 50 years ago a small girl lived on a farm in Michigan. Her only dishes were the broken parts of a little china tea-set. The sugar bowl had lost its cover, the teapot spout had been broken off, and the cream pitcher had no handle. The tea cup was very friendly with the cream pitcher, for it too was without a handle, and the small girl played there were two saucers, as one was in two parts! These tiny dishes were decorated with very pink flowers and delicate sprays of green leaves. Every little piece was well washed and dried whenever the small girl and her smaller doll had a tea-party.

Ons day when the farmer was planting acres of potatoes the small girl watched the careful cutting of the seed-potatoes before they were put in the ground.

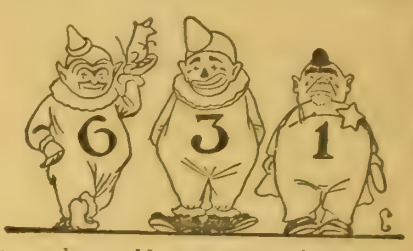
Feeling sure that she had mastered the lesson about potato eyes and the fall crop, she hurried to look at the parts of her beloved tea-set. She had a plot of her very own in the flower garden, and for once she was glad that her dishes were already broken, for she decided to plant them! Every part was put into its little hole and covered with a shapely hill of good earth. Her garden was hoed, weeded and watered with diligence, and when others were digging potatoes, she dug for tea-sets! She was a brave child, and when she found only the pieces she had planted, she washed and dried them, saying to herself—"Good thing the seeds didn't rot"—and nobody knew of her thwarted attempt to grow tea-sets until she was a grown woman, with a little boy who loved to hear her tell about long ago when she was a little girl. Then one day she told him the secret.

Not long afterward she had a birthday and one of her presents was a lovely little tea-set with pink flowers and sprays of green leaves. The little boy had saved his pennies until he had enough to buy the gift of which nobody but his mamma guessed the secret when he said that it was for the little girl whose tea-set never grew. She took her boy in her arms, and laughing said, "But it has grown, it has grown, my precious boy, and it is more beautiful to me than any tea-set ever made."

OUR PUZZLE

The Three Clowns

It is told of a circus parade in which three clowns walked; they were numbered 6, 3, 1 and a free ticket to the circus was offered to any-



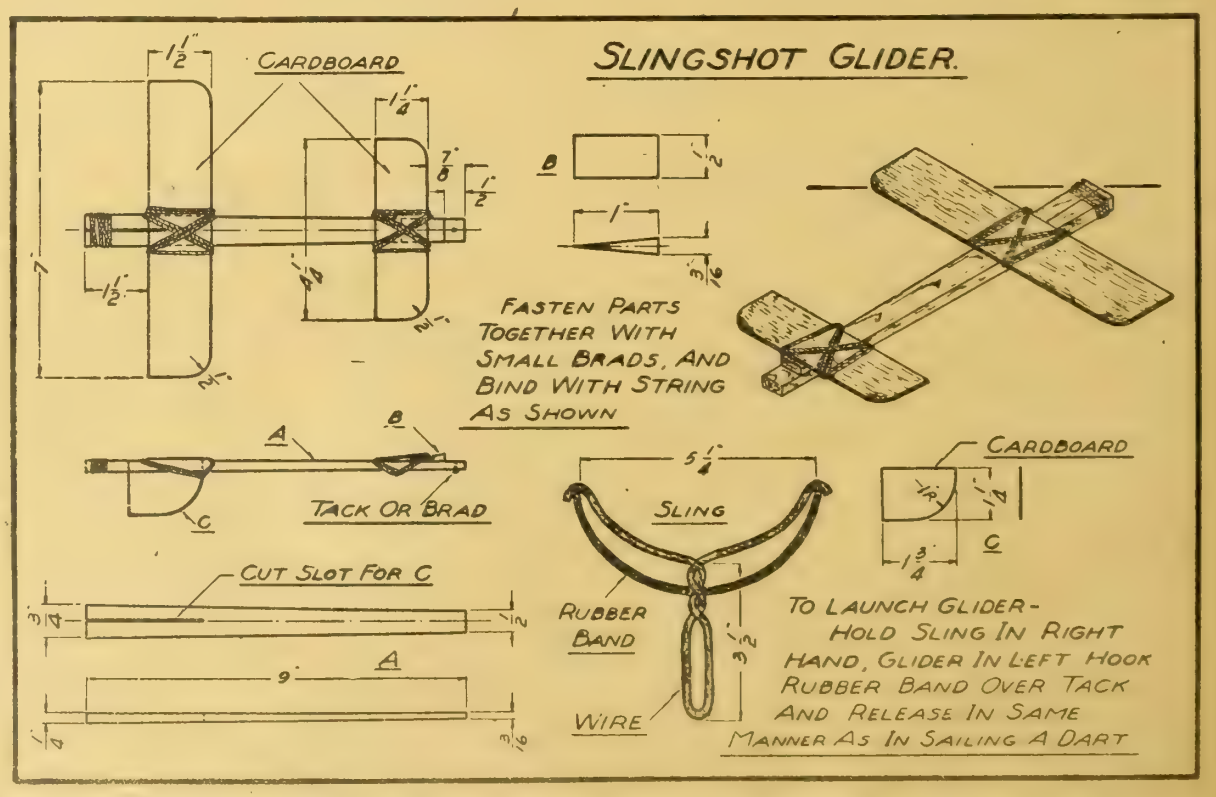
one who could so arrange them that the whole number formed would be divisible by seven. Can you arrange them?

Ax-Golf

The old farmer was trying to impress upon his son, who wanted to play golf for exercise, that chopping wood would answer the purpose just as well. "Oh, no, father," said the boy, "it is the walking between strokes that makes golf such a valuable exercise; that gives the legs a change as well as the arms." "Oh, that's it, is it?" said the old man. And then he went into the yard and placed sticks of wood at intervals all around it. After this he handed the boy an ax and said: "Now play the full course."

Dear Laddie—This is the first time I have written to you. My father takes the M. B. F. and likes it fine. I live on a one hundred twenty acre farm. We have 11 head of cattle, six hogs, four horses, some sheep and about 50 chickens. I help my father on the farm. I have four sisters and two brothers. I am next to the oldest. I am thirteen years old and go to high school at Farwell and am in thhe ninth grade. My teachers are Miss King, Mr. Chappell and Mr. Oden. I like them all fine. I take four subjects. My sister Genevive is writing too. Will close, hoping to see my letter in print.—Velma Schofield, Farwell, Mich., R. F. D. 3.

TOYS AND USEFUL ARTICLES THAT A BOY CAN MAKE



SLINGSHOT GLIDER.
CARDBOARD
FASTEN PARTS TOGETHER WITH SMALL BRADS, AND BIND WITH STRING AS SHOWN
TACK OR BRAD
CUT SLOT FOR C
SLING
RUBBER BAND
WIRE
CARDBOARD
TO LAUNCH GLIDER - HOLD SLING IN RIGHT HAND, GLIDER IN LEFT HOOK RUBBER BAND OVER TACK AND RELEASE IN SAME MANNER AS IN SAILING A DART

WITH all the agitation concerning the effort to conquer the air, any toy that tends to develop an interest in this matter is at once exteremely useful and very interesting. The one shown herewith will appeal even to the younger boys—in fact, it is an excellent toy for the real young boy to make. And as for the older boys it is a very good toy for them to first make in starting out on any experiments along this line. We must all do the smaller things before we can hope to do successfully the larger ones. Perhaps And then he went into the yard could accomplish tasks at the very first attempt, and yet I feel that such would not be the case.

Every boy knows what the slingshot is and also what the dart is—the kind you make from a shingle, cut a notch in it, then tie a string to a stick and after that hook the string to the notch by a knot tied in the end of the string, and then launch the dart into the air. This toy works just the same way so far as the principle is concerned.

First get out part A from a light piece of wood. You will notice that this piece tapers both ways—both in width and in thickness. The slot in the broad end must be cut carefully. A fine saw will be necessary—as near the thickness of the cardboard to be used for the wings, as it is possible to get. It is easily seen that this piece can be split very easily in sawing this slot.

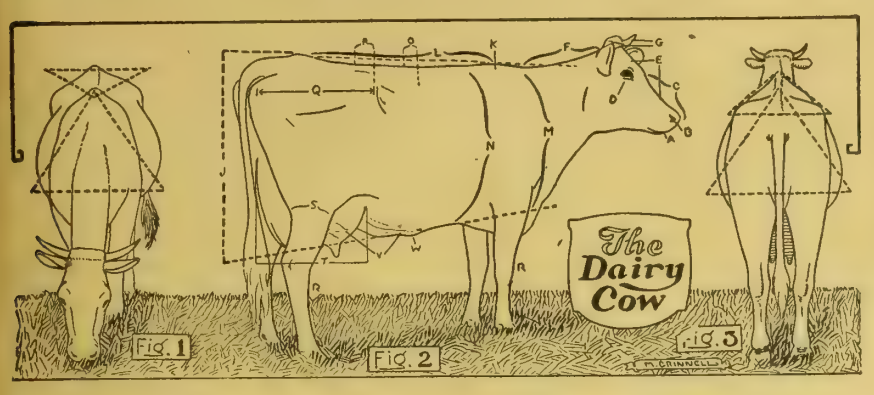
Cardboard is to be used for the wings and for part C. It should be of only average weight—similar to that in the ordinary shoe box. The

making of these parts will not be hard as they can be laid out and cut with shears. The wedge B is rather small and may bother you somewhat. This should be of wood. Very small brads should be used in fastening the parts together after which they should be bound with ordinary string as shown in the drawing.

The sling should be made next. This may be made from wire or from wood. Every boy knows how to get one from wood—the crotch from a small tree, that is, where two small branches separate. If wire is used, it should be heavy enough to withstand the strain of casting the glider. Form to the shape indicated and attach a good strong rubber band.

The small wedge may seem useless to you until you happen to try to sail the glider without it. It is used to elevate the front wing which causes it to rise. No finish will be necessary. After you have successfully made one of these gliders you can then try your hand at larger things—some of which will appear later in these columns. Watch for them. Explanation is given on the drawing as to how to proceed to launch the glider. Much fun can be had by having competition among several boys to see who can sail their glider the farthest.

HOW TO JUDGE A DAIRY COW



A—mouth, b—nostril, c and e—face, d—eye, f—neck, g—horns, k—withers, l—back, m—chest, n—heart girth, o—loins, p—hips, q—hips to pin bones, t—legs, s,—thigh, t—udder, u—teats, v—milk veins, and w—milk wells.

YOU WERE promised not long ago that you would be shown some pictures which would help you to know how to judge a good dairy cow and explain a lot of things probably hazy in your minds. It is very important for a young person on a farm to know how to explain these things. Your city relatives will be asking you just such questions and you would be ashamed not to be able to answer promptly and correctly. Besides that, if you know how to size up a good or bad cow, it is going to mean money in your pockets when you grow up, and maybe right now, if you are allowed to have charge of some stock on your farm.

The breed of the cow does not matter so much so long as she is a good dairy cow, (in this article we are going to limit it to talking about the cows producing the best supply of milk.) Jerseys and Guernseys usually produce the richest milk, while Holstein, Ayrshire and Brown Swiss cows usually produce the largest amount. So there is considerable discussion as to which is the best kind. In any case, you are most likely to succeed if you choose the breed you like the best.

It does not pay to buy a cow merely because she is cheap. A poor producing cow is pretty sure to lose money for you, no matter how much care and feeding you provide. If you have to choose between buying one from two or more cows, find out the results of the scales and the Babcock test. A good dairy cow should be well developed in many points, not merely in a few. She should have a large mouth; large, open, distended nostrils; fair length from muzzle to eyes, which should be large, bright and prominent separated by a broad, well dished face.

The ears of a good dairy cow are usually of medium size. The horns small and incurving (or otherwise agreeing with the standards of the breed). The neck should be clean-cut, long and thin. Be sure to watch for the wedge shape, which is shown in the diagrams. The withers should be pointed with the backbone refined, but prominent, often jointed and straight from the shoulders to the tail setting. There should be depth to the chest, and flat and deep ribs. The hide should be supple and the hair silky. Her thighs should be thin and well arched out. A large, highly attached udder invariably shows a big yield. The teats should be well placed, one at each corner. Also be sure to watch for the milk veins extending from the udders. It is better to choose a good cow of this sort with a blemish or two, than to choose a poor cow which may look fairly pleasing to the eye.

With these points in mind, you should talk the matter over with the folks and with others who are well-posted on good dairy cows, and you will always be pretty safe in making a deal of this sort.

MUSKRAT TRAPPING HINTS

ALTHOUGH the muskrat is considered easy to trap, many points may be of benefit to you and help to increase your catch. For the beginner it is best not to try to handle too many traps, six or eight is about the right amount. In making sets in the banks of streams muddy water will often tell if the hole is inhabited. Set the trap at the entrance and fasten the chain so the rat will not pull itself back in the hole after being caught. It it does it is very difficult to get it out without spoiling the den.

If you catch a rat set again in the same place and you will likely get another, I have caught four rats in one hole. Another good set is to find mounds above the water which indicate presence of muskrats and place a trap at the foot of it about three inches under the water. A slight hit on the head will kill a muskrat so it is not necessary to pound it severely which will likely damage the pelt. Baits prove more effective late in the season than in the early part. They should be placed so the rat will go over the trap to get it. So much natural bait in plain sight might attract the attention of people who make it a business to take other people's catch. In making shallow water sets reach your trapping ground at dark as a muskrat will chew off its leg is soon as it is light. Do not skin muskrats as soon as they are taken from the water, wait until they are dry. The hide should be taken off and stretched pelt side out. Remove the tails as they are worthless. Hides caught during warm weather should be rubbed with salt on the flesh side and shipped as soon as possible. For stretching the average muskrat, a board five and a half inches wide at the bottom and narrowing down to two inches at the top, eighteen inches long and a fourth inch thick will do. Let the hide dry a week or ten days in a dry, cool place.—*Parm Mayer, Merrill, Mich.*

THE ETERNAL WOMAN

(*Continued from page* 12)

you that interests me. Stop war!

"I care not what your schemes may be; all I ask is that you do not slump back into the old plan whereby you settled your disputes periodically by a carnival of murder, burning, rape and devastation.

"I am law. I am common sense. I am democracy. I am justice. All these things are but names for me.

"I am dumb. I have no place in your parleys, no vote. But in my hands, men, is the reward you crave. In my body is the food of your highest hunger. In my soul is the golden casket that holds your dreams.

"You shall have no peace of mind, you shall have nothing but bitterness, and bloody revolutions, and the terror of night until you give me what I want.

"I am the eternal woman. And with me is the eternal God. And without us you can do nothing but evil."

FRANK CRANE

(Copyrighted, 1919)

PLAIN VEGETABLES—DRESSED UP

It is just about this season of the year that we begin to wonder what we will have to eat to vary the menu. One of our readers reminded me of this when she wrote in last week, asking: "Why don't we have any recipes—haven't seen any for a long time, and while we have plenty to eat, I should like some new, appetizing ways of preparing or serving it."

And so this week I am giving you a few special dishes made of ordinary fruits and vegetables such as you would have in your cellar or can very easily obtain. Some of them can be used for left overs, while some are very nice for luncheon or supper dishes.

Turnip Balls

Cook rutabagas or turnip tender, drain, mash, season with salt, pepper butter and a little sugar, roll into small balls, dip in beaten egg, flour or bread crumbs. Fry in deep fat. With care this can be browned nicely by rolling in skillet with a little drippings.

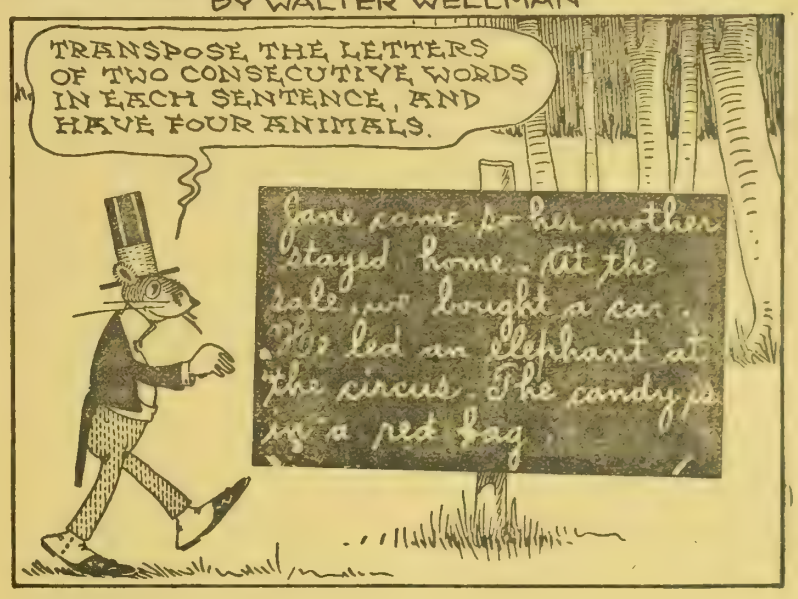
Carrots and Peas

Select rather large carrots. Cut them off so they will be of even lengths, using the large end. Cook until tender, then with a sharp knife cut out the inner and lighter part, leaving the darker shell. Heat and season a can of peas and fill these carrot shells with the peas. This special, served on the plate direct from the kitchen, with potatoes on the half shell, makes a very attractive plate for a company dish.

The ends and insides of the carrots thus used, can be utilized in vegetable soup.

JUMBLED ANIMALS

BY WALTER WELLMAN



TRANSPOSE THE LETTERS OF TWO CONSECUTIVE WORDS IN EACH SENTENCE, AND HAVE FOUR ANIMALS.
Jane came to her mother stayed home. At the sale, pat bought a car. He led an elphant at the circus. The candy is in a red bag.

Boys! Girls! This School Outfit YOURS for a LITTLE Extra Work

During the past 30 days more than 50 "LIVE WIRE" boys and girls have secured this dandy outfit which consists of 3 pencils, 1 pen holder, 1 combination pen and pencil, 12 pen points and holder, 1 pencil sharpener, 1 ink and pencil eraser and 1 aluminum collapsible drinking cup, all packed in a beautiful box, without it costing a penny.

HOW THEY DID IT

They simply called on two of their friends who were not taking Michigan Business Farming. had them look over one or two recent copies and explained just what this weekly has done and is doing for the farmers of Michigan and convinced them that they ought to be taking M. B. F. if they expected to keep abreast of the times and derive the same benefit over 70,000 farmers are now enjoying. Then they explained that they were working for a school outfiit. That settled it, their friends subscribed and now the School Outfit is theirs.

HERE'S YOUR CHANCE

All you have to do to win this outfit is to call on two of your friends who are not now taking M. B. F. and ask them to help you win the outfit by giving you their subscription to M. B. F. for one year at $1.00 each. Send us the $2.00 with their names and address plainly written and the outfit will be yours.

Get your Father, Mother, Big Brother or Sister to help you.

MAYER'S PLANT NURSERY

FARMERS SERVICE BUREAU

(A Clearing Department for farmers' every day troubles. Prompt, careful attention given to all complaints or requests for information addressed to this department. We are here to serve you.)

FARM SOLD ON CONTRACT

I would like you to answer the following questions: If A sold a farm to B and B payed one-sixth down, the balance on contract of a stated amount plus the interest annually, should B give a mortgage in connection with his note. If so could A sell the mortgage to another party? If not, would there be any way that A could get the balance other than as contract stated? Yours truly, S. A. H.

If the farm is sold on a contract there would be no mortgage and usually no note as the contract specifies the payments and time and rate of interest as well as the other terms of a contract. The record title remains in the grantor in the contract. One may sell the contract the same as he would sell a mortgage, but he would also give a deed of the farm to the purchaser of the contract, making the deed subject to the terms of the contract.—*W. E. Brown, legal editor.*

USE OF SPARK INTENSIFIERS

Does a spark intensifier on a Ford, short the coil or in any way harm the coil or magneto? What makes so many porcelain cracks in my car.—A. F. S., Saginaw County.

There is no harm in the use of a spark intensifier in the Ford coil system. Nor will it harm the magneto. I have the assurance of a prominent Ford dealer which agrees with this statement. The second part of the question regarding the cracking of spark plug porcelains is answered as follows. There is more or less vibration in a Ford motor at all speeds. There is a particular speed at which there is more vibration than at any other. On some cars this excessive vibration occurs at a rate of speed of about seventeen miles per hour. On some others it is a little higher. This would account for the tendency to break porcelains as is frequently the case in Ford cars.—*E. C. Sauve, M. A. C.*

TAX ON BONDED STOCKS

Does a person need pay special tax on full blooded stock that he keeps for the improvement of his own herd and not be a member of a Breeders' Association? Also give No. of volume Statute and page for the benefit of furthur investigation. Please answer in next issue if possible. Yours truly, H. A. Rae, Beaverton, Mich., R. F. D. 2.

We have your letter of December 18th, relative to a special tax on full blooded stock.

The constitution and laws of the State of Michigan require that all property shall be assessed for purpose of taxation at its true cash value; therefore the owner of full blooded stock should be required to pay taxes on the actual value of the stock, the same as on any other class of property.—*Board of State Tax Commissioners, B. F. Burtless, Secretary.*

CONCRETE GRANARY

I've been building a cement granary this fall and I would like to know if any of the patrons have had any experience in keeping grain in such a building as I wish or rather will have to line the bins with lumber to keep the grain away from the cement or put it right on the floor. Now, if someone that has tried this would give me some advice through the paper I would appreciate it.—W. P H., Walkerville.

It is a very common practice to keep grains in bins having concrete floors without the use of any wooden flooring to keep the grain away from the concrete. If the floor were made of a very lean mixture, and, therefore, porous, and if it were located where the natural drainage was bad, there might be some necessity for using a wood covering but usually there is no necessity whatever for it. Neither will there be need for a wooden lining when the granary walls are made of concrete. This is proved by the fact that hundreds of concrete grain elevators are in daily use and are keeping grain in a first-class condition. All that is necessary is that the walls be made of a reasonably good quality of concrete. We might mention in this connection that practically every grain elevator of over 100,000 bushels capacity which has been built during the past six years has been of concrete.—*A. J. Curtis, Manager Farm and Cement Products Bureau, Portland Cement Ass'n.*

INFORMATION FOR THE CENSUS

Will you let me know why it is that in the government census the valuation of farm property is taken while the city property, that is, what is not for farm purposes, is not asked for?—M. A., Lincoln, Mich.

The census law does not provide for the census of property that is not producing something. The law says the census shall be restricted to inquiries relating to population, to agriculture, to manufacture, to forestry, and forest products, and to mines and quarries. A farm is a factory in the sense that it is producing something, whereas a city home and its surroundings is merely a place of habitation.

Questions relating to agriculture include name, color, sex, country of birth. Of occupant of each farm. tenure, acreage of farm, acreage of woodland, value of farm and improvements, and the encumbrance thereon, value of farm implements, number of live stock on farms, ranches and elsewhere, and the acreage of crops and the quantities of crops and other farm products for the year ending December 31st next preceding the enumeration. quiry shall be made as to the quantity of land reclaimed by irrigation and drainage enterprises and the capital invested in such enterprises.—*Editor.*

COST OF WINTER FEEDING

I have a friend who has two horses, four cows and a year-old calf and wants me to take them and let them run with my cattle. I keep my cattle in the barn every night and give them good oats, straw and all the shucked corn fodder they can eat, and salt and water. What is it worth to feed and take care of these seven head of stock a month as he wants me to keep them till grass this spring? The cows are dry and not giving milk at all. Please give me advice.—A E. C., Saginaw County.

It is rather difficult, according to Prof. M. A. Brown, of M. A. C., if not impossible to estimate the monthly cost of handling this stock, as much will depend upon the amount of feed fed them and the condition in which they are kept. Furthermore, the amount of stalks and straw fed to them will depend a great deal on their quality. The only fair way to figure this to both parties would be to make a careful estimate of the amount of straw and stalks that these cattle and horses consume and then let the owner of the stock pay the man who is caring for them for the feed at market price. Straw with us is worth from $10 to $12 per ton on our local market

This arrangement would not take into consideration the labor of caring for them which would not need to be considered if the feeds were paid for at a price such as they would demand if hauled to market as, in addition to saving the labor of hauling the feed to town, the caretaker would also have the manure left on his place.

HOW TO FEED MOLASSES

Could you tell me how to feed molasses? Should it be diluted and how much should be fed to horses and cattle?—Subscriber.

In using the heavy molasses usually sold for feeding purposes one should add from one to two parts of water for every portion of molasses, says Prof. A. C. Anderson, of M. A C. Stir this thoroughly and in the case of cattle pour the material on the silage and grain or sprinkle it upon the rough feed. In using molasses for horses it is almost always sprinkled on the hay or straw. In feeding beet sugar molasses one should usually limit his feeding operations to one pint per day. Double this amount however, may be fed in the case of cane molasses. In all instances begin with small portions and gradually increase to the desired quantity.

SENSE AND NONSENSE

WILL GROW WINGS

Mr. Butterfly—Mr. Caterpiller is not sporty these days.

Mr. Moth—No, but he will be very fly later in the season.

Reckless Doctoring

Doctor: "Madam, I shall have to paint your husband's throat with nitrate of silver."

Profiteer's Wife: "Please use nitrate of gold, doctor. The expense is quite immaterial."

Preparedness

Wifie—"Dear John, mother was so pleased with all those nice things you said about her in your letter to me. You see, she opened it by mistake."

Hubby—"Yes, I thought she would."

The Awful German Language

Jud Tunkins says he has no objection to German music. What he frets over is the German words that go with the music.

A Suggestion

Perhaps the United States would accept a non-resident membership in the League of Nations.

LIKE LOTS OF US

Mrs. Fly—The old hypocrite, he told me he never went near that stuff!

The Thrifty Scot

Bix—"I wonder why a Scotchman always says 'hae' for 'have?'"

Dix—"Possibly it's on account of his thrift. He saves a 'v' every time he does it."

Earning His Rest

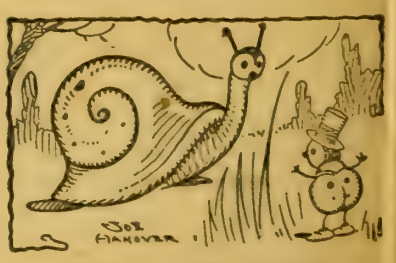
"Some officeholders are not very industrious."

"Well," explained Senator Sorghum, "after a man has been running for office he's liable to feel tired enough for a good, long rest."

The Usual Distinction

"Don't you admire determination in a man's character?"

"That depends. If it brings success I praise it as splendid perseverance. If a failure, I denounce it as confounded obstinacy."



AIN'T IT THE TRUTH

Bug—Ha, ha, I wouldn't carry my house around on my back!

Snail—I would. A person's lucky to have a house these days.

UNCLE RUBE SPINACH SAYS:

HIGH LIVIN'—AN' EVERTHING

Bein' granted a vacation of two weeks ,over Christmas an' New Years y'know, I jest thought I'd go at it an' solve this hull dum question of high cost of living' an' some other things, that have been a puzzlin' so many of our prominent men an' women, as well as investigatin' committees, for some considerable time.

I spent sleepless days an' restful nights a lookin' round an' by keeping my eyes open an' my mouth shut, I have to my own satisfaction at least, learned quite a considerable. Of course, as everybody who has to buy anything knows, prices on most everything, sugar an' whiskey included, is a little high—quite high I might say—but the cost of high livin' is a darn sight higher an' right here is where the trouble—a hull lot of it anyway, comes in.

I found clerks drawin' twenty to thirty dollars a week, had to have the finest clothes made, why they think nothin' of payin' seventy-five to a hundred dollars for a suit of clothes, fifteen to eighteen dollars each for silk shirts, four dollars for a tie, fifteen dollars for a hat, fifteen to twenty dollars for a pair of shoes, two to three dollars a pair for silk socks—oh, they must dress like peacocks y'know or folks'll think they're cheap skates dont'che know An' by jingo, their wives have to go 'em one better in matters of dress, or that hateful Mrs. So and So may be a wearin somethin.' costin' a little more an' so be entitled to turn up her little snub nose when she meets Mrs. thirty dollar a week clerk an' that wouldn't do at all don'tcha see.

Now the man who employs Mr. clerk an' who mebbe is worth, financially, considerable more than he, will manage to wiggle along on a 35 or 40 dollar suit of clothes, a $3 hat, a $2 or $3 shirt, a 75c tie and shoes costin' not more'n $6 or $8 an' seems jest's if he looked 'bout as well dressed an' feels 'bout as comfy as his thirty dollar clerk, even if he don't happen to be wearin' silk sox an' silk shirt an' everything.

Then I go in the butcher shop—Mr. Clerk comes in an' he must have the finest cuts of meat, sirloin or porterhouse "cut thick y'know and trimmed up all slick and nice an' please wrap it up in two papers." Oh, they're particler all right, an' then in comes Mr. Employer an' he says "got a good soup bone today?" "Well send 'er up an' say jest gimme a pound or two of liver will ya? I'll take it right along because I want it for my supper y'know."

Now it's a well known fact that the cheaper cuts of meat contains the most nourishment but Mr. Clerk ain't after nourishment, he's got the money an' he wants to spend it, an' nothin' cheap about him, he's got to keep up appearances y'see an' how can he do it on soup bones or liver, huh?

In these days of high prices, the thrifty farmer is spoken of in terms of awe, an' with bated breath (or breath otherwise perfumed) our city friends will say "jest look at the ol' farmers, they're a gittin' rich an' makin' money so fast they have to come to town with a truck load of it every few days cause they ain't got room on the farm to store it an' have to bank it real often."—that's about what our friends think, whether they say it or not.

Well, take it for granted the farmers, as a whole, have saved a little money— you probably have noticed that, rich as they are thought to be, most of 'em drives a "Henry's Pride" otherwise known as "Tin Lizzies," an' seem jest about as happy as though thew wuz drivin' automobiles.

But the twenty-five dollar a week clerk don't drive no Tin Lizzie, not on your life, he wants a 44 calibre, 12 cylinder, high jumpin' car—one that'll go better'n a mile a minute when she's on low. somethin' costin' up in the thousands don'tchknow! Henry's little joy wagons are far too slow, "an they're so cheap, an' appearances count so much an' eats into the income—an' yet these same fellers are the first to holler about the high cost of livin' an' the high cost of everythin'

Folks, some of 'em at least, have a certain standard of prices, below which they will not go fur fear of bein' thought cheap. To illustrate: A certain woman right here in this city had a friend who owned a pair of shoes for which she had paid $8 in Kalamazoo. They were jest what the B. C. lady wanted, so she went down town to find some like 'em. Goin' into her favorite shoe store, she was shown some shoes that looked exactly like her friends, but they wuz only $6 an' she must have $8 shoes. Well the dealer bein' wise to women's way, sez "now madam, I have no shoes of that style at $8 today but come in tomorrow afternoon an' I'll have 'em," he sez.

Soon's the lady went out he jest marked $8 on the box, laid 'em away an' when she came back next day the shoes were ready for her an' she took 'em an' went away happy in the belief that she had her eight dollar shoes, an' the dealer was happy cause he'd pleased a good customer—but jest the same he's more convinced than ever that "there's one born every minute," "and they're gettin' more numerous every day.

I have mentioned Mr. Clerk here, but what I have said regarding Mr. and Mrs. Clerk applies to workers in general—of course there are exceptions but the fact remains that people of small incomes, comparatively speaking are in trying to keep up appearances, living beyond their means, and in always demanding high priced goods, are keeping the cost of living unreasonably high and also unnecessarily high. We could all live cheaper if we would an' be jest as happy too.—*Uncle Rube.*

What the Neighbors Say:

COST OF PRODUCTION

We will vote for any man who thoroughly understands farming and is familiar with cost of production and who will do all he can to secure for the farmers a square deal on a cost basis.

We also agree with you that it is necessary to have a large representation in the state legislature to back up a governor and be composed of men who are not afraid to act as they see best.

The virgin fertility of the soil is giving out on many of our farms and we are confronted with the necessity of using commercial fertilizers, and the steady rising prices of machinery mean higher production cost for us. It is time we were figuring what it costs us to raise a crop and get together and organize for the purpose of marketing and asking a price which will at least cover the average cost of production.

I believe it is time that we were looking up our men to represent us and single them out and that it is the duty of every farmer to get busy.—*J. T., Bentley, Mich.*

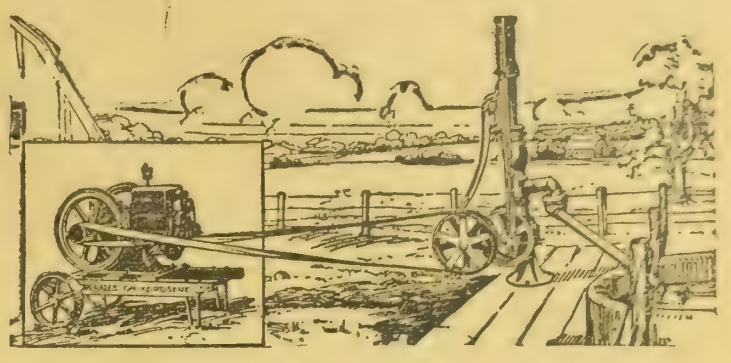
With Mr. L. Whitney Watkins and Mrs. Dora Stockman on the Board of Agriculture, we hope to see our agricultural college taking an even greater interest than in the past in the study of producing costs on the farm. There is a great deal to be done along this line, and if it is a matter that can be aided by legislation, by all means we want men who can be trusted to take the necessary steps.—Editor.

"YOUR PAPER PRODUCING RESULTS"

Our first choice for governor is Herbert F. Baker, also we must put in some men who are in sympathy with our aims. Look the way taxes are soaring. Go to any city and every third man you meet is some petty officer living on the producer. Our legislatures, every time they meet, must find some soft jobs for their henchmen. Soon there will be no producers but all officers. Is it not time to call a halt? Your paper is producing results in the minds of the farmers of this township.—*John H. Sharpe, Essexville, Mich.*

You will be interested in the article on another page of this issue, "State taxes increased 1,800 per cent in 24 years." It IS time to call a halt. The wealth of Michigan has increased by leaps and bounds the past ten years, and we see no sound economic reason why the rate of taxation should have likewise increased It is a subject which M. B. F. has been giving some study to and hopes to find both the reason and the remedy for the appalling high taxes.—Editor.

The Farm Drudge
" Handyman
" Chore Boy
" Burden Bearer



THESE nicknames and others are frequently attached to the good kerosene engine of which we sing the praises. But, since it is a very serious and practical prose song, the engine shall here be called strictly by its proper name—International.

International Kerosene Engines are annually doing millions of hours of work: Annually taking the menial, toilsome, everyday farm jobs—pumping, sawing, separator turning, washing, grinding, shelling, etc.—off the lame shoulders of grateful men, women and children the nation over: Annually adding to the service that makes farm leisure possible and farm life more than ever worth while.

International quality in general and **International Kerosene Engine quality** in particular are everywhere admitted and admired. These engines are reliable, simple, long-lasting and economical. Among the sizes—1½, 3, 6, and 10—is your correct size. See the International dealer.

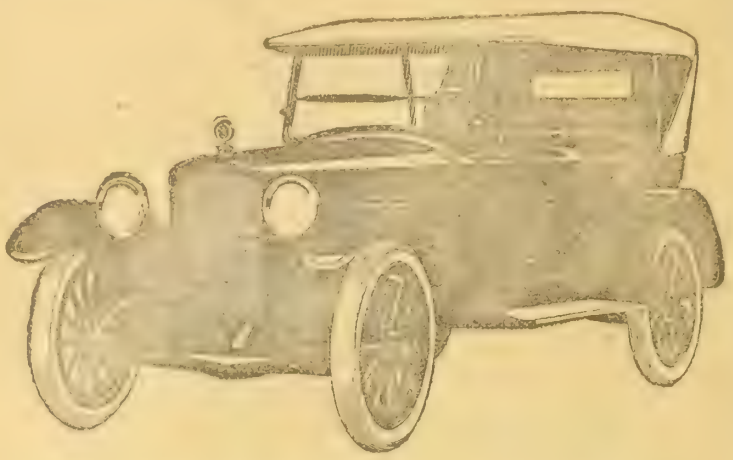
POWER and PERFORMANCE



GRANT SIX

Most cars perform well on the level. The test of power is what a car will do on a long, tedious hill climb. That is where reserve power counts and that is where you feel a keen sense of delight if you drive a Grant Six, for this car has power in reserve; more power perhaps than is necessary for ordinary driving—but it is just that EXTRA POWER that makes the Grant Six show so remarkably well on hills.

The Grant Six overhead valve motor takes this car as fast as most men dare to drive. Its flexibility is so marked as to excite comment. It is quick on the getaway and it will slow down to a walk with a steady, even, vibrationless pull.

It is no secret that through the use of both annular and roller bearings, by the use of highest grade universal joints, and by the most effective lubrication of all working parts, Grant Six power losses through friction are practically nothing. It is this fact, in connection with its light weight, that makes possible its very satisfactory performance under all conditions.

Four body styles to choose from — Five passenger Touring Car; Three passenger Touring Roadster; Five passenger Sedan; Four passenger Coupe.

Write for new illustrated catalogue and name of Grant Six dealer in your community.

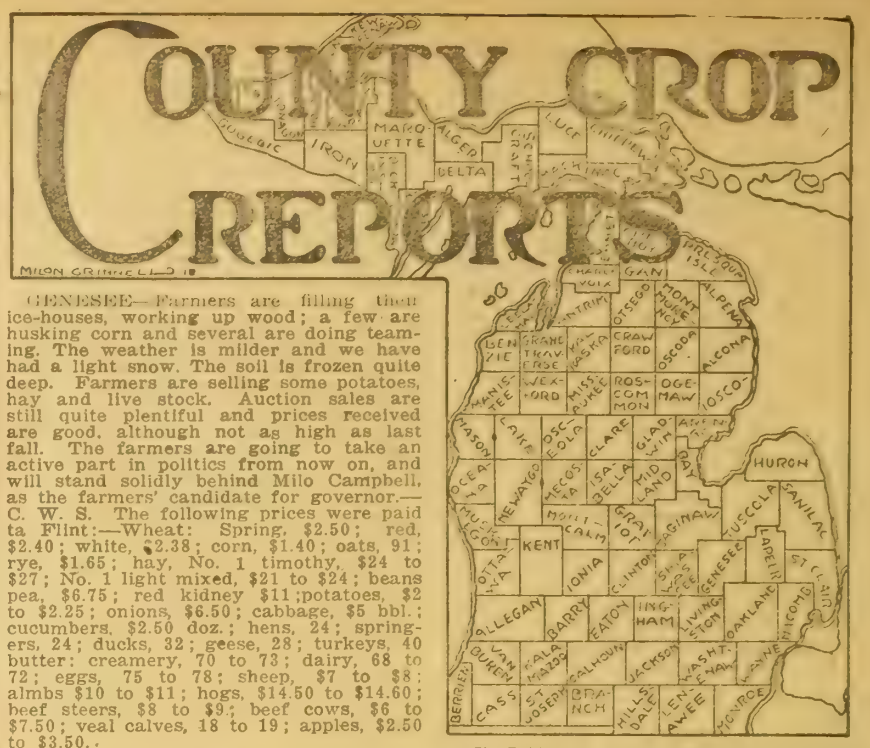
COUNTY CROP REPORTS



GENESEE—Farmers are filling their ice-houses, working up wood; a few are husking corn and several are doing teaming. The weather is milder and we have had a light snow. The soil is frozen quite deep. Farmers are selling some potatoes, hay and live stock. Auction sales are still quite plentiful and prices received are good, although not as high as last fall. The farmers are going to take an active part in politics from now on, and will stand solidly behind Milo Campbell, as the farmers' candidate for governor.—C. W. S. The following prices were paid ta Flint:—Wheat: Spring, $2.50; red, $2.40; white, $2.38; corn, $1.40; oats, 91; rye, $1.65; hay, No. 1 timothy, $24 to $27; No. 1 light mixed, $21 to $24; beans pea, $6.75; red kidney $11; potatoes, $2 to $2.25; onions, $6.50; cabbage, $5 bbl.; cucumbers, $2.50 doz.; hens, 24; springers, 24; ducks, 32; geese, 28; turkeys, 40 butter; creamery, 70 to 73; dairy, 68 to 72; eggs, 75 to 78; sheep, $7 to $8; almbs $10 to $11; hogs, $14.50 to $14.60; beef steers, $8 to $9; beef cows, $6 to $7.50; veal calves, 18 to 19; apples, $2.50 to $3.50.

JACKSON, (E.)—The farmers are not selling much of anything. They are holding their rye for a higher price. The weather has been very good this winter. We had a heavy snow storm the 8th of January. Farmers are not building. Taxes too high. One farmer did start to build a barn this winter 40x70 feet and a cyclone blew it down before it was finished, killing one man.—B. T. The following prices were paid at Jackson:—Wheat, $2.30; oats, 85; rye, $1.70; beans $6.50; hay, $26; rye-straw, $11; wheat-straw, $11; oat-straw, $11; potatoes, $2; hens, 23c; springers, 23; butter, 64; butterfat, 70; eggs, 75; beef steers, 10; beef cows, 7; veal calves, 18; sheep, 9; lambs 18; hogs, 12 1-4.

MANISTEE, (N.)—Not much doing in these parts; a few potatoes going to market, a few hogs and chickens also, but that is all. The weather is rough and some snow. The ground is frozen. Some farmers are trying to log a little. Some are hauling gravel but not much doing as the roads are either bare or drifted.—C. H. S. Th following prices were paid at Bear Lake:—Wheat, $2; corn, $1.40; oats, 90; rye, $1.25; hay, No. 1 timothy, 35; No. 1 light mixed, 32; straw-rye, 10; wheat-oat, 12; beans: Pea, $6; red kilney, $10.50; potatoes, $2.50; hens, 20; springers, 20; butter, 55; butterfat, 63; eggs, 55; hogs, 12; beef steers, 7; beef cows, 5.

CHARLEVOIX, (S. W.)—Farmers are shoveling snow and building fires. This is the third day of the worst storm of the winter. The local market is dull. Eggs are up a little, also potatoes; other stuff about as before. The farmers show a disposition to hold beans, but they are dull. A good many farmers are selling a few hogs.—C. M. The following prices were offered at East Jordan:—Wheat, $2.10 to $2.08; corn, $1.40; rye, $1.14; hay, $28 to $30; straw-rye, $15; wheat-oat, $15; beans, $6.70; potatoes, $2.50 to $2.60; onions, 5c lb.; hens, 22; springers, 25; butter, 65; butterfat, 67; eggs, 70; hogs, 12; beef steers, 5 to 6; beef cows, 4 to 7; apples, $2.

WEXFORD—Roads are drifted badly in some places; impossible to get thru in some of the cuts, and still more snow coming. If it keeps on and we don't get a thaw this month which we generally do, we will have some snow by spring.—S H. S.. The following prices were paid at Cadillac:—Wheat, $2.20 to $2.25; corn, shelled, $1.40; oats, 85; rye, $1.50; hay, No. 1 timothy, $30; potatoes, $3 cwt cabbage, 2c; hens, 19 to 21; springers, 19 to 21; ducks, 20 to 23; geese, 17 to 20; turkeys, 28 to 30; butterfat, 65; eggs, 55; hogs, 10 to 18; veal calves, 18 to 22.

MANISTEE, (N.)—Farmers are not very busy at present. The snow is too deep to do much but cut and haul wood and hay, and feed and do chores. Weather cold and snowy. Farmers are not selling much unless it is rye. Auction sales are being held at various parts of the country. I think the farmers are holding most of their beans and potatoes for higher prices. Farmers are buying a good deal at the auction sales. Too cold to do much building.—H. A. The following prices were paid at Bear Lake:—Butter, 55; eggs, 55; butterfat, 63; potatoes, $2.80; Navy beans, $6.

CALHOUN, (N.)—Very little being done by farmers, mostly chores. It is very cold here. The roads are good with just a little snow. The ground is frozen hard. Very little grain being marketed, at the most was sold earlier in the season. It doesn't seem as if as much stock was being fed as usual this winter.—G. R. The following prices were paid at [illegible]: Wheat, $2.43; oats, 80; rye, $1.70; hay, $25; straw-rye, $8.50; beans [illegible] stock, $6.50; potatoes, $1.75; hens [illegible]; butterfat, 65; eggs, 60; lambs, 16; hogs, $13.50; beef steers, 8.

ARENAC, (E.)—Sixteen below and then some; it makes a fellow wonder where he has been all summer. Hay balers busy and buying at fair prices. Beans declined 10c cwt. last week. Farmers are doing chores and getting up wood. Nothing of importance at this report.—M. B. R. The following prices were paid at Twining:—hay, 20 loose; beans, $6.40 hens, 16 to 18; springers, 15 to 22; butterfat, 63.

HURON (N. W.)—The following prices were paid at Caseville:—Wheat, $2.25; oats, 68; hay, No. 1 timothy, 25; No. 1 [illegible]ght mixed, 23; beans, $6.75; potatoes, $1.25; onions, 8; hens, 14; springers, 17; [illegible]cks, 32; geese, 27; butter, 56; butterfat, 63; eggs, 68; hogs, 12; beef steers, 9; beef cows, 7; veal calves, 14; apples, 2.50.—C. G.

GRAND TRAVERSE—Not much doing these days. Snow is so deep it is hard work to get around. Two days last week we did not get any mail as the roads were so bad.—C. L. B. The following prices were paid at Williamsburg:—Wheat, $2.15; corn, $1.40; oats, 80; rye, $1.50; beans, $3.60; potatoes, $2.70 to $2.75; butter, 68; butterfat, 68; eggs, 60 veal calves, 18.

SUPREME COURT DECISION IN POSTAL USURY CASE

(*Continued from page* 11)

of the parties under our view of the case is unimportant. The statute, C. L. 1915, Sec. 5998 provides:

"No bond, bill, note, contract or assurance, made or given for or upon a consideration or contract, whereby or whereon, a greater rate of interest has been, directly or indirectly, reserved, taken or received, than is allowed by law, shall be thereby rendered void; but in any action brought by any person on such usurious contract, or assurance, except as is provided in the following section, if it shall appear that a greater rate of interest has been directly or indirectly, reserved, taken or received, than is allowd by law, the defendant shall not be compelled to pay any interest thereon."

"The mortgage and notes provided for seven percent interest, (the highest legal rate) and the notes included the ten percent additional. There is no claim made that more than $1,231.39 was paid out by Mrs. Postal and it is admitted that she received notes aggregating $1,359.42, payable to herself. The words of the statute are plain:

"'If it shall appear that a greater rate of interest has been reserved, taken or received, than is allowed by law, th defendant, shall not be compelled to pay any interest thereon.'"

Whether Mrs. Postal or her husband received the avails of the ten per cent commission or bonus would seem unimportant. It certainly was reserved to her in the written instruments constituting the evidence of the transaction. In the course of his evidence James R. Postal testified that in negotiating the deal with defendant he was acting as agent for his wife. It should perhaps be noted that the Plaintiff does not claim to be a holder for value without notice but admits that he takes the security with such infirmities if any as would have attached thereto in the hands of the original holder

The decree is affirmed

Michigan Co-Ops Enter Ohio Field

The Gleaner Clearing House Association of Michigan, has purchased the elevator and store at Lockwood, Ohio, and is already doing business. The elevator is one of the best equipped in this state, having the latest improved machinery and in addition a mammoth steel coal elevator and loading device. The property purchased includes a store, which will handle all farm supplies. The Farmers in this vicinity are very enthusiastic and subscribed thirty-two thousand dollars in stock.

Investigations of Moisture in Soils

(Continued from last week)

BURR at Nebraska determined distance and rate of water transfer above water table in loam soil cropped to alfalfa. Water level ranged from 17 to 21 feet from the surface depending upon the flow in the river two and one-half miles distant.

Effect of Capillarity on Soil Moisture

Alfalfa on bench land. Per cent water in soil.

Depth feet	May 20 1911	Jan 29 1911	Apr 22 1912
1	10.5	8.5	21.0
4	8.7	8.7	8.4
8	9.0	9.1	9.0
9	11.1	9.1	10.1
12	13.0	9.6	12.7
14	19.3	17.2	21.3
15	24.6	21.0	24.8

Each foot of soil was sampled to a depth of fifteen feet from the surface and the water content determined on March 20, June 14, 1911 and also on April 22, 1912. This, of course, shows the distance from the free water that capillary action took place as well as indicating its rate and in addition the depth to which the old alfalfa plants removed water in the loam soil. The investigator makes these comments on the results presented.

"The table shows that during the winter months when the alfalfa is not using the water, there is an increase in the moisture content of the soil from the sheet water to the ninth foot from the surface. The table shows a fluctuation in the water content of the first three feet of soil, due to water from rains or snow on the surface. Practically no change is found in the water content of the next five feet. No water has passed thru this to increase the content below. The lowest section obtained, the fifteenth foot, being closest to sheet water, is most nearly saturated. The amount of water in each section above this diminishes until we reach a point where capillary action is equalized by the force of gravity and the upward movement of water stops. During the summer the crops use this water. The fifteenth foot is, however, close enough to the sheet water so that there is a constant supply rising within the soil zone occupied by the lower roots of the alfalfa. It should be remembered that this rise of water into the lower levels shown in Table 29 is due to the presence of sheet water on a few feet below, so that the upward rise of water in this soil does not in any way diminish the per cent of water in the soil immediately below it and that this action would cease very soon after the free water was exhausted.

The soil in this field has not been dried in any section as dry as the same section in the alfalfa field on the table land. The plants seem to find it easier to raise the water from below than to take more from the soil in the intermediate sections. During the year 1910 and 1911 a field of alfalfa on the table land died for lack of moisture. The alfalfa was seeded in 1902 and was well established in the soil. During the same years the alfalfa on the bench not only lived through but produced almost normal crops of hay."

In view of the fact that film movement is quite local in soils, that is, where the water table is several feet below the surface, the depth of root penetration of the crops is one of extremely great importance in the utilization of moisture in the deeper layers of soil.

We have found that temperature plays a very important part in regulating the film movement of water in the soil. In fact it may conserve water in the soil. Many maintain that tillage operations to conserve moisture other than by the eradication of weeds is of little value, in other words the mulching of soils by cultivation is not necessary. The effect of temperature probably accounts for the results reported by several investigators. If a warm, dry layer of soil overlies a cool, moist one there cannot be any movement of capillary or film water upward inasmuch as the attractive power of the soil decreases with a rise in temperature but increases as it is lowered; moreover, the fluidity of the water is decreased with the lowering of the temperature. We have shown by many tests that no movement of water takes place when we have conditions with respect to soil temperatures as above outlined. Now under field conditions, as earlier stated in this contribution, during the day the temperature of the surface soil becomes appreciably warmer than the lower layers and thus water movement does not take place. At night however, the temperature of the soil reverses itself and it is possible that a slight upward movement of water takes place. This would be lost from the surface by evaporation during the following day, however. This is of utmost importance and will be discussed more fully subsequently.

Movement of Water Vapor

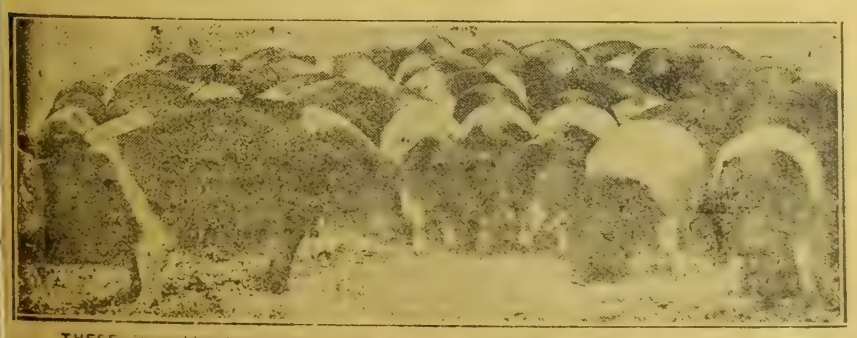
The translocation of water in the form of vapor is appreciable in the surface layers. The loss of water that takes place from the soil after a dry layer is formed on the surface must be accounted for as vapor movements thru the interstices of of the soil. Of course, this is confined mainly to the regions of soil that have a rather wide daily range of temperature. Soils in which cracks form lose considerable moisture in this manner.

Hampshire Hogs Score at International

DURING the past year the progress of the Hampshire Breed of hogs has been one of the most sensational ever enjoyed by any breed of hogs in any year. Over 100,000 pedigrees have been printed in herd book form. The Record Association has paid all of these printing bills under abnormal prices, yet the Association is about $5,000 better off that it was at the beginning of 1919, notwithstanding the fact that slightly over $11,100 was paid out in special premium money during the year.

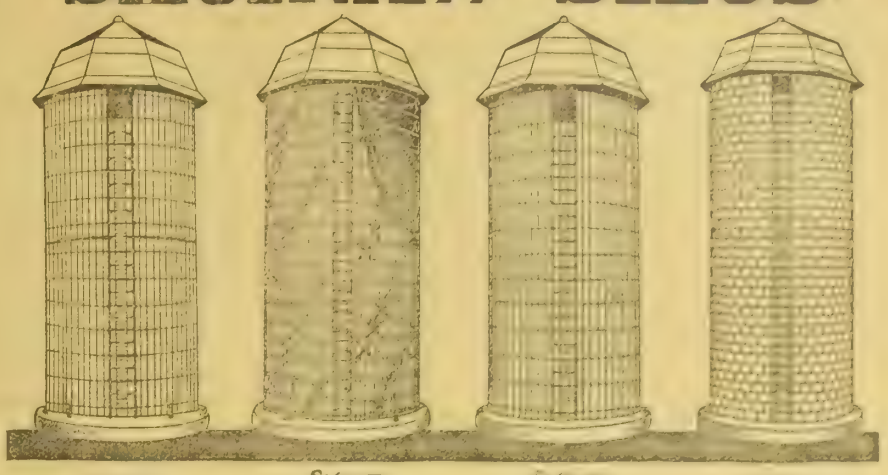
At the recent Chicago International the Hampshires in the pen classes were much more numerous, larger and of more perfect form than was ever shown before. In the carload classes they won two out of three firsts and all the Grand Champions in the carload lots and then outsold any and all breeds for the single car or for average of all cars in the exhibit.

The single car of Hampshires sold for $20.50. The average selling price was $19.08. The average price of the Durocs was $16.13; the average selling price of the Polands was $16.19; the average of the Chester Whites, $17.13. There was only one car of Berkshires, those being heavy weights and sold for $19, yet the average of the Hampshire was above the tip top, realized for any other car $1.50 above the price of any other car at the International.
—*E. C. Stone*



THESE Hampshire hogs made a great showing at the International Live Stock Show at Chicago. They won highest average [illegible] pound.

SAGINAW SILOS



Saginaw Steel-Built Wood Stave | Saginaw Hollow Wall Wood Stave with Cross-Truss | Saginaw Leader Wood Stave Silo | Saginaw Vitrified Clay Silo

HERE are four types of Saginaw Silos—each one tested and proved by years of service.

This means that you can choose a Saginaw Silo that will exactly fit your needs and pocketbook—full measure of Silo value.

And in buying a Saginaw you are following the judgment of many thousands of farmers who are now making more money by feeding Saginaw Silage.

Those farmers and stockmen who are considering the purchase of a silo are entitled to one of our 1920 live stock calendars. Write for it.

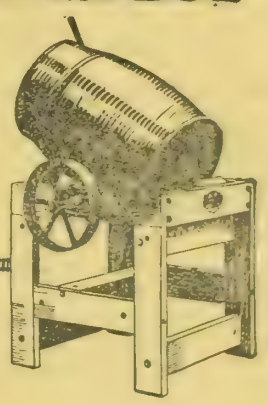
Every Farm Needs a Concrete Mixer

Concrete improvements have saved money for so many farmers that their Sheldon Farm Concrete Mixer has become as important a piece of farm equipment as their corn sheller or cultivator. Do away with the old fashioned, expensive, backbreaking, unsatisfactory hand and shovel method—mix your concrete the Sheldon way and get a uniform mix every time; save labor, save time and save the cost of the Sheldon on the first job.

Sheldon Concrete Mixer

does the same high grade work as a $300 mixer yet costs only a fraction as much. Solidly built to stand strain and vibration for years. Easy to operate—easy to move—mix two wheelbarrowsful at a batch—a 1 1-2 H. P. engine will run it.



Mail Coupon Today

and get our new 1920 Book on Concrete. It will tell you how you can save money on your concrete work. Shows all types of Sheldon Mixers and gives our direct-to-you low prices. It's FREE. Get your copy today.

Sheep in Houghton County on the Share Plan

By LEO M. GEISMAR, County Agricultural Agent

LETTERS thus far received from Wisconsin, Illinois and Ohio, indicate that considerable interest was taken in a news item which recently appeared in the Houghton Mining Gazette with reference to the forty per cent dividend declared by the Houghton County Live Stock Association which was organized less than two years ago. An unobtrusive statement, mentioning that part of the 40 per cent was due to sales of sheep, was embodied in the original news item but evidently disappeared while in transit or while being trimmed out in the tonsorial department of some editor's sanctum.

Primarily the Houghton County Live Stock Association came into existence as a war measure. Food production at that time was being increased beyond anyone's expectation, the women of the country doing far more than "their bit." The wheat crop was increased by more than four hundred per cent and the mining companies led the way by giving free use of vast tracts of land which they first fenced, plowed and harrowed, thus helping to increase a potato crop of which for the first time in the history of the country was not only sufficient for local needs but left a surplus of over 20,000 bushels which were shipped out. When first approached with the suggestion that mutton and wool being important war necessities, sheep might prove a good investment when furnished to farmers who were financially unable to secure them, one of the leading business men answered: "Never mind the investment put me down for a couple of hundred dollars and if I never see it again it will have been worth far more than that if it helped provide extra meals and blankets for the boys over there." This spirit prevailed to a large extent until after the Live Stock Association was organized and when the number of needy farmers proved to be greater than anticipated, the First National Bank of Hancock offered to supply the necessary funds to all farmers who were willing to buy the sheep on time.

Sheep were therefore supplied to all farmers who could be induced to keep some and among these were a few who offered to pay cash, while quite a number accepted the offer to give notes payable in from six to twenty-four months. Those who preferred taking the sheep on shares from the Live Stock Association entered into a contract which has unique features from an economical standpoint and is calculated to provide a stimulant for better co-operation and for the general improvement of live stock.

All of the sheep on shares were placed with farmers who formerly worked in the mines and after saving up a few hundred dollars bought some cut-over land which they are gradually developing into farms. Originally they came from Northern Europe where they handled a few sheep, using methods generally unknown in American sheep husbandry, such as shearing sheep two or three times a year, breeding without regard to the time when lambs would be dropped, cutting brush during the fore part of the summer and storing it for winter food and carding and spinning the wool and knitting it into various garments. No attempt was made to "educate" these farmers in American methods. It was deemed more advisable to remember that education is the summed of experience of great numbers and that even he who knows it all may still be young enough to learn from others and often from those he least expects it. Nor was there any provision inserted in the contracts to guard against the dog nuisance, even though it is well known that a poor man keeps one dog, a very poor man keeps two dogs and a dam poor man keeps three dogs. Care was taken however to place the sheep only with those who would agree to fence off with woven wire five to ten acres of cut-over land for sheep pasture and as most of them were unable to pay cash for the fencing, arrangements were made with one of the local hardware firms to sell it to them on time. The object in placing these sheep on cut-over land pastures of partly developed farms was to enable the farmers to find out that sheep will do most of the land clearing and pay for doing the work.

The best high grade yearling ewes obtainable were secured and placed on these farms early in the spring, while during the fall pure bred rams of the same breed were furnished at the rate of one for every 15 to 20 ewes, the several groups of farmers agreeing among themselves as to who would take care of the rams, the others paying the custodians a fee sufficient to pay for the feed and care. The contract specifies that the rams are to be exchanged each year among the several groups of farmers in order to prevent inbreeding, and as the contract runs for five years, one of its clauses provides for the castrating of all ram lambs during the first four years, thus enabling the farmers to raise practically pure bred rams during the fifth year. Those clauses should enable the farmers to appreciate that co-operation is the keystone of successful farming; that inbreeding is to be avoided, that one breed within a community is more profitable than several, and that pure bred stock held co-operatively is cheaper than scrubs kept individually.

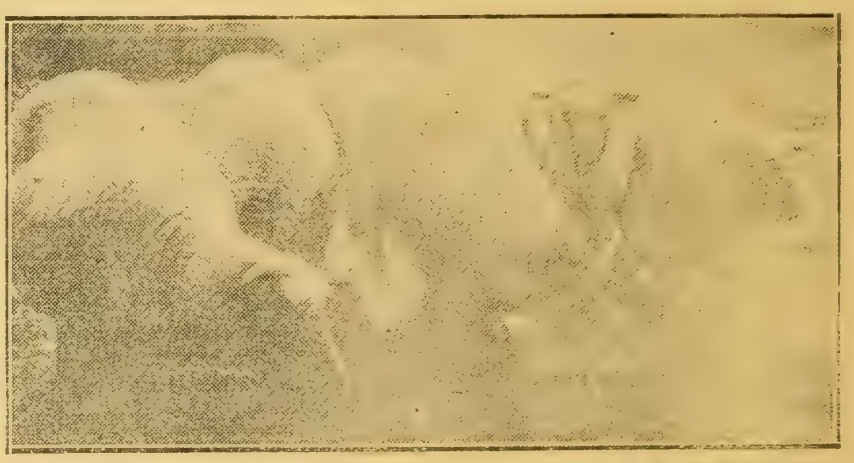
The contract provides that sheep not properly cared for may be taken away without giving previous notice and the farmer held for damages equal to the difference between the original value and the appraised value when taken away. Being a case of learning as much as one of educating, this was considered more advisable than attempt to condemn old world practices in sheering oftener than once a year, breeding at any time or using brush as winter food. Whether these practices are to be condemned is still an open question, judging from results obtained up to the present time.

The sheep have passed through one winter and came out in fair to excellent condition, while the ewes had their first lambs last spring. Sheep sheared twice a year yielded an average of ten pounds per fleece, while those sheared once yielded an average of 8 1-2 lbs. As all of the wool was used locally, the actual market value of the shorter wool could not be ascertained, nor whether it had a sufficiently lower value to offset the one and a half pounds extra yield and the additional labor in shearing.

Brush cut by several of the farmers while clearing land during the fore part of the summer and cured in small bundles for winter feed was relished by the sheep in all cases. When given to them while being fed on mixed hay, the sheep invariably left the hay and began eating the brush.

Sheep sheared once a year gave a lamb crop averaging 85 per cent while those sheared twice averaged 43.6 per cent. This great difference would condemn the practice of frequent shearing, were it not that the highest percentage, or 133 per cent was obtained by one farmer whose ewes were sheared twice and dropped their lambs in February. In a larger flock not kept on shares and handled in a like manner the increase was 88 per cent, the lambs being dropped in January and February.

The amount of brush destroyed by the sheep on the fence areas of cut over land after the two season of pasturing, varies according to the original condition of the areas. The largest amount was destroyed where the brush was low enough to enable the sheep to reach the tops, and the least amount where the brush consisted mostly of tall saplings, where the fenced areas consisted of brush and stump land. less brush was destroyed, the sheep during the latter part of the season preferring the clover and grass growing among the stumps but giving preference to brush during the fore part of the season. At a very conservative valuation, the saving in the cost of clearing the land on the fenced used for sheep pasture during the two seasons, represents an average of $2.50 per acre when comparing these areas with adjoining unfenced brush land.



John Kaake, of Peck, Sanilac County, has sent in the above picture of his three-year-old sheep with her four lambs. The lambs were only four months old when picture was taken.

As above stated the contract provides for keeping the sheep five years after which they, or an equal number, are to be returned to the Live Stock Association, the farmer meanwhile turning over one half of the wool and one half of the lambs to the Association. In order to give an inducement to the farmers to retain all of the wool and the lambs, they are given an option to pay cash based on prices which are calculated to be below actual market values. Thus with a market value of 65 to 72 cents a pound for wool last year and 55 to 60 cents this year, the price agreed upon is 50 cents, then 40 cents, during the third year; 35 cents during the fourth and 30 cents the fifth year. Likewise, the price of lambs, when ready for market during late fall, ranges from $10 the first year, down to $6 during the fifth year. While the ewes cost $18.50 and the rams $38.50, the farmers are also given the option to keep them at the end of the fifth year by paying $10 a head for them.

Since placed on shares, some of the sheep have been sold by the Association on account of having been returned by farmers who sold out and by others who wished to reduce the size of their flocks. Those sales of course account in a great measure for the forty per cent dividend paid to the stockholders this year.

LONG HARD WINTER SAY THE PROPHETS

That the present winter is to be a "long, hard one" is the prediction which is coming from many quarters and sources, says the *Arenac County News*.

Men who judge the future weather by the habits and preparations of the wild animals, seen unanimous in predicting that this winter will be one of unusual severity.

Hunters and trappers in the northern peninsula declare that one sign which never fails is now present. That is the traveling of wolves in large packs instead of singly or in small numbers. Extra fur on fur bearers and other wood signs point the same way, say woodsmen.

The Need of Sulphur as Fertilizer

By MYRON A. COBB

"HISTORY tends to repeat itself." "There is nothing new under the sun," apply to agriculture as well as to other activities. The recent movement to apply land paster to the soil is a repition of what was done a generation or so ago. However, the explanation of its value is different. Chemists of the early day explained its action as a soil stimulant. The modern chemist adds the thought that land plaster supplies sulphur, a necessary plant ingredient.

Sulphur will likely be a constituent future of fertilizers. Nitrogen, phosphoric acid and sulphur or nitrogen, phosphoric acid, potash, and sulphur will be the fertilizer components. Recent fact indicates that plants demand sulphur in considerable amounts and that soils are deficient, or becoming so, in sulphur. The need for adding sulphur to the soil is probably as great as that of adding phosphoric acid.

"How does it happen that we have not known these facts before?" is a natural question. The answer is easy. In the older method of analyzing plants for the amount of sulphur the plant was burned and the sulphur content of the ash determined. This shows a low per cent and the conclusion was there was an ample supply in the soil. However in heating the plant, the volatile sulphur is driven off and this must be determined and added to the amount in the ashes to determine the total amount used by the plant. Total determination of sulphur shows that some plants contain 100 times as much volatile sulphur as that found in the ash. Corn and wheat contain 40 times as much volatile as fixed sulphur. The volatile sulphur can be easily noticed in the burning of coal, a product produced by plant life. These facts may make a decided change in our fertilizer formulas.

Sulphur exists in plants principally as sulphates, in protein and in some oils. Perhaps the most necessary form is protein, the most valuable constituent of plant and animal life. Some proteins contain over 2 per cent of sulphur.

The housewife is familiar with the effects of protein from plants and animals in tarnishing silver. This most noticeable from cabbages, eggs, turnips, and onions, these contain a high per cent of volatile sulphur. Another product containing sulphur is wool, about 1-2 of 1 per cent. A 100 lb. fleece would contain 1-2 lbs. of sulphur. Ordinarily this is obtained from the feed. Perhaps the custom of adding sulphur to salt is of more than medicinal value.

Here is a list of plants and the amounts of sulphur and phosphorus they remove per acre of average crop.

Barley	6.1	9
Oats	8.0	8.4
Corn	3.8	7.9
Meadow hay	5.7	5.3
Clover hay	9.4	10.9
Beans	9.3	12.7
Turnips	17.8	9.9
Cabbages	32.9	25.3

From the table we notice that legumes, turnips and cabbages use the most sulphur. The latter are members of the mustard family, whose members require a large amount of sulphur. Other members are radishes and mustards. It is also noticeable that the demand for sulphur is similar to the demand for phosphorus. For some time we have realized the demand of plants for phosphorus and the lack of this element in the soil. It is now evident that we must consider the demand for sulphur.

"How much sulphur is there in the soil?" is the next question. Here is the analysis of soil by one of the experiment stations:

Sulphate: sand, .055 per cent, 1,150 lbs.; clay, .075 per cent, 2,250 lbs. Phosphoric acid: sand, .087 per cent, 2,660; clay, .141 per cent, 4,230.

The last figures are in pounds per acre foot of soil.

Taking into consideration the demand for sulphur and phosphorus by plants and the shortage, it is evident that both must be added for best results.

There are several sources of sulphur. The air contains it in the form of a gas, sulphur dioxide, produced by the burning of coal and wood. This gas is washed to the soil by rains and may become available for plant use. From 5 to 18 lbs. are added per acre from this source. It is evident that there would be more sulphur in the air during the winter and near the large cities, if it were not for the losses by washing, this source might be sufficient for plant use. Another source of sulphur is from acid phosphate which contains sulphur as calcium sulphate. There is a question as to how much of the benefit from the adding of acid phosphate comes from the phosphorus or the sulphur.

Michigan is fortunate in having beds in gypsum or land plaster; Michigan contains sulphur near Grand Rapids. In the past the farmer used land plaster freely on the soils. No doubt that a part of its value is due to the sulphur. Its probable value was also due to the action on the soil in liberating plant food, hence it became known as a soil stimulant. This, however, is another story.

Ammonium sulphate, a product of the gas industry is used in fertilizer because of its nitrogen but it contains sulphur. Sulphate of potash is another fertilizer, used because of the potash, containing sulphur. The direct addition of sulphur in the form of a powder to the soil much as you would apply lime, is a source used in the west. About 100 lbs. per acre is used. Two counties in Oregon used 300,000 tons in 1916 largely on the alfalfa fields. The following yields were found: powdered sulphur to soil gave 5,378 lbs. of hay, gypsum, 2,645 lbs., checks 2,176 lbs. The sulphur increasing the yield more than twice.

Another source of sulphur is in barnyard manure and organic matter. The addition of manure replaces sulphur as well as nitrogen, phosphoric acid, and potash. The combined sulphur of protein and organic matter is disintegrated much the same as is combined nitrogen. The sulphur is oxidized or changed to a sulphate when it is of use to a plant. This process is called sulphorification, a jaw breaking word. The change is similar to nitrification which is the disintegration of protein and the changing to nitrates which are of value to plants. Both reactions are brought about by bacteria of the soil.

This article has given the reader only a part of the story of the relationship of sulphur to life; there is much to be learned, the curtain is lifted and it is up to chemistry and practical experiments to put matters on a firm foundation. Perhaps our forefathers were "wiser than they knew" in adding land plaster to the soil.

FARMERS LEAD WITH TRUCKS

That the proposed expenditures in the United States for the next year for hard-surfaced highways will be $633,000,000 as compared with the $125,000,000 expenditures of the closing year for the same purpose, means more to the farmers of this country than nearly any other class. Nearly 60 per cent of the trucks of the United States work in the country, though a large percentage of them may be housed in the city. About 20 per cent of them are actually owned by farmers, which represents 10,000 more than are used by any other class of producers. The manufacturer who come next in line in the use of trucks.

This means that more roadways, the forerunner of the truck and civilization, will enable them to use the trucks for transporting greater variety of commodities with a consequent saving of money and time, says M. L. Pulcher, general manager of the Federal Motor Co.

"The possibilities of the truck for carrying commodities between farms and cities have only been touched. The newer and better roads will give the impetus needed to bring out all its possibilities," says Mr. Pulcher.

Feed for a Bigger Herd

The size of your herd is not limited by the number of acres on your farm but largely by the amount of feed that those acres produce. You can carry more live stock by growing more feed to the acre. The right fertilizers produce more feed, which increases the manure supply to be returned to the land and increase its crop-producing power.

A·A·C· Fertilizers

Make This Possible

They are specialized fertilizers that help to produce maximum yields. They are made to suit your crops and farm conditions; special fertilizers for top-dressing grass, special fertilizers for Corn, Oats and other grain, special fertilizers for use with manure or without.

Our Agricultural Service Bureau can help you to select the fertilizers best suited to your crops and your own farm conditions. This Bureau has made fertilizer tests in many states. It is under the personal charge of Dr. H. J. Wheeler, formerly Director of the Rhode Island Agricultural Experiment Station. Write for information. The service is free.

Ask our nearest office for our book, *"How to Make Money with Fertilizers."* It is full of practical fertilizer information and contains 46 illustrations.

If we have no agent in your town, we want one.

CATTLE

HOLSTEIN-FRIESIAN

Four Thousand Five Hundred Quarts of Milk per Year

The big yield cow is the only cow that will ever make dairying profitable in the United States. The dairy farmers of Holland have blazed the way to a successful national dairy industry with their Holstein-Friesian cows that average between 9,000 and 10,000 lbs. of milk per year.

Imagine our cows averaging 4,500 quarts! Our farmers would then be able to make the finest, best and cheapest milk on earth, just as the Hollanders do now, and prosperity would abound, for every quart would mean profit.

Send for Free Illustrated Booklets.

THE HOLSTEIN-FRIESIAN ASSOCIATION
295 Hudson Street
Brattleboro, Vermont

MAPLE PLANE HOLSTEINS

Five Bull Calves, one from 30 lb. 5 yr. old cow, one from 28 lb. cow; one from 27lb. cow; one from a 20 lb. two yr. old heifer and one from an 18 lb. three yr. old whose three nearest dams average 29 lbs. The Sire of these calves is a better than 30 lb. bull.
GUY WAKEFIELD, Fowlerville, Mich.

MR MILK PRODUCER

Your problem is more MILK, more BUTTER, more PROFIT, per cow.

A son of Maplecrest Application Pontiac—132652—from our heavy-yearly-milking-good-butter-record dam will solve it.

Maplecrest Application Pontiac's dam made 35,108 lbs. butter in 7 days; 1344.3 lbs. butter and 28421.2 lbs. milk in 365 days.

He is one of the greatest bred long distance sires.

His daughters and sons will prove it.

Write us for pedigree and prices on his sons.

Prices right and not too high for the average dairy farmer.

Pedigrees and prices on application.
R. Bruce McPherson, Howell, Mich.

Holstein Cow Brings $3,250 at East Lansing Sale

High Prices for Michigan Pure-Breds

THE FIRST annual sale of the Michigan Holstein Friesian Ass'n, at East Lansing, Jan. 13th, set new high levels for Michigan pure-breds. College Belle Butter Lass, shown above, consigned to the sale by the Michigan Agricultural College, brought $3,250, and her breeding and milk and butter record shows she was worth every cent of it. Her yearly record just completed, shows that she produced 1,100 pounds of butter from 2,500 pounds of milk in 365 days. The average of $824 per head of the 75 cows, bulls and calves that were sold reveals something of the demand that exists for pure-bred stock. Michigan's reputation as a pure-bred live stock state is attracting buyers from other states, and farmers who invest their money in animals of pure strain can be assured of a steady and profitable market for their increase for many years to come.

Breeders' Directory

What Michigan Has Done Toward Eradicating Live Stock Diseases

By H. H. HALLADAY
State Live Stock Sanitary Commissioner

THE LAST legislature created the State Department of Animal Industry and abolished what was known as the State Live Stock Sanitary Commission. The duty of this department is to care for the health of approximately 7,500,000 animals which are owned in the state of Michigan. It is estimated that the value of these animals is $325,900,000, which shows that the responsibility resting upon this Department is no small matter.

The department consists of one commissioner (instead of three, as formerly under the old law) a state veterinarian, assistant state veterinarian, pathologist, two inspectors, one appraiser, and two clerks. The Bureau of Animal Industry are cooperating with the state department of Animal Industry in the eradication of hog cholera and tuberculosis. Under this co-operative plan, the government is furnishing inspectors in the eradication of tuberculosis and hog cholera. The expense of these inspectors is borne by the government. These departments are all working from the office of the state Department of Animal Industry in the Old State Block, Lansing, and, as the records will show, are handling a vast amount of work.

Tuberculosis

During the last year, 26,766 animals have been tested for tuberculosis, or an increase of approximately fifty-eight per cent over the previous year. Of this number, 1,585 reactors were found and disposed of according to law. Among this lot are several large herds which have never been tested and which showed a large percentage of reactors. A number of herds that showed a moderate percentage of tuberculosis eighteen months ago are now passing clean tests. This is encouraging to breeders, as well as to the officials in charge, showing that we are making progress in the control of this disease.

The state and federal governments have taken up what is known as the accredited herd plan, whereby herds which are known to be free from the disease and which have passed two successful tests are placed on what is known as an accredited list. There are now forty-seven fully accredited herds in this state and 129 which have passed one successful test. The number of herds which are now being handled by the state and federal governments is about three hundred. Many cities are enacting ordinances requiring the tuberculin test on all cattle which supply milk within their corporate limits. This requires much work from this department in handling reactors and making appraisements. Many private or local tests are being conducted by local veterinarians who are approved for this work by the State Department, and much interest is being shown in this work. A statement has been prepared showing the number of cattle slaughtered, the number passed for food, and the number condemned in the various counties of the state and the amount paid by the state in each county for the year 1919.

During the last year a laboratory has been established and the services of a pathologist procured for handling contagious diseases. Much benefit has been derived from its use, and we expect that it is going to be of material assistance in determining the nature and cause of diseases which are otherwise hard to diagnose.

Hog Cholera

When this co-operative plan began, hog cholera was prevalent in nearly ever county in the state of Michigan, to the extent that thousands of hogs were dying from the disease. We started a co-operative plan with the government for the eradication of hog cholera from the county of Branch in the year 1914 and continued for two years. During that time hog cholera was entirely controlled in that county and it was thought best by the departments to undertake a statewide campaign for the control of this disease. Since that time an organized force has been at work to control the disease among the many herds of the state, and by co-operative effort with the veterinarians, the county agricultural agents, and the farmers, hog cholera has been confined to but 254 outbreaks in the state during the present year, and these were in scattered areas and at no time did the disease become epidemic, thus saving thousands of hogs from the ravages of this disease. The serum treatment is no longer in the experimental stage, but, if properly administered will protect hogs from cholera. We have had splendid assistance from the government in working out this project.

Glanders

The state appears at the present time to be almost entirely free from glanders among our horses. We have had only six cases during the last year and these were isolated and the areas in which they were kept are being watched for any recurrence of the disease.

Rabies

There has been considerable rabies in the state during the past year, which we have tried to keep under control by local quarantines, although in some cases the parties interested and local health officers have not been so prompt as they should be in reporting this disease. At the present time we have the affected localities under quarantine, so that the disease will be controlled without spreading any farther, we hope.

This disease is very far reaching in its effects, usually starting among the dogs, and they, in turn, transmitting it to live stock and in many cases to human beings. During the last year a death occurred in one of our northern counties from being bitten by a rabid dog. We hope that the new dog law which has been placed upon the statute books will have a far reaching effect in the contol of this disease, as well as rid the state of many worthless and undesirable dogs. It becomes the duty of this department to assist in the enforcement of this dog law. While we realize that it is no small job, we shall do our best to make the law a success, thereby benefitting the rural communities which desire to raise more sheep and do so without fear of destruction by worthless dogs.

Hemorrhagic Septicemia

This disease is one of the acute, infectious diseases of live stock, appearing in local outbreaks and also among cattle shipped in from the stockyards. There have been ninety-six of these cases reported and investigated during the last year. A number of feeders in this state have had the misfortune of losing cattle and sheep from this disease. The use of serum is advocated. In many cases great good has resulted from its use.

Blackleg

We have had but six outbreaks of blackleg and no very heavy losses. Segregate and vaccinate the healthy animals immediately when the outbreaks are reported.

A great deal has been accomplished in the discovery of bacterins and serums for the control of contagious diseases among live stock. These are quite generally used by local veterinarians and state and government officials. We believe that the time is coming when the research laboratories of this country will be producing more of these products for the control of animal diseases.

The first ... this ye... the Depa...ment placed ... regulation ... the prevention and spread of contagious ...eases among live stock which r... as as follows:

(*Continued on page* 19)

Pure Bred Live Stock in Michigan

The week just passed at East Lansing has proven conclusively that Michigan should and must rank with the leading live stock and dairy states of America.

There is no reason why we should allow other states, less modest, but infinitely better blowers-of-their-own-horns, to claim for their states the position in this industry which Michigan, by every right occupies.

We have active and well-managed breeders' associations in Michigan.

——and yet there are important breeders, who, for the few paltry dollars which it costs to become a member of the association or for other selfish reasons will not lend a hand to a movement which is destined to help their business, whether they will or not.

Lend these associations a hand!

For put this down in your note-book, Michigan will succeed as a Live Stock and Dairy State exactly in ratio to the encouragement you, Mr. Breeder, give to the intesests which are working for you.

As for Michigan Business Farming, we believe you will agree that from the first issue we have encouraged these twin industries in every possible way.

It was M. B. F. that first, on its own initiative and its own expense, advertised Michigan's "healthy" herds in the national dairy and breed papers.

It was this weekly that published the first Live Stock and Dairy Annual ever printed in Michigan.

And it has been one of our greatest sources of satisfaction that those who patronized the advertising columns of our Breeders' Directory, invariably wrote us of their good returns and that every Live Stock or Dairy Cattle sale which has been advertised in this weekly has been a profitable and outstanding success.

We Michigan folks, who are interested in this business of making Michigan's herds famous, so that buyers will naturally turn to Michigan when they think of healthy herds at fair prices, must learn to "blow-our-own-horns!"

It takes more than one man to make a band, and right now Michigan needs a big band, with a lot of brass in it too, to be heard above the bedlam of tin horn and tin-pan bands that are parading for some other less worthy states.

Michigan Business Farming and every man on it is Michigan born and raised with no interests in other states to please or profit—and every last man Jack of us is boosting your live stock business every day, knowing that as you succeed and profit so must we—for now, as ever.

——"he profits most who serves best!"

MICHIGAN BUSINESS FARMING

January 24th
1920

"When Right is Obtained No One is Wronged"

Slogan Under Which Michigan Beet Growers Will Push Their Claims to Recognition and a Better Beet Price

WHEN the sugar growers of Utah and Idaho, through the Inter-Mountain Farmers' Ass'n asked the sugar corporations to pay them a better price for their products the corporations refused and attacked the association through the columns of the press which they controlled. The leaders were accused of trying to destroy the sugar industry by fomenting strife among the growers of beets. But the farmers flung back at them, "When right is accomplished no one is wronged," and with that as a slogan they have swept through the states of Utah and Idaho, organizing the sugar beet growers into an association which eventually will control the beet acreage of those states.

But we do not have to look to the far west to apply this truism. Right now the beet growers of Michigan have gone to battle with the manufacturers and under the banners of "right and justice" have started a campaign that will carry them "over the top," and secure to the growers of beets a fair portion of the profits of the industry.

Every farmer in the state of Michigan ought to take a keen interest in this fight between the growers of beets and the manufacturers of sugar. For a fight it is and to the finish. It is not a fight from choice. The beet growers exhausted every honorable and peaceful means to bring the manufacturers to a conference in the hopes that the differences might be threshed out without resort to extreme measures, but the manufacturers declined the invitation leaving the growers no alternative but to organize and fight!

This fight is not solely in the interests of growers of beets. In it is involved something of far greater importance than the mere question of sugar beet prices. There is involved a principle of vital importance to every man who farms. That principle is whether the farmer shall fix the selling price of his products or whether he shall accept the price that is offered him. This principle has been in the balance for many years, and more than once the testing point has been in sight, only to be obliterated by a compromise which left the issue itself as cloudy as before. Now the sugar beet growers of Michigan are on the point of forcing this issue to a clean-cut and final settlement. They say in effect to the manufacturers: "You have always fixed the price at which we should grow sugar beets. You have done this without so much as consulting our wishes or taking into consideration our costs of producing this product. Now, however, we desire to have OUR say about the price of our product. We will TELL you what we WANT for it and you can take it or leave it alone. More than that we will tell you what it COSTS to PRODUCE this product so that you may determine whether the price we ask is unreasonable, and we challenge you to reveal YOUR costs to the public."

Where is there a man or woman of intelligence who will deny that this is a fair proposition? Where is there one who has the effrontery to stand up before the farmers, and say, "Your claims are unjust. It is the manufacturer who should set the price on your product."

Now, let us be fair to the manufacturers, for they are "honorable men." They have invested their money in great plants which provide an outlet for an important crop. They are entitled to some credit for having made possible Michigan's great sugar beet industry, although we would hardly expect them to claim that they invested their money for any other purpose than to make money. There have been lean years in the sugar business, but in our charity for the manufacturers, let us not forget that there have likewise been lean years in the beet business. Don't htink for a moment that ALL the losses sustained by this industry came out of the pockets of the sugar manufacturers. If the manufacturers lost money with sugar at 5 cents how much did the farmers lose with beets at $4? Give the manufacturers all the credit that is their due for developing the beet sugar industry in this state, but let us reserve a goodly portion for the unsung and unhonored farmer who has toiled early and late, in sunshine and rain, with the help of his wife and little children, to grow the beets which, after all is said and done, are the actual foundation upon which the industry rests.

But the lean times have gone at least for a little while. There is an unequalled demand for sugar, and the manufacturers stand in a fair way to make up ten times over for all the losses they may have sustained. But how about the grower of beets? Is it not just that he, too, should share in the larger profits and be compensated in like measure for his past losses? And that is all he asks. He is not arbitrary. He does not fix an unreasonable price which would stress the manufacturers to pay. On the contrary he asks for a very moderate minimum price, but insists that the PROFITS derived from sugar over 9 cents a pound shall be divided EQUALLY with him. Is there anything wrong with that?

Of course, it is claimed by the manufacturers in their propaganda which has been going the rounds of the press that the farmers are delighted with their returns on the 1919 crop. But we venture to assert that if the manufacturers had to depend upon these "delighted farmers" for their 1920 contracts their mills would not run ten percent of capacity next season. The sugar manufacturers well know that they must have not only the contracts of the "delighted farmers" but those of the "disgusted" farmers as well in order to make their 1920 operations successful. Hence, their propaganda goes on. Story after story has been published in the press of the state telling of the great sums of money that have been paid to farmers for their 1919 crop of beets. Specific instances have been cited of farmers "paying for their land" from their returns on their last year's crop, and numerous other statements have been made public calculating to deceive the public into believing that the farmers have been making extraordinary profits out of sugar beets. But we fail to recall any news item relating that John Jones, the sugar manufacturer, has just bought his wife a new sedan and his son who is in college a new roadster, out of his extra sugar profits. And don't think that because the press is silent upon John Jones' extra dividends he didn't have any. No, indeed. The less John Jones says about his 1919 sugar profits, the less he will have to pay to the income tax collector.

"LOYALTY" spells "success" in the sugar beet growers' campaign for recognition by the manufacturers and a fair price for beets. Loyalty to your brother farmers and to the sugar beet industry will win the day. The growers are trying to conserve and build up the industry by making the growing of beets profitable to the farmer. The manufacturer, deluded in the belief that he can forever dictate the terms of the contract and secure beets at less than cost of production, is taking the sure course to ruin the industry and drive farmers to grow other crops.

The tactics of the sugar manufacturers are mean-spirited, despicable and un-American. They DARE NOT fight the issue on its merits, for they would LOSE and they know it. They THINK they have the farmers fooled when they themselves are the victims of their own cupidity. There is an old saying that "He who cannot reason is an idiot; he who will not reason is a fool; he who dare not reason is a coward, and neither fools, idiots nor cowards have ever contributed anything of value to the progress of humanity." To which class do the manufacturers of sugar belong?

We cannot think the manufacturers are so dense as to believe they can cover up their profits from the farmer, or deceive him into believing that they cannot pay him a better price for sugar beets. That is not the real reason why they refuse to meet with the farmers' representatives. They simply cannot bring themselves to the point of recognizing the farmer as a factor to be considered in writing the beet contract. They realize that if they once acknowledge the principle that the farmer has the moral and legal right to set his own price that from thenceforth on they must accede to that principle, and that the days of exorbitant profits are past.

This is the real issue so far as the manufacturers are concerned. The loyalty of every farmer who grows sugar beets and the sympathy and encouragement of all other farmers will decide the victor.

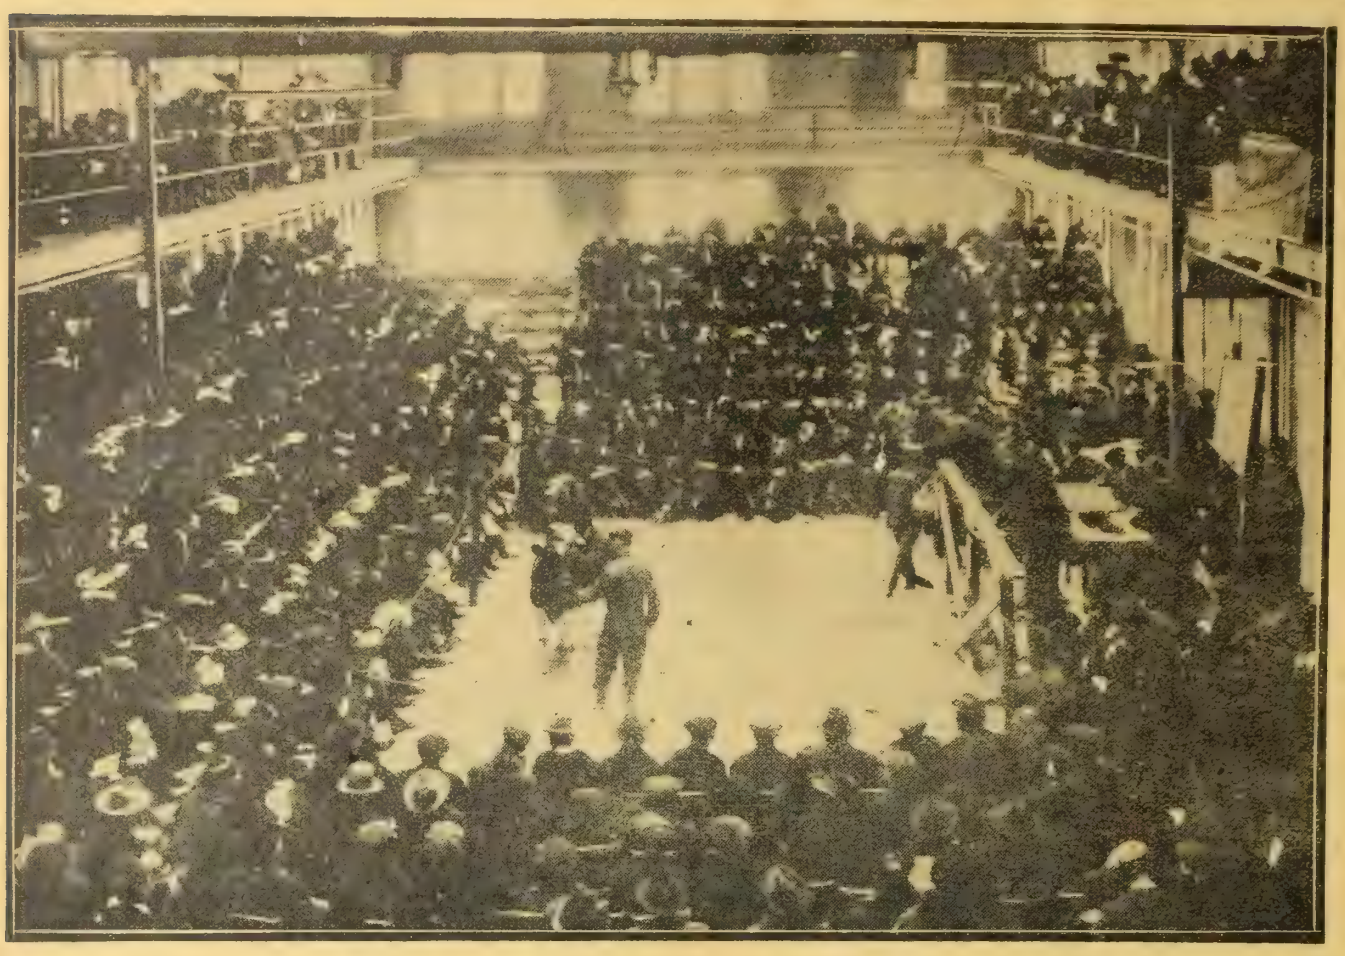
"That man or woman who does not desire to know what is right, or will not work to find out what is right, and who will not make personal sacrifices to bring to pass what is right, is an undesirable citizen," and has no right to the respect of their fellow men.

Just a Few of the Good Things We Have in Store for the M. B. F. Folks

1. Edward Frensdorf will discuss cost of state government, and "things." He knows how.
2. What should you Pay the Hired Man to enable him to live comfortably and save for a rainy day. A big problem to the farmer who has the welfare of his hired man at heart.
3. Revelations of the Tariff Commission on the Costs and Profits of Producing Beet Sugar.
4. Co-operative Marketing, the Producer-to-Consumer Way.
5. Senator Scully's income tax measure, and how it would affect the farmer. Other phases of the tax problem.

East Lansing Holstein Sale Nets Over $60,000

Live Stock Breeders Gather From all Over Michigan to Attend Twenty-Ninth Annual Session



View of Sale Ring at M. A. C., where 75 head of Pure Breds changed hands Jan. 13th, at an average price of $824 a head.

TWO BIG live stock sales and the organization of the Michigan Wool Growers' Association were features of the twenty-ninth annual meeting of the Michigan Improved Live Stock Breeders and Feeders Association, and affiliated bodies, at the Michigan Agricultural College, Jan. 14th to 16th.

The first annual sale under the auspices of the Michigan Holstein-Friesian Association was largely attended by both buyers and spectators, it being estimated that over 700 actual farmers were present. Seventy-five head of as high grade animals as were ever brought together at one time in a Michigan auction sale were put under the hammer. Col. Perry, the well-known Columbus auctioneer, cried the sale. He was assisted by Col. Mack, of Missouri. The proceeds of the sale amounted to $60,970, or an average of $824 a head. This is considered an exceptionally high average, and the prices secured are quite likely to establish a level for succeeding sales of the year.

The highest price offered for any animal was bid by Waters & Buth, of Grand Rapids, who paid $3,250 for College Belle Butter Lass. This cow was consigned by the College, and her pedigree record shows that she sprang from a long line of high producing animals. Her yearly record, just completed, shows a milk production of 25,000 pounds and butter production of 1,100 pounds. Waters & Buth also bought the highest price calf of the sale, Vale Kalmuck Korndyke, for whom they paid an even thousand dollars.

Fred Knapp, Jr., and Fred Kinzel of Blissfield, Mich., were successful bidders for Flint Maplecrest Ona Butter Bay, a fine specimen of bull, only a little over two years old. The price paid was $1,675—the highest bid for any sire.

Bidding was spirited most of the time, but the calves and cows of high record seemed to be in special demand. Buyers were present from all over the country, some of the best animals going to Texas and Minnesota people who have found that Michigan is the home of the country's best and most dependable Holsteins. For some time past Texas buyers have been coming to this state, and several carloads of pure-bred Holsteins were shipped to Texas during 1919 from Livingston county alone.

A complete record of the sale, containing names of consignors, animals consigned, purchasers and purchase price, may be found elsewhere in this issue.

The Holstein people drew their share of the crowds at their Wednesday session and had some very fine speakers, principal among which were George A. Prescott, D. D. Aitken, of Flint and Mr. W. A. Chapin, of Chapin & Co., feed manufacturers of Chicago, who gave an instructive address upon the world's supply of dairy feeds, future costs, etc. Mr. Chapin's address is published elsewhere in this issue.

General Program

The first session of the parent association was held Wednesday afternoon just before the evening banquet, with Pres. Colon C. Lillie presiding. H. H. Halladay, Michigan State Live Stock Sanitary Commission, gave the address. His splendid review of the work the state has done the past year toward the eradication of disease among live stock, also a report of the animals tested and condemned during 1919, is published elsewhere in this issue.

The main program on Thursday was only partially carried out owing to unavoidable causes. L. Whitney Watkins, who was on the program to give an address on "The Agricultural Outlook" was unable to fill his engagement owing to the death of his father, Hon. L. D. Watkins. O. E. Bradfute, of Xenia, Ohio, a director in the American Farm Bureau Federation, was taken sick enroute to the meeting and was obliged to cancel his engagement. E. C. Brown, president of the National Live Stock Exchange, was scheduled to appear on the morning's program but did not reach East Lansing until the afternoon. His remarks, a copy of which had previously been spread broadcast over the state, were almost entirely confined to an attack upon the pending legislation to regulate the packers. He pictured the evils that are supposed to attend government regulation of business, but if he had any remedy to curb such monopolies as the packers he did not present it.

Dean Shaw talked on "The Diversified Farm," strongly urging the farmers to depart from the one-crop idea. He showed how the diversified farm, with live stock as an adjunct, was in the long run the most profitable farm.

President's Address

Mr. Colon C. Lillie, president of the Association, gave a very fine address which so pleased the attending members that they voted to adopt portions of it as a part of the agricultural program. The major portion of the address was devoted to the Farm Bureau movement. Mr. Lillie has long been an enthusiastic advocate of a "State and National Chamber of Agriculture," and he conceives the Farm Bureau as a means to that end. His address is published in its entirety on another page.

Several important resolutions were adopted. One of them was an endorsement of the Michigan State Farm Bureau, another that the Michigan Agricultural College be requested to erect a suitable pavilion for the exhibition of Michigan live stock, a third requested the Michigan delegation at Washington to support a statute defining pure wool and preventing shoddy being sold in such manner as to deceive the consumer. A fourth resolution urged the agricultural committee of Congress to do all in its power to secure appropriations to continue the fight against tuberculosis. The work of the Michigan State Live Stock Sanitary Commission was endorsed.

Election of Officers

The following officers were elected for the ensuing year: President, Herbert Powell, Ionia; Vice president, J. Fred Smith, Byron; Secretary, Geo. A. Brown, East Lansing; assistant secretary, W. E. J. Edwards, East Lansing; treasurer, H. H. Halladay, Lansing. Executive committee, Jacob De Geus, Alicia; Earl C. McCarty, Bad Axe; Alexander Minty, Ionia; J. Lessiter, Orion; W. E. Livingston, Parma.

Section Meetings

The majority of the meetings of the various associations comprising the Live Stock Association, were fairly well attended and interest was keen. The success of the others was indifferent. Several of the associations had so small an attendance that the meetings were called off altogether, but when it is considered that several meetings were scheduled for the same hour and that Farmer's Week comes within two weeks following, it is not surprising that the attendance was not greater. However, such associations as carried out their scheduled programs, enjoyed very interesting sessions.

At nearly every session some speaker emphasized the need and advantage of advertising the respective breeds of live stock which the various associations represented. The Holstein-Friesian organization are among the largest and most influential in the country and their present strength is due in a large measure to the persistent advertising that has been carried on not only by the national association, but the state association and individual breeders as well. Hundreds of thousands of farmers have been converted to pure-breds through the advertisements that have appeared in their farm papers.

Another subject to which considerable attention was paid was that of marketing. All realizing that this end of the farmer's business has too long been neglected.

Nine generations of Herefords are represented in the panel above. The mother of this remarkable family is the proud lady standing at the head of the procession. She is Delila, bought by the College in 1909 for $200. Her eight daughters still remain in the herd, but her only son has been sold.

$1,000 calf, Vale Kalmuck Korndyke, consigned by Tracy F. Crandell, of Howell, and bought by Waters & Buth of Grand Rapids.

Michigan Wool Growers' Ass'n

The organization of Mich. Wool Growers' Ass'n which was effected at the meeting of the Michigan Sheep Breeders' Assn', marks a new era in Michigan's sheep industry. As has been noted before in these columns this industry has been forging to the front very rapidly the past several years. The wide discrepancy between prices paid by dealers in various parts of the state, and their comparatively low level, has revealed the need of a state-wide co-operative marketing organization through which the entire crop of the state's wool could be handled. Many of the county agents have been instrumental in organizing local associations of this nature, and have obtained very satisfactory results, but it is believed that a state organization will assist materially in stabilizing prices throughout the state and bringing to the farmer the highest possible returns. It was stated at the meeting that there are now approximately 2,300,000 head of sheep in the two peninsulas, and this number is rapidly on the increase.

Mr. E. G. Read of Richland, member of the 1919 legislature, and well known and successful farmer, was named president of the new association. Mr. Read was president the last year of the Sheep Breeders' Association and was re-elected at the annual meeting. Donald Williams, of East Lansing is secretary of the new organization. Following are the directors: H. H. Halladay, Lansing; G. A. Tyler, Detroit; A. M. McBride, Lansing; Amos Welch, Ionia; J. DeGeus, Alicia; Harold Burtless, Manchester; A. E. Illenden, Adrian; and J. A. Doelle, secretary of the Upper Peninsula Development Bureau.

Other states have tried out the co-operative marketing plan with great success, and Mr. J. B. Walker, of Gambier, Ohio, told the audience a very interesting story of what has been accomplished in that state. He was followed by C. A. Tyler, Detroit banker and sheep enthusiast, who told why "we should have an active Michigan Wool Growers' Association." The two speakers furnished much of the inspiration that later led to the formation of that Association.

Michigan Jersey Cattle Club

The annual meeting of the Mich. Jersey Cattle Club, Wednesday, Jan. 14th, and was carried out to the letter as planned with the exception of the banquet which was called off owing to its conflict with the general banquet the same evening.

The following program was given:

"The Detroit Milk Commission and the Jersey Cow" by Prof. A. C. Anderson. It is a waste of words for anyone to try to tell about Prof. Anderson's address for everyone knows he handles any subject well. "It was to the Michigan Jersey Cattle Club," says Sec'y Bassett, "that the Jerseys all owe the credit of pushing across the raise in price of the better quality of milk, although it is true that the Commission (some of them) were in favor of it."

"Breeding and Raising the Jersey" by H. F. Probert. Mr. Probert brought out his subject as only one can who has been breeding some of the best Jerseys ever bred anywhere. Half of the Mich. Champion cows in 1918 were bred by him.

"The Jersey Can Not Live on Her Past; What Will You Do for Her Future?" by Dr. George A. Waterman. Dr. Waterman't talk was along the line of advertising. He carried his hearers with him in his enthusiasm. He was elected chairman of the advertising committee.

"The Pure Bred Herd and the Community," by W. F. Taylor. The talk of Mr. Taylor was intensely interesting. He brought out the fact that the Jersey brought the income up where it was possible to send the children to college thus making the community better.

Michigan Shorthorn Ass'n

The principal interest of the Shorthorn people was in the sale scheduled to be held Friday afternoon when forty-four head were offered. This sale was held too late in the week for us to publish the details in this issue. Speakers at the annual session of the Shorthorn Breeders included editor Halloell of the Shorthorn World, and Mr. J. B. Tormey, of Chicago, representative of the American Shorthorn Breeders' Association. Officers elected: Pres., Geo. Prescott Jr., Tawas City; vice president, L. P. Otto, Charlotte; secretary treasurer, W. E. J. Edwards, East Lansing.

A $3,000 cow, Topsy Hartog Pet Canary, consigned by Chas. S. Heeg, of Howell and sold to Dudley E. Waters, of Grand Rapids.

Aberdeen Angus Ass'n

The absence of Pres. Minty who is in Scotland in the interests of the Abedeen-Angus folk, detracted some from the interest in the annual session, but it was nevertheless well attended and some good speeches were given by Mr. F. H. Higgins, assistant secretary of the national association, and Mr. T. F. Marsten, secretary of the Northeastern Michigan Development Bureau of Bay City.

Another speaker was Dr. K. J. Suelke of Cornell University, who will take up the duties as eastern field representative of the American Aberdeen-Angus Breeders' Association next month and will return to Michigan at that time to inspect the cattle that will go into the sale at Saginaw in March. This is calculated to be one of the biggest sales ever held by the Michigan Aberdeen-Angus people.

Michigan Hereford Breeders Ass'n

The Hereford meeting at East Lansing, Jan. 14, proved to be the best attended and most interesting annual meeting that the Hereford men of the state have had in years and everything looks bright for the "white face" in the near future. All breeders are reporting a very good demand and with satisfactory prices.

Above: Sir Topsy Model, of Pleasant View, consigned by Chas. Heeg & Son, of Howell, sold to C. H. Fink, of Chesaning for $1,000. Below: Flint Maplecrest Ona Butter Boy, consigned by S. A. Ferington, Roso, Mich., and bought for $675.00 by Fred Knapp, Jr., and F. Kinsel, of Blissfield, Mich.

The excellent program arranged by the officers was exceedingly instructive and helpful, followed by lively discussions. Plans are under way for a very extensive visitation of state herds by auto the coming summer by large numbers of breeders.

Officers elected for 1920: President, Jay Harwood, Ionia; 1st vice president, Tony B. Fox, Pewamo; 2nd vice president, E. E. Cole, Hudson; 3rd vice president, W. B. Wood, Dowagiac; secretary and treasurer, Earl C. McCarty, Bad Axe.

Michigan Swine Breeders' Ass'n

Fair crowds attended the annual session of the Michigan Swine Breeders' Ass'ns and the meetings of the associations representing the several breeds, with the exception of the Chester Whites, who were obliged to call off their meeting altogether, because of poor attendance. The old officers will hold over until another year. They are: Pres., H. T. Crandall, Cass City; secretary, J. Carl Jewett, Mason. "Wake up there, you Chester Whites."

Officers of the Swine Breeders' Ass'n, Pres., W. C. Taylor, Milan; secretary and treasurer, P. P. Pope, Mt. Pleasant.

The Duroc Jersey breeders had a good crowd and a fine program. Addresses were made by Mr. N. M. Jordan, editor of the Duroc Jersey Bulletin, Ralph Carr, Monroe county agricultural agent and T. F. Marsten, of Bay City. The principal topic of discussion was the sale to be held Feb. 7th. A substantial appropriation was authorized to advertise the merits of the Duroc Jersey. The following officers were elected: Pres., O. F. Foster, Pavilion; secretary and treasurer, J. B. Miller, Ithaca. Member executive committee, W. C. Taylor, Milan.

Other cattle association meetings were carried out to the letter with the exception of the Red Polled which held no meeting on account of scant attendance. The officers for the ensuing year are, Pres., N. C. Herbison, Birmingham, Mich.; secretary, E. J. Peabody, Grand Ledge. Be on deck next year, you Red Polled folks !

The Guernseys held their meeting as per schedule, carried out an interesting program and elected officers as follows: Pres., E. J. Smalidge, Eau Claire; secretary and treas., E. J. Hemmingway, Sodus.

Officers of Other Associations

Michigan Horse Breeders' Ass'n—Pres., Jacob DeGeus, Alicia; secretary, R. S. Hudson, East Lansing.

Poland China Breeders' Ass'n—Pres., J. R. Hawkins, Hudson; secretary-treasurer, I. K. Maystead, Hillsdale.

Oxford Sheep Breeders' Ass'n—Pres., O. M. York, Millington; secretary, I. R. Waterbury, Detroit.

* * *

Michigan Out After Europe's Best

Alex Minty, manager of the Woodcote Stock Farm at Ionia, has taken a trip to Scotland expressly to secure a herd bull and a bunch of high class females that will make the Woodcote second to none in the United States.

It is hoped that, with the addition of the new blood that is secured, the Woodcote Stock Farm will, within two or three years, be able to hold annual sales of Angus cattle.

Mr. Minty expects to attend the great Perth sale held the first week in February.

Five granddaughters of Delila. These also remain in the M. A C. herd. The total value of the herd today is around $8,000, a pretty fair interest on the College's original investment. Do pure-breds pay? Here's the best answer we can give you.

Michigan Wool Men Unite at Opportune Time

World Situation Without Parallel, Causing Sheep Growers to Co-operate in Marketing of Product

By VERNE E. BURNETT

State Wool Growers Organize at East Lansing

WOOL PRODUCERS of Michigan got together last week at East Lansing and formed an association which is making the market gamblers sit up and take notice. In connection with the meeting of the Michigan Sheep Breeders, the Michigan Wool Growers' Association was organized at the Michigan Agricultural College, in order to put the marketing of Michigan wool upon a co-operative basis, controlled by the producers themselves.

Michigan, with its 2,300,000 sheep and several thousand wool producers, has great possibilities, especially in Northern Michigan and in the Upper Peninsula, and the new association hopes to develop these possibilities to the limit, turning back all profits to the farmers handling wool.

E. G. Read, of Richland, was elected president of the new association, and Donald Williams, of Lansing, secretary. Competent critics declare that the action taken was at an especially fitting time. The accompanying article, which explains the world wool situation, serves to throw interesting light upon the subject.

MICHIGAN growers of wool have taken concerted action and have organized what is believed to be a wool growers' association with a real future. This step has been under consideration for some time, and the charter members felt pretty sure of their ground before setting the ball to rolling. It was well that the wool growers took their action at this time for a number of reasons.

Co-operative marketing by farmers, on a big scale which is really only in a healthy infancy compared with what it is going to become, has been brought forcibly and favorably before the public's attention only recently. Michigan, being such a power in the world's wool business, should be able to support a splendid wood growers' marketing association. It should not be so very hard to finance such a program. The bulk of the several thousand Michigan wool growers are pretty sure to have faith in a thing of this sort. Not all, but a great many co-operative farmer marketing organizations have been making splendid profits and savings according to the annual reports of many made this winter. The co-operative enterprises which get in now with a secure footing on the ground floor are believed to be assured of greater success as the movement expands, and improves. The time in the history of co-operative marketing, then, is thought to be especially opportune for the action of the wool growers.

The present world wool situation is such that it is well for growers to be banded strongly together for their protection and for the betterment of the wool business. In order to explain this complex situation, it will be necessary to give over the most of the article to the subject.

The months since the signing of the armistice, Nov. 11, 1918, have had important effects upon all markets. The transition from a war to peace basis in wool, was a sharp one, and prices dropped off heavily. The government has done much to the wool game in the way of auctions; and nearly all growers are watching the Department of Agriculture laboriously winding up the affairs of the domestic wool section of the War Industries Board.

Out of the four distinct steps and a possible fifth, the Department publicly admits that not one is really completed. The first step is probably the nearest to a solution, inasmuch as this consists of getting sworn reports from the 3,686 country dealers and the 179 distributing center dealers to whom permits were issued. The second step depends on the first and involves the detailed auditing of these accounts. Collection of excess profits is the difficult third step and the fourth is the working out of equitable distribution. The possible fifth step is an audit in the field of dealers' accounts.

Many growers believe that organization just now among the wool interests of the nation will do something toward stimulating the Department of Agriculture into actually getting some results with a fair degree of promptness. Returned soldiers now back in the sheep raising business declare that the red tape of wool officials resembles the case of back army pay and long delayed mail. Thus it goes among some of the slow going offices at the capitol. The only remedy in sight is organized "stimulation," such as the association of wool growers can provide.

A Year of Auctions

At the signing of the armistice there was a very unequal distribution of wool in the world. The American and British governments had absorbed the greater share of the world's wool supply. The United States alone had in its possession about 458,000,000 pounds of wool which had to be distributed back to the trade with the least disturbance possible to the wool market. The officials adopted the auction plan of getting rid of its supply and thus getting out of the wool business altogether, holding the first sale about a month after the armistice signing. These auctions have been continuing for about a year. They are considered as having been the most unique in the world's wool history, so far as the great variety of goods are concerned.

The manufacturers were the heavy buyers especially at the early auctions, and the prices shot far down. In the spring the prices rose again and the manufacturers have been making enormous profits. The Boston wool dealers and manufacturers are said to be rolling in prosperity unequaled in their history. But what of the wool growers? Some of them have made money, but many have not. Instead of the sheep being fleeced, the isolated and unorganized individual has been fleeced.

E. G. READ, of Richland
President of Mich. Wool Growers' Ass'n

The wool growers of the West made a notable fight during the past months in order to get a higher limit established, in order to get production cost "plus." They naturally sought to have higher limits established. They did not want to have the wools held by the United States government to be sold on a level with the prices established by the British government. A bill introduced into the senate by Senator King would have established minimum withdrawal prices at 10 per cent above the parity of British issue prices. This bill died in the Senate committee. According to an organ of the Boston wool interests, "it died a natural and proper death." Other bills wanted by the growers met a similar fate—their organization was not strong enough.

But organized wool growers, following their King bill defeat, went to work with renewed energy and scored one point by getting the government to call off its wool auctions during the months when the wool growers would market their product. This period, during the summer and autumn months saw prices for the high grades at five to ten cents above the government withdrawal limits. Even the inferior merinos exceeded the withdrawal limits by a few cents.

Thus one can get a better idea of what the power of organization can do for wool. But numerous defeats of the wool growers have shown that further organization is necessary. Dealers and manufacturers are more prosperous than ever and have all sorts of money and influence to throw into the fight to twist the market to suit their will. Much good can be done right here in Michigan, both in big and little matters. There surely is considerable similarity between the Potato Growers' Exchange and the work cut out for the Wool Growers' Association.

Stupendous Task Involved

The business of distributing the government wool stocks has been a stupendous one and it is not over yet. The federal auctions have already disposed of more than 365,000,000 pounds of wool, or an average rate of one million pounds per day for one year. Neither England nor Australia held sales which could compare with that amount.

Michigan wool growers suffered losses during the past season, which organization might prevent to some extent. In the domestic wool market at Boston last February, when prices were generally down, 1-4 blood combing, mixed lot Michigan and Missouri good wool, was quoted at $1.10. During the next few months practically all good wools rose in value from thirteen to fifty cents. But the Michigan lot dropped off thirteen cents. Even in November, when the market was higher than ever for good grades, the Michigan lot still showed a loss of ten cents, compared with the figures of February, 1919.

One striking phase of the need for mutual protection among the wool growers is seen in the prophesy of the coming of hard times. Says an expert in the *Commercial Bulletin*.

"There are shrewd business men, who are predicting the worst panic in history during the next six months. Others are of the opinion that there will be at least a year to two years of unprecedented prosperity. Between such widely divergent views of equally well-informed men, the reader may 'pay his money and take his choice.' For ourselves, we guess along with the optimist, that prosperity will last, even at the present inflated values rather more than six months.

"It will be interesting to watch the course of the English government Colonial wool sales. It would seem to have been the better course, could these wools have come forward more through the usual channels but the problem of getting these wools here under the circumstances now obtaining is a most unusual and trying one and doubtless the situation will be worked out eventually for the best good of everyone. The disposal of the remaining wools owned by our own government will be of course merely a matter of detail. It will be close to a year, however, before the war shackles will be completely thrown off by the wool trade of the world, if indeed, even then."

One of the strongest predictions of the New England wool men at present is that a better day is dawning for medium grade wools, following the record run of bullishness for the best grades, especially choice Delaine fleeces."

But consider for a moment the excellent work being done right here in Michigan. Various co-operative forces in the state have conducted successful experiments in marketing wool collectively. For example, encouraging reports have been received from Alfred Bentall, of Allegan, and others in Western Michigan, telling of the excellent results of co-op wool dealing in that vicinity, during the last year or so. The Gleaner Clearing House Association is another agency which has successfully handled large quantities of the crop.

Taking for granted that the future marketing success looks assured for a strong wool growers' association, let us turn for a moment to the outlook of the general industry f sheep-raising in this state. As most readers know, northern Michigan and the Upper Peninsula are filled with idle lands which would make excellent sheep lands. The undertaking has been pretty big, heretofore in the hands of unorganized individuals. But with a live, big growers' organization the job it is hoped that the courage and the finances can be obtained to put Michigan up where she belongs in the sheep-raising states.

Taking all things into consideration on the jumbled-up chess board of the world wool situation of the past year or so and the extremely uncertain future, one feels safe in congratulating the Michigan men who have banded together, to take one more step not only for their own protection but also for the stronger organization of agriculture.

Michigan, already one of the leaders in the sheep raising states of the nation, is striking out for greater prestige through thorough organization. Scenes like the above, while common in the Wolverine state, are not nearly common enough, because thousands of acres of good sheep land lie idle in many counties.

Beet Growers Organize Scores of Associations

Farmers Set to Work in Earnest to Organize Sugar Beet Territory

WORD comes from Mr. G. E. Ackerman, who was recently appointed by the sugar beet growers' committee to organize local associations, that the work is being rapidly pushed and meeting with great success. Such meetings as have already been held at Durand, St. Johns and Ithaca entirely disprove the statements of the manufacturers that most of the farmers have signed up. Despite the snowbound roads the meetings have been well attended and not one single beet grower has yet been encountered who does not concede to the justice of the growers' demands or has not signified his desire to join the association and help finance the work.

The St. Johns local organization was formed Monday with fifty charter members, each paying in $1 to the treasury and signing an agreement to pay annual dues amounting to one cent per ton of beets sold thereafter. The form of agreement is printed in bold type on this page. At Durand the previous Saturday a large gathering of growers was held and all agreed that they would grow no beets except under a contract approved by their committee. At the St. Johns meeting about 1,200 acres of beets were represented by the attending farmers.

Other meetings scheduled for the week are: Owosso, Jan. 21st; Saginaw, Jan. 22nd; Pigeon, Jan. 23rd; Sandusky, Jan. 24th, and additional meetings will be held as the farmers in other localities desire to organize.

Mr. Ackerman is following a unique but very effective method in reaching the farmers of the beet territory. He has enlisted the aid of the rural school teachers, many of whom have agreed to discuss the proposition with their agricultural classes in an effort to arouse the farmer boys to the justice of the growers' demands and secure their backing. Mr. Ackerman has been offered invaluable co-operation in his home town of Durand, the entire class of 14 stenographers and typewriters of the Durand High School having volunteered to take care of his correspondence without charge. This assistance will greatly facilitate the organizing of the sugar beet districts and will be heartily appreciated by the growers.

Michigan Business Farming is in this fight to the finish and it urges every reader who grows beets to get into immediate touch with Mr. Ackerman at Durand or Mr. R. P. Peavey, of Caro, who is secretary and treasurer of the state association. There is no time to be lost. If the sugar beet territory can be thoroughly organized during the next sixty days, the manufacturers will be forced to meet with the sugar beet growers representatives and discuss with them the terms of the contract. We cannot see how any farmer, knowing the facts of the relative profits secured by the growers and the manufacturers out of sugar beets and beet sugar, could refuse his support to this association. There is no question but what the majority of the farmers will join, being unwilling to grow beets another year under the terms of the old contract, with sugar prices where they are, but a majority is not enough. There is no reason why the Michigan Sugar Beet Growers' Ass'n should not be 100 per cent strong and be constituted an authority with which the manufacturers will have to reckon in the future. So long as the manufacturers do not offer competitive bids for acreage (every contract that they present is strikingly similar, not only in meaning but in phraseology,) and the farmers must put themselves in a position to defend their business from the organized manufacturers. If the manufacturers find it to their advantage to organize and fix a standard price at which they will BUY beets, why should not the farmer follow suit and have a standard price at which they will SELL beets. This is the proposition, pure and simple. Will you stand by it?

Membership Roll of the Michigan Sugar Beet Growers' Association

.....Local Organization

We, the undersigned, being desirous of associating ourselves together in the Michigan Sugar Beet Growers' Ass'n, for the purpose of securing fair prices for sugar beets in proportion to the price rof sugar, better beet labor, and the benefits of organization and of the interchange of ideas and experience in sugar beet raising, hereby signify our intention and become members of said Association and agree to pay a membership fee of $1 and one cent per ton as dues thereafter as long as we are members, the amount of which shall be determined by the number of tons of beets each of us shall market. We also agree to abide by the constitutions and by-laws of this Association and will plant sugar beets only upon securing such contract as shall have been approved by our committee. In case any of us wish to withdraw from this Association it is understood and agreed that any of us may do so by mailing a written notice to the secretary and treasurer of this Association, asking to withdraw and paying the amount their due this Association at the time of such notice.

How Every Sugar Beet Grower Can Help

1st. By refusing to sign [illegible] tract presented by the manufacturers unless previously approved by the growers' committee.

2nd. By turning a deaf ear to the claims of the manufacturers and their field agents that they are not anxious to sign up acreage this year. That's all camouflage and you know it.

3rd. By urging your neighbors to refuse to sign contracts not approved by the committee.

4th. By joining a local sugar beet growers' association, or if there is no local in your vicinity, by writing the secretary and treasurer, Mr. R. P. Peavey, to send someone to your locality to organize one.

As a means to this end, every sugar beet grower is requested to fill out the following coupon and send it to Mr. Reavey, together with a dollar bill in payment of your first year's dues. This money is needed to help pay the expenses of organizing.

Mr. R. P. Reavey,
Secretary-Treasurer,
Caro, Michigan.

I hereby make application to become a member of the Michigan Sugar Beet Growers' Ass'n and enclose, or hand, herewith a membership fee of one dollar, and request that my name be listed with the .....

.....local organization. (If there is no local organization near you and you desire to have one formed in your community, put a cross mark here ( ). I average to raise..... acres yearly.

Signed .....

Address .....

Gleaners to Invade Kalamazoo for National Convention, Jan. 27-31

Members from Thirteen States Will Crowd Celery City for Important Sessions of Biennial Conference

ALL ROADS lead to Kalamazoo for the Gleaner farmers in at least thirteen states, which are expecting to send delegates to the Biennial Convention to begin at the Celery City, Tuesday, Jan. 27, and to continue throughout the week. It is expected to be the biggest event of its kind in the more than twenty-five years of Gleaner history, and Kalamazoo authorities are in an uproar to prepare a royal welcome.

The chief address of the sessions will be delivered by the Hon. Glenn E. Plumb, of Washington, D. C., author of the famous Plumb plan of railway operation. The Gleaners have been credited with standing firmly with the millions of farmers who are unwilling to have the nation's railways go back to the old owners, and they are sure to find high interest in the address to be delivered by Mr. Plumb. The farmers supply more than half of the nation's freight and pay for it, too, so the railway problem is one of the biggest in agriculture. Mr. Plumb has a proposal of putting the roads directly into the hands of the people, with the government, the railway workers and the public co-operating in the running of the system.

Milo Campbell, the generally accepted farmer candidate for Governor of Michigan, will give to the Gleaners what will be his first public address since receiving the unqualified backing of the representatives of the leading farm organizations of the state. He is a member of the Gleaner organization and has taken active part in it, having been the speaker at Gleaner Day at the last Michigan State Fair. Mr. Campbell's Kalamazoo address will be delivered at the opening session, which will start at the Armory at 2 o'clock Tuesday afternoon.

"We Will Meet You at Kalamazoo" is the slogan which has been ringing through the Gleaner arbors for months and there will be but few arbors which will not send representatives. A special round trip rate has been supplied by the United States Railway Administration, and the Gleaner headquarters is arranging free trips as prizes for activities by many members during the winter months.

"Gleaners are like a great giant who has been obliged to lie rather quiet for a year or so," says Grant Slocum, supreme secretary and the founder of the order. "This giant organization has been buffeted by every storm which could batter against it—the great war which took away its young men and made the others work day and night to get the most food possible for the boys, while the women and children also worked in the field and did Red Cross and other relief work besides; the government insurance barred the progress of much of the protection end of the Gleaner work, with more than twenty-thousand Gleaners in the service; then came the deaths in the war and the greater toll of the flu epidemic. In spite of all these troubles, the giant has come up smiling in much better condition than ever before in every way, and it has a future never before believed possible."

Big Times in the Offing

Along with important proposed amendments to the Gleaner constitution and election of officers and so on, matters of the greatest importance are stirring not only the Gleaners but also the farmers throughout the Middle West. The Gleaner farmers the first of this month loosened a big surprise by purchasing the Armour elevator interests in Michigan and by enormously increasing the co-operative marketing work for which they have been famed.

Fred Lewellyn, of the Lewellyn Bean Company, together with his staff of terminal experts, has come over with the Gleaners, and a million dollar corporation is being formed. Along with the fifteen or more elevators and stations which are already in line under the Gleaners, more than fifty others are definitely preparing to join the great system. So it is expected that a chain of more than one hundred elevators and stations will be in operation within a year or so. A splendid new elevator and store at Lockwood, Ohio has just been established by the Gleaners, and Indiana and Illinois and other states are expected to come in very soon. In the offing is the prospect of Gleaners owning their own coal mine, canning plant, flour mills, drain tile factories and so on. The whole idea is entirely co-operative and all profits go back to the farmers.

Another matter which is stirring the Gleaner organization is the preparation for a huge membership drive to be staged on perhaps a larger scale than anything of its sort in the past. "The Gleaners are Coming," is the slogan which is being sent out through the arbors to tell of the approach of the spring drive.

Splendid Program Arranged

The mayor of Kalamazoo and the city's Board of Commerce have spent considerable time in preparing for the reception and entertainment of the invading Gleaner delegates. Ladies from Indiana and Michigan are to present drill work, readings and music. The "movie" houses showing "The Story of the Gleaners" will be thrown open without any charges to Gleaner visitors.

The opening session, at 2 o'clock Tuesday afternoon, in the Armory, will be marked by the addressed of distinguished speakers. Wednesday morning will be occupied by the "Story of the Gleaners" at the movies, and Wednesday afternoon an important business session will start with reports of the credentials committee, [illegible] by supreme officers, committee appointments and short memorial services. A school of instruction will occupy the evening of Wednesday, with Miss Lucia Bellamy in charge.

Thursday morning will see a continuation of the business end of the convention and will continue until the work is finished. Officers of the order have excellent tidings to report. The financial assets of the order are well over a million dollars.

Among the amendments to be voted upon by the Gleaners are twenty proposals. One of these would permit the extending of benefit membership to those living in certain districts and engaged in other occupations than farming, under certain restrictions. Another takes up a proposal for reorganizing the Supreme Council, and still another would provide for the establishment of an arbor upon the acceptance for membership of a satisfactory number of candidates.

The committee in charge of program and entertainment consists of the following ladies: Mrs. Palmer Landon, Miss Lucia Bellamy, Mrs. J. L. Huffman, Mrs. L. Joslin, Mrs. Charles Midgley and Mrs. Emma Cole. The Messrs. Huffman, Joslin, Landon and Midgley will be active in the reception work at Kalamazoo.

A topic of the hour which Gleaners will be discussing at the gatherings at Kazoo is expected to be the proposed arrangement for state federations of Gleaners, allowing for big state rallies in each of the states where there is a sufficient number of members.

More than 70,000 Gleaners in Michigan alone, forming the largest group of organized famers in the state, make the scene of the convention at Kalamazoo seem especially fitting. And undoubtedly Michigan, being the mother state of the order, is showing the biggest interest in this biennial, which promises to be a "bang-up" big event.

Methods of a Sand Land Farmer

How Carl Schmidt Makes Money on Sandiest Land in Michigan

(Concluded from last week)

By JUDSON GRENELL

THERE are 30 employes on the two Schmidt farms, Walhalla and Saradella. Ten are married, and they occupy houses furnished by Mr. Schmidt. The boarders live in the "Saradella hotel," they objecting to the cognoment "boarding house." A few come from the outside—farmers or farmers' sons.

The men "punch the time clock." This is placed in a convenient shelter outside the office, where there is employed an expert bookkeeper. Ten hours constitute a day's work.

The stock from poultry to racing horses, is high bred—the best in the market. Mr. Schmidt can show over 1,500 first prize ribbons secured from state fair, cattle and poultry shows all over the country, besides a cabinet filled with prize cups.

On the two farms are 500 sheep, the 50 cows and calves and the 40 horses already mentioned. There are only a few pigs.

"Pigs are more profitable to raise than any other kind of animal," said Mr. Schmidt. "But I don't like pigs so I do not raise them."

"Some years ago I raised a large number of hogs," said Mr. Schmidt, "and I tried out one of my experiments. I placed before them all the time plenty of food, and in variety. They were not confined to one diet. In consequence they soon lost their hoggish ways, and were dainty in their selection of food. They stopped crowding. If one eating place was occupied, they leisurely went to another place, or waited until some of their companions moved away.

"There comes a time when one must stop feeding hogs. Then they must be marketed. But, as I said, I don't like hogs, so this year I am only raising a dozen for family use." Mr. Schmidt is an advocate of heavy feeding. The cows are fed in proportion to the number of quarts of milk they wield. The cow that yielded 1,493 pounds of milk in July, for example, cost $30.25 to feed, milk and take care of, while the cow that yielded 717 pounds of milk cost $18.16. This is scientific feeding.

Milk at Cost of Four Cent a Quart

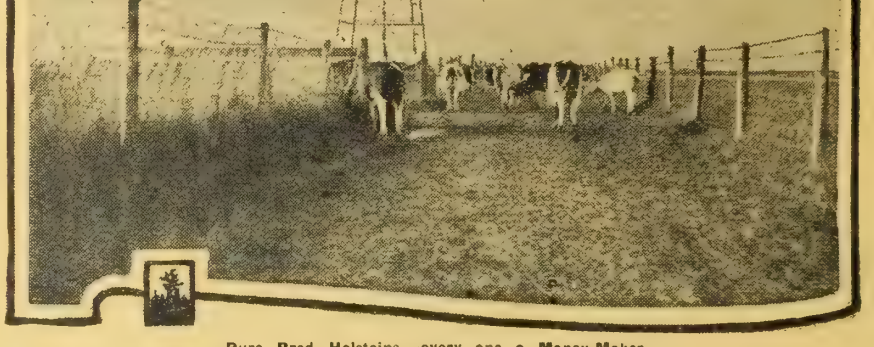
Everything is in the inventory of Mr. Schmidt's farms. Indeed the inventory is a marvel in the way of minutia. Nothing escapes. Each building carries it owns inventory. Machinery is everywhere; electric motors supply power wherever it is needed, fom the 40 horsepower motor supplying power to the sawmill to the small ones running fans. The balance sheet showing the cost of running the dairy during July was an instructive exhibit. The 16 cows then being machine milked produced 12,998 pounds of milk. The labor and feed cost $278.69, and the output was marketed for $406.06. In a word each cow returned an average profit for the month of $7.96. From one cause or another there was a deficit in the output of four cows. The profit on the best producer for that month was $31.35.

The average cost for the whole herd for producing a quart of milk was four cents. It is probable that the overhead and other legitimate charges for marketing the output equaled the original cost. The cows are machine milked. The labor cost of taking care of and milking a cow is placed at about $8 a month for a "dry" cow, say, $4 a month.

"When we have threshed our grain I shall know the exact cost per bushel of each kind," said Mr. Schmidt. "There will be no guesswork about it. I can tell the exact cost of cultivating each field."

Two tractors are in use on the farm, one a Michigan and one an Ohio make. They can be run with the greatest economy, because the fields are so large—averaging over 40 acres to a field—and the soil so light.

I watched a tractor disc-harrowing one of the fields. It got over the ground at the rate of five acres a day. The gasoline cost $1.15 and the labor $3—an average of 83 cents an acre.



Pure Bred Holsteins—every one a Money-Maker.

"Individually I am prejudiced against tractors," remarked Mr. Schmidt, "though they do the work assigned them. To successfully farm there must be plenty of live stock. Take that $1.15 worth of gasoline; when it is consumed it is gone for good. Feed an animal $1.15 worth of fodder and there will be 70 per cent of it fertility value returned to the soil that needs it. In a word, the soil needs manure more than the farmer needs the tractor."

We cut from a barnyard-manured cornfield a stalk 11 feet 9 inches long; but on an experimental patch of corn on Walhalla land where different fertilizers had been used, the stalks were still longer. The wheat is well filled and sure to run between 25 and 30 bushels to the acre. The potatoes show every evidence of running over 200 bushels to the acre.

On the uncleared but fenced-in portions of his plantations Mr. Schmidt has thus far planted 500,000 Norway and white pine trees. A comparatively few have died. As soon as the labor market becomes normal he will plant another 500,000—pehaps a million or more. The trees are raised from seed dropped in a trench. They cost half a cent apiece to raise, and about two cents to plant. Some of these seedlings have been planted without regard to order; in other places where the ground allowed of it they have been regularly placed. Where fallen trees interfered, the rubbish has been cleared away.

"This whole region would long before this have begun to be reforested naturally, but for two reasons," Mr. Schmidt explained. "The first reason is that the lumbermen were such hogs that they did not leave a single seed tree to propagate its kind. The other reason is that no one made any effort to check forest fires."

"Why jack pines grow so readily after the better pine has been cut down is simple. The other pine tree seeds are very sensitive to fire; it takes very little heat to kill them. On the other hand the seeds of the jack pine are so well protected that they survive where others die. Hence when they drop their seeds, these find congenial soil made doubly fertile by the ashes of the fies, and so they quickly germinate and grow.

"I have taught my men to watch for fires. If a smoke is seen anywhere within reasonable distance they get there as quickly as possible and stamp or thrash the fire out. My 500,000 pine trees are gettingg a good start. There is no reason why every foot of pine barrens not given over to prosperous farming should not be reforested, to the advantage of those who have the enterprise as well as to the state.

"There is, however, one other thing that deters people from engaging in extended reforesting."

Who would expect to see 12-foot corn gr[ow]ing on the jack pine plains?

continued Mr. Schmidt. "As the pi[ne] trees begin to grow, and the sa[nd] is once more covered with veget[a]tion, along comes the assessor a[nd] increases the assessed value of t[he] land. The result is that this ki[nd] of enterprise is discouraged, a[nd] many a pine barrens owner declin[es] to interest himself in reforestation.

What the State Might Do

"If the state was wise it wou[ld] tax the timber on timber land on[ly] when the timber was ready to [be] marketed. Growing timber is in t[he] nature of a manufacturing ente[r]prise. One tax on the finished pr[o]duct would be sufficient, as a matt[er] of equity and justice. The sta[te] could also exercise more wisdom [in] its sales of these millions of acr[es] State owned land might be divid[ed] into three classes: First, prime la[nd] near markets; next, medium la[nd] that with small capital could [be] used for ordinary agricultural pu[r]poses; and third, poor land such [as] is to be seen wherever the pine h[as] been stripped off.

"Let the first kind be sold in n[ot] to exceed 40 acres lots; the seco[nd] kind in not to exceed 500 acre ar[eas] the third in any quantity to [the] purchasers.

"I look upon it as a duty that t[he] wealthy owe society to put to u[se] this poor land. I have proved t[hat] even in a financial sense it will pa[y] that point is settled for all time; t[he] problem of soil building has be[en] solved. And I am proving that in [a] patriotic sense it is worth all it co[sts] in time and patience.

"I tried to interest the state [in] the matter of encouraging t[he] planting by private owners. It was severely turned down. It [in]terefered with the speculat[ive] scheme of people who had influe[nce] with the legislature. Michigan [at] least should insist that a tree sho[uld] be planted in some proper locali[ty] whenever a tree is cut down. It would be still better to plant t[wo] trees."

Farmers and High Cost of Livi[ng]

Speaking of the high cost of l[iv]-

Views of Mr. Schmidt's "Wild Life" Domain and some of the Bison and Elk with which it has been stocked.

ing, Mr. Schmidt was sure that the farmer is least responsible of all the agents directly responsible.

"Today only the farmer close to a market is making anything," he insisted. "The big gap between producing and consuming prices is not of the farmer's making. You know I have always been in favor of the municipal ownership of street car transportation. This activity is too close to the life of the community to permit of it being run for profit. Well, is this not true of transportation in general?"

It was suggested that perhaps the government ownership of the means of transportation, and the operation by a combination of executives and employes might be the solution.

"That may or may not be the solution," Mr. Schmidt said, "but anyway the high cost of transportation in one cause of the high cost of living. Certainly our transportation system broke down under private management.

"But a still geater cause of the high cost of living is the lack of warehousing facilities in populous centers. There should be community owned warehouses to which the farmers could send their produce and be sure of proper renumeration under proper classification, less the actual cost of handling, which would be a small item.

"So put it down that this absence of publicly owned warehouses has and will increase the cost of living over and above what it should be.

"Again, the high cost of living could be reduced by enlarging the activities of the pacel post. Weight allowances are now too small. The zones are also too small for such wide market areas as are to be found in the United States. By enlarging the weight maximum and increasing the size of the zones producers and consumers would gradually be brought closer together, to the detriment of no one but the unnecessary middleman. Of course not all middlemen are in this class. But there are enough of them to seriously raise what should be normal prices.

"Then again, consumers are to blame. Many are ignorant, and more are indifferent to that economy which adds to the wealth of individuals as well as to society. The poor want the best, which in itself is not bad for business; but it sadly interferes with social economy if each one declines to take out of the market some of the inferior cuts of meat, for instance, or refuse to burn anything but the most expensive kinds of fuel."

Farmers Ignorant of Cost

Mr. Schmidt considers the average farmer a poor bookkeeper, a bad financier, and very ignorant of the cost of the things he sends to market.

"Not one farmer in a thousand knows what it has cost him to grow the grain he is sending to market" said Mr. Schmidt. "He does not know what it is costing him to feed his cattle. He does not know that he cannot sell eggs for less than 80 cents a dozen, in Michigan, if he charges against the cost of the eggs the market price of the grain the poultry eats. He does not know the real reason why hens do not lay in winter, when, under proper conditions, they will be as prolific in winter as in summer.

"He refuses to take advantage of the experiences of others in so manipulating the soil that crop failure is almost impossible; and this refusal arises more from mental indolence, not to say laziness, than from any other one thing. In this neighborhood are small farmers who are making good; also in this vicinity are better located farms in regard to natural soil fertility, who are going back, and who must eventually sell at a loss or abandon what little they have accomplished in the way of improvements.

"A famer ought to have the very best stock in the market, because it pays best. It costs no more to feed a good blooded animal than it does to feed a scrub. The same care will bring both to maturity; one will sell such farms everything is shipped away and nothing is returned to the soil."

A Great Co-operative Enterprise

Mr. Schmidt's farmin gactivities are operated on the co-operative plan. He supplies the land, the 40 or more buildings in use and the active capital. He gives to the heads of his departments 25 per cent of the profits and another 25 per cent is divided among the rest of the employes. The remaining 50 per cent is his share out of which must come interest on capital investment and such overhead charges as cannot be charged against the business.

This is a new arrangement between Mr. Schmidt and his employes, so there is no data which can be taken as a basis for prophesying the ultimate results. However, as these employes receive the very highest wages given to any similar body of farm hands in Michigan, should there be a deficit instead of a surplus they would have nothing of which to complain and the loss would fall entirely on Mr. Schmidt.

A job nurser on these farms gets no encouragement from his mates for his laziness would cut into their profits. Therefore a "foreman" in the sense of needing someone to watch and keep the men to work is a superfluity which has been eliminated. Each man must keep up his end, or he is practically "fired" by his fellow employes.

As a result the fields are ployed and planted when they should be and also in a workmanlike manner. The hay and grain are harvested promptly, so that there is no needless waste from the unpropitiousness of the weather. The cattle receive the best of care, for the men are looking after their own interests. In a word, it is a co-operative partnership which safeguards the interests of all.

A fine specimen of the Elk on the Schmidt Farm

To add to the close relationship between employer and employes, a dance is held in the farm club house every Saturday night, in which all are on a democratic equality, and all participate in the dancing.

There is also on Serradella Farm a public school, the 16 pupils being all from families the heads of whom ae employed by Mr. Schmidt.

The Right to be Happy

"Give me a thought to take away with me," I said jokingly to Mr. Schmidt, after a four days' visit. I had roamed at will over fields covered with a good turf, through buildings for housing the cattle but from which the usual smell accompanying such use was absent, and along forest paths leading to Lake Huron; and I had been taken around the country along the shores of Van Etten Lake and the AuSable river and over the jack pine plains.

"Fiddlesticks," Mr. Schmidt replied. "I'm no dotage philosopher. My joy in living comes from doing things the 'other fellow' is afraid to tackle. One has the right to do that which will bring to him and his fellow men the greatest happiness; and it is inconceivable that happiness can be obtained by injuring others."

The chauffeur tooted his horn, and I jumped into the waiting coupe as the individualist co-operator waved me a genial adieu.

Cedar Lake, Pingree Point in the distance. Abounds with Fish and is the resting place of great numbers of ducks.

Production of Fertilizer for 1920 Likely to be Short of Demand

By W. D. HUNTINGTON,
President, National Fertilizer Association.

THERE is at the present time an apparent shortage of fertilizers for the spring of 1920, due largely to the following reasons:

The strike in the phosphate rock mines in Florida for a considerable period of time this summer and early fall, was one of the most serious things that the fertilizer industry has had to contend with. Florida supplies the bulk of phosphate rock used by manufacturers in the East, and the strike resulted in a complete tying up of practically all of the mines, and while the strike today is technically over, none of the mines is as yet producing full tonnage. During the strike the laborers scattered, most of them finding employment in the citrus fruit section, and many have not yet returned.

On account of this shortage in production it has been necessary for manufacturers to buy hard rock, which formerly was only mined for export shipment, and use it in their production of acid phosphate, resulting in a very much higher cost.

The strike in the Spanish pyrites mines, and at the port of Huelva, Spain, has greatly curtailed the shipments of pyrites to this country, and has made it necessary for many manufacturers to go back to brimstone again, with the resultant high cost for their sulphuric acid. The reduced production has added to the cost of overhead charges per ton, and the cost of labor is considerably higher than it was when the armistice was signed.

These conditions have resulted in making the cost of acid phosphate considerably more than it was last spring.

In connection with the raw materials for complete fertilizers, the manufacturers are considerably worried over the probable shortage in the supply of potash, which certainly will not be anything like sufficient to supply the demand that is already evidenced from the orders that are being placed. The promises of shipments from Alsatian mines, as well as Germany, will not be carried out, due first to a strike in Alsace which lasted about ten weeks, and second, to a lack of fuel for use in concentrating potash salts; third, to inadequate transportation facilities. Manufacturers report that they are receiving again orders for brands containing 6 8-10 per cent potash, but such brands cannot possibly be supplied this year.

The supply of sulphate of ammonia will be very greatly reduced because of the coal strike. This had resulted in an increased demand for nitrate of soda, and of course, as is always the case, the price has advanced considerably. Nitrate of soda is being offered today by the importers at a much higher price than it was purchased for three months ago.

The other ammoniates, such as tankage and cotton seed meal and fish, are extremely scarce, due, I think, more to the fact that a very large percentage of all of these articles is now going into food for cattle, which formerly was only used for fertilizer purposes.

There is no question but what the fertilizer manufacturers are today confronted with far more serious problems than with anything they had during the war, but every possible effort is being made to keep up the production to the highest possible point.

My own personal opinion is that there will be a considerable shortage in production throughout the eastern part of the United States for the spring 1920 as compared with the spring 1919, and because of the high price of cotton and other farm products, I do not believe there is any question but that the demand will be at least ten per cent greater than it was last year. This is a most unfortunate situation coming at a time when the cost of living is terrific, and can only come down by increased production so that the supply will be equal to, or greater than the demand.

I have only recently returnd from abroad, where I spent three months in England and on the continent, and as a result of my investigation I find that there is a world shortage of acid phosphate, and that the situation over there is far more alarming than it is here; for they have practised more intensive cultivation than we have, and are absolutely dependent upon the use of large quantities of fertilizer per acre. I am quite confident that the shortage in Europe, outside of Germany, Austria and the Balkan States, will be at least one million tons of acid phosphate for the year 1920.

Nation's Feed Situation Transformed by War

Cereals Devoured by Interests Making Explosives; Readjustments Needed to Benefit Breeders

By R. W. CHAPIN, Pres. of Chapin & Company

(From his address to Mich. Breed convened at East Lansing last week)

THE FEED situation means to those who are present today—the available supply of dairy feeds, and the probable course of the market.

The Amercian dairyman was somewhat fortunate at the beginning of the war, because there was a very plentiful supply of dairy feeds. Prior to 1914, probably 1-3 of the cottonseed meal production was exported, somewhere around 700,000 to 750,000 tons. About 1-3 to 1-2 of the cottonseed meal production usually went into the manufacture of fertilizers in the south. The rest, amounting to anywhere from 1-6 to 1-3 of the crop, or some 300,000 to 700,000 tons, was estimated as being used to feed domestic animals in the United states. Quite a large proportion of this went to feed beef cattle, especially in the southwest and west.

In 1914, the south was suddenly threatened with no market for either cotton or cottonseed products. They could not look ahead and see that cotton was bound to become one of the most valuable commodities we could raise—and that it would treble in price. Germany and Scandinavia were our chief customers for cottonseed meal. When all ocean commerce with them was suspended, the price of cottonseed meal immediately slumped. It could be bought at a very low figure—even cheaper than cornmeal. Very soon this situation righted itself, and cottonseed meal went up. Just because it was cheap, everybody started using it.

Another situation arose that may never be repeated. The amount of explosive needed in modern warfare is almost beyond belief. For every pound of smokeless powder, it is said two pounds of alcohol are required to make it. All the distilleries in Europe were not able to make alcohol enough at the beginning of the war to take care of 1-10 of their consumption, and they were forced to call on the United States, which had a very large capacity which had never been fully used. The result was that every distillery in the United States had all the orders it could take care of to run continuously for several years. This took an enormous amount of corn, and all the molasses that could be obtained. It is probable that distillers used up in a single year close to 720,000 tons of corn, which, expressed in bushels would be about fifty-six million bushels. Possibly, more than this was used. In any event, there was production close to 20,000 tons per month of that valuable dairy feed known as corn distiller's grains. The result was that we had an abundance of good dairy feeds for several years.

As we got into the war ourselves, we ran short of nitrogen for powder and other purposes, and this hit the fertilizer trade, who could not get enough Chilean nitrate, and were therefore forced to use more cottonseed meal. Cottonseed meal was under regulation, and the price was put so low that it was the cheapest fertilizer material available. Regulation is quite apt to rob the cow when she is not given an opportunity to pay up for what she needs on account of a fixed price and no chance to bid.

This turning of so much dairy feed into fertilizer was felt in the shape of higher prices for dairy feeds. They started to go up in 1917, and have gone up nearly $20 a ton since that time; at least, the high protein feeds. Our Allies were soon able to build up enough distilling capacity to make their own alcohol, and the distilling of corn was practically stopped about a year and a half ago. What alcohol we needed toward the end of the war, we were able to make out of molasses. This put the price of molasses up to a very high figure, around $40 per ton, but at the same time, we had a short crop, and corn sold at over $2 per bushel.

It is well to look over our production and supply of dairy feeds, and we can better understand the causes of the present scarcity and reason for some of them being out of line with our old standby—corn. In former years, corn being our chief animal food, it always had a profound influence on the prices of all other feeds and grains. A chart showing the price of bran for the past ten years until we got into wartime regulation would show that the bran price followed the corn price very closely all this time. Sometimes it was a little below and sometimes a little above. These two feeds are not necessarily interchangeable—certainly, corn has a very much greater feeding value than bran, but the close relationship between prices shows there must have been some reason for it that we do not understand.

Our production of wheat mill feeds—bran and middlings—while it has increased each year with the population, has not increased very considerably, because, in years gone by, we grew a great deal more wheat than our population consumed, and exported the flour so that this gave us plenty of mill feed. For every addition to our population, we need more cows to give them milk and butter, as well as other dairy products. The cow population has increased faster than the feed production. Wheat bran is one of our chief dairy feeds, even more necessary than middlings. Middlings is quite largely diverted to the feeding of swine. Quite a little goes into poultry mashes, and a large amount of it is fed to young stock. It is safe to say we have a production of about three and a half million tons of bran and one and a half million tons of middlings and feed flours.

When we had such a bumper wheat crop year before last, we exported a large part of it, and did not increase our milling so materially. The bran situation during the war was a great source of trouble, and much bitterness. This was due to the fact that it was regulated or controlled. Whenever man tries to regulate prices, he nearly always makes a mess of it, because prices have to regulate themselves. Where prices are regulated by agreement between the producer and consumer, there is less trouble, because adjustments are made from time to time to meet the actual conditions, and give both sides a square deal, but when an arbitrary price is put on any commodity, it is against all the experience of mankind, and no good can come of it. Regulating prices does not increase the quantity one bit nor does it produce any equitable distribution. This country is too big to have bread cards, meat cards, or feed cards, so that every man should get his just quota. The card system was a failure in every country that tried it, and fortunately, we did not try it.

The dairyman needs bran worse than any other animal husbandry man and could afford to pay more for it because the dairy cow does need a bulky ration to prevent impactions where she is fed so many fine feeds like meals. Since the earliest days farmers have lightened up their meals with bran, which the most desirable way to feed it, though when they could get them, they used other bulky feeds, like distillers and brewers grains, and sometimes beet pulp, oat hulls, and other coarse materials.

The increase in the number of dairy cows as shown by the census which now reports about twenty-three million cows, does not tell the whole story. The cows are getting bigger and better—they produce more and they eat more. They are being fed better rations and they need more dairy feeds, such as bran and the protein feeds. The per cow production of bran, however, has gone down. This does not mean the cows are getting any less bran per head, but there is not enough available to feed them all. It is true a large part of our cow popoulation is in the west and in some sections only summer dairying is practiced, and pastures, with a little farm grains, is about all the cows get. Dairy cows farther east, where they have pure bred and good grade cows, have to be fed the year around, for both summer and winter dairying.

To return to our supply of feed, our average production of cottonseed for the past ten years was about twelve million bales. This would ordinarily give us two million tons of cottonseed meal and cake. The last crop is below the average, and is variously estimated at between ten and eleven million bales. This would mean a decrease of about two hundred thousand tons of cottonseed cake. This is not all. Texas produces about 40 per cent of the cotton crop. Texas had very bad weather at the time of maturity, and a large part of the seed was damaged. Some of the other southern states also had excessive rains and their crop was badly damaged. The meal from damaged seed will mostly have to go into fertilizer although some of it will be fed from necessity.

Our flaxseed crop has been steadily going downward. Flaxseed is grown in the northwest, chiefly as a first crop, to break up the soil. The largest crop of flaxseed we ever raised was twenty-six million bushels. Our normal requirements at the present time are not less than twenty-one million bushels. This year's crop was estimated by the government to be ten million bushels, and by the linseed crushers, who have been good crop reporters, at somewhere between six and eight million bushels. A twenty-six million bushel crop would produce about 500,000 tons of linseed cake, and a ten million bushel crop only about 200,000 tons. This means that we will have to draw at least ten million bushels of flaxseed chiefly from the Argentine, although some of it can be had in Canada. Flaxseed that comes from the Argentine is naturally crushed at our seaports, and to bring the resulting meal or cake into the middle west is very costly, as freight rates are very high.

In normal years, a large part of our linseed meal and cake was exported, 3-5 of it, on a normal year. Within the last few years, linseed meal has come to be more appreciated at home, and instead of shipping millions of dollars worth of fertilizer material and food to Europe, we are inclined to keep it at home and save the fertility and get the results from the feed.

You can readily figure that with this small production of linseed meal not half of the cows in the country can get a smell of it. Moreover, a great deal of it is fed to horses, steers, sheep and young animals.

Our fourth largest protein feed is Corn Gluten Feed—a by-product from the manufacture of starch and corn syrup. It resembles distillers' grains very much in its composition, except that it is made by a different process and does not taste the same or exactly the same when fed. Our production of gluten feed is ordinarily about 600,000 tons a year. It is increasing rapidly, due to the enormous demand for sugars and sweets of all kinds. During the last year, one large starch factory was destroyed by fire—another company had a very bad strike for 40 days, and the production of gluten feed was cut down just when we needed it most, by an amount somewhere between 80,000 and 100,000 tons at least. This may account for the change in the relative price of this feed, whereas last year, gluten feed sold at $15 under corn, right now, it is $15 over, but no one can say an article is worth what it can bring, or that a protein feed may not be worth a good deal more than the grain of which it is made. It would take 300 pounds of corn to supply the protein found in 100 pounds of gluten feed, and we can't feed dairy cows very well on corn and oats. It is better to take out the starch and feed the protein part to the cow for a certain part of her ration.

It was estimated by the Chicago *"Price Current"* that there is, this year, compared with last, (and by that, they mean the current year from summer to summer,) a shortage of one and one half million tons of protein feeds, which would figure out about as follows: 600,000 tons of brewers' grains, 240,000 tons of distillers' grains, and the remainder in linseed and cottonseed meal, malt sprouts (of which there was annually made approximately 75,000 tons) and cocoanut meal, (which was a war production, and which is no longer made to any extent, at least, not right now.)

With this great shortage in protein feeds, the relatively high price of them can be explained. For the past five or six years, protein feeds did not, as a whole, taking an average of all kinds, cost any more than corn and oats. Right now, corn and oats are relatively cheap, especially on the farm, the average price, taking the country over, would be not to exceed 80c for oats, which is $50 per ton, or $1.40 for corn, which is $50. These are wholesale prices or selling prices. Protein feeds cost all the way from $70 to $85 wholesale and more at retail.

One dislikes very much to be thrown into a discussion on political economy, for it is a very dry subject and one on which authorities do not seem to agree, but everyone must admit that prices have come up and money has gone down. The production of money all over the world is only limited by the capacity of the printing presses that make it. There is, at the present time, three and one half times as much money, mostly paper money, in the U. S. as there was four years ago. Money is only a convenience in bartering. We could, if we had to, get along without it, but it would be very clumsy. What the farmer is most concerned about is—are his prices on a line with other prices of the things he most needs? There are always some discrepancies, of course. There are times when a hog sells for less than the market value of the corn that was fed to him. There is no fixed law that 100 pounds of milk should buy 100 pounds of dairy feed, although this has been about the rule that has prevailed during the last ten years

(Continued next week)

Protein Feed for Cows

PROTEIN FEEDS PRODUCED PRIOR TO THE WAR		24,000,000 Cows Per Cow
Cottonseed Meal	1,500,000 tons	130 lbs.
Linseed Meal	400,000 tons	40 lbs.
Gluten Feed	600,000 tons	60 lbs.
Wheat Bran	3,000,000 tons	260 lbs.
Middling and Feed Flour	2,000,000 tons	150 lbs.
Cocoanut Meal	60,000 tons	6 lbs.
AMOUNT OF PROTEIN FEEDS ACTUALLY USED PER COW PER YEAR, 1919		**Protein Per Cow Per Year**
Cottonseed Meal	65 lbs.	26. lbs.
Oil Meal	25 lbs.	8.2 lbs.
Gluten Feed	50 lbs.	12.5 lbs.
Bran	210 lbs.	31.5 lbs.
Middlings	75 lbs.	11. lbs.
Cocoanut Meal	6 lbs.	.12lbs.

Reports of World's Crops Show Huge Shortage

Figures Give Interesting Comparison Between Production per Acre and Total of World's Principal Agricultural Countries

WHAT DO you know about the sum and total of the world's crops? Very little, you will have to confess. And yet you must admit that it is just as much to your finanial benefit to know the annual supply of food as it is for the manufacturer of automobiles to know the annual supply of machines. After several years of indifferent success in governmental regulation of food prices we are more thoroughly impressed than ever with the fact that supply and demand DO regulate the prices of the products you grow on your farm, to a very large extent. The speculators may speculate, and the bears and bulls may raid the markets, the prices of minor crops may successfully be controlled, and the prices of the major crops for a time held in check, but by the end of the marketing season, the inexorable laws of supply and demand make themselves felt as the final barometers of trade.

Agriculture has groped for centuries in the dark, never knowing from one season's end to another what the season might bring forth. Crops have always been sold in almost total ignorance of the price the consumer would have to pay. "Better a half a loaf than none," has been the motto of the farmer, who has taken his crops to market in fear and trembling lest he might not receive for them what his labor and investment would entitle him to have. He considered himself fortunate if he received that price, and put it down as merely back luck if he were obliged to accept less. But the twentieth century farmer has come to the conclusion that the profits and losses of farming need not be left to the whims of chance. He believes that more losses are sustained from inadequate market price than from inadequate production, and since production cannot be entirely controlled by man, the losses thus sustained must be passed on to the consumer. So it is to the adoption of a national and perhaps later an international plan by which the supply of food products can be approximated from year to year, and the distribution so arranged, and the market price so regulated that the greatest number of farmers may receive a fair profit for their goods at the lowest possible prices to the consumer.

The Bureau of Crop Estimates of the U. S. Department of Agriculture has spent many years in the organizing of a crop reporting service which could give to the farmers some idea of the estimated production of farm crops. The International Institute of Agriculture has done wonderful work along this line, and the country, of which the annual estimated production of farm crops is not known to this institute is hardly worth reporting. But commendable as has been the work by these two great crop-statistic gathering bureaus, it is still crude and far from comprehensive. Moreover, a serious question exists as to whether the general public should be appraised of the annual production of crops any more than of the annual production of clothing, automobiles, steel rails, etc. There is a question as to whether this is not a matter that is solely the concern of the farmer, who, like other manufacturers must receive a fair profit over cost of production if his business is to thrive. But in the absence of any means provided by the farmer for the purpose of gathering these crop statistics for his confidential benefit, such efforts as have been made by governments along these lines are to be heartily commended.

As a national organization of farmers, the Farm Bureau is calculated to perform this function eventually. The only reason why farmers produce crops in excess of the world's needs, is because they each and individually are ignorant of what crops their fellow farmers are producing. Were there a national organization through which every county in the state of Michigan could be kept advised of the crop plans of every other county, who would say that a great deal of the frequent over-production of this crop and the under-production of that crop could not be largely eliminated. We assert that were every acre in the United States producing the crop best adapted to it that crops would be produced in more even quantities, and the excess or under-supply of the consumers's needs would become so slight as to be scarcely noticeable and would have no material effect upon the market price.

Below are a number of charts showing the estimates of the U. S. Bureau of Crop Estimates and of the International Institute of Agriculture, of the world acreage and production of wheat, oats corn, rye, barley and potatoes. They are not complete, but enough figures are given to enable the average farmer to make intelligent comparisons between the crops for the three years mentioned, and to determine therefrom what the demand and price may be expected to be on the balance of the 1919 crop. The report shows a shortage of wheat, oats, rye and barley, but a considerable surplus of corn. Things to be taken into consideration in examining the figures are the difficulties now being experienced by the export trade, such as lack of ships, high rate of exchange, Europe's poverty, etc. Our conclusion from a review of these charts is that materially higher prices are in prospect on all these crops with the possible exception of corn. Some independent reporters claim that the government's figures on corn are too high in which case there is better than an even chance that corn prices will be higher before another crop.

Note the much higher production per acre in foreign countries than in the United States. The average yield of wheat in this country for 1919 was, for instance, about 13 bushels to the acre. In Belgium it was 30, Denmark (1918) 40, Germany (1918) 25. The average yield of potatoes in the United States for 1919 was about 90 bus. to the acre. In Canada it was 130, Belgium 250, Germany (1917) 200, Netherlands 275. On nearly all other crops the yield in the United States compares favorably with the yield in other countries.

The present chaos in Russia makes it impossible to gather dependable statistics of that great country's crops, but it is sure that none of the Russian provinces have produced more than sufficient for domestic needs. Russia is, therefore, out of the reckoning for some time to come as an export nation.

The figures in these tables are taken from original reports published by the various governments, from the International Institute of Agriculture, and from other sources that quote government reports.

The years given here are those during which the harvests take place. In the countries marked with an asterisk (*) the harvests extend from the end of one year to the beginning of the next year and for these countries the years are 1918-19, 1917.

CURRENT AGRICULTURAL NEWS OF THE WORLD

GRINNELL9

CALHOUN COUNTY ANNUAL FARM BUREAU MEETING

The big court room in the Marshall court house was filled with eager farmers on Saturday, January 10. Every man and woman present was talking organization. All were anxious to hear about the progress of the Farm Bureau campaign. The meeting was the best represented farmers' gathering ever held in Calhoun county. People came from every township ready to do their part in perfecting the organization.

County Agent, Paul C. Jamieson read his annual report, which showed that a great deal of progress had been made in the development of the Farm Bureau organization, and that a successful, constructive program of work has been completed.

Mr. Williard Cribbs, of the State Market Department, explained the methods employed by the Michigan Potato Growers' Exchange in selling farm produce and in purchasing supplies. He told of the wonderful possibilities of the Farm Bureau in solving our market problems. Dr. W. W. Deihl, the father of the great Illinois Agricultural Association, spoke of the wonderful field open to the Farm Bureau in marketing, in legislature and in education. Secretary, C. A. Bingham, of the Michigan State Farm Bureau, related some of his experiences with the old Farm Bureau, and told of the development of the New Farm Bureau which is gaining the support of thousands of farmers throughout the state. Dr. Eben Mumford, state leader of County Agents, awakened everybody to the realiziation of the great need of a strong, active farmers' organization which will work for the farmer's interests in every branch of the agricultural business. Dr. Eben Mumford said that we must organize and make agriculture a desirable and profitable occupation for the young men of our country or our farms will be owned by peasants who are willing to put up with poor conditions and a poor living.

Mr. Paul C. Jamieson, county agent in Calhoun county, enthused the crowd with the idea of getting behind the organization with a fighting spirit to win and to stick together. He said that Calhoun county should get 1,800 members. His call for volunteers to drive the canvassers from farm to farm brought sixty-five men to the front. Some townships are ready for business now with practically no preliminary work necessary. The farmers of Calhoun county are certainly to be congratulated in the way they are taking hold of the Farm Bureau organization work.—Paul C. Jamieson, County Agricultural Agent.

OVER 15 MILLIONS LOANED TO FARMERS IN DECEMRER

During the month of December, '19, an aggregate of $14,281,625 was loaned to 4,267 farmers of the United States by the Federal Land banks on long-time first mortgages according to the monthly statements made to the Farm Loan Board. The Federal Land bank of St. Paul leads in the amount of loans closed, the same being $2,344,800, the Federal Land bank of Houston following with $2,239,505. The other banks closed loans in December as follows: Spokane, $1,660,200; Louisville, $1,381,000; Omaha, $1,087,100; Columbia, $1,017,900; New Orleans, $1,015,150; St. Louis, $908,770; Wichita, $736,200; Berkeley, $712,500; Springfield, $652,900; Baltimore, $525,600.

On December 31, 1919, there were operating in the United States 3,923 farm loan associations. The total mortgage loans made by the Federal Land banks through these associations to 111,131 farmer-borrowers as of that date, amounted to $296,386,496. During December 7,484 applications were received asking for $28,913,802. During the same period 6,435 loans were approved, amounting to $21,411,365.

The grand total, as above, of loans made is distributed within the Federal Land bank districts as follows:

St. Paul	$39,834,900
Spokane	39,270,420
Omaha	37,942,490
Houston	33,647,906
Wichita	25,333,600
St. Louis	23,223,110
Louisville	21,317,700
New Orleans	20,563,530
Columbia	16,030,495
Berkeley	15,713,300
Baltimore	11,959,400
Springfield	11,549,645

Up to December 31, 1919, interest and amortization payments due by borrowers to the banks amounted to $16,825,073.07. Of this amount all but $233,904.07, or 1.4 per cent had been paid, and of this sum $115,499.71 represents installments which had only become due during the month.

Standish Condensary Closed

The directors of the International Milk Products Co. have decided to close permanently the Standish branch and have directed their local manager, C. E. Lonsberry, to stop buying milk after Jan. 15. The local plant will be dismantled and moved to Bad Axe where the company already has a large factory. Mr. Lonsberry will be transferred to Bad Axe. It will take four to six weeks to dismantle the local factory after operations cease. Efforts will be made to induce another condensary to locate here.

New County Agent in Antrim

A committee composed of Supervisors Frank Shepherd, of Star, Frank Lesher, of Mancelona, and William Chapman, of Custer township, has engaged the services of L. L. Drake, of Traverse City, as Grand Traverse county farm agent to succeed W. C. Cribbs, resigned. Drake has been in charge of the state asylum farm at Traverse City for several years.

Canadians Invent Flax Machine

A demonstration of a new flax seeding machine, the invention of Messrs. F. W. and F. L. Van Allen, drew an interested crowd of spectators to the John East Iron Works, Seskaton, Canada. The machine, which has been designed for the commercial more than the agricultural end of the flax industry, was operated and explained.

In the opinion of a number of experts who were present at the demonstration, it has successfully overcome the one great drawback of previous flax deseeding machinery, inasmuch as the fiber passing through the machine is not broken up and comes out with all the heads threshed and the stalks straight. It has been built for the linen trade and when taken into use by the manufacturer will do away entirely with hand threshing, which is the means of deseeding flax at present.

By the use of this machine the labor of six to eight hand threshers is accomplished in the same time.

China Co-operative Association

The Annual Meeting of the China Co-operative Association, which was was held at the Gleaner Hall in China township showed that a large volume of business had been done during the past year and that the saving which the organization brought about has led to a steady increase in membership. County Agent Brody was present and suggested a few changes in the by-laws with a view to extending the usefulness of the association. All of the old officers were re-elected as follows: President, Fred Allington; vice-president, Orville Lindsay; secretary,-treasurer Carl Eisen; member of board of directors, Carl Greenberg.

Shelby Market to Expand

Shelby's marketing facilities are to be considerably increased during the coming season by the addition of two large warehouses. Hardin Near is to build one for his seed potato business on the site of the old basket factory warehouse. This will give Mr. Near an L-shaped building about 100x50 feet which is to be of frost-proof construction with capacity of many cars of potatoes. Mr. Near has developed a potato similar to the Petoskey or russet rural which is yielding from 175 to 300 bushels an acre.

The Shelby-New Era Co-operative Association is to build a large warehouse on property purchased from C. E. Butterfield, fronting on Second St. and extending along the railroad siding north. Although this is an infant organization its success in co-operative marketing during the last year requires this outlay to expedite its business.

This association handles nearly every product of the farm. Shipments of peaches, apples, potatoes, stock and other farm products having been made this year in carload lots and sold in connection with a central association located at Cadillac.

Constructive Criticism by a Genesee County Farmer

Lennon, Mich., Jan. 14th, 1920.

To the Editor: Despite the fact that Secretary Bingham of the Michigan State Farm Bureau came within the narrowest margin of taking all the "kick" out of that organization in this state when he announced that the Bureau must keep out of politics, I am glad to see that it still lives. I think the farmers are fully aware that all that is necessary to keep up the intolerable conditions under which the farmer's are living is "to keep out of politics." The farmers of Genesee county in large numbers have joined the Farm Bureau. I joined the organization myself and I am ready to boost for it just as long as I am certain that it is working for the interests of the farmers, first, last and all the time. The fact that farmers have signed up as members of this organization, which as yet seems to have no definite policy or platform, is conclusive proof that the farmers of Michigan have at last firmly resolved that they are going to work with might and main as one man to throw off the yoke which has throttled them so long and which well nigh threatens the very extinction of the American farmer. To any who may be suspicious that the Bureau is the work of a master mind who has conceived a great scheme for the painless extraction of the farmers' teeth, I will say that their fears are entirely unfounded. Judging from the calibre of the men who have joined the Bureau in the counties which have been canvassed there is no danger of the Burau going wrong. The executive officers of the Bureau will be put to the test and if they have formed any entangling alliances they will be relegated to places where they belong. I would like to see the slogan of the Bureau "Cost of Production Plus a Reasonable Profit for the American Farmer."

The attitude which MICHIGAN BUSINESS FARMING has taken toward the Farm Bureau is most admirable and you have cleared the atmosphere in a clean cut and forceful manner. Keep up the good work.

Yours truly,
PETER B. LENNON.

Peter Lennon is both a good lawyer and a good farmer. He was a member of the last legislature and made a valiant fight in the House to save the warehouse amendment from being harpooned by its enemies. There is never any question where Peter Lennon stands on farm questions. It is the presence of thousands of such farmers as Mr. Lennon in the county farm bureaus that gives us an abiding faith in the final triumph of the movement.—Editor.

REMUNERATIVE PRICE IS SOUGHT BY PICKLE GROWERS

Pickle producers of Fruitport and adjoining townships have organized the Fruitport Pickle Growers' Association for the purpose of protecting and promoting their business, social and economic interests.

Much enthusiasm is being shown by the members, and the movement is spreading rapidly.

The members expect to derive great benefit from the organization and point to the advantage of similar organizations in other parts of thhe state.

Where such organizations are being organized we will be glad to render all assistance possible, and any communication directed "Secretary of the Association" will be given prompt attention.

President: A. Berson, Fruitport, R1
Sec'y:-Treas. G. L. Colburn, Fruitport, R 1.

Following is an item of cost account based on careful estimates and records kept on last year's crop. The figures plainly show that the present price of $2.50 per cwt. will not cover cost of production.

Cost of the care and the delivery of the pickles from one acre of ground:

Rent of ground,	$ 10.
Plowing ground,	5.
Fitting, drag and disc,	7.
Manure spread (16 loads at $3),	48.
Manure in hills (6 lds at $3)	18.
One day spreading with team ,	6.
One day manuring hills, team	6.
Planting pickles (2 day's labor)	4.
One day cultivating (for season)	6.
Thinning and hoeing (4 days)	16.
36 days picking at $4,	144.
Delivering pickles, 36 trips at $1,	36.
Total cost of production,	$306.
Average yield, 1st grade, 150 bu at $1.25,	$187.5
Average yield, 2nd grade, 50 bu., at $ .40,	20.
Total receipts,	$207.5
Total cost,	$306.
Total receipts,	207.5
	$99.50

actual loss by following reasonable wage and a fair price for the manure.

St. Joseph Co-Op. Men Meet

The Three Rivers Co-operative Association held its annual meeting recently and unanimously voted to branch out into other lines of business directly related to the business of the farmer. Plans for this will be completed at a later meeting.

Since the organization was perfected a year ago the association has shipped 2,351 hogs, 762 sheep, 250 calves and 231 cattle—41 carloads valued at over $100,000.

James P. Rogers, manager of the Bangor Co-operative store, gave an address on the workings of their organzation and benefits to the community as well as to the farmer. He emphasized the point that the business which went to mail order houses largely would be diverted to the co-operative store. He stated that the Bangor store is paying members of the association 2 per cent dividends.

Million Dollar Farmers' Organization

A meeting of the stockholders of the Gleaner Clearing House Association will be held early in February at which time the capital stock will be increased to one million dollars. We believe this will give Michigan the largest co-operative enterprise in the United States. A large number of elevators now owned and operated as individual plants have asked to come in with the Gleaner line; and the rapid expansion in other lines has made the increase in capital stock necessary.

Caretakers Pay Fare

The Railroad Administration's ruling cancelling the practice of permitting caretakers to accompany straight carloads of live poultry free, which became operative Dec. 30 has stirred up quite a protest among the trade.

By This Trade-Mark

You Will Know This Better Lubricating Oil

Motor performance depends largely upon the quality of the lubricating oil used. Faulty lubrication means friction. And friction means wasted power and wear of parts.

In aeroplanes, automobiles, motor boats, tractors, trucks and engines, En-ar-co Motor Oil has proved its case. The thousands upon thousands of never changing users bear testimony to the unvarying quality of this Scientifically Refined oil. And its certain protection against friction and carbonizaton.

Look for the trade-mark shown in this advertisement. It is your guarantee of motor oil satisfaction. Try En-ar-co Motor Oil, and other En-ar-co products once. Then you will know the difference. Write us if your dealer cannot supply you.

All En-ar-co Products Excel

White Rose Gasoline — clean, uniform, powerful. National Light Oil for Tractor fuel, also best for lamps, oil stoves and incubators. En-ar-co Motor Grease for transmissions, gears and differentials on motor cars and tractors. Black Beauty Axle Grease for wagons. Always look for the En-ar-co trade-mark!

Auto Tour Game FREE!

This coupon will bring you FREE the fascinating En-ar-co Auto Tour Game, in which autos compete in a cross country race (not a road map). Two, three or four can play it. Just the game for those cold winter evenings. Send in the coupon NOW.

The Spellbinder

By Octave Thanet

Author of "The Man of the Hour," "The Lion's Share", etc.

(Copyright, Bobbs-Merrill Co.)

(Continued from last week)

THE MAN who came out of the room was young, slight of figure and limped. Nevertheless there was nothing of dejection in his bearing or his face. He was freckled to a degree, smooth-shaven and his teeth were beautiful. He had fine eyes also, a deep blue, flashing like steel as they moved from one object to another. The eyes were keen, alert, and determined; but being set rather wide apart under his light brows, they gave the face a candid, almost artless, look, and when he smiled the deep dimple in his cheek made it as merry as a child's.

"Good evening, gentlemen," said he cheerfully. No one responded. Robbins made a gurgle in his throat, which the newcomer generously accepted for salutation, promptly approaching the fire at Robbins' elbow.

"Cold weather," said he. Two or three of the company lifted their heads and eyed the speaker. Robbins wondered were they as keenly conscious as he of the young fellow's trimly fitted clothes, what good quality that rough plaided brown stuff was, how dainty was his linen. He looked at the home people's ragged coats, he thought of the poverty that he knew, and the reflection of a sneer was on his own lips, and, somehow, a lump in his throat.

"Too cold weather for folks to travel unless they're wanted bad!" said the gray-haired man on the edge of the company. There was a thrill of some strong feeling in his deep voice.

"It does seem that way," agreed the young man with undiminished vivacity. "I am glad to get to a shelter.

"Here, Johnny," said the young man, "run up to twenty-five and fetch me the bag there, the black one. If we are to drink to our business, I want you all to join. You are all interested, I take it?"

The boy whom he had addressed, the landlord's son, a lad of twelve, had been busy staring at the stranger ever since he entered the room. He ran away, but as he ran could not restrain himself from flinging one or two glances back over his shoulder.

Not seeming to recognize any chill in his reception, the young stranger approached the stove. No one moved to admit him to the inner circle; this, also, he did not seem to observe. "This whole country looks as if you had been having hard times," he continued. His voice had full, rich, magnetic tones, but its unfamiliar intonations jarred on his hearers, they knew them to belong to the east, and they hated the east. "It's pretty sad to ride through miles and miles of farming country and see the burned fence posts that caught fire from the cinders just lying where they fell, and the smoke not coming out of one farm house chimney in six. It looks as if the farmers out this way had simply given up the fight."

"You've hit it," said the mild-eyed man; "they have. Some of them have moved away and some of them have killed themselves, after they've lost their stock on chattel mortgages and lost their land to the improvement company. There ought to be lots of ghosts on these abandoned farms and in those homes where the fences are down. This country is full of ghosts. We ain't much better than ghosts ourselves."

"It was the three dry years, I suppose."

"That and the mortgage sharks and the Shylocks from the east," old Captain Sparks interrupted in a venomous tone; "what pickings the drought left they got."

"Pretty tough!" said the stranger, declining the combat again. "There's one man I want to meet here; his name is Russell—Doctor Russell."

The mild-eyed man explained that his name was Russell; the other men looked puzzled and suspicious. "What's his little game?" whispered the captain. "It won't go, whatever it is," said the man next him. Robbins heard question and answer distinctly; but the young fellow near him did not wince. "Are you the one that wrote to Fairport, Doctor Russell? I guess you must be."

"Yes, I wrote to Fairport," said Russell.

"Well, I hope you liked the barrel we sent, and the boxes. They were going to send them to another place, but your letter decided us. That's my church, you know, which sent them. And, for that matter it was your letter first turned my father's attention to investing in your part of the country. Oh, tell me, where did that tea go? My mother would send her best London mixture—"

"Was it your mother?" Robbins spoke. With a red face and a flash of his eyes at the sullen group about him, he withdrew his chair, making a clear passage to the stove. "I'd like to thank her then, and her son for her; that tea and that quince jam—whose was the quince jam?"

"I rather think my mother put that in, too."

"Well, it almost cured my wife; it was better than medicine, that and the tea, for, not to mention that we couldn't get any medicine, it put heart into her as medicine couldn't." I wonder was it your mother, or who was it put in that volume of college songs? I got that. You wouldn't think it, but I'm a university man—Harvard—"

The young fellow caught his hand and gripped it hard. "Harvard? So am I—Martin Wallace, '92."

"My name is George Robbins, and I'm a good deal farther back; and, as you can see, I'm down on my luck. But there's no need going into my hard-luck story; it's like a lot of our stories here. You see where we are—hardly shoes to our feet; not because we have been shiftless or idle, or have wronged anybody; yet the cutthroats and thieves in the penitentiary have had better fare and suffered less with cold and hunger than we have. And it's not that we are fools, either; we're not uneducated. There are at least three other college men in our community; there's Doc Russell—"

"I am," drawled Russell; "much good it's done me; but I won honors at the University of Iowa."

"I didn't win any honors, but I went to the state university—was graduated there before I went to Harvard. But—you aren't Teddy Russell, Teddy Russell of the Glee club and the football eleven?"

"Yes, I am Teddy Russell."

"E. D. Russell, of course; why didn't I guess? You were there two years before me, but I daresay that you won a touchdown with a broken rib on you, and the time all the rest of the Glee club missed the train at Fairport, going to Lone Tree, and you went on with the banjoes and were the whole thing for three-quarters of an hour! Well, I'm glad to meet you, Doctor! Let us have a good song or two together after business."

Russell unconsciously felt for the cravat which was not round his soiled and frayed collar; he buttoned his wreck of a frock coat. "Yes, we will," he began, but his voice stuck in his throat as the captain's rough grasp gripped his arm.

"I guess not," said the captain; "business first, young feller!"

Russell shook off the hand muttering something too low for Robbins' ear; but Robbins sidled nearer to him, so near that he was able to exchange a single glance and to see Russell's lips form the words, "Watch Orr!" They understood each other.

"Weren't you from Ann Arbor yourself, Captain?" said Robbins, grabbing at any straw of peace.

"I've been too poor ever since the war to remember whether I ever had a college education or not," retorted the captain with a sneer. "I belong to the people now! their cause is my cause. Where do you belong? We've tended your folks when you were sick, and helped you lay by your crops, and driven the mortgage sharks off your stuff. Say, what are you doing now? Are you monkeying around to turn traitor or coward or what's the matter?"

"We're all right, Captain," answered Russell, the western burr on his tongue as soft and leisurely as ever, and no hint of excitement in his manner; "but I see no harm in letting Mr. Wallace answer our questions before we fly off the handle." So saying, before the captain realized his purpose he edged through the crowd to Wallace's side. Robbins followed him; and the eyes of all the others turned to the three menacing and eager.

"All I ask is to answer questions and to make my proposition to you," said Wallace, his fearless young eyes running around the circle. "If you don't like it you can refuse and send me home—to make other arrangements."

"No, we ain't going to send you home," said Orr. It was the first time that he had spoken. Wallace flashed a keen glance at him and spoke his next words directly to him. "But I'm sure you won't want to do it. You see, I'm your last chance and you have to examine it."

They had not expected such an answer. A little vibration ran like a wave over the gaunt, ferociously attentive faces. Wallace's eyes were fixed on Orr's face, which did not change. Orr's hand was in the breast of his ragged waistcoat

"You people have certainly had the devil's own time and through no fault that you aren't quitters.

"That's right," said Robbins. Orr's eyes narrowed a little. Wallace continued, not taking his own eyes off the farmer's:

"This country is all right when there's a good year, but the good years come so seldom! What you fellows need down here is not free silver, but free water. With plenty of water you can raise big crops; and down in the valley there is not the danger; if we dig ditches, of the river running dry; we can get—"

"And who'll pay for irrigation?" a voice demanded. Wallace did not shift his gaze to the speaker; he talked to Orr as if Orr were the only man in the room: "We expect to furnish the money."

"And what will happen till the ditches are digged?"

"There's alfalfa to be raised on all these abandoned fields."

"And what's to become of us?" said Orr. "I can see where you folks can git a holt and come out even; but what's going to become of us? Are we to move off the earth and let you stay here?"

Every one listened for Wallace's answer. Even the boy in the doorway, returning with Wallace's bag stood half scared at the foot of the stairs not daring to go forward.

"Why not stay and take pot luck with us?" said Wallace cooly. "We bought the mortgages cheap, and we'll sell them cheap. We'll sell water rights cheap also. And you will make better colonists than any we could import—cheaper, too. It's for our interests as well as yours to make a deal with you and to make one that will be satisfactory.

Orr's hand dropped to his side, he shuffled to his feet, his eyes turned from Wallace to seek the captain. "I hadn't figured it out you was going to make any such proposition," said the captain.

"Perhaps you thought we intended to chuck you all out in the cold and hog everything. We are neither such pigs nor such fools. You fellows can help us more than anybody else. Here is Johnny. Now let's come to business.

"All you folks here need is hope," said the cheerful young Iowan; "you have plenty of pluck and plenty of sense and oodles of experience; and we stand ready to put in the capital. What do you say; does it go?"

After an hour of talk over the maps, he repeated the question, and the captain himself led the chorus, "It goes. We'll stand by you."

The blizzard had not come, and the moon was shining when George Robbins and Wesley Orr drove home from town. A basket was carefully held on Orr's knees. Robbins was caroling the chorus to "Johnny Harvard" and wishing a health to him and his true love at the top of a hoarse and husky voice. Orr looked solemnly ahead into the little wavering disk of radiance that their lantern cast. Once he shivered violently, but he was not cold. Suddenly he spoke. There was a quiver in his face and his voice, but all he said was, "Say, he was dead right. We was so desperate we was crazy. Hope, that was what we needed, and he give it to us; but how some fellers would have messed that job, getting round to that same proposal we all wanted to hug him for! And—I'm glad he didn't. I'm mighty glad we didn't git a chance to do what we set out to do. He was slick. Say, what is it they call them newspaper boys? Spellbinders? That's him—a first class. A number one, spellbinder."

Live Stock Shippers and all Other Farmers Need National Organization

Address by Colin Lillie Before Breeders' Meeting at East Lansing Takes up Basic Problems of Agriculture

WE MEET today, more than a year since the close of the world war, with an uncertain uture for the live stock industry nd, in fact, for all agriculture, be- ore us. More uncertain, perhaps, an ever before in history. To be re the future of all business is un- ertain. The whole business world trying to solve the problem as to s status when the after-the-war ormal conditions have been found. ome are talking about getting back pre-war conditions as though that the condition desired, or believing at pre-war conditions must of ecessity eventually come back, oner or later.

But, my friends, pre-war business nditions never will come back. The hole American business world in- uding agriculture, at least has gone step or it may be several steps for- ard and America never turns back. he idea of never retreating is what rought Germany to her knees much oner than most of us expected. he boys in khaki refused to obey the rench commander in the second attle of the Marne when "fall ack" was ordered. "We never re- eat" was a new slogan in the world ar and it inspired not only our own my but the armies of the Allies as ell and, more, it inspired the people ack home, the people of France and reat Britain and of Italy, with the sult of the forward drive all along e front, which never stopped, never ltered, until proud, arrogant, con- ited Germany begged for peace.

Important advancement has come agriculture by means of the world ar. A great, just, business prin- ple has been applied to agriculture d now it is up to the farmer to e that there is no "falling back"— "retreating" no return to pre-war nditions, so far at least as agri- lture is concerned. Agriculture ll intrench and fortify on this ad- ntage ground. Trenches are al- ady being dug and fortified and me are now dug, that will resist encroachments to force agricul- re back to pre-war conditions. The rmer does not want low prices for od products. The farmer does not ant low prices for food products, en if prices of everything should down with food products. The rmer sells more of human neces- ies than he buys and if he pros- rs, he must get more for the thing sells than he has to pay for the ings he buys.

he Forward Step in Agriculture

Whoever heard, before the war, the commercial world, or the con- ming public or the government it- lf advancing the idea, or even ad- tting it that the farmer is entitled "cost of production" plus a profit. hen the time came that the world eded the farmer as much or more an it did the soldier, then economic stice was advocated. But it was vocated then rather to prevent ex- ssive profits than to establish eco- mic justice. The price of wheat s fixed at $2.20 per bushel, figur- g on a cost and profit basis, not to arantee the farmer what justice titled him from loss, as in other siness, but to prevent him from aking too much profit. The same n be said of the attempt to fix the ice of other food products.

However, the farmer rejoices rath- than complains of this treatment, cause it establishes an economic inciple applying to agriculture as ll as to other business. I have d before that when the President the United States appointed that mmittee representing all classes of izens to fix a price for wheat bas- on the principle of cost and profit at the world war would prove the vation of American agriculture. e great court of public opinion, e consuming public, does not and ll not object to paying the farmer decent profit above cost for the od products which they must nec- sarily consume. The consumer will t stand for profiteering but he will illingly pay a just profit.

termining Cost of Agricultural Products

You are well aware that the suc- ss of any business eventually de- nds upon being able to determine to a very close approximation, at least, the net cost of production. This is no simple matter in agriculture. The business is very complicated and very uncertain. One man may make a splendid profit in fattening a bunch of steers, or lambs, or hogs one year and lose all he makes the next year. One man may grow 300 bushels of potatoes one year at a magnificent profit and with the same effort lose money the next year. One community may make a good profit and another community a few miles away, farm at a loss. One state has favorable conditions one year while another has bad. It can be stated in general as a broad fact that to have a prosperous agriculture, conditions which will enable the farmer to live fittingly and maintain at the same time the productive power of his land, in other words, to do his best in supplying a full ration to the people of the world, now and in time to come, the average farmer, under average conditions, for a period of years must make a profit. It will not do to take exceptional individual yields, like those we read about in the city papers where a man pays for his farm from one crop of potatoes, or one crop of clover seed, or one crop of sugar beets, etc. Neither would it be fair or just to fix the cost of producing milk from the records of an exceptional cow or herd, even. On the other hand, it would not be fair to the consumer to determine cost on poor crops or on crop failures. Consequently, the cost of production for all agricultural products must be an average cost under average conditions for a series of years.

What agriculture needs and must have as a business organization of the farmers of every county in every state in the union whose duty is, under expert supervision, to determine the cost for each county. But the county cost is not sufficient. The county cost of each county in the state must be averaged to get the average cost for the state. And this is not enough. The cost of each and every state must be averaged as a whole to determine to a close approximation the cost of producing a given agricultural product for a given year for the nation. Then after we have the data for a series of years, a national cost can be determined that will be beyond dispute.

Overproduction

What can be done with a surplus? The skeptic will say that one year of overproduction will smash the whole business. Not so. Products must be held on farms and in local and terminal elevators and storage and placed on the market only as the consumers will pay a just price. An excess can be held or transferred into other channels and future production limited on this product to meet the needs only of the market. But the farmer must be as just to the consumer as he asks the consumer to be to him. No food product in time of scarcity should be held for excessive pofits. It must be sold for a fair and just price. A policy of this sort would do away largely, if not entirely with speculation in food products after they leave the farmer's hands, because prices would vary but little from year to year.

My friends, the county, state and national farm bureaus now organizing, can and will accomplish all this. We have an example of what can be done in a local way in carrying out this principle, in the Michigan Milk Producers' Association. They interested our experiment station in their cause and determined by every painstaking labor and investigation the cost of producing market milk. The Milk Commission came into being

Practical Tractor Facts

THE 1920 "Ten-Twenty" that is going to outdistance all other tractors not only in the matter of nation-wide popular demand, but also in general satisfaction to the farmer, is the **Titan 10-20.**

Titan 10-20 Features

1. **Wide friction-clutch pulley**
2. **Economy throttle governor**
3. **Adjustable drawbar**
4. **Safety fenders**
5. **Comfort platform**
6. **Sixteen-tool set**
7. **Free starting-instruction service**

In five years' time a great many thousands of Titan tractors have been manufactured at the great Milwaukee Works, the home of the Titan. Practically every one of these tractors is in use today. They are serving not only the farmers of America, but also thousands in Europe, rebuilding the dormant war-torn acres that are hungry for crops.

With so great a number of Titan 10-20's in active use — setting so many good examples to farmers in need of right power — it has been necessary to enlarge the manufacturing facilities to meet the rapidly developing demand for this most popular of popular tractors. The scene at the tractor plants is one of night-and-day activity, with 5,000 men on the job. It is probable that, by the time this notice appears, producing volume will have been increased sufficiently to enable you to get a **Titan 10-20** for early spring delivery *if your order is placed at once.*

There has been no increase in price. **Titan 10-20** is available for you at the 1920 price fixed last July **—$1,000 cash, f. o. b. factory.** See your International dealer.

John Dodge

FROM a blacksmith to a multi-millionaire maker of internationally known motor cars in scarcely more than a dozen years—such in few words is the history of John F. Dodge, Detroit manufacturer, who died last week of pneumonia.

There is at least one great lesson to be learned from the life of John Dodge, and another from his death. The first is that opportunity beckons to the poor and obscure as well as to the rich. The rise of John Dodge from the forge to the head of a great manufacturing concern operating many forges and employing thousands of men is the most eloquent testimony that can be had in rebuttal of the old argument that opportunity no longer exists for the poor man under our "capitalistic system." And John Dodge's success is not the most conspicuous of the successes attained by men who were once poor. Thousands of others as poorly equipped as Mr. Dodge have made fully as great names for themselves in the fields of manufacture, science, invention, medicine, etc. The great will continue to rise from the ranks of the lowly in spite of all seeming obstacles before them.

Another lesson to reflect upon has been the subject of moralizing for centuries past, namely, that riches avail nothing when death comes. John Dodge had spent the better part of his life attaining riches, though it was perhaps as much a desire to create something useful for other people as well as a competence for himself, that he toiled. But he was approaching a period in his life when he desired to enjoy his vast wealth, and last summer he began the erection of a $2,000,000 residence on the lake shore road between Mount Clemens and Detroit. This was intended to be one of the most palatial homes in the United States, and fascinating stories are told of the rare stones and wood that had been imported to be used in the construction of the house. All summer long, a battery of pile drivers and dredges, a score of teams and a small army of men were busy as bees filling in a large area of Lake St. Clair directly in front of the mansion site. According to rumor this miniature peninsula was to be set with rare shrubs and trees and threaded by canals in which the canoes and yachts of the Dodge guests could find a resting place. Withal, the Dodge mansion and grounds were to be the last word in luxury and beauty. And even as the humblest views with eager expectation the putting together of his lowly cabin, we may suppose that John Dodge looked eagerly forward to the day when he and his family could possess themselves of their wonderful home. But as it so often happens in the life of man, that they are taken away at the culmination of their happiest ambitions, so was John Dodge called to his last resting place when life seemed most full and secure.

"My parks, my walks, my manors that I had,
Even now forsake me; and, of all my lands
Is nothing left me but my body's length!
Why, what is pomp, rule, reign, but earth and dust?
And, live we how we can, yet, die we must."

* * * * *

The Real Danger

LET US not be like the man, who shrinking away from an imaginary enemy, backed over the edge of a precipice and lost his life.

A warning has been sounded against Bolshevism. Irresponsible zealots whom we have hospitably welcomed into our house have been preaching a doctrine that is as loathsome to the average citizen as the doctrine of divine right. They are like a lot of ants in a forest of animals, annoying but otherwise quite harmless. But their ant-hill has been made to appear a mountain, and every time you pick up a newspaper or attend a lecture on "Bolshevism" or "Americanism," you are made to feel the shadow of the mountain encompassing you.

Every reactionary force in the country has armed itself to fight this shadow. Sundry blows have been struck, and have fallen wide of their mark. To those who fear Bolshevism, its shadow looms ever nearer and more menacingly. Those who have no cause to fear Bolshevism are unmindful of its shadow.

When man throws down the gauntlet to an unseen foe, he commits himself to a losing battle. Have you not seen a man strike at a hidden snake? No sooner does he deliver the blow than he quickly steps backward impelled by the sudden notion that the reptile may be under his very feet. That is the way this country is fighting this imaginary evil of Bolshevism. Every blow that is struck is the signal for a step backward. So we have been striking and backing until we are dangerously near the edge of the precipice.

What causes social revolution anyway? Surely not the preachings of anarchists and Bolshevists! You cannot convince a great race of people that they are being subjected to wrongs if those wrongs do not actually exist. The most fruitful causes of revolution are oppression, high taxes, extravagance of government, monopolization, low wages and hard working conditions. The existence of any one of these conditions in a government of free people provides fertile ground for social revolution. But the disciples of reaction are so busy fighting the preachers of Bolshevists that they haven't the time to give any attention to the audience. In this fact lies the greater danger to our Republic.

* * * * *

Your Neighbor and You

THE OLD saying that "there is so much good in the worst of us and so much bad in the best of us that it hardly behooves any of us to speak ill of the rest of us" could probably well be applied to your neighbor and you. You don't always speak well of your neighbor and you are morally certain that he seldom speaks well of you. Yet to all appearances you are the best of friends.

Oh, the hypocrisy that friends practice! A hearty hand-shake when face to face, but unkind remarks when the back is turned. A friendly "how-dy-do" when you meet on the street, but a slur or uncomplimentary comment when you discuss each other in talking with others. Sometimes it doesn't take very much to turn friends against each other. Opposite views on political or religious matters, perhaps a trade, or a controversy over township affairs, and the trick is done. Take a dislike to a person and you can easily make yourself believe that there is nothing good about him. Everything he does will arouse a suspicion in your mind that there is something wrong about it. It is easy to represent things as you wish them to be.

Life is all too barren of love and friendship as it is, without our putting our friends unde the microscope and picking out their flaws. W can take it for granted that we will never fi perfection in any of our friends and acce them for what they are with all their huma weaknesses. One of the best ways to cover o our own shortcomings and make ourselves lo ed and respected by our acquaintances is dwell only upon the good traits of others. T it and see for yourself.

* * * * *

Necessity is the Mother of Invention

NECESSITY is not only the mother of i vention. She is also the mother of o ganization and co-operation. Necessity g birth to the potato growers' association; s drew the farmers of North Dakota into a no partisan league; she conceived the idea of great national farmers' organization and wi much travail is now delivering into the han of the farmers a child which, if not altogeth perfect, gives promise of great things. T foundation of all successful farmer organiz tions was built upon necessity, and the bon of necessity have held them together.

Ninety-nine per cent of the success of an o ganization depends upon the need that exis for such an organization. Necessity overloo defects in organizations and their leaders a will accompany them almost to the verge destruction to save the germ and rebuild t structure. On the other hand, the most po erful organizations will collapse if a real, vit need does not exist for their continued exi ence. An organization is like a man in th respect; it must have something to do; so work to accomplish; some mission to perfo to keep it trim and healthy and always in t running. Farmers who would organize shou keep this thought ever in mind. Make su there is need and room for your organizati and nothing can kill it.

The Passing of an Old Enemy

JOHN BARLEYCORN has gone quietly his grave. The federal prohibition amen ment went into effect at midnight, Jan. 16, and today the United States is theoretica dry.

There was a time when this strange fell drew millions to his side. He was the aris crat of the card table, the dining table and conference table. Men thought they could conduct a minor business transaction or affa of state without calling him into counsel a listening to his advice. But for the better p of a decade he has been slipping from gra Men learned that his congenial presence w but the exterior of a cold heart that knew the meaning of friendship, charity or lo They discovered that society had been ent taining a guest whose smiles concealed poi fangs which at unsuspecting moments wou fasten themselves into those who sought companionship. So they have put him aw and there is small regret at his passing.

* * * * *

In view of the fact that the majority of f farm organizations have recommended legis tion to curb the monopolistic tendencies of packers, we rise to inquire why a represen tive of the packing trust was invited to the cent live stock breeders' meeting at our far ers' college to speak against such legislati Or, if in the name of truth it was advisable hear the packers' side, why also in the name truth, was not a speaker invited to present public's side? Please don't all answer at on

* * * * *

The cards are all stacked for the next ele tion. Will the farmers sit back as usual a take what is offered them or will they demand a new deal?

* * * * *

Death and taxes are always with us. Sin the cost of funerals has gone up, it's a qu tion which we prefer.

* * * * *

"Deliver us," says a subscriber, "from a other 'business administration.'"

WHAT THE NEIGHBORS SAY

A GOOD SERMON

We seem to agree on what constitutes industrial justice. How to get it is "another story" that can't all be told in one chapter. You seem pessimistic about getting it at all "until the natures of man are made over," which recalls that old saying of the liquor interests, "God never made men good enough to form a nation of tee-totallers."

The cussedness of human nature is no valid argument against any reform. It is just what makes reforms necessary. Without it we would need no government or laws. The mission of Christianity is to fight human cussedness. When Jesus healed leprosy and cast out devils he promised that after he was gone his disciples should do "greater works than these." To cast out the booze-devil from a nation is surely a greater work than bouncing an ordinary brimstone imp from a single citizen. Had the professed Christians of this country really believed the teachings of the Christ, both slavery and booze would have disappeared many years sooner, with far less trouble and expense. Let us not make the same old blunder again. It is well to be sure we are right before going ahead but in the name of Christ whatever ought to be done can be done.—*Stacy Brown, Lake Odessa, Mich.*

The struggle for the dollar is the struggle for existence which is the first law of nature. What is enough for one man is insufficient for another, and more than a third man needs. Men have different notions of values. Some people are accustomed to a higher plane of living than others. Their wants are not easily met. That is one reason why, as we pointed out in these columns a few weeks ago, there is so great a difference between the financial conditions of families living in the same surroundings and having the same income. Your problem of "industrial justice" is not unsolvable, by any means, and though you may not ever be able to bring about perfect justice where every individual receives the portion to which he seems to be entitled, that is certainly no reason for not making the attempt. Great strides can be taken in this direction, it is sure.—Editor.

WANTS STATE LAND CLEARING ACT

I am addressing this communication to the MICHIGAN BUSINESS FARMING, with the one idea of catching the eyes of the next governor of the State of Michigan as I do not doubt but that the fifty-seven prospects to the last man, are constant readers of your valuable medium, even though they may not all be on your subscription list.

As a modest citizen, with real constructive ideas, it matters not to me personally, if our next governor is drafted from the plow, captains of industry, ranks of labor, reformed lounge lizards, or is merely a plain, every-day sort of a human, with no past to live down, if he but possess the vision, force and will, to drive home to an indifferent or hide-bound legislature, its long neglected duty to the entire state's interest—in failing to provide a State Aid Land Clearing Act, merely because it smacks of paternalism—and so necessary to rapidly connect the land hungry with the immense tracts of idle, tax ridden, agricultural stump lands within our border. Yes, I will praise him while yet alive, even though he happen not to be a disciple of Thomas Jefferson.

I have never favored legislation designed to pass the buck to the tax payers (which includes all consumers) in the interests of a chosen few, nor am I guilty of advocating it in this case, for a State Aid Land Clearing Act, properly framed, saddles no burden upon the tax payers. On the other hand, the rapid development of our idle lands by a hundred per cent citizenry into productive fields, enriches the entire state materially and otherwise. The productive soils of northern Michigan, once tamed for the plow, becomes a permanent source of wealth to the state and nation. You will find no abandoned farms with bottomed-up fertile soils in northern Michigan.

As well recognize first as last, that the rapid development of Michigan's vast acreage of idle stump lands of known agricultural value, absolutely depend upon the land hungry, but modestly equipped, if at all, for building from the wild, as those possessing sufficient means, as a rule, are not interested in subduing the forest wilds or denuded lands. Its improved or partly improved farms for them. It is the same old story of the yesterdays, of every state in the union. The indispensable asset of pioneer builders, rarely inventory less than 90 to 95 % faith and hope.

Financing in a very modest way, the embryo farmer, in his initial clearing operations only, out of a revolving fund permitted under an amended constitution, on long time, low interest, amply secured on the land, and payable in the manner of a drainage tax, entails no expense upon the tax payers, although the benefits derived are statewide while furnishing material encouragements so necessary to the pioneer settlers.

No substitute for a State Law Clearing Act can press so lightly upon the settler, nor prove so inexpensive to the tax payers of the entire state.

If there is one single industry (always in the infant stage of development) that is entitled to the first and last nip at the suckling bottle, but forced always to be content with hay tea until weaned, it is the hardy self-denying types of the Lincoln characters, in small bands on the frontiers of civilization, enduring hardships, while paving the way for others, and we purposely remain stone-blind to their dues. Gee! How penny wise and pound foolish our legislature appears at times.—*John G. Krauth, Millersburg, Mich.*

Your suggestion is directly in line with what we have long advocated. The present governor made a promise that if he were elected he would turn his attention to the uncleared land problem in this state and recommend legislation to aid in its development. But the promise proved to be nothing but a campaign tickler, for the governor has made no effort to carry it out, and has in fact retracted from his position. Being in the business of loaning money to farmers on cut-over lands, at attractive,—very attractive,—rates of interest, it is not to be supposed that he would go very far out of his way to make the state a competitor. The problem of our cut-over lands is a big one, and should command the earnest attention of the entire state.—Editor.

ENDORSES M. B. F. EDITORIAL

In your issue of January 10th your article "The State Farm Bureau and Politics" strikes me as being very timely and right to the point. I agree with you most heartily. The great organized strength of the Michigan State Farm Bureau should be used towards helping to get good men in our state offices. If it is not to be used for such worthy purpose, why was it organized? I feel that I can safely say that our County Farm Bureau is going to do its part toward that end.

We are going to have a big meeting here to-morrow and expect to have farmers here from all over this county. Dr. Mumford and several other noted speakers will be on the job.

With best regards, I am yours truly—*John F. Quinlan, Petoskey, Mich.*

I am certainly glad to know that the Emmet County Farm Bureau members will concern themselves with the ways and means of securing better government among which is the naming of worthy representatives. I feel assured that the great majority of farm bureau members will take the same interest.—Editor.

OBSOLETE INSTITUTIONS

I have been much interested in the many expressions of needed reforms by yourself and the many readers of your "Open Forum." It has been plainly shown that there is a great need for men to make laws, more democratic laws, to benefit those who create wealth, as well as those who get it to the consumer. Our present system is crude and belongs to the period of ox-carts and corduroy roads, tallow dips and log houses and fire places, when one newspaper supplied a community, and once in four weeks a preacher or religious teacher came to sojourn for a few days. Today we have a daily mail to nearly every door in Michigan as well as every door in this great land. And what does the mail bring us? Nine out of every 10 papers published support the present system of unjust distribution of wealth and our present unjust system of taxation. We have a half dozen different labor organizations in our state and no doubt they have a work to do, but is there a concentrated effort being made along well defined lines? I have seen three distinct political parties organized say nothing of the Gleaners, Farm Bureau, Knights of Labor, etc., and only to see our liberties slipping away slowly but surely every year, until we have only one state in this country that is governed by its people and that is North Dakota. When every voter in Michigan studies the principles of the Non-partisan League and its mode of getting control of state and national governments, then they will act for and with a purpose.—*P. P. Miner, Saginaw County.*

The people of North Dakota are trying a grand experiment. Let us see what it amounts to before we follow their footsteps. There is nothing basically wrong with the majority of our laws. We have exactly theh same election machinery here in Michigan as in North Dakota. If we do not employ it to good and useful ends, that is not the fault of the law, the politicians, nor those who abuse the law. That is your fault, my fault, our neighbor's fault, and the fault of all ordinary citizens who permit their elections to be engineered by political rings, and who vote for the men whom the ring pick out for us to vote for.—Editor.

THE COST OF PARTISANSHIP

Regarding your straw vote for a farmer for governor, please permit me to ask a question, which you are asked to pick flaws with. Why a farmer, a Ford, a Newberry, or a millionaire for governor. Congressman, president, or in fact any important office? Why no men elected by the common people and common men in office? Why always stick to Republicans or Democrats or any other political party?

It appears to me so long as we have political parties, just so long will we have one party fighting the other. Why not do away with them and elect men, or women to fill our offices regardless of party?

What does it cost this country for two political factions, strong factions such as the Republicans and Democrats daily to sit in congress and stall in their time fighting so to speak, almost every issue that is advanced by either party? Take our congress for instance, the number of men and multiply their salary by the number and see what it costs the country daily for them to sit there and chew the rag.

If the common people, and by common people I mean the ones who actually keep this country going were placed in office, and a few of the best men nominated by the people, then what we read in the papers to be only the experience, education and fitness for office, and let the one who received the most votes be declared elected, and any time that such a party accepted a bribe, or missused his office then and there such a party is to step down and out would it not be better than harboring political parties?

Do away with all parties. Do away with all strife and contention. Elect qualified men to fill our offices regardless whether they have any money or not. We don't want money men in office. We want MEN.

Is not the Ford-Newberry contest enough for the common people to unite and select their candidates and elect them to office. Have not the common people this power 100 to 1. Yes possibly 1,000 to 1, and still tho one, the money is ruling, and it will rule just so long as we have political parties, or try and have one class dominate another class. What would your office care if your employees were Democrats, Republicans or what not. What you want is employees that make good, who are on the job and who are working for your interest, and this is it exactly in politics. What the country wants is men or women to fill our offices regardless of party and those who will uphold the constitution of the United States, the laws, and a combined effort for good. If this country could unite to win the war, surely we can unite to manage our offices.

He is too small for recognition,

(*Contined on page* 25)

The Week's Editorial

"Politics Demands Every American's Attention"

CHAIRMAN Hays of the Republican national committee is apparently talking from broader viewpoint than that enjoyed by a mere partisan when he asserts that what we need in this country is not less politics, but more attention to politics because only thus can the best candidates be obtained. Mr. Hays is speaking with especial reference to the coming presidential campaign, and while his words are true, whether taken in a general or in a specific sense, they are doubly forceful as he applies them.

For not since Mr. McKinley and Mr. Bryan became opponents on the free silver issue, perhaps not since the campaign that put Mr. Lincoln in the White House, has there been a national election of such portent to the country, as the one due in November promises to be. The foundations and policies of our government are to be affected as they have not been affected for many years.

The very question of our integrity as a sovereign nation may be at stake. The outcome of the balloting may decide, too, whether we are to have a genuine postwar reconstruction, or a revolution through socialistic legislation; whether we are to be a republic or sink in the mire of state socialism; whether we are to go back to a regime of stalwart Americanism in Washington or continue under a near despotism; whether the executive is to continue in control of the legislative departments, or whether we are to keep our free institutions.

We are to choose whether sectionalism is to rule the United States or whether the government is to be a government by and for the people of all parts of the country. We are to determine what are to be the relations between capital and labor on one side and the great general public on the other. Our merchant marine policies, our railroad policies, the great question of national preparedness, the equally great question of national frugality, our future attitude toward the Monroe doctrine, toward Europe, toward Mexico, toward South American, are all in the balance.

It is impossible yet to tell what may be the so-called paramount issue in the impending campaign. Much will depend upon the developments of the next few weeks; but whatever seems to hold center of the stage, the underyling issue is to be Americanism. What bigger issue for our country can there be than this?

It is as necessary for the voters of America to concern themselves with politics throughout the next few months as it was for them to concern themselves with the war thruout the period of the active fight against Germany. The demands of patriotism are quite as peremptory in the one instance as in the other.

The same duty rests in equal measure on the members of both great parties. The adherents of each ought to make certain that the best man obtainable is chosen to make the campaigns for the presidential chair. We can imagine no better political fortune for the country than the selection of first-class candidates by both the Republicans and the Democrats. Such a development would in itself be a most hopeful augury for the future. It would be an indication of a national understanding of the bigness of the crisis through which we are passing.—*Detroit Free Press.*

MARKET FLASHES

HOOVER HELPS WHEAT

WHEAT PRICES PER BU., JAN. 20, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.62		2.65
No. 2 White	2.60	2.70	
No. 2 Mixed			
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
No. 2 Red	2.30	2.30	2.38
No. 2 White	2.26	2.28	2.34
No. 2 Mixed	2.26	2.27	2.33

News that the Russian trading with the world was to be resumed at once had a weakening effect last week on numerous grain markets, especially the wheat section. Minneapolis reported that spring wheat had declined from 15 to 20 cents per bushel. Furthermore it reported that the news had resulted in almost an unsaleable condition for winter wheat in the west.

But this week Herbert Hoover's statement on the European situation backed by approval of other foreign experts, has bolstered up the wheat price situation, as well as corn and other grains. Hoover states that Russia cannot export wheat as long as the people of that country are starving to death. He says that the cities of Russia and other Slavic districts must have imported food immediately in order to live through the winter without terrible famine. The country districts, according to his statements, have supplies for only a few months.

Along with this the Grain Corporation has been applying its usual bearish tactics. But the week started out with a bullish tone. Supplies in Detroit are very low.

In Chicago, the prediction made not long ago for $4 wheat looked much nearer realization, when No. 1 northern sold at $3.53 in the Chicago market. This is the record peak, and it is believed that the demand for fancy grades may easily boost the top to around $4 before long.

CORN RETAINS STRENGTH

CORN PRICES PER BU., JAN. 20, 1920			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow			1.67
No. 3 Yellow	1.53	1.54	
No. 4 Yellow	1.49		
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
No. 2 Yellow			1.53
No. 3 Yellow	1.38	1.34	1.50
No. 4 Yellow	1.33	1.33	1.48

Nearly all factors in the corn markets of the country have been expecting the usual January decline of corn prices, due to heavy receipts and other bearish elements concentrated upon the market at this season of the year. To be sure there has been some slump, but the follow-up of encouraging news on the Russian situation and the arrival of only small stocks at the terminals caused the corn market to retain its strength. The Detroit quotations are only one cent below those of a week ago, and the Chicago market has eased off only a cent or two more. Last year about this time there were heavy losses.

The Russian statement by Hoover caused a big recovery Monday this week. Only a few cars appeared at Chicago for grain shipping purposes, whereas great supplies of rolling stock were anticipated. The blizzards affecting many parts of the nation also held up movements. A delegation has gone from Chicago to Washington in hope of getting relief from the car shortage, although it is expected that little relief can be given by the administration.

Exports of corn have been increasing, but even now they are only half what they were a year ago. Farmers are believed to have quite fair stocks of corn on hand, but, in a number of states, show a disposition to hold for $1.50 per bushel at the country stations. The rapid fluctuations of the past week make prophecy rather hazardous at this moment although many predict better prices [illegible]

LAST MINUTE WIRES

DETROIT—Grains, excepting rye, show strength; potatoes higher; beans in fair demand, strong and steady. Seeds stronger and higher. Hay firm.

CHICAGO—Corn and oats show strength. Wheat weak. Provisions bullish. Hog market strong and higher.

Weekly Trade and Market Review

ALTHOUGH the League of Nations has become a reality and most of the nations of the world have signed the peace treaty, the United States has been little affected. Technically our nation is still at war with someone or other. Instead of strengthening the foreign exchange rate of money, the past week has seen further declines. The Italian money is worth less in the United States than at almost any time in history. The cotton trade from America to England is bolstering up the English money a little and helping our export trade to the British Isles. One other country, Russia, saw a strengthening of its money value in America this week, due to the opening of trade relations in that nation.

Business continues to be lively in most parts of America, and it is believed that the campaign for Thrift Week is cutting down the nation's extravagance. Cold weather is putting in its hardest licks now in the business and trade conditions, by making cities snowbound and cutting off rail transportation. Parts of Michigan have suffered this condition last week, and this week one of the deepest snowfalls in years struck many parts of the country. New York state is one of the heavy sufferers.

In the markets, the usual slump which occurs in January did not strike the corn market very hard this time. Cold weather is forecast as the strengthening factor, while a better price for hogs this week is also worth noting. Other grains have staid near what they were a week ago, except wheat, which has dropped somewhat.

OATS' SITUATION HAZY

OAT PRICES PER BU., JAN. 20. 1920			
Grade	Detroit	Chicago	N. Y.
Standard	.69	.67	.76
No. 3 White	.69	.66	.75
No. 4 White	.68	.65	.74
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
Standard	.89	.87	.88
No. 3 White	.88	.86	
No. 4 White	.87	.85	

There is a considerable haziness in the outlook upon the oats market. Reports keep coming from New York every day, telling of export buying of oats, but Chicago, Detroit and other Western market men are not so sure that there is much movement of oats abroad. Although oats are scarce in the markets, there has been slight demand the last week or so, and the price has edged off a cent in the past week. It might seem that the general bullishness of the oat market for many weeks has stopped to take a rest for a spell. That the market will make still further progress is entirely likely, inasmuch as the oat supply is so scant and the need is greater than ever.

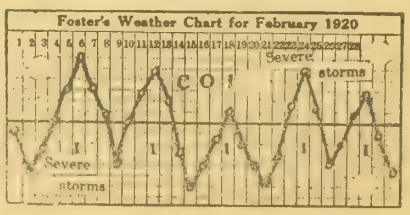
Export of oats is known to have dropped off at least 30,000 bushels in one week, and the total export rate is about a ninth or tenth of that maintained last year at this time. Despite the tired feeling in the oats market just at present, a new high level for highest grade oats was reached in Chicago a few days ago.

RYE AND BARLEY

Rye and barley, along with oats, are now well established as international grains. Fluctuations in these markets have depended almost entirely of late upon conditions abroad. Rye has suffered the most of any of these grains during the "January slump," while barley has actually gained somewhat. There has been almost no demand for rye in the Middle West. Detroit quotes rye, cash No. 2, at $1.74, which is 12 cents below last week's figure. Barley, cash No. 3, $3@$3.20 per cwt.

THE WEATHER FOR THE WEEK

As Forecasted by W. T. Foster for MICHIGAN BUSINESS FARMING



WASHINGTON, D. C., Jan. 24, '20.—Warm waves will reach Vancouver about Jan. 28, Feb. 3 and 9 and temperatures will rise on all the Pacific slope. They will cross crest of Rockies by close of Jan. 29, Feb. 4 and 10; plains sections 30, Feb. 5 and 11, meridian 90, great lakes, middle Gulf states and Ohio-Tennessee valleys Jan. 31, Feb. 6 and 12; eastern sections Feb. 1, 7 and 13, reaching vicinity of Newfoundland about Feb. 2, 8 and 14. Storm waves will follow about one day behind warm waves and cool waves about one day behind storm waves.

These disturbances will dominate the weather of North America from near Jan. 27 to near Feb. 14. The week centering Jan. 5, as predicted, not only brought severe storms in America but in Europe also. The The week centering on Jan. 18 was also predicted to bring severe weather events.

Most severe storms and most precipitation of February are expected during weeks centering on 6 and 24. The period of about nineteen days described above is expected to bring a decrease of precipitation in the Cotton states, an increase in the northern states and a continuances of moderate precipitation in Canada and on the Pacific slope. While some extremes of weather events are expected, February will average about normal. It will require about an average and care. A cold, hard, stormy winter would be very expensive to live stock feeders. Weather conditions for February seem to favor winter grain but too backward for southern truck.

W. T. Foster

BEANS IN DEMAND AND STEADY

BEAN PRICES PER CWT., JAN. 20, 1920			
Grade	Detroit	Chicago	N. Y.
C. H. P.	7.35	7.75	8.00
Red Kidneys		13.75	14.75
PRICES ONE YEAR AGO			
Grade	Detroit	Chicago	N. Y.
C. H. P.	8.75	9.25	10.25
Prime	7.75	8.50	9.50
Red Kidneys	12.00	12.00	13.00

Beans have picked up a little in the past week with a good demand and steady market at present in Detroit and other centers. Detroit pays $7.35 per cwt. for prompt shipment, and quotes February bid $7.45.

Interesting figures have been gathered concerning the Michigan bean crop of the past year. It is estimated that the total Michigan bean crop last year was 4,030,000 bushels, a loss of 850,000 bushels compared with 1918. This does not show the great shrinkage in acreage, however, because there were more beans per acre in 1919 than in 1918. It is estimated by some authorities that 13 bushels per acre formed the state's 1919 average, while 1918 got only nine bushels per acre.

Saginaw county farmers are reported to be holding back their beans at present, although nearly half the crop was thought to have been marketed in October and November. J. B. Leach, of the Chesaning Farmers' Elevator Co., says that the farmers expect an increase of around fifty cents per bushel in the next month.

The government report shows that Michigan produced more beans than all the other leading bean states, omitting California, which leads Michigan slightly. The government report also tells of advancing prices of soy beans in Japan, due to drouths in Manchuria in the past season. It also tells of poor quality of the oriental crop. Taking all considerations into account, conditions look pretty bullish for the bean market at present.

POTATOES STILL CLIMB

SPUDS PER CWT., JAN. 20, 1920		
	Sacked	Bulk
Detroit	4.80	4.70
Chicago	4.65	4.50
Pittsburg	4.80	4.70
New York	5.00	4.80
PRICES ONE YEAR AGO		
Detroit	2.00	1.90
Chicago	1.95	1.85
Pittsburg	2.30	2.20
New York	2.50	2.30

Potatoes have surprised many by continued advances, in spite of heavy arrivals from the Maine growers and other heavy producing centers. Western growers seem well satisfied with the prices they are getting, as a rule. The Michigan white stock has been pulling down higher and higher prices. Even the famous Aroostook county in Maine has been taking a back seat to Michigan and has been getting prices of ten to fifteen cents below Michigan grades.

The following interesting letter has been received from A. A. Lamberston, of Cedar Spurings, Mich., regarding the spud market:

"In regard to the price at which potatoes went out last spring, I think that if we had normal weather, potatoes would have gone out at $2; but the weather turned off hot for twenty days—hotter than ever known before. Of course that brought the southern spuds on much earlier. The heat also made buyers afraid of stocking up because of fear of the spuds rotting. The farmers' business is a continual gamble in this respect. I have watched several seasons and believe that this is one in which the government estimate is all off—perhaps one-half out of the way.

"I have yet to see Snow in the Rural New Yorker, make a mistake in estimating any crop; he has paid reporters all over the country; he figures the government report is a good ways off.

Pittsburg	27.50 @ 28	27.50 @ 28	26.50 @ 27

Very firm hay markets are reported generally, especially New York, Detroit, Chicago and Pittsburg are all undersupplied.

The hay trade car situation is desperate and further expressions from dealers indicate they do not feel that the full available supply of box cars for hay loadings is taken advantageof. "We cannot urge shippers too strongly to get in the market now," said Albert Miller & Co., of Chicago, "as conditions are ideal. Advices of loadings and actual receipts continue exceptionally light and are expected to continue so for some time yet."

DETROIT PRODUCE MARKET

This week Detroit's opening produce market did not develop much interest and the price list remains with scarcely any change. In dairy products the trade was active and tone firm. Receipts of both butter and fresh eggs are increasing and demand is enough to take care of it all. While receipts of eggs have been steadily increasing, there is a chance now that the snow storm will check the movement and bring another ptriod of scarcity. Consumers are taking hens freely, but there is not much doing in any other line of poultry, and the supply of chickens is more than enough. Dressed calves are firm and active. Dressed hogs are in small demand. The market is quiet for fruits and vegetables.

Apples—Western, boxes, $3.25@$3.50; Spy, $3.25@$3.50; Baldwin, $3@$3.25; Greening, $3.50@$3.75 per bu.

Popcorn—Chelled, 11@12c per lb.; cauliflower, $2.25@$2.50 per case; honey, white comb, 32@35c per lb.; celery, Kalamazoo, 40@75c per doz.; onions, Indiana, $6@$6.50 per 100-lb. sack; sweet potatoes, Jersey, crates, $3@$3.50; cabbage, home grown, $100@$124 per ton; tomatoes, six-basket carrier, repacked, $7.50@$8.

Dressed Hogs—Best, 19@21c; heavy, 17@18c per lb.; calves, (dressed), fancy, 28@29c; choice, 25@26c per lb.

Lettuce — Iceberg, $2@$3 per crate; hothouse, 26@27c per lb.; Florida hampers, $2@$2.25.

Dressed Poultry—Turkeys, 45@50c; chickens, 30@32c; ducks, 38@40c; geese, 28@30c per lb. Live Poultry—Spring chickens, large, 28@30c; Leghorns, 26@28c; hens, 32@34c; small hens, 27@29c; roosters, 19@20c; young geese, 28@32c; ducks 38@40c; turkeys, 44@45c per lb.

LIVE STOCK STRONGER

One of the encouraging features of the week is the better tone for hogs on the Chicago markets. The leading markets are strong for all kinds of live stock, with price jumps of from fifteen to twenty cents at some points. Quotations follow:

DETROIT—Cattle market steady; best heavy steers, $12@$13; best handy weight butcher steers, $10.50@$11.50; mixed steers and heifers, $9.50@$10; handy light butchers, $8.50@$9; light butchers, $7.50@$8; best cows, $9.50@$10; butcher cows, $8@$8.50; cutters, $6.50@$7 canners, $5.50@$5.75; best heavy bulls, $10; bologna bulls, $8@$8.50; stock bulls, $7.50@$8; milkers and springers, $65@$150. Veal calves: Market steady at last week's opening; best, $22@$23; others, $9@$19. Sheep and lambs: mark strong! 25 [illegible] higher than last week's close. lambs, $19.75@$20; fair lambs, [illegible]@$18; light to common lambs, $[illegible]6; fair to good shee[illegible] $10.50@$11; culls and commons, [illegible].50. Hogs: Market active; mixed hogs, $15.45; pigs and light yorkers, $15.50.

CHICAGO—Hogs: 15@25c higher; closing weak; bulk, $15.10@$15.30; top, $15.35; heavy, $14.85@$15.25; medium, $15.19@$15.35; light, $15.15@$15.35; light light, $14.50@$15.20; heavy packing sows, smooth, $14.15@$14.65; packing sows, rough, $13.65@$14.15; pigs, $13.50@$14.50. Cattle: Firm; beef steers, medium and heavy weight, choice and prime, $17.50@$19; medium and good, $11.50@$17.50; common, $9.50@$11.50; light weight, good and choice, $13.75@$18; common and medium, $9@$13.75; butcher cattle, heifers, $6.75@$14.25; cows, $6.65@$13; canners and cutters, $6.50@$6.75; veal calves, $17@$18.50; feeder steers, $8@$12.50; stocker steers, $7.50@$11. Sheep: Strong; lambs, 84 lbs down, $17.25@$19.25; culls and common, $14@$16.75; ewes, medium, good and choice, $9.25@$12; culls and common, $5.50@$8.75.

EAST BUFFALO—Cattle steady; prime steers $16@$17; shipping steers $15@$15.50; butchers, $9@$15; yearlings, $14@$15.50; heifers, $6.50@$11.50; cows, $4.50@$10.50; bulls, $6.50@$10.50 ;stockers and feeders, $6@$10.25; fresh cows and springers, $65@$175. Calves: 50c higher; $6@$24. Hogs: 25c@50c lower; heavy, $15.50@$15.55; mixed and yorkers, $15.75 light do and pigs, $15.75@$16; roughs, $13.50@$13.75; stags, $10@$11.50. Sheep and lambs: Steady to 50c lower; lambs, $11@$21; yearlings, $10@$13; wethers, 13@$14; ewes, $4@$12; mixed sheep, $12@$13.

WOOL MARKET FIRM

Boston reports very firm wool market conditions with following quotations on Michigan and New York Fleeces:

Fine unwashed, 67@68; Delaine unwashed, 87@90; 1-2 blood unwashed, 80@82; 3-8 blood unwashed, 68@69; 1-4 blood unwashed, 64@67; 1-2, 3-8, 1-4 clothing, 55@57; common and braid, 41@42.

ERADICATION OF LIVE STOCK DISEASES IN MICHIGAN

(*Continued from page 2*)

"It is hereby ordered by the State Department of Animal Industry, located at Lansing, Michigan, that all cattle which are offered at any public fair in Michigan for exhibition purposes within such state shall have been tested for tuberculosis by an accredited veterinarian not to exceed sixty days prior to said fair.

"It is further ordered that all hogs offered for exhibition purposes at any public fair in Michigan shall be accompanied by a certificate of health signed by a graduate veterinarian licensed to practice under the laws of the state in which he resides, showing that said hogs have been immunized against hog cholera at least twenty-one days previous to offering for exhibition followingg the use of the simultaneous inoculation, or within a period of thirty days immediately following the use of the serum alone method. Provided, however, that this regulation shall not apply to unweaned pigs under six weeks of age from sows which have been immunized by serum and virus inoculation at least sixty days beforeparturition.

"Said certificates must be held in readiness by the owners of the live stock at all times for inspection by an authorized agent from the State Department of Animal Industry."

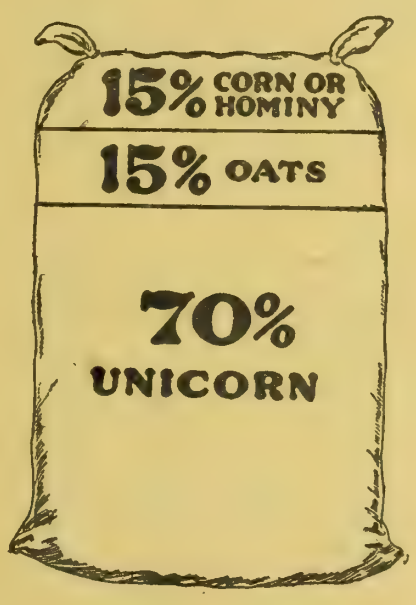
We believe that the money appropriated for the use of this Department for the control of diseases of live stock is money which is well spent. We are making every effort to economize in the use of our funds and believe that a dollar of public money should be used the same as though it were our own. Therefore, we desire to thank the breeders of live stock in this state for the splendid co operation which they have rendered during the past year. We trust that the services which we have rendered have been of value and that our efforts have not been in vain.—*H. H. Halliday, Commissioner of Animal Industry.*

A paper that's a sort of keeping track of things.—*Frank M. Cornair, Saginaw County.*

You, or rather our M. B. F. is doing more for the farmers than any other paper. Let's stick together to the last. We will win in the long race, so don't forget to keep M. B. F. coming right along. Yours for success.—*G. F. K., Elsie.*

I am enclosing my straw vote for Baker. I have taken your paper since it was published and I not only take it but I read it and I think it is worth every cent I pay for it, for I am like the boarder with the butter. The landlady complained to her boarders that butter was very dear, that she paid 50 cents per pound for it. One of the boarders reached over and took about half there was on the dish; spread it thickly on his bread and then remarked, "It is worth every cent you paid for it, Madam, for it is splendid butter." That is what I think of your paper; it is a splendid paper.—*A Subscriber, Chippewa County.*

How Breeders Feed Unicorn to Make Records



BREEDERS use Unicorn as a high protein feed. It has just the right combination of grain and oil seed proteins for balancing with farm grains. Unicorn tests more than 21% *digestible* protein.

The percentage of protein is important, but no more so than the combination and quality of the feeds used.

Unicorn is the feed for record-making.

The following records recently completed were made on a mixture of about 70% Unicorn, 15% hominy (or corn), and 15% oats.

Semi-Offical Year Records Made With Unicorn

	Breed	Age	Lbs. Milk	Lbs. Fat
*Walcowis Ollie Mooie	Holstein	Jr. 2	21,569.70	808.50
*Nancy Whitehall	Ayrshire	Jr. 4	18,707.00	754.00
Star Watson Mooie 3rd	Holstein	Full-aged	25,994.50	736.56
Fryslan Waldorf (*World's milk record in class when made*)	Holstein	Jr. 4	24,648.60	894.39
Doede Binnema Flora (*World's milk and fat record for cow of her age*)	Holstein	11 yrs.	28,857.00	1005.66

*World's fat record in class when made.

NOTE

For those breeders who do not raise corn and oats, we recommend our Centaur Feed, made of corn, oats, oilmeal and bran.

Unicorn is made to fit your cows by people who know feeds and cows.

Feeding cows "right" is difficult. Unicorn helps you get a maximum yield. U[illegible] is *not* high priced when fed with your own grain.

CH[illegible] & COMPANY, Chicago

The Farm Home
A Department for the Women

Edited by MABEL CLARE LADD

THRIFT

"TO EARN a little and to spend a little less," was the creed advanced by Robert Louis Stevenson and this is practically the same creed which the nation has asked every individual to adopt as his or her own, in the program it is advancing in this "Thrift Week."

It is a well known fact that this question of financing lies largely with the women of the land, as almost any woman can spend more than a man can earn, if she so will, or a determined woman can compel a spendthrift husband to meet her demands for a "budget" and can so plan the family expenditures that there will be a definite amount laid aside for legitimate investments.

Investigation after investigation has been made by prominent men and women regarding the H. C. of L. and each and every one has agreed in the final analysis, that the only remedy lies in greater production. Just as there must be greater production in order to remedy the present problem of costs, so there must be greater saving if we are to keep our country first of all, for production has lagged for two years and in order to catch up it will take a vast amount of capital and it is up to the individual to assist in supplying that capital through sane investments in bonds which will assist our country in catching up.

It is a most remarkable condition which exists—with prices higher than they have ever been in the history of our lives—still there is not a bread line or a soup kitchen from coast to coast of our fair land. This is a marvelous record for any country—now the thing to do is to keep it so by keeping men employed and they cannot be kept employed unless the country keeps prosperous and a thrifty country is a prosperous country. And so to help instill the gospel of thrift in our minds the government has given us these commandments which it would be well for us to keep in mind, not only this week which has been set aside as Thrift Week, but every week throughout the year.

THE TEN COMMANDMENTS OF INDIVIDUAL FINANCES

1.—Work and earn—to help increase the world's goods and decrease cost of living.

2.—Make a Budget—Ascertain how you should dispose of your income.

3—Keep a record if expenditures to see how close you come out to your estimates.

4.—Have a bank account—To keep money in a safe place and help you save.

5.—Carry life insurance to protect your loved ones in case of your death.

6.—Make a will to insure your resources going quickly to your loved ones in case of your death.

7.—Own your own home to secure the greatest satisfaction in your own home.

8.—Pay your bills promptly—To meet the moral obligations you have to your creditors.
